

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

FRIENDS' INTELLIGENCER

EDITED AND PUBLISHED BY

AN ASSOCIATION OF FRIENDS.

VOLUME XXIII.

PHILADELPHIA:
EMMOR COMLY, PUBLISHING AGENT,
No. 144 NORTH SEVENTH STREET.

EXTRACTS FROM CLARKSON'S "PORTRAITURE OF QUAKERISM."

(Continued from page 818, vol. 22.)

As no person, in the opinion of the Quakers, can be a true minister of the gospel, unless he feel himself called or appointed by the spirit of God, so there can be no true or effectual worship, except it come through the aid of the same spirit.

The public worship of God is usually made to consist of prayer and preaching.

Prayer is a solemn address of the soul to God. It is a solemn confession of some weakness, or thanksgiving for some benefit, or petition for some favor. But the Quakers consider such an address as deprived of its life and power, except it be spiritually conceived. "For the spirit helpeth our infirmities. For we know not what we should pray for as we ought. But the Spirit itself maketh intercession for us with groanings which cannot be uttered." (Rom. 8: 26.)

Preaching, on the other hand, is an address of man to men, that their attention may be turned towards God, and their minds be prepared for the secret and heavenly touches of his spirit. But this preaching, again, cannot be effectually performed, except the spirit of God accompany it. Thus St Paul, in speaking of himself, says, "And my speech and my preaching was not with enticing words of man's wisdom, but in demonstration of the spirit and with power, that your faith should not stand

in the wisdom of men, but in the power of God." (1 Cor. 2: 4.) So the Quakers believe that no words, however excellent, which men may deliver now, will avail, or will produce that faith which is to stand, except they be accompanied by that power which shall demonstrate them to be of God.

From hence it appears to be the opinion of the Quakers, that the whole worship of God, whether it consist of prayer or of preaching, must be spiritual. Jesus Christ has also, they say, left this declaration upon record, that "God is a spirit, and that they that worship him, must worship him in spirit and in truth." (John 4: 24.) By worshipping him in truth, they mean, that men are to worship him only when they feel a right disposition to do it, and in such a manner as they judge, from their own internal feelings, to be the manner which the spirit of God then signifies.

For these reasons, when the Quakers enter into their meetings, they use no liturgy or form of prayer. Such a form would be made up of the words of man's wisdom. Neither do they deliver any sermons that have been previously conceived or written down. Neither do they begin their service immediately after they are seated. But when they sit down, they wait in silence, (Mat. 10. 19. Acts 1. 4.) as the Apostles were commanded to do. They endeavor to be calm and composed, They take no thought as to what they shall say. They avoid, on the other hand, all activity of the

imagination, and every thing that arises from the will of man. The creature is thus brought to be passive, and the spiritual faculty to be disencumbered, so that it can receive and attend to the spiritual language of the Creator. If, during this vacation from all mental activity, no impressions should be given to them, they say nothing. If impressions should be afforded to them, but no impulse to oral delivery, they remain equally silent. But if, on the other hand, impressions are given them, with an impulse to utterance, they deliver to the congregation as faithfully as they can, the copies of the several images, which they conceive to be painted upon their minds.

This utterance, when it manifests itself, is resolvable into prayer or preaching. If the minister engages in prayer, the whole company rise up, and the men with the minister take off their hats, that is, uncover their heads. (1 Cor. ch. 11.) If he preaches only, they do not rise, but remain upon their seats as before, with their heads covered. The preacher, however, uncovers his own head upon this occasion.

The Quakers certainly believe that the spirit of God furnishes them with impressions on these occasions, but that the description of these is left to themselves. Hence a faithful watch must be kept, that these may be delivered to their hearers conformably to what is delivered to them. But if so, it may perhaps be necessary to be more watchful at the outset, in order to ascertain the dimensions as it were of these impressions, and of their several tendencies and bearings, than afterwards, when such a knowledge of them has been obtained. Or it may be that ministers, who go wholly unprepared to preach, have but a small view of the subject at first. Hence they speak slowly. But as their views are enlarged, their speech becomes quickened, and their feelings become interested with it.

Against the preaching of the Quakers, an objection is usually made by the world, namely, that their ministers generally deliver their doctrines with an unpleasant tone. But it may be observed that this, which is considered to be a defect, is by no means confined to the Quakers. Persons of other religious denominations, who exert themselves in the ministry, are liable to the same charge. It may be observed also, that the difference between the accent of the Quakers, and that of the speakers of the world, may arise in the difference between art and nature. The person who prepares his lecture for the lecture-room, or his sermon for the pulpit, studies the formation of his sentences, which are to be accompanied by a modulation of the voice. This modulation is artificial, for it is usually taught. The Quakers, on the other hand, neither prepare their discourses, nor vary their voices purposely, according to

the rules of art. The tone which comes out, and which appears disagreeable to those who are not used to it, is nevertheless not unnatural. It is rather the mode of speaking which nature imposes, in any violent exertion of the voice, to save the lungs. Hence persons who have their wares to cry, and this almost every other minute, in the streets, are obliged to adopt a tone. Hence persons with disordered lungs, can sing words with more ease to themselves than they can utter them, with a similar pitch of the voice. Hence Quaker women, when they preach, have generally more of this tone than the Quaker men, for the lungs of the female are generally weaker than those of the other sex.

Against the sermons of the Quakers two objections are usually made; the first of which is, that they contain but little variety of subject. Among dissenters it is said, but more particularly in the establishment, that you may hear fifty sermons following each other, where the subject of each is different. Hence a man, ignorant of letters, may collect all his moral and religious duties from the pulpit in the course of the year. But this variety, it is contended, is it not to be found in the Quaker church.

That there is less variety in the Quaker sermons than in those of others, there can be no doubt. But such variety is not so necessary to Quakers, on account of their peculiar tenets, and the universality of their education, as to others. For it is believed, as I have explained before, that the spirit of God, if duly attended to, is a spiritual guide to man, and that it leads him into all truth; that it redeems him; and that it qualifies him therefore for happiness in a future state. Thus an injunction to attend to the teachings of the spirit, supersedes, in some measure, the necessity of detailing the moral and religious obligations of individuals. And this necessity is still farther superseded by the consideration, that, as all the members of the Quaker society can read, they can collect their Christian duty from the scriptures, independently of their own ministers; or that they can collect those duties for themselves, which others, who are illiterate, are obliged to collect from the church.

(To be continued.)

Acceptable prayer may be offered whenever the soul feels its wants and its imperfections with words vocally expressed or by silent breathings that cannot be uttered; in the busy throngs of men, or alone in the forest depths; in the assemblies of the people met for Divine worship, or on the lonely pillow in the silent watches of the night; amid the domestic cares of the household, and when the fond mother folds the loved one to her bosom, and asks for

Divine help to train its steps in the paths of virtue. Here is no form or attitude, no interruption, yet these silent prayers are registered in Heaven as much as though on the bended knee or standing position with uncovered head, and the answer and the object as fully obtained.

CHRIST AS A SEED.

BY I. PENNINGTON.

Ques.—What is Christ?

Ans.—He is the word of eternal life, who is appointed of the Father to give life, and who giveth life to them that receive him and obey his Gospel. He is the Son of God, the wisdom of God, the power of God, the righteousness of God, the Saviour and salvation of God. The peace, the rest, the joy, the life of the soul. The King, the Priest, the Prophet, the Shepherd of the sheep. The way, the truth, the door, the vine, the olive tree, into which the living are gathered and engrafted. And he is also a hammer, an axe, a sword, a fire to the corrupt tree and fruit.

Q.—How is Christ known, received, and obeyed?

A.—As a seed; as the seed of life, as the seed of the kingdom, as leaven, as salt; as a little, small thing, rising up in the heart against all that is great and mighty. As a branch out of a dry ground; as a little child to lead, which all the wisdom of man and flesh cannot but despise; and, therefore, that must first be brought down in some measure in the heart before Christ can be owned in the heart and subjected to.

Q.—How is the seed received?

A.—By feeling its virtues, manifestations and operations in the heart, and subjecting thereto.

Q.—What are its virtues, manifestations and operations?

A.—They are all living, and have all living and powerful effects upon the heart as they are let in. They are all against darkness, sin and death; tending to discover it, to turn the mind from it, to lead out of the captivity, power and reach of it; and they are also all for God, tending to prepare the heart for him, and to bring it into union and covenant with him.

Q.—What is the first operation of the seed to the soul, wherein it is to be waited for and closed with, that the soul may come into the farther sense and feeling of it?

A.—It is according to the state of the soul; which being in darkness, sin and death, it appears as a light to discover the sin and darkness and death, and to lead out of it, to the redeeming power. And then to them that thus receive it and wait upon it in the fear and humility which it gives and begets, it appears as life, quickening the soul, and as power, enabling

it in some measure to live to God, and to walk with Him in the way to the kingdom.

For Friends' Intelligence.

WE MAY "LOOK THROUGH NATURE UP TO NATURE'S GOD."

As I was walking in the garden one morning last summer, my attention was attracted by the buzzing of a humming-bird that was busy sipping the sweets of the nasturtion flowers, and I thought, truly we may be instructed by the fowls of the air. As I watched the little creature drawing its nourishment from the flowers of the garden, my mind was led to consider the wonderful instinct by which it knew where good was to be found, and the knowledge how to derive its nourishment from the sweets thereof. It appeared to me to show far greater wisdom than many possess who are blest with the inspiration of the Almighty to give them understanding; for indeed every day gives added proof that man, poor forgetful man, made but little lower than the angels, and designed to be the nobler part of God's creation, comes far short of fulfilling the end for which he was designed, and instead of drawing sweet consolation from the precious privileges of the glorious gospel of Christ preached in the heart of every creature, he often resists instruction, or refuses to be directed to the source from whence good comes. The desire was then raised on my own account that I might, like this little bird, be attracted by the sweet influence of heavenly good, and in partaking thereof find nourishment to the soul.

DUANESBURGH QUARTERLY MEETING.

Duanesburgh Quarterly Meeting was held for the first time in the city of Albany, on the 19th inst.

The several Monthly Meetings constituting it were well represented, and all were most cordially and hospitably entertained. A few families, not members of our Society, kindly solicited the company of Friends, which invitation was accepted, apparently to the satisfaction both of the entertainers and the entertained.

Notice having been given, the Public Meetings were quite large. We were favored with the company of several Friends from other Quarterly Meetings, whose presence and gospel labors were truly acceptable. The attention was called to the primitive principles of our Society, also to the peculiar testimonies we have ever felt called upon to bear. The youth were feelingly exhorted to faithfulness in small requisitions, and cautioned against deeming them of trifling importance; they were also encouraged not to shrink from the pointings of the finger of scorn, being assured that as we obey that voice

"that speaks as never man spake," we shall find the way made easy and our path will be the path of peace. The language of sympathy was extended to those in affliction, whether from the loss of friends or reverse of fortune, and they were encouraged to put their trust in Him who is a "present helper in every needful time."

The business that came before us was transacted in much harmony, but whether a loss is not sustained in our meetings for Discipline, by withholding more than is meet, thereby lessening the usefulness of many of the members, seems a question worthy of consideration.

Having been solemnized together, we felt that we could say, "as iron sharpeneth iron, so the countenance of a man sharpeneth his friend;" also, that "it was good for us that we had been there."

A MOTHER'S THOUGHTS ON EDUCATION.

There is, perhaps, nothing of more vital importance to us as a Society than the proper education of our youth and children. I have already seen several ably written articles on the subject in the Intelligencer, and am rejoiced to know that some parents and teachers are again rising to the standpoint of the olden time; I say this as a mother, and had I the pen of a ready writer, I, too, ere this, would have made my offering to the great common work. As it is, I desire to throw in my mite.

It seems to me that we as a people suffer much loss from the neglect, so apparent among us, of organizing and supporting suitable institutions where our children may be educated apart from the contaminating influences of our District Schools. I confess that I deeply feel our need of improvement in this matter, and I doubt not that all parents are with me who have the moral or spiritual interests of their children at heart. Will the love we bear our offspring, or the interest we have in society, or the duty we owe to both, allow us longer to stand inactive with so vast a field of labor in view? In the city, new life has sprung up; it is in the country, where friends are scattered abroad at greater distances from each other, that we suffer. And is there no remedy for us? Must our children be sent hundreds of miles, perhaps, from their homes, at an expense which but few amongst us can bear, or must they be doomed to the alternative of being thrown as it were into the very arms of temptation, turned by the most effectual means from the doors of society out into the allurements and vanities of an artful world, that they may gain their needed intellectual training?

Why should we not, rather, in vicinities where we are so scattered that schools cannot well be

established under the immediate supervision of Monthly or Quarterly Meetings, institute select or family schools? What though it should cost a little more time or money or painstaking, should we not be amply rewarded by seeing our dear young people growing up in innocence and simplicity of spirit, ornaments to society, and preparing to fill the places of those worthies who are fast passing away! It is certain that if we wish our children to be Friends, *we must educate them as such*; not to sectarianism,—to dogmas or forms,—for these of themselves have not the life; yet we would have such examples set, and such influences surrounding them, as should bring into their view, and strengthen in them, the pure simplicity of Truth, on which real Quakerism is built. It behoves us to consider how high and holy is the profession we are making—and to remember it is a self-denying and cross-bearing profession; nor can we expect our children to come forward as champions in the great warfare against vanity and lies, if we allow vanity and lies to become their meat and their drink while their tender minds are in the state of formation. Guard them then,—carefully and prayerfully guard them; not by closing round them such bands of prejudices that they can take no Christian by the hand, nor recognize a brotherly love for him unless he also be called a Quaker, for we believe that of every nation, kindred, tongue and people, those who fear God and work righteousness are accepted with Him; but while all brotherly love and charity shall prevail toward others, let us stay by our own standard, if we think that standard worth preserving. Let us show our young members by our actions *how much* we value it; not as a name, not as an ancient and beloved superstition, but as a beautiful and high and holy principle of life, the principle of everlasting life given forth, not by man or custom, but as coming directly from Christ, the Light we seek to follow; and thus may we accomplish by our labor something for our children's real welfare, both present and eternal.

Another subject has claimed my serious attention—a subject intimately connected, however, with what we have already considered.

The literature for our youth,—have they what they need? This question has been earnestly suggested by some others who have written for the Intelligencer; and why may it not be further considered and thought of, until some step has really been taken by way of improvement? Our children ought to read,—they will read *something*; and what shall that something be? We are well aware that the writings of Friends, both ancient and modern, as they now stand, though excellent in themselves, would prove like strong meat to our little ones, whereas they require milk. We have a few juvenile

works, but nothing to what we need; what, then, shall we do? Abandon their plastic but eager minds to anything they may find—let them devour the light or worse than light literature that crowds the press, and, I may say, with pain, the tables, of many of our respected members?—or shall we give them what they need, prepared by a little labor and expense in a manner proper for their use?

This is a serious question—let us ponder on it. Let us look about us and consider if there be not talent enough amongst us, and means enough to spare, to enable us to publish a journal devoted exclusively to the use of the young? Other societies publish such periodicals amongst themselves, and were it not for a few peculiarities, they would be generally useful; but these few things make them unfit for the work we have to do. They encourage a *hireling* ministry, support war, and maintain *dead rites* and traditions.

Then why may we not have one of our own—one that shall be adapted to the minds of *young Friends*—one that shall hold forth our important and peculiar testimonies in their true light and beauty.

Let us look well to these things, that when the Father makes up His accounts, the question, "Where are the lambs entrusted to your care in the wilderness of the world?" be not an unwelcome one, and we have to answer, with confusion of face, "Lord, we were so taken up with the things of the world, and the desire of amassing carnal riches for our children, that we *did* neglect to train them up in thy nurture and admonition."

M. A. CALKINS.

Farmington, N. Y., 2d mo., 1866.

For Friends' Intelligencer.

ON LIVING NEAR THE PRINCIPLE OF TRUTH IN OURSELVES.

The Society of Friends grounds its religious faith upon the all sufficiency of the divine light, or, in other words, Christ inwardly revealed. We have ample testimony in proof of its sufficiency for qualifying us to live the life and die the death of the righteous. Witness how the martyrs and our early Friends were sustained by it! A strict adherence to the inward guide brought them into suffering, through the enforcement of unrighteous laws with which they could not comply. They were not overcome by tyranny and years of persecution, but were joyous under sufferings, comforted under mourning, and through faithfulness obtained the victory. By giving heed to this same manifestation of divine light, the Apostle Paul, from being a persecutor of the Christians, became a Christian in word and deed, and was made a powerful instrument in gathering souls unto God. This inward guide (so far as they were governed by it) preserved Abraham, Isaac,

Jacob, Moses, Joshua, Joseph, and the righteous of all ages. Who, then, can slight or neglect to adhere to this all-powerful principle without sustaining loss? Its non-observance has been the downfall of individuals, religious societies, and even nations.

When we consider that it is by the redeeming power of this principle, making free from sin, that any can stand justified in the Divine sight, it surely becomes a matter of the greatest magnitude. If inroads have been or are being made upon the dignified Christian testimonies that have characterized the Society of Friends, can it be traced to any thing else than the want of "minding the light." This was George Fox's rallying point. Departures from the Christian path of self-denial steal in, little by little, upon the unwatchful, almost unperceived, but by no means unimportant. The greatest libertinism has its beginning often in small deviations. No one taking a wrong step can tell to what length in error it may lead. Hence the importance of man's keeping near his guide, the inner light, even in what may be deemed little things. The usefulness of the Society of Friends for good has always been equivalent to the faithfulness or unfaithfulness with which its Christian testimonies have been sustained by its individual members. Hence no compromise of the testimony against war can be made without loss. Had each member of the Society of Friends lived out this fundamental principle of our profession, who can estimate the weight of influence for good that the Society might have exerted upon the great family of man, would it not have been indeed "as leaven in the meal," "as a city set upon a hill, a light in the world, that could not be hid." The testimony against war, slavery and intemperance, against following vain, changing fashions, having their origin in pride, is the legitimate fruit of abiding under the government of this inward manifestation of truth, which leads its votaries out of all evil upward and onward to the author of all good.

We are emphatically exhorted to bring our deeds to the light, and prove them, whether they be wrought in God,—yea or nay. If this service was entered upon and prosecuted with a heartfelt, sincere engagement, commensurate to its importance, would not a wider field of labor open to the Society of Friends and its members?

I desire that we may be more generally awakened to the importance of becoming subservient to the operations of divine grace, that grace which the Apostle declared to be sufficient for salvation, and had appeared unto all men. Why should any make a Christian life a matter of indifference or a subject of delay?

Is it not well for each of us often and candidly to consider how far the design of our cre-

ation is being answered in our daily life, and whether we are keeping pace with knowledge? Oh! how unwise for any to neglect or refuse to profit by the greatest and best gift a gracious God has bestowed on man to fit him for the highest state of enjoyment. D. IRISH.

DUTCHESS Co., N. Y., 2d mo., 1866.

If mothers only knew what inspiration lies in the pure, loving deeps of their own nature, if they but knew the yearning, clinging love in their sons, at least, they would never fail in their duty or despair of their power.

SCRAPS FROM "FELLS OF SWARTHMOOR HALL."

Three of the Swarthmoor sisters were ministers—Isabel, Sarah and Susanna. We have already quoted what Gerard Croese says of Sarah's extraordinary gift of exhortation and prayer; to Isabel he also alludes incidentally on the occasion in 1677, when she went with two other Quaker ladies to visit Elizabeth, the Princess Palatine of the Rhine. Three years previous to that visit William Yeamans, Isabel's husband, died; and at the time of which we speak, only one of her children, a son, survived.

It is thus Croese writes of Isabel and her friends:—

"When these women came to the Court of the Princess, and desired liberty to speak with her, she who was so full of humility and gentleness, admits and hears them with cheerful and favorable countenance, being especially pleased with Isabel's discourse, who indeed had a curious voice and a freer way of delivering herself."

When Isabel Yeamans, George Keith's wife, and Gertrude Dirick Nieson* started from Amsterdam on that visit to the Princess Palatine, they left behind them in Holland the English Friends with whom the two former had gone over to attend the general meeting at Amsterdam. These were George Fox, William Penn, George Keith, Robert Barclay and Benjamin Furley. It is evident the ladies wished to go by themselves as unobtrusively as possible, on their religious mission to a Christian sister; and as Christian sisters the Princess received and afterwards remembered them. Princess Elizabeth was a woman of great amiability, conscientiousness, and religious tenderness. Her mother having been an Englishwoman, probably that tied her all the more cordially to welcome the sympathy of these fellow countrywomen of hers. The Princess was a daughter of the Queen of Bohemia, Charles I.'s sisters, whom Margaret Fell visited in London; consequently she was first cousin to

Charles II., and sister of Prince Rupert, whose kindly offices Mary Fell spoke so hopefully of in her letter to her mother in 1664, describing her visit to the King.

When the three women Friends returned to Amsterdam, William Penn, Benjamin Furley and Robert Barclay paid their visit to the Princess,—they had been acquainted with her previously, and now had free religious communion with her and with some of the ladies of her Court, especially the Countess of Horne. The Princess did not live more than about four years from that time, but her correspondence with Penn and Barclay continued till her death, Robert Barclay was very careful about not giving publicity to any of her letters, or those of the Countess, for the reason given in the letter we are about to transcribe, and which is now with its enclosures presented to the public for the first time, after nearly 200 years of oblivion:—

ROBERT BARCLAY TO THE SISTERS AT SWARTHMOOR.

"*ABERDEEN PRISON, 27th of 10th mo., 1676.*"

"Dear Isabel, Sarah, Susanna and Rachel,—I received the signification of your love in the postscript of your father's letter, which reached unto me and refreshed me. Those real testimonies of your respect towards me deserved long ago a suitable acknowledgment; leastwise by the expression of my sensibleness thereof, for a real requital proportionable to the obligation you have put upon me, is not only without my reach at present to perform, but without my view when it may—only I can assure you, I am not unmindful thereof, and do, and I hope will and shall, return that love and regard for you which I will not adventure to express, least I should seem to sway from simplicity—only feel it in that which is beyond words. In its flowing I do at present dearly salute you. Blessed be the Lord that hath brought us to the knowledge of this kind of love and friendship, which standeth in that which is more excellent than ought in the world, even in the Truth itself. And as we abide therein, it both may and can grow, without finding an end. It was this precious Truth alone brought us to an outward acquaintance as well as inward friendship: so therein I desire daily to be nearer and nearer unto you, whereunto this present trial will I hope not a little contribute.

"As I intimated in my last, I do now send you a copy of the Princess Elizabeth's first letter to me, and the Countess of Horne's. I have since received letters again from both of them, but they are not by me. You will by these perceive how things stand with them, and I hope they will refresh you. I send them to you with the greater confidence, that I know you to be persons of such education as will use them with discretion, and not trust them so

* A Dutch Friend who was afterwards the wife of Stephen Crisp.

as to come to the ears or hands of any who cannot so use them;—knowing that persons of their condition are apt to offend when their freedom is made public, and will thereby be straitened from using the like hereafter.—But I fear not you in this particular.

“With my dear love to your worthy mother, and to your brother and sister Lower, I continue your Friend and Brother in the Truth that is unchangeable,

“BARCLAY.”

“THE PRINCESS ELIZABETH—HER FIRST LETTER.

“My dear Friend,—In our Saviour Jesus Christ, I have received your letter this day, dated the 24th of June. As I am pressed to take this opportunity to make a certain address to your brother, Benjamin Furley, I must give you the abrupt answer.

“Your memory is dear to me, so are your lives, and your exhortations very necessary. I confess myself still spiritually very poor and naked, all my happiness is, that I do know I am so,—and whatsoever I have seemed or studied heretofore, is but as dust in comparison to the true knowledge of Christ. I confess also my infidelity to this light, by suffering myself to be conducted by a false politique light; now that I have sometimes a small glimpse of the True Light, I do not attend to it as I should, being drawn away by the works of my calling, which must be done. Like your swift English hounds, I often overrun my scent,—being called back when it is too late. Let not this make you less earnest in your prayers for me,—you see I need them. Your letters will be always welcome to me, so shall your friends, if any please to visit me.

“I should admire God’s providence, if my brother could be a means of releasing your father and the 40 more prisoners in Scotland. Having promised to do his best, I know he will perform it, he has always been true to his word; and you shall find me by the grace of the Lord a true friend,

“ELIZABETH.”

The other letter which Robert Barclay copied and sent to the Swarthmoor Sisters, whilst he was confined in Aberdeen prison, is as follows:—

“THE COUNTESS OF HORNE—HER LETTER TO R. B.

“Dear Friend,—It was a regular joy to me to receive your acceptable letter, which this morning awaited my hands by the post. It testifies your love and care for me who am unworthy thereof. Therefore do I justly esteem it the more, being heartily thankful that you remember me before the Lord, who am waiting upon Him—O that it might be truly in the Spirit. I cannot but admire the wonderful

providence of God, which brought you hither, and raised such love mutually between us.

“I can in truth say that my heart went after you in love, and hath been many a time in admiration of that wonderful work of the Lord amongst us the last time we saw each other. I hope to His praise He will accomplish the work He has begun, and raise His witness in my soul, that it may testify of Him so clearly that I cannot doubt whether it be His voice or not. It may be with me as it was with Samuel, who heard the voice of the Lord calling, Samuel! Samuel! yet knew not that it was the Lord, but thought it to be the prophet Eli. I say it may at times thus fare with me, that the inward witness testifies and calleth to me in my soul, and I, because I know not His voice nor the testimony thereof, do pass it by, looking upon it as the voice of a stranger. For want of this spirit of discerning, I come many times to behave myself as an enemy in not receiving His testimony.

“That which now makes me fearful to receive any thing [I do not clearly see] to be the testimony of God, is, because so many I perceive have deceived themselves, taking the testimony of the flesh for the testimony of God; not that they do it willingly, yet I must needs believe that they deceive themselves therein. Yet this I see, that there must be a testimony of God in the soul, and that God commanded Isaiah to bind up the testimony, and seal the laws for his disciples—after these my soul doth long. These desires often cause me to sigh unto my God in this way—‘O raise, I pray thee, thy witness in my soul.’ As the Lord gives you liberty, sigh with me, and for me, for the arising of this witness. I confess I am not worthy of such a favor, being an unfaithful virgin, yet hope still for favor and mercy from Him that calls me.—I know He calls me, O that I did but always know his voice, and know what He requires of me. Now my place appears to be in silence, to be still, and wait upon the Lord there, and I hope He will strengthen me in this waiting, and not suffer me to grow weary, and preserve me from speaking peace to myself, or seeking it from any other but from Himself alone. I am, by His grace, from day to day more retired from men, and my soul weaned from the world, and more and more burthened with this spiritless, lifeless worship. I could well desire with that lovely lady (I mean the Lady Overkirk) to be delivered from all these opinions, and that I be no more of Paul’s or Apollos’, but only Christ’s, and come into fellowship with those that have the testimony of Jesus, by whatsoever name they are called.

“Satan pressed hard upon me some years ago, with most of those temptations which now you tell me of. He came so far as almost to

make me believe there was no God; but my faithful God, in whom my strength, and comfort, and joy was, stood by me, and rebuked him, so that he became silenced. Me, He sustained that I did not sink, and he took from me the fear that I had of Satan, so that if he should anew assault me, I know that Immanuel lives, and that he will preserve me by His power. All that I now fear is this sinful self that I feel still in me. O that the Lord would arise as a mighty man of valor to slay it!—how gladly would I see it crucified and laid down at the feet of the Lord Jesus.

"Time permits me not at present to write more unto you, only that I hope to do my best to learn English. A book that may contribute to it will be very acceptable to me. When I know the cost, I shall send it you, and I hope the Lord who hath sent me in your letters so many good exhortations, will cause them to live in my soul. I could very well read and understand them all. I am glad to hear that on your return home you found all there in a good state. I do thank you, my beloved friend, for your faithful care of me, and that it extended so far as to inquire after my brother, who is now before 'Mastwoht.' May the Lord do with him what is good in His eyes.

"Salute for me, I pray, all the lovers of the Cross of Christ—all who fear the Lord in Spirit and in Truth. The Lord bind us more and more in His pure love, in which I remain your dearly loving friend,
"ANNA MARIA—COUNTESS OF HORNE."

"This was sent to Benjamin Furley, and by him translated out of the Dutch. She is so well advanced in the English, that she not only can understand what she reads, but she has translated out of English into Dutch a book of Isaac Pennington's.

"Excuse the bad ink. G. K. desires in particular to be minded by you all."*

The above letters are all in Robert Barclay's handwriting, and are thus endorsed, apparently by John Abraham:—

"The excellent Robert Barclay's letter to three of my aunts, and to my dear and tender mother."

How beautifully and how abundantly is the spirit of Christian love manifested in those letters! How strikingly do they point out the mark of discipleship in the writers and in the recipients!—"By this shall all men know that ye are my disciples, if ye have love one to another," says Christ our Holy Redeemer. But that token of discipleship did not fully satisfy the over anxious mind of the countess. She was troubled to an undue extent about not having a clearer preception of "God's witness in her soul,"—yet she assuredly had that Wit-

ness there, as her feelings and her works manifested. Our Lord when on earth appealed to His works in proof of the Divine presence and power having executed them—so may His servants. Supremé love to God and to man is God's Witness, and if existing in the heart, will manifest itself in striving to do good to all around us, and assuredly this impulsive love in which the works originate, is the operation of the Holy Spirit.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, THIRD MONTH 10, 1866.

FRIENDS TRAVELLING IN THE MINISTRY.—Ann Weaver, a member of Green St. Monthly Meeting, Philadelphia, and Rachel Tilton, a member of Purchase Monthly Meeting, N. Y., attended Burlington Quarterly Meeting, held at Mount Holly, N. J., on the 27th ult., with minutes from their respective Monthly Meetings.

THE CHILDREN'S FRIEND.—In another column will be found the prospectus of a Journal under the above title, which will be expressly devoted to juvenile taste and culture. From our knowledge of the Friends who have assumed its publication we can cheerfully recommend it to parents.

The need of such a paper has often been expressed by our subscribers, and we think many will hail with pleasure the announcement of the issue of a periodical which will regularly bring to the children, unexceptionable reading matter.

As the paper will only be issued conditionally, it is desired that those intending to become subscribers should forward their names, as early as practicable to the Editor.

Though it is not usually our practice to notice communications to which no signature is appended, and for the animus of which no person stands responsible, yet the earnest remonstrance of one who says, "How can I forbear to give expression to the departure from the advice of discipline and the practice of ancient Friends," and who desires that his comments may "be published in 'Friends' Intelligencer,' as a friendly hint to Monthly Meetings," induces us to vary from our established custom. "Recently," continues the writer, "a Monthly Meeting granted a certificate to a female Friend, a minister, which was endorsed by the Quarterly

* From the original in M. Thirnebeck's Collection.

Meeting, to attend a neighboring Yearly Meeting, the meetings composing it, and to appoint some. This female Friend having no companion from home, had to depend upon the kindness (and no doubt some times the inconvenience) of Friends she visited."

The imperfect information furnished by our correspondent does not admit of our forming a correct judgment as to whether there was, or was not, in the case referred to, an omission of duty on the part of the Monthly Meeting; we believe, however, that it is the desire of Friends generally, in the administration of Discipline, to be governed by "that wisdom that is profitable to direct." Neither our book of Discipline nor the Advices contains any direct instruction on this point; but when a Friend has so far received the sanction and sympathy of a Monthly and a Quarterly Meeting, as to obtain a minute for religious service, we can scarcely suppose that some of the members of those meetings will not feel an obligation to further the prosecution of such a concern, should their aid be needed.

That the Friend, on the occasion specified "accomplished the visit to the peace of her own mind," shows that no necessary thing was withheld, but that way was made for the required service; and if such services are carried out in Gospel love, we cannot think that those visited will esteem the inconvenience of receiving them a burden.

We have no suspicion as to the ministering Friend alluded to, nor the Monthly Meeting indicated; but we believe that all cases of dereliction are more effectually reached by private labor than by open condemnation. "If thy brother shall trespass against thee, go and tell him his fault between him and thee alone: if he shall hear thee, thou hast gained thy brother." General censure gives a vague impression of wrong somewhere, and while it may lead to erroneous and unprofitable surmises, is seldom accepted by those for whom it is designed.

PUBLIC INSTITUTIONS.—We have received the Report of the Pennsylvania Hospital for the Insane; also that of the Indiana Institute for the Education of the Blind.

The latter is under the superintendence of our friend William H. Churchman, "to whose gen-

eral efficiency and appropriate qualifications" for such a position the trustees bear ample tribute. We notice this with the more pleasure from the knowledge, that W. H. Churchman is himself deprived of sight, making the duties of such a position the more arduous and difficult.

From the Pennsylvania Report will be found a few extracts in our next number.

DIED, in the village of Quaker St., Schenectady Co., N. Y., on the 24th of Eighth month, 1865, after a short but painful illness, HANNAH, wife of Enoch Hoag, aged 64 years. She was a faithful wife, a devoted mother, and, in the neighborhood, more like a sister than a neighbor, giving counsel and encouragement to the afflicted, and ever ready to lend a helping hand in time of need.

—, on the 22d of Twelfth month, 1865, ELIZA ALLEN, a member of Union Springs Preparative and Scipio Monthly Meetings, N. Y.

—, on the 17th of First month, 1866, at his residence in Dublin, Ind., ISAIAH KIRK, in the 65th year of his age; a member of Milford Monthly Meeting of Friends. His disease was of a lingering character, causing him much suffering, which he bore with Christian fortitude and patience.

—, on the 23d of First month, 1866, at his residence in Wood Lawn, Md., WILLIAM HOPKINS, in the 61st year of his age; an Elder of Deer Creek Monthly Meeting. Thus has passed away a beloved husband and kind friend; and while we mourn the loss of one so justly dear, we have the comforting assurance that "all is well, all is peace—peace," and that his purified spirit has entered into one of the mansions of his Heavenly Father. "The pure in heart shall see God."

—, on the 22d of Second month, 1866, near Woodbury, N. J., after a lingering illness, which he patiently endured, ISAAC BALLINGER, in the 63d year of his age; an upright and consistent member of Woodbury Monthly Meeting.

—, on the 19th of Second month, at Fall Creek, Madison county, Ind., ELIZABETH M. FUSSELL, in the 76th year of her age, relict of the late Joseph Fussell.

—, on the 1st of Twelfth month, 1865, at his residence in Willistown, Chester county, MARIS HALL, in the 72d year of his age; an esteemed member of Goshen Monthly Meeting.

—, on the 26th of Second month, HANNAH, daughter of Hannah and the late Isaac Townsend, a member of the Monthly Meeting of Friends held at Race street, Philadelphia.

—, on the 26th of Second month, MARY E., wife of Joshua W. Lippincott, and daughter of Samuel and Martha H. Parry, in her 27th year; a member of the Monthly Meeting of Friends of Philadelphia.

—, on the 3d of Third month, JAMES MARTIN, in his 78th year; a beloved elder of the Monthly Meeting of Friends of Philadelphia.

—, on the 23d of Second month, at her residence, Morestown, N. J., RACHEL, widow of Joseph Thomas, in the 86th year of her age.

—, on Fourth-day, 14th of Second month, HENRY T. DIXON, aged 41 years.

—, on the morning of the 25th ult., of disease of the heart, at his residence in Philadelphia, JOSEPH MAXFIELD.

—, on 10th of Twelfth month, 1865, of consumption, ELIZABETH A. WILLIAMS in the 36th year of her age, daughter of Lukens and Margaret Comly; members of Abington Monthly Meeting.

—, on the 1st of 2d month, 1866, near Springboro', Warren County, Ohio, of congestion of the lungs, CHARLES LOWNES, son of Letitia J. and Edward T. Hestin, aged 5 months.

NOTICE.

A Stated Meeting of the Committee of Management of The Library Association of Friends will be held in the Library Room on Fourth-day evening next, the 14th inst., at 8 o'clock.

3d mo., 10th, 1866.

JACOB M. ELLIS, *Clerk.*

The Managers of the Home for Destitute Colored Children at Maylandville have now in the Institution several boys, of suitable age to be useful on a farm, and would be glad to receive applications from any persons desirous of employing them.

Information can be obtained by applying at the "Home," Maylandville, on the Darby road, two miles from Market street Bridge.

RUSH CREEK, INDIANA.

To Friends wishing to change their residence and come west, I would recommend Rush Creek as a good place for them to settle. The land is good, pretty well watered, and well timbered. There is a turnpike running from our settlement to Wabash City, nine miles distant, where there is a good market, as there is a railroad and canal running through it. There are also two other depots within seven miles of us. A Monthly Meeting is held alternately at Rush Creek and Maple Grove; the two meetings are ten miles apart. There is a good opening for a merchant here. To those wishing to inquire by letter, direct to JOSEPH JONES or to ASA KINDLEY, New Holland, Wabash Co., Ind.

2d mo., 1866.

For Friends' Intelligencer.

FRIENDS' SOCIAL LYCEUM.

On the evening of the 20th ult., Dr. Geo. J. Barker considered the different chemical, physiological and anæsthetic properties of Nitrous Oxide, familiarly known as Laughing Gas. He directed attention to the agents that were in use by the ancients, for the purpose of alleviating pain, particularly the vegetable narcotics, as opium, mandragora, Indian hemp and deadly nightshade. The practice had, however, never been reduced to a system until the present century. The credit of proposing narcotism for surgical operations belonged to Sir Humphrey Davy, who remarked in his *Researches*, published in 1800, "As nitrous oxide appears capable of destroying pain, it may probably be used with advantage during surgical operations in which no great effusion of blood takes place." The credit of putting this suggestion into actual practice belongs to Dr. Horace Wells, a dentist of Boston, who tested its application, first upon himself, and subsequently on different individuals; but not being skilled as an experimentalist, and

also unaware of the proper mode of administering the agent so that perfect repose and unconsciousness should result, abandoned it before its practicability was fully demonstrated. His student, Dr. Morton, witnessing the experiments of Wells, sought for some other agent, and introduced as a substitute, ether, which, though having been long known, was not believed to possess anæsthetic properties suitable for the production of narcotism. Dr. B. considered at some length the chemical properties of nitrous oxide, stating that it was the product of the decomposition of the nitrate of ammonia—an article formed by saturating pure nitric acid with the carbonate of ammonia, followed by evaporation and crystallization.

He presented to notice the different apparatus requisite for manufacturing pure nitrous oxide; also cautioning against any impurity of chlorine or nitrous acid. The gas was colorless, of a sweetish taste, being composed of the same chemical elements as atmospheric air, with the exception that nitrous oxide contained one-third of oxygen to two thirds of nitrogen, while air only contained one-fifth of oxygen to four-fifths of nitrogen. Like oxygen, it was a powerful supporter of combustion, a fact which the lecturer demonstrated by several experiments.

He presented at some length his views as to action of nitrous oxide on the economy, and urged, as a special argument in its favor, the fact that it was the only anæsthetic that possesses the power of supporting life and combustion, its action being at direct opposition to chloroform, or ether which act by deoxidizing instead of oxidizing the blood. It had also the advantage of producing an almost immediate unconsciousness when properly inhaled, and was followed by no subsequent depression or sedation. Its effects also passed off in a few moments. He concluded by expressing the belief that it should have an appropriate place in the list of anæsthetics as the best and safest agent for use in minor surgery.

A SATISFACTORY TEST.

Distrust having been felt in the accuracy of the decyphrement of the Assyrian cuneiform inscriptions, the following tests were recently made. Copies of the great cylinder inscription of Tiglath Pileser I., extending to nearly a thousand lines, were submitted to four Assyrian scholars, Sir Henry Rawlinson, Dr. Hincks, M. Oppert, and Mr. Fox Talbot. Their independent translations, sent under seal, were examined by a committee of the first scholars in England, Dean Milman, M. Grote the historian, Prof. Wilson, Dr. Cureton, and Sir G. Wilkinson. The translations were found to coincide, not word by word, but in all essentials of distribution of subject, reading of names, and general signification, so that the committee pro-

nounced these gentlemen competent to read and translate the language.

Review of "A Declaration," &c., published by order of the Yearly Meeting of Orthodox Friends (so called) held in Philadelphia in 1828 By WM. GIBBONS, M. D.

(Continued from page 827, vol 22.)

ARTICLE XVII. The next extract in the Declaration being mutilated, I will include a part of the context, putting the charge in brackets and italics. It is taken from the Darby Sermon, p. 13.

"If I do not the works of my Father, believe me not, but if I do, though you believe not me, believe the works." Here we see it is not by what people *profess or believe*, that we are to judge of them, *but by their works and doings*. If all their works give evidence that they arise from the *love of God*, if they are *clothed with his love, and wisdom, and humility*, this exalts the creature, for it is only the humble soul that is exalted of God; [*and what encouragement, my friends, we receive through this medium, when we are brought by the light into a feeling of unity with our great Pattern, Jesus Christ, and with God our Creator. O I see how we come up into an equality with him.*] We are swallowed up in his righteousness, having no will of our own, but always at his disposal, going on in the increase of a right knowledge of God's perfections and of his excellency."

ARTICLE XVIII. The next extract is also garbled. I give it, therefore, (in italics and brackets,) with the part connected with it, and necessary to get the sense of the speaker.

"And the spirit by which he [the man Jesus] was actuated, is that light and life, which is the Saviour of the soul. And it was the same light and life, which is the light and life of God; for he [Jesus] derived it from God, his heavenly Father, [*and we derive a portion of the same which is able to save the soul, if properly obeyed. Here now [that is, in this respect] he was put upon a level;*] and for this reason Jesus called the children of God his brethren, saying, {I will declare thy name unto my brethren; in the midst of the church will I sing praise unto thee."—*Darby Sermon*, p. 17.

The exception is to the words "an equality with him," and "he was put upon a level."

Within two pages from whence one of these extracts is taken, we find the following: "The apostle says, that he is our example, that we should follow his steps. But if he had any more power than we have, how could he be an example to us? He had no more power than would enable him to do the will of God; and he had it in *its fulness*, and of this every rational creature has his *proportion*. He had more, because

he had a much greater work to perform."—*Quaker*, vol. 1, p. 16.

Then, the proper construction is, that the equality spoken of is *relative* and not absolute. We receive, with the man Jesus, of the *same*, and in the *same proportion* to our need and capacity, as he did. "He had more, because he had a much greater work to perform."

The objection lies equally, even against Jesus, and the apostle Paul. "That they all may be one, as thou, Father, art in me, and I in thee, that *they also may be one in us*." John xvii. 21. This is the equality meant, and lies in the "feeling of unity." "He gave some apostles," &c., says Paul, "for the perfecting of the saints,—for the work of the ministry,—for the edifying of the body of Christ: till we all come in the unity of the faith, and of the knowledge of the Son of God, unto a *perfect man*,—unto the measure of the stature of the fulness of had Christ. Eph. iv. 13.

A similar charge was brought against George Fox; namely, for the saying that he was *equal with God*. To this he answered, "That was not so spoken; but that He that sanctifieth, and they that are sanctified, are of one: (Heb. ii. 11;) and the saints are *all one, in the Father and the Son*; of his flesh and of his bone. This the Scripture doth witness; and 'ye are the sons of God;' and the Father and the Son are one; and 'they that are joined to the Lord are one spirit': and they that are joined to a harlot are one flesh.'"—*Saul's Errand to Damascus, Gr. Mystery*, p. 514.

In like manner, *Francis Howgill* replies to an opponent: "The first thing thy dark mind stumbles at, is, that some have said that 'they that have the spirit of God, are equal with God.' He that hath the spirit of God is in that which is equal, as God is equal and his ways equal. And he that is joined to the Lord, is *one spirit*: there is *unity*, and unity stands in equality itself. He that is born from above, is the Son of God; and he said, 'I and my Father are one.' 'And when the Son is revealed and speaks, the Father speaks in him, and he in the Father, in that which is equal, in equality itself; there is equality, in nature, though not in stature. P. 232.

"Every one of the children of Light, in the measure of growth in Him, the *same mind* is in them that was in Christ Jesus."—*William Dewsbury*, p. 120.

"And so being *one in the same spirit*,—one in the *same life*,—one in the *same Divine nature*, (2 Pet. i. 4,) even partakers of God's holiness, (Heb. xii. 10,) Christ is not *ashamed* to call them brethren: (Heb. ii. 11,) nor is the apostle ashamed to give them the name, Christ, together with him." (1. Cor. xi. 12.)—*Isaac Pennington's Works*, vol. 3, p. 54.

I proceed to the next extract.

ARTICLE XIX. "Here we find that the Son of God saw no alternative; for if he gave up his testimony in order to save his natural life, he *could not be saved* with God's salvation; hence he surrendered to the divine will, rather than to *lose his standing and favor* with his Almighty Father; and what a blessed example it was."—*Darby Sermon*, p. 16.

The Sermon, immediately preceding this extract, alludes to the deeply affecting scene, described in Matt. xxvi. 36, &c. "Then cometh Jesus with them unto a place called Gethsemane, and saith unto his disciples, 'Sit ye here, while I go and pray yonder.' And he took with him Peter and the two sons of Zebedee, and began to be sorrowful, and very heavy. Then saith he unto them, 'My soul is exceeding sorrowful, even unto death; tarry ye here and watch with me.' And he went a little farther, and fell on his face and prayed, saying, 'O my Father, if it be possible, let this cup pass from me! nevertheless, not as I will, but as thou wilt.' And he cometh unto his disciples, and findeth them *asleep*, and saith unto Peter, 'What! could ye not watch with me one hour? Watch and pray, that ye enter not into temptation: the spirit indeed is willing, but the flesh is weak.' He went away again the second time, and prayed, saying, 'O my Father, if this cup may not pass away from me, except I drink it, thy will be done!' And he came, and found them asleep again, for their eyes were heavy. And he left them, and went away again, and prayed the third time, saying the same words. Then cometh he to his disciples, and saith unto them, 'Sleep on now, and take your rest; behold the hour is at hand, and the Son of man is betrayed into the hands of sinners.'"

There is no part in the history of Jesus, that furnishes so striking an evidence, as does the above account, of the truth of the testimony, that he was made like unto us in *all things*, sin excepted; or that more forcibly exhibits his *entire dependence* on his heavenly Father. "O my Father! if it be possible, let this cup pass from me," is the universal language of human nature under the pressure of heavy affliction and trials. But strength from Him alone who is "mighty to deliver," prompts the saving clause, "Nevertheless not as I will, but as thou wilt." And as we dwell under this power, a holy resignation is experienced, and we are enabled with Jesus, to pronounce the holiest of anthems—"Thy will be done."

"That which is sanctified, and kept the body pure, and make all acceptable in him, was the life, righteousness, and holiness of the Spirit. And the same thing which kept his vessel pure, it is the same thing that cleanseth us." (*Isaac Pennington*, vol. 3, p. 31.) For he conquered all his soul's enemies "in our capacity, in every

respect in our capacity, except sin: and, therefore, as the arms in which he conquered are ours, we certainly may, if we will but avail ourselves of the force and omnipotency thereof, conquer all the arts and powers of hell. (*Job Scott's Salvation by Christ*.) Hence he said, "Be of good cheer; for I have overcome the world." And this he could not have said in sincerity if he had not conquered in our capacity.

The holy child Jesus, according to apostolic testimony, was "subject" to his parents, "waxed strong in spirit," and "increased in wisdom, and in stature, and in favor with God and man:" and thus by the light and life of the Word, he was enabled to do the will,—to fulfil and abolish the law. And as John prepared the way for him, so he opened the way in the minds of men, for the spiritual administration, by miracles, signs, and wonders which God did by him, as well as by his sublime instructions, and most heavenly example of purity: for in his whole life, doctrine and death, did shine forth the clearest evidence of truth, goodness, mercy, patience, deep travail for the world, self-denial, holiness, and triumphant martyrdom.—*See William Penn's Christian Quaker*, p. 200.

(To be continued.)

From Snow-Bound, a Winter Idyl.

BY JOHN G. WHITTIER.

The two sisters of the poet, one of whom, his constant companion, he has recently been called upon to mourn, are thus described:

There, too, our elder sister plied
Her evening task the stand beside;
A full, rich nature, free to trust,
Truthful and almost sternly just,
Impulsive, earnest, prompt to act,
And make her generous thought a fact,
Keeping with many a light disguise
The secret of self-sacrifice.
O heart sore-tried! thou hast the best
That Heaven itself could give thee,—rest,—
Rest from all bitter thoughts and things!
How many a poor one's blessing went
With thee beneath the low green tent
Whose curtain never outward swings!

As one who held herself a part
Of all she saw, and let her heart
Against the household bosom lean,
Upon the motley-braided mat
Our youngest and our dearest sat,
Lifting her large, sweet, asking eyes,
Now bathed within the fadeless green
And holy peace of Paradise.
Oh, looking from some heavenly hill,
Or from the shade of saintly palms,
Or silver reach of river calms,
Does those large eyes behold me still?
With me one little year ago:—
The chill weight of the winter snow
For months upon her grave has lain;
And now, when summer south-winds blow
And bries and harebell bloom again,
I tread the pleasant paths we trod.
I see the violet-sprinkled sod

Whereon she leaned, too frail and weak
 The hillside flowers she loved to seek,
 Yet following me where'er I went,
 With dark eyes full of love's content.
 The birds are glad; the brier-rose fills
 The air with sweetness; all the hills
 Stretch green to June's unclouded sky;
 But still I wait with ear and eye
 For something gone which should be nigh,
 A loss in all familiar things,
 In flower that blooms, and bird that sings.
 And yet, dear heart! remembering thee,
 Am I not richer than of old?
 Safe in thy immortality,
 What change can reach the wealth I hold?
 What chance can mar the pearl and gold
 Thy love hath left in trust with me?
 And while in life's late afternoon,
 Where cool and long the shadows grow,
 I walk to meet the night that soon
 Shall shape and shadow overflow,
 I cannot feel that thou art far,
 Since near at need the angels are;
 And when the sunset gates unbar,
 Shall I not see thee waiting stand,
 And, white against the evening star,
 The welcome of thy beckoning hand?

From *Littell's Living Age*.

An Address on the Limits of Education, read before the Massachusetts Institute of Technology, November 16, 1865. BY JACOB BIGELOW, M.D.

In 1829 a volume was published in Boston bearing the name of "Elements of Technology." This name was not then in use, nor was it generally understood, except by those who drew its meaning from its etymology. It was not in Johnson's Dictionary, nor yet in Reese's Cyclopædia. In Worcester's Dictionary, where it now has a place, no older authority is cited for its support than that of the volume alluded to. Its analogue indeed was extant in some other languages, and fifty years ago was published in Latin among the "Theses" of the graduating class of Harvard College. But its revival for the use of English readers had to be justified by the assertion that it might be found in some of the older dictionaries.

Such, less than forty years ago, was the doubtful tenure in English literature of a word which now gives name in this city to a vigorous and popular institution, a large endowment, a magnificent edifice, and at the same time a great and commanding department of scientific study in every quarter of the civilized world.

It has happened in regard to technology that in the present century and almost under our own eyes, it has advanced with greater strides than any other agent of civilization, and has done more than any science to enlarge the boundaries of profitable knowledge, to extend the dominion of mankind over nature, to economize and to utilize both labor and time, and thus to add indefinitely to the effective and

available length of human existence. And next to the influence of Christianity on our moral nature, it has had a leading sway in promoting the progress and happiness of our race.

To appreciate what has been done by the applied sciences operating through their dependent and associate arts, we have only to go back a little more than two-thirds of a century, to the times of Franklin and Washington, and in many cases to those of our own immediate fathers. In those days of small things, men were compelled to pass their lives in a sort of destitution which in this age of scientific luxury would be considered a state of semi-barbarism. The means of domestic convenience, personal neatness, easy locomotion, rapid intelligence, agreeable warmth, abundant light, physical as well as intellectual, were things wished and waited for but not yet found.

To us, their effeminate descendants, it might be painfully interesting to witness the efforts of these hardy and much enduring people to procure warmth in their dwellings, by the scorching and freezing of their alternate sides, under the blast that swept from many apertures towards the current of a vast open chimney. And this state of things was hardly bettered by the established zero temperature of an unwarmed church, or the irrespirable atmosphere of a stove-heated school-room or country court-house. Our recent progenitors read their dusky and infrequent newspaper by the light of a tallow candle, and groped their way through dark and unpaved streets under the guidance of a peripatetic lantern. If in summer they desired a draught of cold water, there was no ice; and if in winter they wished for dry feet, there was no India rubber. If in darkness they sought for light, there was neither gas nor even lucifer matches.

Men were stationary in their habits and deliberate under their necessities. He who would communicate with a friend in a neighboring State might do it in a week, providing he could devote a preparatory week to seeking a safe private conveyance. And if any one had occasion to transport himself from one town or city to another, he could do it on a trusty saddle horse, or still more rapidly in the organized relays of the Boston and New York stage-coach "Despatch Line," which undertook to put him through in less than a week. They who went down to the sea in ships could reach England from either of the above named ports in from one to two months if wind and weather were favorable. Literary productions were written out with a goosequill, and printed in a reasonable time by the labor of two men toiling at a hand-press. Housewives plied the spinning-wheel, the distaff and the shuttle, and webs of coarse texture grew into perceptible existence

with a speed which might be compared to that of a growing vegetable. Beef was roasted on a revolving spit, turned round by a man, a dog, or a smoke-jack. And what will hereafter be accounted still more strange, garments were made by sewing slowly together their constituent parts with a needle and thread.

I have taken technology as a leading exponent of the great advance which was to be made, and has been made, during the lifetime of some of us, in certain intellectual and practical improvements of mankind, in supplying the wants, overcoming the difficulties and increasing the elegances of life. To enumerate all these improvements would simply be to recount the great steps by which our own age has advanced to the elevated and privileged condition in which we now see it. And yet, although the practical arts, in the hands of science, have taken the lead in the great visible changes of the present century, it would be presumptuous to call technology the only field from the cultivation of which mankind have obtained abundant and unlooked for harvests. In every other walk or sphere of science, literature, and refined humanity, the civilized world, with unfaltering progress, has pushed forward, at the same time, its dominion over mind and matter.

It is the object of the present remarks to show that the amount of knowledge appropriate to civilization which now exists in the world is more than double, and in many cases more than tenfold, what it was about half a century ago, and that therefore no individual can expect to grasp in the limits of a lifetime even an elementary knowledge of the many provinces of old learning, augmented as they now are by the vast annexations of modern discovery. Still farther, education which represents the threshold of accessible knowledge, instead of being expanded, must be contracted in the number and amount of its requirements, so that while all its doors are freely kept open to those who possess time, opportunity and special aptitude or necessity, a part of them at least must be closed to those who do not possess those requisites. If in the days of the ancient Greeks "life was short," while "art was long," how is it now, when life is no longer, but art, literature and science are immeasurably greater? How will it be in another half century, when new discoveries shall have arisen commensurate in their results with those of electro-magnetism and of solar actinism, of modern optical combinations and geographical and geological explorations? How will it be with the discoveries of newly armed astronomers and the calculations of geometers yet to appear,—with revolutions stirred up by chemists among elements that have slumbered together since the creation,—with the augmented conversions of heat into force, driving innumerable mechanisms to

minister to man's pleasure and power,—and more than all, how will it be with the cumbrous, vast and insurmountable weight of books, which shall render literary distinction a thing of chance, of uncertainty, perhaps even of impossibility.

A law which obtains in matter, obtains also in regard to the mind and its acquirements, that strength is not increased in proportion to magnitude. The static and dynamic strength of materials for the most part decreases as their bulk increases. A column or a bridge cannot be carried beyond a certain size without crushing or breaking its substance, and a whale, if unsupported by the surrounding water, would die from the pressure of his own weight. A small animal will leap many more times his length than a large one, and the integrity of his slender limbs will not be injured by the exertion. The useful development of a tree is known to be promoted by severe pruning, and where this is impossible, as in primeval forests, the trees prune themselves and attain greater height by the death of their under branches, the insufficient supply of sunlight being monopolized by the upper and dominant members at the expense of the lower. These examples, drawn both from inert and organic matter, may serve to illustrate the corresponding truth that human intellect, though varying in capacity in different individuals, has its limits in all plans of enlargement by acquisition, and that these limits cannot be transcended without aggregate deterioration in distracting the attention, overloading the memory, or overworking the brain and sapping the foundations of health.

The school system of New England is at the present moment our glory and our shame. We feel a just pride that among us education is accessible to all, because our public schools are open to the humblest persons. But in our zeal for general instruction, we sometimes forget that a majority of men and women must labor with their hands, that the world may not stand still, and that all may not lose by disuse the power to labor. We cannot train all our boys to be statesmen and divines, nor all our girls to be authors and lecturers, or even teachers. We ought not, therefore, to drive them into the false position of expecting to attain by extraordinary effort a place where neither nature nor circumstances have made possible. Many unfortunate children have been ruined for life, in body and mind, by being stimulated with various inducements to make exertions beyond their age and mental capacity. A feeble frame and a nervous temperament are the two sure consequences of a brain overworked in childhood. Slow progress, rather than rapid growth, tends to establish vigor, health and happiness. It has always appeared to me that a desirable and profitable mode of school education would be one in which

every hour of study should be offset by another hour of exercise required to be taken in open air.

(To be continued.)

A wise parent will not plunge his child into a hand-to-hand conflict with disobedience, if he can help it. If the child is peevish and unhappy, and tending to insubordination, he will not immediately launch a command, though the command itself may be reasonable, and eminently fit to be obeyed. He will endeavor to soothe, to lead the troubled mind away from its troubles; and when placidity is restored, and the little face is clothed with sunshine, the command will be cheerfully obeyed.

From Friends' Intelligencer.

REVIEW OF THE WEATHER, &c.

SECOND MONTH.

	1865.	1866.
Rain during some portion of the 24 hours,	3 days.	2 days.
Rain all or nearly all day,...	1 "	4 "
Snow—incl'g very slight falls	9 "	2 "
Cloudy, without storms,.....	4 "	4 "
Clear, in the ordinary acceptance of the term,.....	11 "	16 "
	28 "	28 "
TEMPERATURE, RAIN, DEATHS, &c.	1865:	1866.
Mean temperature of 2d month per Penna. Hospital,	32.60 deg.	34.14 deg.
Highest do. during month,	54.00 "	60.50 "
Lowest do. do. do.	3.50 "	7.00 "
Rain during the month,.....	5.83 in.	6.61 in.
Deaths during the month, being 4 current weeks for each year,.....	1550	1148
Average of the mean temperature of 2d month for the past seventy-seven years,.....		30.54 deg.
Highest mean of do. during that entire period, 1857,.....		44.03 "
Lowest do. do. 1825, 1836, 1838,		24.00 "

WINTER TEMPERATURES.

Mean temperature of the three Winter months of 1864, 1865,	32.03 deg.
Do. do. 1865, 1866,	33.68 "
Average of the Winter temperatures for the past seventy-five years,.....	31.33 "
Highest Winter mean occurring during that entire period, 1850—51,.....	38.33 "
Lowest do. do. 1814—15, 1835—36,	26.66 "

It will be seen by the above that not only has the month a higher temperature than the corresponding month of last year, as well as the average for twenty-seven years past, but that the same remark will apply to the winter temperatures. The quantity of rain is, also, in excess; the record of the Pennsylvania Hospital, commencing with 1825, shows nothing equal to it in any second month during that period. The winter, as usual, has embraced a great deal of stormy, unpleasant weather; has rejoiced in, it is said, the

very coldest day ever experienced in Philadelphia, and has chronicled an unusual number of extensive fires all over the United States, destroying millions of dollars' worth of property.

PHILADA., Third month 2, 1866.

J. M. ELLIS.

There being a manifest need in the Society of Friends for a paper devoted to the culture and advancement of children, it is proposed to issue on the first of Fifth month, 1866, a Journal to be called

THE CHILDREN'S FRIEND.

Its object will be to afford a medium through which the principles and testimonies of Friends in all their beautiful simplicity may be inculcated to the rising generation.

Liberal in feeling, it will combine the useful with the agreeable, the amusing with the instructive, hence it will contain Religious instructions, Moral stories, Poetry, Literary and Scientific information; each and all adapted to the comprehensive powers of children.

With this object we ask for the hearty co-operation of Friends generally throughout the country, trusting that through our undivided energies, "THE CHILDREN'S FRIEND," will be an ever welcome visitor at the fireside.

The paper will not be issued unless a sufficient number of subscribers is obtained to insure its success.

The earlier the names are forwarded the sooner will we feel encouraged to enter upon the work in earnest.

Size, 7 by 11 inches. Sixteen pages.

TERMS, \$1.50 per year in advance.

All who forward their names prior to the Fifth month, will remit the subscription on receipt of the first number.

All letters should be addressed to

ESTHER K. SMEDLEY

West Chester, Chester Co., Pa.

ITEMS.

THE RUSSO-AMERICAN TELEGRAPH.—The bill authorizing and directing the Secretary of the Navy to detail a steam-vessel from the Pacific squadron to sound the opposite coast, and otherwise to assist the Russian-American Telegraph expedition to lay the cable at Behring's Strait, having been signed by the President, is now a law. The line lacks only about twenty-five hundred miles of being completed—nearly equally divided between the two continents. With the assistance volunteered by the Emperor of Russia, it is likely to be finished in a year.

JAMAICA.—In the House of Commons, on the 13th ult., Lord Cardwell introduced a bill for the future government of Jamaica. He briefly explained that the Government had thought fit to ratify the decision which the Legislature of Jamaica had arrived at, abolishing itself, and it would be proposed to establish a government similar to that in Trinidad, for a period of three years, and if the experiment was successful, then it would be made permanent. If not, some other government would be devised.

Madame Dora d'Istria has been admitted in place of that distinguished traveller, the late Madame Ida Pfeiffer, to the French Imperial Society of Geography, founded in 1821 by Malte Brun.

CONGRESS.—Among other bills and resolutions the following were before the Senate. The House concurrent resolution declaring that no Senator or Representative shall be admitted as a member of Congress until the National Legislature decides that their States are entitled to representation, was several days under debate, and finally passed. A resolution

was offered and adopted calling upon the President to furnish to the Senate copies of all papers designating certain persons as Provisional Governors, and an account of the salary they have been allowed; the oaths they may have taken before entering upon their duties; and if they did not take the oath of office prescribed by Congress for officers of the United States, then why they did not take the same. Also, copies of any communications in his possession from such persons to any convention or legislative assembly in their respective States. Also, copies of any constitution, articles or laws purporting to have been adopted in such States, so far as the same affect the present condition of such States and the rights of persons therein. A petition from authors and publishers was presented, asking for an international copy-right law between this country and Great Britain, which was referred. Another petition was read asking a change in the manner of voting for President and Vice-President of the United States, and making the election direct by the people, instead of through the medium of electors. The bill to grant land to aid in the construction of a railroad from Springfield, Missouri, to the Pacific coast, was passed. The bill prohibiting the importation of neat cattle, as a means of protection against the introduction of the cattle plague, was passed, and awaits the Presidential approval to become a law.

HOUSE.—A bill to continue in force and amend the present act establishing the Freedmen's Bureau was presented and referred. The Committee on Ways and Means was instructed to inquire into the expediency of relieving auctioneers from taxes on sales of property under judgment. The same committee were also directed to report upon the expediency of reducing the duty on paper. The Senate bill for the protection of persons in their civil rights was reported with several amendments. It declares all persons, without distinction of color, born in the United States, are citizens. After some time spent in debate it was postponed until the 8th inst. A petition was presented from the citizens of Georgia, setting forth the deplorable state of things existing there, asking that the national troops be not withdrawn, and protesting against the organization of the militia. It was referred to the Committee on Reconstruction.

THE FREEDMEN.—Superintendent Eberhart reports from Georgia that the recent returns show that there are throughout the State 62 freedmen's schools, 89 teachers, 6,569 pupils—an increase in one month of 5 schools, 22 teachers, and 2,218 pupils. In the first month, the freed-people contributed \$538 to the support of their schools, and in the city of Augusta over \$2,000 during the past six months for their suffering brethren. G. W. C. B. Fisk, Assistant Commissioner of the Bureau for Tennessee, reports that in education, industry, justice and good order there is a steady advancement. The superintendents, chosen, generally from citizens, have earnestly and successfully labored to place the freedmen in good homes at fair wages, or for a share of the crops raised. But few dependents upon the Government charity are now in the State. In Twelfth month, only \$620.28 were expended in subsistence to the poor.

Organizations among the freedmen themselves, for the relief of their own poor, have rendered valuable service. The Nashville Provident Association, a society conducted by the colored people of that city, has its coal and wood depots, soup-houses, physicians, &c. This society relieves the suffering poor without distinction of color, and daily reports exhibit that a greater number of white than of colored persons are its beneficiaries. Many widows and orphans, whose husbands and fathers fell fighting to

perpetuate slavery, have been fed and warmed through the kindly offices of this association.

EXTRACTS FROM CLARKSON'S "PORTRAITURE OF QUAKERISM."

(Continued from page 2.)

The second objection is, that the Quaker discourses have generally less in them, and are occasionally less connected or more confused than those of others.

It must be obvious, when we consider that the Quaker ministers are often persons of but little erudition, and that their principles forbid them to premeditate on these occasions, that we can hardly expect to find the same logical division of the subject, or the same logical proofs of given points, as in the sermons of those who spend hours, or even days together, in composing them.

With respect to the apparent barrenness, or the little matter sometimes discoverable in their sermons, they would reply, that God has not given to every man a similar or equal gift. To some he has given largely; to others in a less degree. Upon some he has bestowed gifts, that may edify the learned; upon others such as may edify the illiterate. Men are not to limit his spirit by their own notions of qualifications. Like the wind, it bloweth not only where it listeth, but as it listeth. Thus preaching, which may appear to a scholar as below the ordinary standard, may be more edifying to the simple-hearted than a discourse better delivered, or more eruditely expressed. Thus again, preaching, which may be made up of high-sounding words, and of a mechanical manner and an affected

tone, and which may, on these accounts, please the man of learning and taste, may be looked upon as dross by a man of moderate abilities or acquirements. And thus it has happened, that many have left the orators of the world and joined the Quaker Society, on account of the barrenness of the discourses which they have heard among them.

With respect to Quaker sermons being sometimes less connected or more confused than those of others, they would admit that this might apparently happen; and they would explain it in the following manner. Their ministers, they would say, when they sit among the congregation, are often given to feel and discern the spiritual states of individuals then present, and sometimes to believe it necessary to describe such states, and to add such advice as these may seem to require. Now these states being frequently different from each other, the description of them, in consequence of an abrupt transition from one to the other, may sometimes occasion an apparent inconsistency in their discourses on such occasions. The Quakers, however, consider all such discourses, or those in which states are described, as among the most efficacious and useful of those delivered.

But whatever may be the merits of the Quaker sermons, there are circumstances worthy of notice with respect to the Quaker preachers. In the first place, they always deliver their discourses with great seriousness. They are also

singularly bold and honest, when they feel it to be their duty, in the censure of the vices of individuals, whatever may be the riches they enjoy. They are reported also, from unquestionable authority, to have extraordinary skill in discerning the internal condition of those who attend their ministry, so that many, feeling the advice to be addressed to themselves, have resolved upon their amendment in the several cases to which their preaching seemed to have been applied.

As I am speaking of the subject of ministers, I will answer one or two questions, which I have often heard asked concerning it.

The first of these is, do the Quakers believe that their ministers are uniformly moved, when they preach, by the Spirit of God?

I answer—the Quakers believe they may be so moved, and that they ought to be so moved. They believe also that they are often so moved. But they believe again, that except their ministers are peculiarly cautious, and keep particularly on their watch, they may mistake their own imaginations for the agency of this spirit. And upon this latter belief it is, in part, that the office of elders is founded, as before described.

The second is, as there are no defined boundaries between the reason of man and the revelation of God, how do the Quakers know that they are favored at any particular time, either when they preach or when they do not preach, with the visitation of this spirit, or that it is, at any particular time, resident within them?

Richard Claridge, a learned and pious clergyman of the Church of England in the last century, but who gave up his benefices, and joined the society of the Quakers, has said a few words in his *Tractatus Hieroglyphicus*, upon this subject, a part of which I shall transcribe as an answer to this latter question.

"Men," says he, "may certainly know, that they do believe on the Son of God, with that faith that is unfeigned, and by which the heart is purified: for this faith is evidential and assuring, and consequently the knowledge of it is certain. Now they, who certainly know that they have this knowledge, may be certain also of the spirit of Christ dwelling in them; for 'he that believeth on the Son of God, hath the witness in himself'; and this witness is the spirit; for it is 'the spirit that beareth witness,' of whose testimony they may be as certain, as of that faith the spirit beareth witness to."

Again—"They may certainly know that they love the Lord above all, and their neighbor as themselves. For the command implies not only a possibility of knowing it in general, but also of such a knowledge as respects their own immediate concernment therein, and personal benefit arising from a sense of their con-

formity and obedience thereunto. And seeing they may certainly know this, they may also as certainly know that the spirit of Christ dwelleth in them; for 'God is love, and he that dwelleth in love, dwelleth in God, and God in him.' And 'if we love one another, God dwelleth in us, and his love is perfected in us.' In the same manner he goes on to enumerate many other marks from text of Scripture, by which he conceives this question may be determined."

I shall conclude this chapter on the subject of the Quaker preaching, by an extract from Francis Lambert of Avignon, whose book was published in the year 1516, long before the Society of the Quakers took its rise in the world. "Beware," says he, "that thou determine not precisely to speak what before thou hast meditated, what soever it be; for though it be lawful to determine the text which thou art to expound, yet not at all the interpretation; lest, if thou doest so, thou takest from the Holy Spirit that which is his, namely, to direct thy speech that thou mayest preach in the name of the Lord, void of all learning, meditation, and experience; and as if thou hadst studied nothing at all, committing thy heart, thy tongue, and thyself, wholly unto his spirit; and trusting nothing to thy former studying or meditation, but saying to thyself in great confidence of the divine promise, the Lord will give a word with much power unto those that preach the Gospel."

(To be continued.)

THE TRUE CHRISTIAN LIFE.

Little words, not eloquent speeches or sermons; little deeds, not miracles nor battles, nor one great act or mighty martyrdom, make up the true Christian life. The little constant sunbeam, not the lightning; the waters of Siloah, "that go softly" in their meek mission of refreshment, not "the waters of the river great and mighty," rushing down in torrent noise and force, are the true symbols of a holy life. The avoidance of little evils, little sins, little inconsistencies, little weaknesses, little follies, little indiscretions and imprudences, little indulgences of self and of the flesh, little acts of indolence or indecision, or slovenliness or cowardice, little equivocations or aberrations from high integrity, little touches of shabbiness or meanness, little bits of covetousness and penuriousness, little exhibitions of worldliness and gaiety, little indifferences to the feelings or wishes of others, little outbreaks of temper and crossness or selfishness or vanity; the avoidance of such little things as these goes far to make up at least the negative beauty of a holy life. And then, attention to the little duties of the day and hour, in public transactions, or private dealings, or family arrangements; to the little words and tones; little benevolences, or forbearances, or tendernesses; little self-de-

nials, self restraints, and self-forgetfulness; little plans of quiet kindness and thoughtful consideration for others; punctuality and method, and true aim, in the ordering of each day—these are the active developments of a holy life, the rich and divine mosaics of which it is composed. What makes you green hill so beautiful? Not the outstanding peak or stately elm, but the bright sward which clothes its slopes, composed of innumerable blades of grass. It is of small things that a great life is made up; and he who will acknowledge no life as great save that which is built up of great things, will find little in Bible characters to admire. —Bonar.

From "Reason in Religion."

THE REVELATION OF THE SPIRIT.

BY FREDERIC HENRY HEDGE.

The New Testament speaks of "the Spirit" very much as the Old Testament speaks of Jehovah or "the Lord." When the Old Testament says, "The Lord spoke," or "The word of the Lord came," to this or that prophet, the New Testament substitutes Spirit,—"Jesus was led by the Spirit into the wilderness," "The Spirit said to Philip," "The Spirit said to Peter," &c., &c. The same thing is meant in both cases, but the different phraseology makes a difference between the two dispensations. The same fact, the same power, is differently conceived. In one case it is formal, concrete,—an individual. In the other it is liberal, diffusive,—an influence. When the Jew thought of his Jehovah, it was somewhat as the Gentile thought of his Jove. He thought of him as a powerful individual, as a wise and strong man. When the evangelists thought of the Spirit, they thought of it as a breath, a vision, a whisper in the heart; a subtle influence informing the mind, inspiring the will, directing the life.

The personification of the Spirit in the New Testament is merely rhetorical; but the church, not satisfied with a figure of speech, converted the rhetoric into dogma. They constituted the Spirit a distinct person in the Godhead. No harm in this, if by "person" is meant nothing more than a manifestation. But with many the idea of persons hardens into that of independent individuality. The Spirit is conceived as a being, distinct from the Father, instead of a character of or in God the Father. This was not the intent of the doctrine, as defined by the councils of the Church. It conflicts with the accompanying doctrine of the "procession," as it is called, "of the Holy Ghost." The Spirit is said to proceed from God. And this procession was not once for all, but still continues. It is not a past transaction, a fact accomplished, but a present and constant process. The language is not "proceeded," but "proceeds." The question arose in the ages which developed

this doctrine, whether the Spirit proceeds directly and solely from God, or from God through Christ. The Greek church taught, and still teaches, that the Spirit is wholly and only from the Father. The Latin or Roman-Catholic Church maintained, and still maintains, that the Spirit proceeds from the Father and the Son. And the Latin church is right: the interior meaning of that doctrine is that the spiritual creation, like the material, is based on intelligence. There can be no holiness without insight.

The Holy Spirit is that particular agency of God, direct or indirect, which concerns itself with the moral and religious education of mankind. It is God acting in this particular way as distinguished from God in nature.

Self-manifestation—the revelation of himself in rational minds—must be supposed to be the end of all God's doing. The visible universe is one revelation,—intelligible only when viewed as such. "Day unto day uttereth speech, and night unto night showeth knowledge." Nature reflects to intelligent minds the divine wisdom and love. But nature could never convey the most distant idea of moral good. The truth which we attempt to express, when we say that God is just, that God is holy; the fact of a moral law, duty, conscience, accountability,—these have no prototype or symbol in nature. This is something of which nature is unconscious. The animal world exhibits something of instinctive love, something of blind attachment, but nothing like justice, holiness. This is "the way which no fowl knoweth," which "the vulture's eye hath not seen," and which "the lion's whelps have not trodden." "The abyss saith, It is not in me; and the sea saith, It is not with me." We should know God only as mighty, wise, and beneficent, never as holy and just, were there not another creation and revelation co-parallel with the material,—the moral creation, the revelation of the Spirit, in which God is revealed as moral law, and as moral and Spiritual good.

The element and medium of this moral creation is the moral nature which always accompanies conscious intelligence, here and wherever conscious intelligence is found. Its materials are rational souls. Of these "living stones," the divine Architect, the Holy Spirit, compiles the Spiritual fabric which all good men are helping to build, and whose completion will be the consummation and the crown of time. The Christian Church, in the vision of the apostles, was identified with that fabric, "Christ himself being the chief corner-stone; in whom all the building, fitly framed together, groweth unto an holy temple in the Lord." The Christian Church in their theory is not only the product, but the earthly representative and embodiment of the Holy Spirit. At once, both

agent and object, creator and creature, it sends forth the influences which convert the world, and grows and reproduces itself by the influences it sends forth.

If now, from the theology of the Holy Spirit, we turn to its practical, human side, we find in its action on human individuals a twofold influence. The Spirit acts on the reason and on the will. It inspires the knowledge of moral and spiritual truths, and it quickens the moral and spiritual life. We are influenced by it in our perceptions and in our practice.

First, our perceptions,—the knowledge of moral and spiritual truth. All knowledge partakes more or less of inspiration. Our mental faculties are not the sources of truth. In and of themselves, they see nothing and know nothing. They are but organs,—secondary agents. As the soundest eye conveys no image to the mind, until the light from without has touched its nerve, so the keenest intellect can never comprehend the simplest truth, until moved to action by some impulse from abroad. Not that any knowledge, strictly speaking, is imparted. We acquire nothing by passive reception alone. All truth is the product of our own minds. But the mind can produce only as it is quickened from abroad. If this is true in respect to secular knowledge, how much more in respect to spiritual. If the truths which relate to the kingdoms of nature come by inspiration, how much more the truths which relate to the kingdom of heaven! Why was it that all the wisdom of antiquity failed to penetrate those mysteries which are now familiar to the dullest minds? Why is it that many an uneducated Christian possesses on these subjects a depth of insight which puts to shame the wisdom of the world? Why, but that the truths of this order are apprehended by some other faculty than the sensuous understanding. The Holy Spirit is the teacher here. And the fact illustrates the equalizing power of the Spirit, which not only overrules the factitious distinctions of social rank, but sets at naught those intellectual disparities which separate more widely between man and man. More than any scheme of human polity, it levels society by raising the lowest to an equality with the highest in that which in all is highest and best. It preaches its Gospel to the poor, and so maintains the equal rights of the mind, without which all other equality is futile and vain.

What, then, it may be asked, is the agency of the Spirit in the communication of truth? It is the agency of the sun in the natural world. The spirit is to the mind what light is to the eye. Its office is not to impart truth, but to show it. To those who seek the truth in sincerity, the aid of the spirit will not be wanting. Let the eye be open, the heart free, and the understanding will be full of light. Doubt and

unbelief will vanish away; the spirit will guide into all truth.

(To be continued.)

SCRAPS FROM "FELLS OF SWARTHMOOR HALL."

The following letter will not be devoid of interest to those who desire to trace the early developments of the women Friends' meetings for Discipline, as exhibited in the first age of the Society. Of the abode of the writer I only know that when William Edmundson was holding meetings from place to place in the north of England, he speaks of being at *Margaret Fawcett's at Elksstone*, and next day had a meeting at Pardshaw Cragg; hence we conclude she belonged to Cumberland, or a place adjacent:—

MARGARET FAWCETT TO MARGARET FOX.

"The 5th day of the 8th mo. [October], 1677.

"Dear Margaret,—In the weighty truth, which the Lord hath placed a measure of in me, do I salute thee, with all thy dear and tender children; for my love is truly to you all, and my soul delights in your prosperity, as I believe you do in mine; for, dear Margaret, thou hath been as a mother to many children, and I with many more have received strength and nourishment from thee.

"And, dear M., that which chiefly occasioneth me at this time to write unto thee, is to give thee to understand something of our proceedings in our women's meetings, concerning the book that was given forth from your quarterly meeting at Copley.

"Our women's meeting was the next Third-day after, where our dear friend and brother, Jo. Banckes, did much assist us in our proceedings; he read the book, and Friends were very well satisfied with it, and the Lord's power and presence was much with us and among us; and we gave notice that day that Friends should bring in their testimonies about tithes the next women's meeting, which accordingly was done, and J. B. took their testimonies, one by one, from their own mouth: which I believe was given in the fear of the Lord, and where any was wanting, they brought them to the next women's meeting or before, and all or the most part belonging to our women's meeting are found clear in their testimonies, which are already gathered up and recorded in a book we have provided for that purpose.

"And further this is to let thee understand that we had the book to our quarterly meeting, where we did intend it should be read, and Jo. Steel and I did acquaint Friends of it before the meeting, but some Friends in the ministry being there, took up the time, so that it could not conveniently be read that day, which was no small grief to my spirit. (J. B. was then in Westmoreland.) After the meeting I could do no less than speak of it, and delivered it to the

next women's meeting, and desired them to copy it over and send it through the county, that so the service whereupon it goeth forth may be performed.

"And, dear heart, there is one thing more in my mind to signify to thee, which is concerning the disbursements of our collections, and setting of it down in writing; it is not at all agreeable with my spirit, neither with several more good Friends belonging to our meeting, for we are satisfied that many honest Friends that may stand in need, will rather suffer much than take anything of us, if it must be made so public as to stand upon record. Dear M., I could do no less than give thee my judgment in this matter, hoping thou wilt bear with me as one who with thee would have all things well. No more, but my true love unto thee and all thine. Thy nearly related friend and sister,

"MARGARET FAWCETT.

(P. S.) "The number of Friends belonging to our women's meetings that have given in their testimonies concerning tithes are 109."

It was about the time when the above letter was written, that some diversity of opinion and practice existing among Friends respecting tithe, the yearly meeting put forth a document, before alluded to, requesting that all members who held opinions on the subject would state them in writing to their respective monthly meetings, and have them recorded. These are the testimonies mentioned by Margaret Fawcett.

ETERNITY OF GOOD AND EVIL INFLUENCE.

We can form no competent ideas, at present, of the effects of good any more than of evil. What we do of either is merely the kindling of a fire; how far it may burn we cannot tell; and, generally speaking, our minds are but little occupied about it. Who can calculate the effects of a modest testimony borne to truth; of an importunate prayer for its success; of a disinterested act of self-denial; of a willing contribution; of a seasonable reproof; of a wholesome counsel; of even a sigh of pity or tear of sympathy? Each or any of these exercises may be the means, in the Lord's hand, of producing that in the bosoms of individuals which may be communicated to their connexions, and from them to theirs, to the end of time. When results so enduring hang upon human agency, how immensely important is seen to be the sphere of each man's influence! He is, each day of life, forming the eternity of others as well as his own. The tablet on which he is continually making inscriptions never decays.—Whether he does good or evil, it goes beyond him, lives, and, it may be, accumulates for ever. The earthly memory of the wicked may perish, but never his moral influence. That goes before him to the judgment, and draws after it through all the cycles of his future being. "He

that doeth the will of God abideth for ever," not more in existence than in influence. Truly, in every hour and act of life we are making up the sum of our own and of others' eternity.—*Andrew Fuller.*

For Friends' Intelligence.

The following "Thoughts on Books and Reading" were published in Birmingham, England, a number of years ago, by Joseph Bevan Braithwaite, and were printed in the form of a tract for circulation among Friends. S. B. F.

He who duly reflects upon the exquisite delicacy and susceptibility of the human mind, and its vast capacity either for good or evil, will not easily overrate the importance of its right culture, and of having the influences which are brought to bear upon it of a pure and healthful character. Among the influences affecting it, few are more powerful or constant than books. The choice and character of our reading may, therefore, profitably form a frequent subject for reflection.

Some persons are anxious to be thought great readers; but it is well for such to remember, that it is not what we read, but what we digest, that nourishes the mind. "It matters not," says an old writer, "how many books thou hast, but how good: multitude of books do rather burden than instruct, and it is far better thoroughly to acquaint thyself with a few authors, than to wander through many."

The mind requires nourishing food. Trifling reading enfeebles it. Lord Bacon wisely says, "Read not to contradict and confute, nor to believe and take for granted, nor to find talk and discourse, but to *weigh and consider.*" This is undoubtedly the great secret of what we read. If books were more commonly judged by their real weight, how many popular works would at once shrink into insignificance? It is melancholy to think of the millions of immortal minds that accustom themselves to reading, which, when weighed in the balance, is found to contain little else than the lightness of vanity. How many that might have attained the stature of full grown men, have thus become enervated, dwarfish, deformed or crippled. With desires formed for the highest enjoyments and understandings capable of the noblest improvement, the reading of trifling and pernicious books, the habit of mental association with low, mean, and unworthy thoughts, has prostrated the energies of thousands, and debased them below themselves.

As an intimate friend has sometimes been styled a second self, so our favorite books may be justly called the mirror of our minds. It may be well for us to look at ourselves in this glass. We fear that some would be ashamed of their own reflected image. The vast accumulation of

trifling publications of late years, makes it needful to be especially on our guard against them. The plain truth is, we have no time for such reading; and we must be bold enough to say so, and act accordingly. Let none of our young friends be ashamed to confess that they have never read much which the world loudly applauds. Let them beware of being led astray by a vain desire to keep pace with the literature of the age. Let them not imagine that any reading is necessary to their character or standing in general society, which is inconsistent with Christian purity of taste or feeling. Some of them have very little time for reading of any kind; such ought to be especially careful that the little which is granted them be duly improved. Let not the precious moments be squandered upon trifles. Lay out the little that you have to spend upon the best investments. Remember that that which costs nothing is not worth buying. The book that can be read without thinking, will be read without improvement.

Let it not be thought hard and uncharitable thus summarily to dismiss the crowd of inferior authors. All that is asked is, that they should be treated according to their merits. No one ought surely to think it unreasonable that the best and worthiest should be first entertained. And it may be safely affirmed, that he who takes the pains to *read and digest* the good books first, will not only be amply rewarded, but will have neither time nor inclination for any others. "A good book," says Milton, in characteristic language, "is the precious life-blood of a master spirit, embalmed and treasured up on purpose to a life beyond life." And when all may enjoy the privilege of communion with such spirits,—intellectual companionship with the wisest and best men of all ages,—is it not surprising that any should seem to prefer mean and low-lived acquaintances? Here are those whose characters are well known, who have stood the severest test, who come recommended to us by the best judges, who have proved themselves worthy of our esteem and confidence; they invite us to partake of their most precious gifts, and, as it were, court our society and friendship; and shall we be so unwise as to reject their favors, and rather choose associates that will degrade instead of ennobling us, who intrude upon us without suitable recommendations, and leave us unimproved, or, it may be, disgraced and polluted, by their idle, worldly, or sensual conversation?

But in making choice of our favorites, we should beware of being dazzled by the splendor of genius. It is not the possession, but the employment of talent, that gives real worth to the character; and they who have perverted their gifts and opportunities, however abundant, are surely more worthy of our just aversion,

than of being treated as familiars and friends.

The man who employs wealth not his own, for his own purposes and enjoyments, who openly sets at naught the most express declarations of trust, is accounted a disgrace to society. And shall they be thought worthy of our confidence and regard, who, having received all their boasted knowledge, illuminations and wisdom from "the Father of Light," have indeed magnified themselves in them, but Him they have not glorified?

It is of the highest importance to accustom our intellectual appetite to wholesome food, and, in so doing, we shall quickly lose our relish for any other. The more our hearts are seasoned with divine grace, the less pleasure shall we have in the writings of men, whose talents, however great or brilliant, have not been consecrated to the service of Him who gave them. The true disciples of the Lord Jesus know the unspeakable privilege of an abiding in Him; they have tasted the sweet enjoyment of His heavenly presence, and can no longer delight in such unholy fellowship. Their joys spring from the pure fountains of Divine wisdom and consolation, and they rather loathe than long for the polluted streams. They feel how much is implied in the solemn injunction, "Grieve not the Holy Spirit of God, whereby ye are sealed to the day of redemption;" and are often reminded, while yet strangers and pilgrims upon earth, "that that which is highly esteemed among men is abomination in the sight of God."

To the studious it may be said, accustom yourselves to habits of careful reading. Do not be satisfied with assertions second-hand. The old rule is a good one: "Truth is the purest at the fountain head." Do not dip into too many books. It is true economy to confine ourselves to the best. The really good books contain all the necessary information, which is only feebly and inadequately repeated in others. Then, again, in the choice of subjects, do not grasp at too many, but rather confine yourselves to those within reach, which more immediately concern you, and of which you are capable. If your tastes are not decided, prefer subjects which are important and useful, before those which are less so. Study not from motives of vanity or the love of display. Ever bear in mind the apostolic injunction, to avoid "foolish and unlearned questions," which are, indeed, "unprofitable and vain." Not that indolence is to be indulged in or recommended; but that our time and talents, which are given to us as a precious trust, shall be diligently appropriated to the worthiest uses.

If we duly consider the uncertainty and shortness of life, we shall think it needful to put a check upon many curious and difficult inquiries which naturally agitate our minds, and be content to be ignorant of many things, be-

cause we have neither time nor opportunity here upon earth adequately to search them out. And if our first and greatest concern be, as it ought to be, "to give diligence to make our calling and election sure," we shall not be idle. Our talents will find abundant occupation in the plain path of practical holiness. And in this work of faith and labor of love, we may often be cheered with the recollection, that the period of our intelligent existence is not limited by the bounds of time; that, on the contrary, this present life is but, as it were, the childhood of the soul, (1 Cor. xiii. 11, 12,) and that in the eternity which awaits the faithful believer, all right desires for improvement will be satisfied, infinitely beyond his present conceptions. An eternity of love, light, and wisdom, shall fill his cup to overflowing. Freed from the contagion of sin and the weakness of mortality, with an understanding renovated and enlarged, and capacities fitted for his new enjoyments, he will be prepared for all the glorious discoveries that may be then unfolded of the wisdom and knowledge of God, and the mysteries of His kingdom, which in this world it is not possible he should ever apprehend or even conceive. "Then shall he know even as he is known."

EXTRACT FROM A LETTER.

A friend writing to us from New Garden, after expressing regret at the republication of Gibbons' Review, closes his letter with the following remarks:

"Now, when just emerging from one of the most dreadful conflicts that history gives an account of, which was brought about by the conflicting opinions of men, we think the time demands something consolatory, something that will draw and bind together, instead of that which will scatter and divide. For my part, I have yet to learn that there has ever much good grown out of a discussion upon doctrinal points.

In accordance with the ability afforded, which is but limited, I feel willing to call the attention of my fellow men to that principle which alone is sufficient to direct us aright, which comes not from man, but from God. Had the children of men in the different ages of the world attended to the exhortation of the Apostle, in which he says that which may be known of God is manifest in man, what a different aspect would this world have presented from what it now does. Instead of denouncing one another with hard names—traducing and defaming each other's characters—the minds of men would have been leavened with meekness and humility, and love to our fellow men would have abounded throughout the land: let us therefore, in the language of the Apostle, "be willing to

submit ourselves unto God; draw nigh unto him, and he will draw nigh unto us."

There is one lawgiver who is able to save and to destroy. Who art thou that judgest another! Oh! may we each and all be willing to seek for that holy anointing to which all have access, and let the by-gones be by-gones; and believe me that an attention to this Divine principle will make us wiser than all the teachings of men.

With respect,
HALLIDAY HOOPES."

Specific duty is a matter between every soul and its God. If a man has really become a child of God, God's will will henceforth be the ruling principle of his life. He will desire nothing so much as to find out what God wishes him to do, and then to do it. Loving God whom he hath not seen, he will love his brother whom he hath seen. He will no longer seek his own but his neighbor's good. Self will be deposed from the first place in his heart, and God will reign supreme. The deposed monarch may set on foot many a rebellion, and the kingdom may, for a long time, have but little quiet, but the end will surely be peace, and he shall come whose right it is to reign.

PUT YOUR CHILDREN TO BED.

There may be some mothers who feel it to be a self-denial to leave their parlors, or firesides, or work, to put their little children to bed. They think that the nurse could do it just as well—that it is of no consequence who hears the children say their prayers.

Now, setting aside the pleasure of opening the little bed and tucking the darling up, there are really important reasons why the mother should not yield this privilege to any one. In the first place, it is the time of all times when a child is inclined to show its confidence and affection. All its little secrets come out with more truth and less restraint; its naughtiness through the day can be reproved and talked over with less excitement, and with the tenderness and calmness necessary to make permanent impressions.

If the little one has shown a desire to do well, and be obedient, its effort and success can be acknowledged and commended in a manner that need not render it vain or self satisfied.

We must make it a habit to *talk* to our children, in order to get from them an expression of their feelings. We cannot understand the characters of these little beings committed to our care unless we do. And if we do not know what they are, we shall not be able to govern them wisely, or educate them as their different natures demand.

Certainly it would be unwise to excite young

children, by too much conversation with them, just before putting them to bed. Every mother who carefully studies the temperament of her children will know how to manage them in this respect. But of this all mothers may be assured: that the last words at night are of great importance—even to the babes of the flock. The very tone of the voice they last listened to, makes an impression on their sensitive organization.

Mother, do not think the time and strength wasted which you spend in reviewing the day with your little boy or girl: do not neglect to teach it how to pray, and to pray for it in simple and earnest language, which it can understand.

Soothe and quiet its little heart, after the experience of the day. It has had its disappointments and trials as well as its play and pleasures. It is ready to throw its arms around your neck, and take its "good night" kiss.—*Mother's Magazine*.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, THIRD MONTH 17, 1866.

SOUTHERN QUARTERLY MEETING.—This meeting was held as usual at this time at Little Creek, Del., on Fourth-day, the 28th ult. It embraces within its limits the State of Delaware and the Eastern shore of Maryland and Virginia, and chronicles upon its records the names of many noted and valuable Friends: among whom may be enumerated Daniel and Warner Mifflin, Elisha Dawson and Sarah Cowgill. Most of the older members who once constituted this meeting have passed from their field of earthly labor, while many of those younger in life have left the scenes of their early childhood to take part among the busy throngs in the crowded cities. From these causes mainly, it has gradually become reduced in numbers, and within the past few years some of the smaller branches have been discontinued.

Through communications received from two of our subscribers, we learn, that though the meeting recently held was thought to be somewhat smaller than usual, yet there was an evidence of life which gave encouraging promise for the future.

On the evening of Fourth-day, a large company assembled at the meeting-house in Camden. The gathering was of a social character, being composed mostly of young Friends and of those feeling an interest in the Society and

its principles. After reading a portion of the discipline, subjects connected with our views and testimonies were presented by different individuals; queries were propounded and answered, and encouragement was given to all, especially the younger members, to keep near to the body of Friends. Much interest was manifested, and it was thought that, as most of the Monthly Meetings are small, there would be a benefit in mingling in this way once in three months. They therefore adjourned to meet at a Friend's house (it being more convenient) on the evening of the day of their Quarterly Meeting, held in the 5th month next, at Third Haven, Md.

The Youth's Meeting at Little Creek, on Fifth-day morning, was large and satisfactory, a number attending not in membership with Friends. The gospel truths delivered appeared to have a solemnizing tendency, and a hope was felt that the labor bestowed was not in vain.

On the same evening an appointed meeting was held in Camden, which was also largely attended, satisfactory and encouraging. A solemn quiet pervaded the assembly, which listened with deep attention during the presentation of views by exercised Friends. It is the general impression that the Quarterly Meeting, and the other meetings in connection, were held to advantage, and Friends separated, renewed in spirit.

THE MEETING AT READING.—The Circular Meeting, which was one of a series held once in three months at Reading, under the care of Philadelphia Quarterly Meeting, occurred on the 4th inst., and was attended by several of the Committee. Although there are few Friends at this place, yet the house was filled, and the quiet deportment and earnest attention of the audience indicated the interest felt on the occasion.

DIED, on the 8th of Tenth month, 1865, MARY ELMA, daughter of Francis P. and Deborah Smith, of Octoraro, Cecil Co., Md., in the 46th year of her age, leaving to survivors the comfortable assurance that the pale messenger did not find her unprepared, but ready and willing to depart and be at peace.

—, on the 27th of Tenth month, 1865, DEBORAH SMITH, wife of Francis P. Smith, in the 73d year of her age; a minister, much esteemed, for more than twenty years. This dear friend, although for several years a great sufferer from rheumatism, was truly a bright example of cheerfulness and patience, and when health permitted, was diligent in the attend-

ance of meetings, and feelingly exhorted her family and others to that religious duty. The small meeting of which she was a member, as well as society at large, will sensibly feel that her departure has left a void in their midst, but we trust they will take fresh courage from her bright example, and in the reflection, that in her last illness, (although her bodily suffering was most acute,) she gave unmistakable evidence that her peace had long been made with her Redeemer, her work had been done in the daytime, and she was ready to enter into that rest prepared for the righteous from the foundation of the world.

DIED, on the 22d of Tenth month, 1865, at Poughkeepsie, Dutchess Co., N. Y., MARY, only daughter of Isaac and Amy Townsend, in the 16th year of her age; a member of Oswego Particular Meeting.

Although separated in early life from her devoted parents and many friends, yet they are not left to mourn like those that have no hope, for her end was peace.

—, on the 26th of Second month, 1866, at the residence of her brother-in-law, Isaac Eyre, in Middletown, Bucks Co., Pa., PHOEBE KNIGHT, aged 52 years; a member of Middletown Monthly Meeting.

—, of spotted fever, on the 18th of Second mo., 1866, at Fall Creek, Ind., THOMAS, only son of Benjamin S. and Maria J. Cockayne, in the 3d year of his age.

—, on the evening of the 24th of Second month, 1866, at her residence in New Garden, Chester Co., Pa., SARAH WICKERSHAM, aged 91 years and 6 days. She was an esteemed member, and for many years an Elder, of New Garden Monthly Meeting.

Truly, "a mother in Israel has fallen." Born of parents who had themselves been disciplined in the school of Christ, she happily received from them an early training in the same school. The genial influence of their parental care and religious instruction in her early life was no doubt, under Providence, a means of preserving her in that simplicity and Christian meekness which was so conspicuous in her later years. With no more than a mere rudimentary school education, and a stranger to the so-called modern refinements of civilization, she was enabled to discharge, in a becoming manner, the numerous and responsible duties which devolve upon woman in the various social relations in which she was placed.

By rendering due obedience to the requirements of her Divine Master, she also became qualified to discharge her religious duties in a manner which yielded her present peace of mind, and gave her an assurance, when the things of this world were fading from her view, of receiving the final answer, "Well done, good and faithful servant, thou hast been faithful over a few things, I will make thee ruler over many things; enter thou into the joy of thy Lord." It was this assurance which sustained her under protracted and severe bodily affliction, in patient resignation to the Master's will, and enabled her to sing His praise as on the banks of deliverance. It was this, too, which enabled her experimentally to know the truth of the declaration, that "Death is swallowed up in victory." Verily, to one thus fortified by faith, as shown by her works, Death has no sting—the Grave has no victory—for "the sting of death is sin."

E. M.

—, on the 17th of Second month, 1866, of diphtheria, JESSE BLACKBURN, aged 1 year and 5 months, son of Hiram and Mary Ann Blackburn, of Dunning's Creek, Bedford Co., Pa.

—, on the 2d of Eighth month, 1865, near Richmond, Ind., WILLIS T. SHAW, youngest son of Ed-

ward and Peninnah H. Shaw, in the 10th year of her age.

DIED, on the 8th of Eleventh month, 1865, ANN, wife of Jas. Trueblood, Jr., in the 71st year of her age; a member of Blue River Monthly and Highland Creek Particular Meetings, Washington Co., Ind.

—, of scarlet fever, on the 2d of Third month, 1866, GEORGE GASKILL, son of Richard S. and Sarah Ann Ridgway, aged 13 years and 1 month; members of Pilesgrove Monthly Meeting.

The Secretary of the Clothing Committee of "Friends Association for the Aid and Elevation of the Freedmen" requests that those who have obtained sewing from the room, Eighth and Arch Sts., will return the garments when finished to Henry Laing, No. 30 N. Third St., instead of to the former place. The room No. 800 Arch St. is closed for the present.

Gen. Howard, of the Freedmen's Bureau, proposes forwarding from Washington some of the surplus colored population. The first company is expected in Philadelphia the latter part of this week, and will be accommodated at the House of Industry, 718 Catharine St., where those needing their labor should apply. Other companies will be brought on as fast as the demand will warrant.

For Friends' Intelligencer.

FRIENDS' SOCIAL LYCEUM.

At a meeting of Friends' Social Lyceum, on the 27th ult., the lecture was by Dr. H. Allen, upon Animal Electricity and Phosphorescence. He commenced by alluding to the similarity existing between the phenomena of electricity and phosphorescence, as derived from inorganic or organic sources. This resemblance was very exact in the former, but less marked in the latter case. Animal electricity is, as far as its effects are concerned, identical with that elicited by friction and heat; animal phosphorescence, on the other hand, is not an equivalent with the light yielded by phosphorus.

The principal forms were seen to be confined to the fishes among vertebrates, and to the class of centipedes among articulates. A torpedo (*Torpedo electricus*) is the European electrical fish; a large species of eel (*Gymnotus electricus*) is the South American; while an unsightly catfish, (*Malapterurus electricus*), from the rivers Nile, Niger and Senegal, gives to the African fauna an animal possessing this power.

The electricity in all these forms is generated in special organs. In the instance of the torpedo, these are placed upon either side of the head; in the eel, along the lateral aspects of the body; and in the catfish, in a loose tissue placed everywhere beneath the skin. The electrical centipede, (*Scolopendra electricus*), from Europe, appears to be able to give shocks from any portion of its frame.

Philosophers have endeavored to prove from these that all nervous action is electrical in its nature. This idea originated with Galvani, who discovered that by bringing a current, in-

duced by placing together a sheet of copper and one of zinc, in contact with the nerve of a leg of a frog, previously removed from the body, contraction of the muscles of the limb instantly ensued. He inferred from this experiment that he had supplied the force which had been removed by death, and that the nervous power and the agent he had employed were convertible. His opinion appeared to receive confirmation from the fact that all electrical organs are very largely supplied with nerves, and from the observation that portions of the brain and the terminal branches of some of the nerves of sensation seemed in their construction to resemble a number of electrical machines.

But it was found in subsequent experiments that the agent affecting the maintenance of nerve-power had no influence whatever upon electricity. Thus copper wire is a good conductor of electricity, but it fails to transmit nervous impressions. A string tied around a nerve produces paralysis of motion beyond the ligated point, but no ligature, however tightly drawn about a conductor, can obstruct an electrical current. It was then concluded that electricity and enervation were dependent upon different causes.

While enabled to say, therefore, that nerve power is not electrical, we are no nearer the solution of the problem presented in the electric fishes than before. It appears probable, however, that this variety is obtained from its special organs as a distinct product, and is, perhaps, analogous to a secretion.

The lecturer observed, that while electricity is seen chiefly in the higher, phosphorescence is most marked as a property of the lower forms. The phosphorescence of the sea is due in a great measure to the presence of an animal belonging to the lowest division of the animal kingdom,—the *Noctiluca miliaris*. It is an exceedingly minute creature, but is capable of giving out interrupted flares of light; and when large numbers of individuals act together, that sheet-like glimmering is produced so characteristic of the midnight sea.

Another organism was mentioned as a prominent light producer. *Pyrosoma*, or fire body, belonging to the mollusca division, is a composite animal: that is, one made up of many individuals, growing from a common stock, and being subjected to common influences. Its light is vivid and long continued. Some other animals, such as certain jelly fishes, sharks, &c., also at times become phosphorescent.

Among air-breathers, the glow-worm of Europe, and the fire-fly of our own country, were mentioned as familiar examples. In these, the light comes from the rings of the hinder part of the body. A phosphorescent gleam, it has been claimed, but, probably, upon insufficient ground, occasionally emanates from the eyes of

our domestic animals, as well as from the eye of man himself.

The speaker, in conclusion, did not believe that animal phosphorescence had any essential connection with the light derived from mineral substances. It was held to be rather a result of the processes of nutrition, growth, death and decay which are continually going on in the minutest particles of living structures.

Review of "A Declaration," &c., published by order of the Yearly Meeting of Orthodox Friends (so called) held in Philadelphia in 1828. By WM. GIBBONS, M. D.

(Continued from page 12.)

ARTICLE XXI. "Every Christian must come up under the influence of the same Light that guided Jesus Christ; that Christ that was his Saviour, and Preserver, and that power which enabled him to do his work, will enable us to come on in the same path."—*Decl.* p. 22. *Quaker*, vol. 1, p. 44.

PARALLEL PASSAGES.

"The seed was formed into a vessel like ours, but without sin, in which the pure lamb appeared in the pure power of life, which kept the vessel pure; and so he who was to be the first fruits, had the honor above all his brethren; being anointed with the oil of gladness above his fellows." "By feeling and knowing the lamb in our vessels, we know also what was the lamb in his vessel."—*Isaac Pennington*, vol. 3, p. 30.

"In subjection to the same will which the head obeyed." "are the members sanctified."—*Ibid*, vol. 4, p. 128.

"We witness him the same Christ AS WAS IN THAT BODY that suffered at Jerusalem."—*William Dewsbury*, p. 120.

"He had a greater anointing, than the rest of his brethren."—*Elias Hicks*, *Quaker*, vol. 1, p. 42.

"Is not the substance, the life, the anointing, called Christ, wherever it is found? Doth not the name belong to the whole body (and every member of the body) as well as to the HEAD?"

"And the same thing that kept his vessel pure, it is the same thing that cleanseth us." (*Pennington*, before quoted.) That "same thing" was the Spirit, or Christ the word. To be saved and preserved, is it not the same as to be kept pure?

ARTICLE XXII. "I don't want to express a great many words, but I want you to be called home to the substance. For the Scriptures and all the books in the world can do no more. JESUS COULD DO NO MORE than to recommend to this Comforter, which was this light in him."—*Quaker*, vol. 1, p. 40.

The following texts of Scripture are con-

nected with the above extract, and necessary for a right construction of it:

"And I will pray the Father; and He shall give you *another* Comforter, that he may abide with you for ever, even the Spirit of Truth." John xiv. 16.

"Nevertheless, I tell you the *truth*; it is *expedient* for you that I go away; for if I go *not away*, the Comforter *will not come* unto you; but if I depart, I will send him unto you." "Howbeit, when he the Spirit of truth is come, he will guide you into *all truth*." "*But tarry ye in the city of Jerusalem, until ye be endued with power from on high*."

"He that believeth on me, as the Scripture hath said, out of his belly shall flow rivers of living water. But this (says John) spake he of THE SPIRIT, which they that believe on him *should* receive; for the Holy Ghost *was not yet given*, because Jesus was not yet glorified."

It is rendered clear by these testimonies of Scripture, that the administration of Christ in the flesh, was *outward*; for the Holy Ghost was *not yet given*,—the Spirit was not yet received in the heart: and this made the distinction between the *old* covenant and the *new*. This further appears from the *fact*, that although the disciples had "walked" with their Master for years,—had been his constant companions, had the benefit of his instructions and gospel precepts, given both in public and in private,—had his parables graciously expounded to them,—and had witnessed his stupendous miracles, yet, when the time of trial came that would test their love and fidelity to him, and to that gospel which they had heard him declare in so clear, so sublime, and so engaging a manner, one of them betrayed him, another denied him, and all forsook him!

The dispensations of God to men, have ever been, and ever will be to *their state*, for he *forces not himself* upon them. Hence, to the *outward* he appears *outward*. "With the *merciful*, thou wilt show thyself *merciful*; and with the *upright* man, thou wilt show thyself *upright*. With the *pure*, thou wilt show thyself *pure*; and with the *forward*, thou wilt show thyself *unsavoury*." 2 Sam. xxii. 26, 27.

The blessed Jesus knew what was in man. "He knew the outward state of his disciples; he saw that his continuance among them would keep them outward, (for they "almost doated upon his outward manifestation"—William Penn,) and act as a veil upon their hearts; ("Christ's flesh was a veil"—George Fox,) therefore he said, "It is expedient for you that I go away; for if I go not away, the Comforter will not come unto you."

On the whole, it appears clear that the ministration of Jesus was *external*; and necessarily so, as being in wisdom adapted to the condition

of those to whom he was sent; that his disciples were *outward*, and so continued to the last, to an almost incredible extent; as is proved by the fact, that after he had risen and appeared among them, "they asked him, saying, Lord, wilt thou at this time restore again the kingdom to Israel?"

We are told by Mark (ch. vi.) that Jesus, "among his own kin," "COULD DO NO MIGHTY WORK;" "and he marvelled because of their unbelief." The case before us, is parallel to this, and was a like circumstance, over which Jesus had as little control; for the belief of his disciples was still in an *outward*, and not in an *inward* kingdom. And he informed them that his heavenly Father held the times and seasons "in his own power." He therefore "*could do no more*" than to recommend them to that "Comforter,"—to the *substance*,—to that Light,—to that Christ *within*, the power of God, and the wisdom of God, which had "kept his vessel pure;" (Pennington;) and without which, he had declared that he could "do nothing." Hence, his parting counsel to them was, "*Tarry in the city of Jerusalem, until ye be endued with power from on high*."

The event of this weighty advice proved that their blessed Master had been "faithful to Him that appointed him." For when the auspicious season arrived in which the Holy Ghost was given, when the power came from on high upon those who had, but a short time before, proved themselves so weak, so timid, so faithless, and irresolute, they were found to be *fully prepared* by the blessed ministry and labors of Jesus to receive it; and how they courageously braved all the powers of the world which rose up against them, in preaching and spreading the gospel of their blessed Master! And their success was commensurate with the Almighty hand that guided and upheld them.

In the foregoing quotations, Jesus speaks of *another* Comforter, the Spirit of truth, to abide with them for ever, &c. And respecting himself, he says, "If I go not away, the Comforter will not come." Wherein it is plain, that he draws a *distinction* between *himself*, as an outward, visible person, who was about to depart, and that *other* which was the Spirit of truth, that "the Father" would send in his name into their "inward parts."

"It was his [Christ's] Divine light *alone*, that could administer light to the soul, and not shadows."—George Whitehead in the *Christian Quaker*.

"The light that doth enlighten every man that cometh into the world, which is Christ Jesus, is the Teacher; and he that believes IN IT receives Christ.—George Fox, *Great Mystery*, pp. 217, 288.

"I will put my law in *their inward parts*, and write it in *their hearts*."—Jer. xxxi. 33.

ARTICLE XXIII. "*He never directed to himself, but all he wanted was to lead their minds to the Spirit of Truth, to the Light within: and when he had done this, he had done his office.*"—*Quaker*, vol. 1, p. 47.

I believe it may be safely affirmed, that he never did direct men to himself as to a *person without them*; which is the meaning of the Sermon. And in regard to the last clause, that the "office" of Jesus was to lead the minds of men to the Spirit of Truth in them, this was the whole office and design of the law, the prophets, and the Gospel; it cannot be denied.

On this subject, William Penn says in the "*Christian Quaker*:" "And indeed, *all the external dealings of God with men*, have been to bring to Christ the *seed within*, which is *able to bruise the serpent's head*; and did so, in some measure, through all ages."

"And Christ is as truly a healer of his people in this ministration of life to them, by his holy Spirit, as ever he was an healer of persons outwardly, in the days of his flesh. This, with the other miracles which he wrought, was but a shadow of what he would work and perform inwardly, in the day of his Spirit and holy power. And shall he, or can he (to those who faithfully wait upon him) fall short in the one, of what he shadowed out in the other?"—*Isaac Pennington*, vol. 1, p. 695.

"And so he taught them to pray, 'Our Father,' &c., *not to look at his person*, and pray to him *as a person without them*; but bid them pray to their Father which seeth in secret, who would reward them openly. And he that seeth in secret, searcheth the heart, and trieth the reins."—*William Bayly*.

After quoting John xiv. 17, 25, 26, ch. xv. 26, and ch. xvi. 12, 13, Humphry Smith says, "All which plainly declare, and most evidently set forth, how Christ in his ministry, when he was upon earth, did *most chiefly* direct unto the ministration of the Spirit of truth, which was then yet to come," &c. Pp. 181, 182. "And why do others dispute and talk of the *body* so much, which they know not." Ibid, 188. See 2 Cor. v. 16.

(To be continued.)

PRAYER.

BY H. A. FROST.

When blessings cluster round our way,
And skies are bright and fair,
Oh, let the heart its tribute pay—
Its gratitude in prayer.

But should afflictions dim the scene,
Its darkest hours we'll dare,
While on a mighty arm we lean
And find relief in prayer.

How sweet the thought through smiles and tears,
Life's sorrow, joy, or care,
Our Heavenly Father ever hears
And answers fervent prayer!

CONSIDER.

Consider
The lilies of the field whose bloom is brief:—
We are as they;
Like them we fade away,
As doth a leaf.

Consider
The sparrows of the air of small account:
Our God doth view
Whether they fall or mount,—
He guards us too.

Consider
The lilies that do neither spin nor toil,
Yet are most fair:—
What profits all this care
And all this toil?

Consider
The birds that have no barn nor harvest weeks;
God gives them food:—
Much more our Father seeks
To do us good.

CHRISTINA G. ROSSETTI.

—*Macmillan's Magazine*.

Extracts from the Twenty-fifth Annual Report of the Pennsylvania Hospital for the Insane.
By THOMAS S. KIRKBRIDE, M. D.

The Care of the Chronic Insane.—Propositions have been frequently made of late to provide separate institutions for what are commonly called incurables, and it seems only proper that the community should have the views of those whose official relations to this class have compelled them to reflect on the subject. For this reason, and also as a convenient mode of replying to frequent questions, reference is again made to this subject, which has already on more than one occasion been noticed in the reports of this institution. Before entering on any general discussion of the matter under notice, I would once more protest against the use of the term "incurables." There is no one wise enough to say, with absolute certainty, who among the insane are incurable. That can be decided by Omniscience alone. There is no fixed period when such a decree can justly be entered against the sufferer from insanity. Such a decision might often be serious in its results, and there could hardly fail to be produced a sadly depressing influence on any one of common sensibility on being sent to an "institution for incurables." As justly remarked by the editor of the *American Journal of Insanity*, over the entrance to such a building, Dante's inscription for the portals of another place might well be written, "All hope abandon, ye who enter here!" Every one with large experience will easily recall cases where perfect recoveries have taken place when least expected, long after all hope had been given up, not only after one year, but after many years' existence of the most discouraging trains of symptoms. It is a good axiom, that every case received into a hospital should be placed under treat-

ment, and that the use of remedies should be steadily persevered in.

Some kinds of treatment should never be given up, if not to restore the patient, it should at least be to prevent a lower mental and physical condition. Medicine should be given whenever there is any indication for its use, and very often there is, even in the most chronic cases, but medicine is only one of a long list of means at our command. The other remedies, of a most varied character, which ought always to be found about a hospital for the insane, are, many of them, of a kind that no patient should be deprived of. Important and indispensable as these are for recent cases, their influence on the chronic is also almost uniformly favorable. The absence of many of these accessory means, as is pretty sure to be the case in any separate provision for the chronic insane, is one of the strongest objections to the introduction of such institutions. It is everywhere proposed that these should be cheap establishments, by which is understood, that they are to require little money from the public treasury for their support, and yet such may prove the very dearest kind of institutions for any community. It is never economical to do wrong. The cheapest institution, even if its expenses are large, is that which carries out most efficiently the objects for which it was established—the restoration and comfort of its patients, the relief of the families of the afflicted, and the protection of the community—while an establishment which fails in these respects is a dear one, even if it takes not a single dollar from the pocket of any one, nor from the public coffers; just as an inefficient officer, serving gratuitously, might be much dearer than a thoroughly efficient one with a liberal salary.

It is to be remembered that the chronic are not always the most unpleasant cases about a hospital, and, as a general rule, they are by far the least expensive to treat. The costly arrangements, the special attendance, nursing, and remedies, are particularly for the recent cases, no matter whether they are rich or poor, high or low in life, and of all levellers of artificial distinctions, insanity is one of the most thorough in its work. Wealth, talents, refined accomplishments, social position, no one or all of these are sufficient to maintain the distinctions which society recognizes, when our fellow men are laboring under some forms of mental disorder.

Without reference to the protection of the community from the acts of irresponsible individuals, it is no favor, generally, to the chronic insane, to permit them to wander about at pleasure. This kind of liberty is often only another term for suffering and exposure, and they are saved from both, and have better health and much more enjoyment, by having their

movements somewhat directed and controlled by intelligent Christian men and women, who practise that best of mottoes—best for hospitals, as for ordinary life, though it may not be always too well remembered,—“All things whatsoever ye would that men should do to you, do ye even so to them.”

The idea of boarding the insane, with private families, in which there is no one with even ordinary qualifications for such a duty as would devolve on somebody, seems hardly worthy of serious discussion. To say nothing of the moral and sanitary objections to such a course, a much greater amount of physical restraint will obviously be necessary, than in any well conducted hospital.

The only proper mode of providing for the chronic insane, in my estimation, is for every State to erect just as many hospitals as are necessary to give to every insane person within its borders a chance to participate in the benefits which they offer. While these structures should have connected with them everything calculated to promote the comfort and restoration of the patients, not one dollar should be expended on what does not directly or indirectly contribute to these objects, and the propositions of the Association of Medical Superintendents, both in regard to construction and organization, should be fairly carried out.

ADDRESS ON THE LIMITS OF EDUCATION.

(Continued from page 15.)

To illustrate the impossibility of making any one what may be called a general scholar, we need but to take a slight view of the extent and recent progress of a few of the most familiar and popular sciences at the present day. Let us take geography, which treats of the earth's external structure, and geology, which treats of its internal. In the first of these the education of many of the present generation abounded in what are now found to be errors and defects. We were taught that the Andes were the highest mountains of the globe, and the Amazon the longest river. Discoverers had then stopped a thousand miles short of the sources of the Nile and of the Missouri. The Columbia and the Sacramento were geographical myths, while a fabulous Oregon or River of the West was laid down on the maps on the hearsay authority of Carver, displacing what are now the Rocky Mountains, and entering the Pacific Ocean about latitude 43°. The existence of the African Niger was known to the Romans, yet the Royal Geographical Society until 1880 did not know where it reached the ocean, though a hundred Englishmen at various times had laid down their lives in African deserts in fruitless attempts to resolve the mysterious problem. It was not until a still later period that the world knew that there

was a continuous Arctic Sea, or anything like an Antarctic Continent.

But if so much has been done in the more difficult and inaccessible parts of our globe, how much more has been achieved in the parts accessible to settlement and cultivation. The American continent, the interior map of which was almost a blank at the close of the Revolution, is now profusely dotted with towns, cities, forts, post-office and rail stations, until the most diligent compiler of a Gazetteer is obliged to pause in despair at the manifest defects of his latest edition.

Geology may be considered as almost a creation of the present age. When Werner visited Paris, in 1802, it could hardly be said to consist of more than insulated observations with a few crude and unsettled theories. But now it has become a great, organized, and overshadowing department of science. In every language of Europe it has its voluminous systems and its unfailing periodicals. Societies of special organization carry forward its labors, and every country of the globe is traversed by its observers and collectors. The shelves of museums are weighed down by its accumulations, and in its palæontology alone the Greek language is exhausted to furnish factitious names for the continually developed species of antecedent creations.

Chemistry in a limited degree appears to have attracted the attention of the ancients, but of their proficiency in this pursuit we know more from their preserved relics and results than from their contemporaneous records. In modern times the chemists constitute a philosophical community, having a language of their own, a history of their own, methods, pursuits and controversies of their own, and a domain which is co-extensive with the materials of which our globe is made. Many men of gifted minds and high intellectual attainments have devoted their lives to the prosecution of this science. Chemistry has unravelled the early mysteries of our planet, and has had a leading agency in changing the arts and the economy of human life. It now fills the civilized world with its libraries, laboratories and lecture-rooms. No individual can expect to study even its accessible books, still less to become familiar with its recorded facts. Yet chemistry is probably in its infancy, and opens one of the largest future fields for scientific cultivation.

Natural history, in its common acceptation, implies the investigation, arrangement and description of all natural bodies, including the whole organized creation. If no other science existed but this, there would be labor enough and more than enough to employ for life the students and observers of the world. Each kingdom of organic nature already offers to

our acquaintance its hundred thousand specific forms, and these are but the vanguard of a still greater multitude believed to cover the surface of countries yet unexplored, and to fill the mysterious recesses not yet penetrated by the microscope. And so far as we know, every one of these organisms, great or small, carries with it its parasites, to which it affords habitation and food, and which may be supposed not only to double but to multiply in an unknown ratio its original numbers. Again, when we reflect that every one of these species has its own anatomy, its physiology, its peculiar chemistry, its habits, its sensations, its modes of reproduction, its nutrition, its duration, its metamorphoses, its diseases and its final mode of destruction, we may well despair of knowing much of the whole, when a single species might furnish materials of study for a human lifetime.

The foregoing are examples of the claim on our attention and study, advanced by a portion only of the progressive sciences. They serve to develop truths and laws appertaining to the material earth, which truths and laws must have existed had there never been minds to study them. The relations of number and figure, the laws of motion and rest, of gravity and affinity, of animal and vegetable life, must have been the same had the dominant race of man never appeared on earth. But there is another extensive class of scientific pursuits, the subjects of which are drawn from his own nature. He has devised metaphysics to illustrate the operations of his own mind. He has introduced ethical and political science to promote order and happiness, and military science to assist for a time at least in destroying both. He has built up history with "her volumes vast," which volumes are as yet a small thing compared with those that are to come. Under the name of news, the press daily inundates the world with a million sheets of contemporaneous history, for history and news, under small qualifications, are identical. The annals of the last four years may deserve as large a place in the attention of mankind as was due when the poet informed the Egyptian mummy that since his decease, "a Roman empire had begun and ended." The greatest part of what should have been history is unwritten, and of what has been written, the greatest part is of little general value. If all that has actually been committed to papyrus, parchment or paper had by chance been preserved from the effects of time and barbarism, the aggregate would be so vast and the interest so little, that the busy world could hardly turn aside for its examination from more absorbing and necessary pursuits.

But the world is not contented with history which states, or professes to state, the progress,

arts, dates, successes and failures of distinguished men and nations. It requires further, the supplementary aid of fiction, which finds facts, not in testimony, but in probability; not as they are recorded to have happened, but as they ought to have happened under the circumstances and with the actors. Fiction, moreover, not being restrained by the limits of circumstantial truth, is at liberty to seek embellishment from exaggeration, from ornament, from poetry, from dramatic utterance and passionate expression. Hence it has taken the lead in modern literature, and it is not probable that at this day the most accomplished bibliographer or bookseller could point the way to one-half of its multiplied and perishable productions.

There is neither time nor inducement to refer to the pseudo-sciences, which in all ages have made serious drafts upon the limited lifetime of man, nor to the ephemeral and unprofitable issues which consume his time and labor, and wear out his strength. At the present day we have not much to fear from alchemy, palmistry or astrology, nor yet from spiritualism, homœopathy or mormonism. But it is not easy to prevent men from wasting their time in the pursuit of shadows, from substituting exceptions for general laws, from believing things, not because they are probable, but because they are wonderful and entertaining. Still less can we divert them from yielding to the guidance of an excited will, from following prejudices or creating them, from adopting one side of a controversy or party strife for no better reason than that some other party has adopted the opposite.

It would be unnecessary to add to what has already been said, even an inventory of other studies, which present seducing but interminable claims on the life and labor of man. It would be vain to open the flood gates of philology, and to follow the thousand rills of language which have intersected and troubled each other ever since they left their fountains at Babel. And we pause in humility before the very portals of astronomy, which has revealed to us that we roll and revolve, and perhaps again revolve, around we know not what. And helpless as animalcules on the surface of a floating globule, we are ever striving to see, to explore, and to mark our way through the "starry dust" of infinite space. Strong and devoted minds have piled up unreadable tomes, the result of their life-long studies and observations, yet few, save the professional and the initiated, attempt to invade the recondite sanctuary of their deposit.

Thus, the immense amount of knowledge, general and special, true and fictitious, salutary and detrimental, the record of which is already in existence, has grown into an insurmountable

accumulation, a *terra incognita*, which from its very magnitude is inaccessible to the inquiring world. Hence the economy of the age has introduced the labor-saving machinery of periodical literature, which, by substituting compendiums and reviews for the more bulky originals, has seemed to smooth the up-hill track of knowledge, and lighten the Sisyphean load of its travellers. But periodical literature, useful or frivolous as it may be, and indispensable as it undoubtedly is, has become by its very success inflated to an enormous growth, and bids fair in its turn to transcend the overtaxed powers of attention of those for whose use it is prepared. Like our street cars, while it helps forward to their destination a multitude of struggling pedestrians, it substitutes pressure for exercise, and does not save the fatigue of those who are still obliged to stand that they may go. In looking forward to another century, it is curious to consider who will then review the reviews, and condense, redact and digest the compends of compendiums from which the life has already been pressed out by previous condensation.

Since these things are so,—since in the dying words of Laplace, "The known is little, but the unknown is immense," and

"Since life can little more supply

Than just to look about us and to die,"

it is a question of paramount importance, how in this short period education can be made to conduce most to the progress, the efficiency, the virtue, and the welfare of man.

HENRY M. LAING, Treasurer,
No. 20 N. Third St.

Philada., 3d mo. 10, 1866.

ITEMS.

The transfer of the counties of Berkley and Jefferson from Virginia to West Virginia was agreed to by both branches of Congress. The following were among the subjects that engaged their attention the past week.

SENATE.—A message was received from the President, transmitting copies of his correspondence with the provisional governors, and other important papers in relation to reconstruction, which was referred to the committee on that subject. A resolution empowering the Secretaries of War and the Navy to establish sanitary cordons, to prevent the introduction and spread of cholera, was referred to the Committee on Commerce; one was adopted instructing the Committee on Foreign Affairs to report a bill for the appointment of a commission of

two medical officers—one from the army and one from civil life—to examine the subject of cholera preventives, and to attend the cholera congress in Europe. A petition to grant the widow of our late President the amount of salary for the whole term for which he was elected was reported from the Committee on Finance. The joint resolution to amend the Constitution on the subject of representatives was several times under discussion.

HOUSE.—A letter was received from the Governor of North Carolina, accepting lands donated by the United States Congress in 1862, for founding agricultural colleges, but it was refused on the ground that they did not recognize the Government of North Carolina. A partial report was made from the Committee on Reconstruction, relating to Arkansas, Mississippi, Alabama and Georgia. A bill to amend and continue in force the freedmen's bureau law, was introduced and referred. A bill for the transfer of the Smithsonian library was referred to the Committee on the Library. The Senate bill to protect all persons in their civil rights, &c., after much debate, was recommitted to the Judiciary Committee.

INDIAN AFFAIRS.—An important treaty between the Creek Nation and the United States was signed on the 3d inst., at the office of Indian Affairs. The Creeks, among other stipulations, cede the west half of their large domain, admit their emancipated negroes to equal and civil rights, convey the right of way to construct a railroad through their country, and also agree to such legislation on the part of Congress as may be necessary to establish a judicial system in the Indian territory, and a general council, with defined legislative powers, composed of delegates from each nation.

A new treaty was consummated between the United States and the Shawnee nation of Kansas, their principal chief, Charles Bluejacket, heading the delegation. Treaties are also being prepared and will soon be completed with the Cherokees, Choctaws and Chickasaws, the Seminoles, and two bands of the Chippewas, of Lake Superior, the Borsfoot band and those of the Lac du Flambeau.

THE FREEDMEN.—The superintendent of the freedmen's village has been instructed by General Howard to divide the Arlington estate, lying east of the road, into five-acre lots, to be rented on written agreements to the freedmen; the rent to be paid at each harvesting of the crop. Fifteen acres on the west side of the road are assigned to be divided and rented in the same manner; about twenty acres to be cultivated as a garden by the dependents of freedmen's village. This estate is not confiscated property, and therefore cannot revert to the heirs at the death of the owner, but it was sold for taxes, and purchased by the Government for the purpose to which it is now being applied.

General O. H. Howard has issued a special order restoring to Joseph Forrest his property, held by the Bureau of Refugees, Freedmen, etc., in St. Mary's county, Maryland, except the "Sand-gates farm," so-called, of 1,100 acres, being nine separate tracts of land containing 1,915 acres, more or less, subject to the provisions of Circulars Nos. 3, 15 and 20. of the freedmen's bureau.

The assistant commissioner of the freedmen's bureau for the State of Georgia informs the bureau that "the condition of the freedmen is commendable. They are all at work under Government contracts."

The assistant commissioner of the freedmen's bureau for the State of Texas reports that "the freedmen are self-supporting, and that they have already shown a disposition to equal, if not surpass, the laboring class of white men."

WANTED.—A situation, by a Female Teacher, qualified to instruct in the usual English branches, having several years' experience. Friends' School preferred. Good recommendations if required. Address or apply to EMMOR COMLY, 310xt pmtf610. 131 N. Seventh St.

WM. H. HADCOCK, General Furnishing Undertaker, No. 18 North Ninth Street.—A general assortment of ready-made Coffins, and every requisite for Funerals furnished. Being entrusted with the oversight of a "Fair Hill" Burial Ground,—Funerals, and all other business connected with the ground, will be promptly attended to. 311. ly. was m p.

NEW ARTICLES.—The Graduated Measure and Funnel combined, Russ' Scissor Sharpeners, Spring Scissors for Sewing Machines, the Clutch Brace, which does not require the bits to be fitted or notched, the Vegetable Slicer, for beets, cucumbers, &c. For sale at the Hardware Store of

TRUMAN & SHAW, 310xt. No. 525 (Eight Thirty Five) Market St., below Ninth.

CHESTER ACADEMY.—A Boarding and Day School for both Sexes, Broad St., Chester, Pa. Every branch of a solid English Education is taught in this Academy, together with Latin, French and Drawing, in all its varieties. Thoroughness in all the studies is insisted upon, and special care will be taken to educate the *morale* as well as the *intellect* of the pupils. A Primary Department is connected with the School. Pupils can enter at any time.

EXTRACTS FROM CLARKSON'S "PORTRAITURE OF QUAKERISM."

(Continued from page 18.)

I have hitherto confined myself to those Meetings of the Quakers, where the minister is said to have received impressions from the Spirit of God, with a desire of expressing them, and where, if he expresses them, he ought to deliver them to the congregation as the pictures of his will; and this, as accurately as the mirror represents the object that is set before it. There are times, however, as I mentioned in the last section, when either no impressions may be said to be felt, or, if any are felt, there is no concomitant impulse to utter them. In this case no person attempts to speak: for to speak or to pray, where the heart feels no impulse to do it, would be, in the opinion of the Quakers, to mock God, and not to worship him in spirit and in truth. They sit therefore in silence, and worship in silence; and they not only remain silent the whole time of their meetings, but many meetings take place, and these sometimes in succession, when not a word is uttered.

Michael de Molinos, who was chief of the sect of the Quietists, and whose "Spiritual Guide" was printed at Venice in 1685, speaks thus: "There are three kinds of silence; the first is of words, the second of desires, and the third of thoughts. The first is perfect; the second is more perfect; and the third is most perfect. In the first, that is, of words, virtue

is acquired. In the second, namely, of desires, quietness is attained. In the third, of thoughts, internal recollection is gained. By not speaking, not desiring, and not thinking, one arrives at the true and perfect mystical silence, where God speaks with the soul, communicates himself to it, and in the abyss of its own depth, teaches it the most perfect and exalted wisdom."

Many people of other religious societies, if they were to visit the meetings of the Quakers while under their silent worship, would be apt to consider the congregation as little better than stocks or stones, or at any rate as destitute of that life and animation which constitute the essence of religion. They would have no idea that a people were worshipping God, whom they observed to deliver nothing from their lips. It does not follow, however, because nothing is said, that God is not worshipped. The Quakers, on the other hand, contend, that these silent meetings form the sublimest part of their worship. The soul, they say, can have intercourse with God. It can feel refreshment, joy, and comfort, in him. It can praise and adore him; and all this, without the intervention of a word.

This power of the soul is owing to its constitution or nature. "It follows," says the learned Howe, in his "Living Temple," that having formed this his more excellent creature according to his own more express likeness; stamped it with the more glorious characters of

his living image; given it a nature suitable to his own, and thereby made it capable of rational and intelligent converse with him, he hath it even in his power to maintain a continual converse with this creature, by agreeable communications, by letting in upon it the vital beams and influences of his own light and love, and receiving back the return of its grateful acknowledgments and praises: wherein it is manifest he should do no greater thing than he hath done. For who sees not that it is a matter of no greater difficulty to converse with, than to make a reasonable creature? Or who would not be ashamed to deny, that he who hath been the only author of the soul of man, and of the excellent powers and faculties belonging to it, can more easily sustain that which he hath made, and converse with his creature suitably to the way, wherein he hath made it capable of his converse?

That worship may exist without the intervention of words, on account of this constitution of the soul, is a sentiment which has been espoused by many pious persons who were not Quakers. Thus the ever memorable John Hales, in his *Golden Remains*, expresses himself: "Nay, one thing I know more, that the prayer which is the most forcible, transcends, and far exceeds, all power of words. For St. Paul, speaking unto us of the most effectual kind of prayer, calls it sighs and groans, that cannot be expressed. Nothing cries so loud in the ears of God, as the sighing of a contrite and earnest heart."

"It requires not the voice, but the mind; not the stretching of the hand, but the intention of the heart; not any outward shape or carriage of the body, but the inward behavior of the understanding. How then can it slacken your worldly business and occasions, to mix them with sighs and groans, which are the most effectual prayer?"

Dr. Gell, before quoted, says—"Words conceived only in an earthly mind, and uttered out of the memory by man's voice, which make a noise in the ears of flesh and blood, are not, nor can be accounted a prayer, before our father which is in Heaven."

Dr. Smalldridge, bishop of Bristol, has the following expressions in his sermons: "Prayer doth not consist either in the bending of our knees, or the service of our lips, or the lifting up of our hands or eyes to heaven, but in the elevation of our souls towards God. These outward expressions of our inward thoughts are necessary in our public, and often expedient in our private devotions; but they do not make up the essence of prayer, which may truly and acceptably be performed, where these are wanting."

And he says afterwards, in other parts of his work—"Devotion of mind is itself a silent

prayer, which wants not to be clothed in words, that God may better know our desires. He regards not the service of our lips, but the inward disposition of our hearts."

Monro, before quoted, speaks to the same effect, in his *Just Measures of the Pious Institutions of Youth*. "The breathings of a recollected soul are not noise or clamor. The language in which devotion loves to vent itself, is that of the inward man, which is secret and silent, but yet God hears it, and makes gracious returns unto it. Sometimes the pious ardors and sensations of good souls are such as they cannot clothe with words. They feel what they cannot express. I would not, however, be thought to insinuate, that the voice and words are not to be used at all. It is certain that public and common devotions cannot be performed without them; and that even in private, they are not only very profitable, but sometimes necessary. What I here aim at is, that the youth should be made sensible, that words are not otherwise valuable than as they are images and copies of what passes in the hidden man of the heart; especially considering that a great many, who appear very angelical in their devotions, if we take our measures of them from their voice and tone, do soon, after these intervals of seeming seriousness are over, return with the dog to the vomit, and give palpable evidences of their earthliness and sensuality; their passion and their pride."

Again—"I am persuaded, says he, that it would be vastly advantageous for the youth, if care were taken to train them up to this method of prayer; that is, if they were taught frequently to place themselves in the divine presence, and there silently to adore their Creator, Redeemer and Sanctifier. For hereby they would become habitually recollected. Devotion would be their element; and they would know, by experience, what our blessed Saviour and his great Apostle meant, when they enjoin us to pray without ceasing. It was, I suppose, by some such method of devotion as I am now speaking of, that Enoch walked with God; that Moses saw him that is invisible; that the royal Psalmist set the Lord always before him; and that our Lord Jesus himself continued whole nights in prayer to God. No man, I believe, will imagine that his prayer, during all the space in which it is said to have continued, was altogether vocal. When he was in his agony in the garden, he used but a few words. His vocal prayer then consisted only of one petition, and an act of pure resignation thrice repeated. But I hope all will allow, that his devotion lasted longer than while he was employed in the uttering a few sentences."

These meetings then, which are usually denominated silent, and in which, though not a word be spoken, it appears from the testimony

of others that God may be truly worshipped, the Quakers consider as an important and sublime part of their church service, and as possessing advantages which are not to be found in the worship which proceeds solely through the medium of the mouth.

For in the first place it must be obvious that, in these silent meetings, men cannot become chargeable before God, either with hypocrisy or falsehood, by pretending to worship him with their lips, when their affections are far from him, or by uttering a language that is inconsistent with the feelings of the heart.

It must be obvious, again, that every man's devotion, in these silent meetings, is made, as it ought to be, to depend upon himself; for no man can work out the salvation of another for him. A man does not depend at these times on the words of a minister, or of any other person present; but his own soul, worked upon by the divine influence, pleads in silence with the Almighty its own cause. And thus, by extending this idea to the congregation at large, we shall find a number of individuals offering up at the same time their own several confessions; pouring out their own several petitions; giving their own thanks severally, or praising and adoring; all of them in different languages, adapted to their several conditions, and yet not interrupting one another.

Nor is it the least recommendation of this worship, in the opinion of the Quakers, that, being thus wholly spiritual, it is out of the power of the natural man to obstruct it. No man can break the chain that thus binds the spirit of man to the spirit of God; for this chain, which is spiritual, is invisible. But this is not the case, the Quakers say, with any oral worship. "For how, says Barclay, alluding to his own times, can the Papists say their mass, if there be any there to disturb and interrupt them? Do but take away the mass-book, the chalice, the host, or the priest's garments; yea, do but spill the water, or the wine, or blow out the candles, (a thing quickly to be done,) and the whole business is marred, and no sacrifice can be offered. Take from the Lutherans and Episcopalians their liturgy or common prayer-book, and no service can be said. Remove from the Calvinists, Arminians, Socinians, Independents, or Anabaptists, the pulpit, the bible, and the hour-glass, or make but such a noise as the voice of the preacher cannot be heard, or disturb him but so before he come, or strip him of his bible or his books, and he must be dumb: for they all think it an heresy to wait to speak, as the Spirit of God giveth utterance; and thus easily their whole worship may be marred."

(To be continued.)

The only true spirit of tolerance consists in

our conscientious toleration of other peoples' intolerance.

From "Reason in Religion."

THE REVELATION OF THE SPIRIT.

BY FREDERIC HENRY HEDGE.

(Continued from page 20.)

The Spirit is not only light to the understanding: it is also motive and guide to the will. Its agency affects not only the knowledge but the practice of the truth. By it we are filled with holy aspirations, and moved to good deeds. All goodness is from God, just as all power is remotely or directly referrible to him. This divine influence is not incompatible with human freedom. Every act of goodness is still an act of the will. Omnipotence itself will not enforce obedience. Nevertheless, it is God who worketh in us, both to will and to do. From him we derive the capacity and the impulse. But capacity is not necessity, and impulse is not coercion. We are moved, and yet move freely; we accept the divine influence, yoke it with our destiny, and choose that the Spirit of God shall reign in our wills. Liberty is not absolute disengagement from all rule. It does not consist in lawless roving, but in free consent with legitimate sway, in free co-operation with the Supreme Will. Some rule we must obey; but we may or may not elect our ruler. Two opposite currents of influence traverse the world. The one leads Godward; the other, deathward. To move with the former is moral freedom; to be carried with the other is contradiction and bondage. To say that God is the author of our goodness, no more detracts from the power of the human will, than to say that God is the author of truth, detracts from man's intellectual powers. He acts upon us not a compulsory force, but as quickening influence.

The operation of the spirit is not always a direct action on the individual mind. More frequently it acts through the instrumentality of other subordinate agents,—through the lips and lives of men, by teachers and books, by instruction and example, by institutions and ordinances, by every influence which moves the soul to well-doing. When we read a book, and are profited by it; when we listen to a discourse that acts favorably on our moral nature, that awakens good impulses in the breast,—we are visited and moved by the Holy Ghost. The Church, and every institution established for moral and religious ends, so long as it fulfils its original design, is a medium of this influence. It is the Holy Spirit made concrete.

But, though this indirect operation is the more usual mode in which the divine influence is communicated, it acts also without the intervention of any visible agent: it acts as direct inspiration. There are motions of the Spirit in us which are not to be ascribed to any external influence; they are the Spirit of God acting on

the instinct of goodness in the soul. There is this instinct in every soul. It is not the most patent, but the deepest of all our instincts. Often neutralized by other propensities, it needs the quickening of the spirit to give it life. Then it manifests itself in those moral aspirations by which the most thoughtless are sometimes roused to conscientious and beneficent action. If ever, at some moment of solitary musing, we have felt within ourselves a stronger conviction of moral and spiritual truth, a stronger determination to good; if ever we have seized with true insight the meaning and purpose of our being, and have formed the resolution to live for duty and for God,—it was the spirit breathing on the latent spark of spiritual life in the breast, which gave us that vision, and caused those fires to glow. And, if we analyse our experience at such seasons, we shall see how man's free agency may consist with divine impulsion. We shall see that while the determination of the mind to moral ends is a free determination, calling into action the whole force of our own will, it is still a divine impulse that moves us, and a God that works in us to will as well as to do.

The agency of the spirit, as now defined, is impartial in itself considered; but its efficacy in each individual is limited by personal conditions. It is limited by the receptivity which we bring to it; and the receptivity which we bring to it will depend in a great degree on previous training. I do not deny original differences of moral endowment. Some men seem born to goodness as a natural heritage: it is their patrimony. Their way apparently is smooth and free. No obstacle seems to intervene between the purposes they form and the ends they contemplate. The intent and the act hang together by natural dependence like the links of a chain. We admire the facility with which they appear to glide onward to perfection, while we are constantly thwarted and pulled back by inward contradiction or external force. Something of this difference may be due to natural inequality of moral constitution; but more is due to self-discipline. If the spirit of God has greater influence with some than others, the reason is generally, that, by early obedience and long discipline, they have attained to higher degrees of spiritual life. Their previous habits have disposed the mind to be easily affected by such influences; the will has not been perverted and depraved; the first impulses of the spirit in them were not resisted, but received into willing minds, and suffered to acquire a permanent control of the thoughts and actions. In nothing is the truth of the saying, that "to him who hath shall be given," more evident than it is in relation to the moral life. Therefore, said an apostle, "Grieve not the Holy Spirit of God." By a figure derived from human affec-

tions, the divine agency is represented as a friend who wills our good, but may be vexed and alienated by our opposition or our indifference. Not that we can actually change the purpose of God, or avert his grace. Nothing that we can do can alienate his love, or render the Father of spirits less willing to aid and bless. He is true to us, however we may turn from him. Nevertheless, we may destroy the efficacy of his gifts in us; and, by alienating our own minds, may virtually alienate his love. The effect for us is the same, whether he is turned from us or we from him.

There is a very remarkable coincidence between this apostolic precept and the doctrine of some of the ancient Gentile philosophers. Gentile philosophy taught, that a good spirit waits upon all who choose to accept its guidance.

The great Athenian personified in this way the nobler instincts of his mind. He spoke of a daemon (or, as we shall say, a good genius) who informed and impelled him. And Seneca, the contemporary of Paul, says more explicitly, as if he had received the thought directly from him, "There dwells in us a Holy Spirit, which watches all our good and all our evil deeds, and who treats us according to the treatment he receives."

Subjectively, then, the Holy Spirit is to be considered a divine instinct in man; a special faculty, differing from reason and understanding, and the other faculties of the mind, in this, that it always speaks with authority; it addresses us, not as argument, but as command. So it appears in numerous instances in the history of the Apostles, who are represented as urged and impelled by this divine instinct to do, or to refrain from doing, sometimes contrary to their own judgment or their own will. Paul and Timothy, it is said, "assayed to go into Bithynia; but the Spirit would not suffer them." It was reserved for Protestantism, in harmony with its true, original tendency, to follow out these hints, and unfold this subjective side, as the elder church had developed the positive theological view of the Holy Ghost. Honor to George Fox and the founders of the sect of Friends, who first did justice to the Christian idea of divine inspiration; who re-affirmed the spiritual instinct, and vindicated the inward light. What to the elder church was a barren dogma, a scholastic abstraction, and hypothesis, the third person in Trinity, to them was a spiritual fact. "When the Lord God and his Son Jesus Christ," says Fox, "sent me forth into the world to preach his everlasting gospel and kingdom, I was commanded to turn men to that inward light, spirit and grace, by which all might know the way to God; even that divine Spirit which would lead into all truth and would never deceive." His theory, and that of his followers, was, and is, that man, if he will, may have the

immediate guidance of the Spirit of God; that inspiration is not a past fact, but a present reality.

(To be continued.)

A LITTLE AT A TIME.

Dr. Johnson used to say, "He who waits to do a great deal of good at once, will never do any." Grand occasions of life seldom come, are soon gone, and when present, it is only one among thousands who is adequate to the great actions they demand. But there are opportunities at our doors every day, in which the "small sweet charities of life" may occupy us fully. What account can we give of these as they pass by and on to eternity, to lay their record before the great throne? He who flatters himself with air-castles, constructed out of magnificent schemes he would accomplish, were he endowed with great wealth or exalted to high stations, will soon find them dissolving into thin air, whenever he calls his heart to an honest account for the right use of that which God has already entrusted to his care. "He that is unfaithful in that which is least, is also unfaithful in much."

Human life is made up of a succession of little things, or such as are commonly, though mistakenly, so considered. They mould our character and give complexion to our eternity; can they be insignificant? How slow are we in learning to do "whatsoever our hand findeth," and to leave the results, great or small, at the disposal of him who has declared—"whosoever shall give to drink unto one of these little ones a cup of cold water only, in the name of a disciple, verily I say unto you he shall in no wise lose his reward."

Then, Christian disciple, "In the morning sow thy seed, and in the evening withhold not thy hand." "Blessed are they that sow beside all waters." Look around in your neighborhood, in your church, and you can be at no loss for important work to do. Be content to attend to duties as they arise; take them as they are sent by providence. Every moment brings its own responsibilities, and man's wisdom in this world of sin, of sorrow, and of death, consists in cheerfully using present comforts, and diligently attending to present duties. Let the crumbs, the fragments of time, be gathered up, that nothing be lost. Forget not that, all the world over, great things are made up of a vast multitude of those which are little. *Eternity is composed of moments of time, never ceasing.* Nothing will more certainly find the slothful at last, or bring them to a dreadful reckoning, than *wasted time*.

"Wake, thou that sleepest in enchanted bowers,
Lest these lost years should haunt thee in the night.
When death is waiting for thy numbered hours,
To take their swift and everlasting flight;

Wake, 'ere the earth-born charm unnerve thee quite,
And be thy thoughts to work divine addressed;
Do something—do it soon—do it with all thy might;
An angel's wing would droop, if long at rest,
And God himself, inactive, were no longer blest."
—Central Presbyterian.

From Meditations on Death and Eternity.

A FORETASTE OF HEAVEN.

Yea, I know it, I believe it, and I feel it: I see it in every event of my life, in the various destinies of my fellow-creatures, in all the splendid works of nature—that sublime and eternal temple of God—that the all-loving Father has created us children of the earth for perfect happiness, that we may already here below enjoy a foretaste of Heavenly bliss; but that the source of our delights, as the source of our pains, is in our own bosoms,—springs from our virtues or our vices.

How unutterably happy must that man feel whose heart has not one thing to upbraid him with, in respect to any of his relations in life; who does not permit his mind to be unduly disturbed by cares of any kind; who does not allow either unbridled anger, or unrestrained affection, to lead him into any excess! In him dwells a sublime calm, of which ordinary men can hardly form a conception,—that calm which is the true peace of God.

Have you ever passed a fine spring morning alone amid the new-born beauties of nature? When, at such a time, you have been roving in the shade of peaceful groves, through the green canopy of which the rosy waves of sunlight broke; when the soft breath of morn was wafted across the verdant landscape, and the numberless flowerets shivered, and the dew on the leaflets glittered in the tears of joy, which Heaven had shed at the Holiness and Goodness of the Creator; and the cascade leaping from the rock, and the river in its bed, and the forest on the hill, sent forth solemn murmurs; while high up above, and deep down below, the air resounded with the wonderful song of birds, and the buzzing of insects—oh, what were your feelings? Did not a sense of inexpressible delight flash through your bosom? You drew a deep breath; your body seemed etherealized; you felt as if you must join your voice to the voices of the air, as if you must mix your tears with the tears of heaven; you longed for the wings of rosy morn to soar up high into the empyrean, or to sink into the green depths of the forests, or to lose yourself in the blue haze that veiled the unknown distance. You longed to pour your love through the entire world.

Did you ever lie down on the top of a mountain, whence you beheld a wide landscape with its fields and cottages spread in silent repose before your eyes? In your bosom also perfect quiet reigned! You forgot all your domestic

cares; no sorrow weighed on your spirits, no unpleasant remembrance disturbed the beneficent calm, no passion dared to intrude to break the holy peace of your soul, and a voice within whispered, "Blessed were I, could I forever remain thus!" What you then felt was a fleeting foretaste of Heaven, which sometimes even passionate, unquiet spirits are allowed to enjoy, in order that they may look into themselves, and earnestly reflect how they might perpetuate this tranquil and blessed state. What you then felt was the peace of God, which the virtuous and wise, which the true followers of Christ experience even in the midst of the greatest tribulation, and which raises them above it. You were happy in the moments alluded to, because you learnt then to forget yourselves, because you were free from the mundane desires, which regained possession of you as soon as you re entered your homes. But woe to him who, in order thoroughly to enjoy life, must learn to forget himself! This is a proof, either that his heart is burdened with the consciousness of many sins, or that it is oppressed with cares and unsatisfied wants, springing from his vanity, his frivolity, his covetousness, or other impure tendencies; or that when he acts he does not act wisely, and that what he possesses he does not possess with wisdom; but that he allows himself to be consumed by a thousand vain and petty cares, and creates for himself sorrows which he will eventually discover to have been unnecessary.

The true disciple never needs to forget himself in order to be cheerful in his very innermost soul. On the contrary, it is when he examines his inward being, and his relations to the Father of all life, that he feels most happy. The present day may have its storms, but the future only smiles the more brightly to him.—He is with God, and God is with him. Whether he be of high or humble station, rich or poor, praised or blamed, to him it is all the same; for the source of his happiness is not in the outward world, but within himself. And he is with God, and God is with him. And "blessed are the pure in heart, for they shall see God," here already, in their foretaste of the higher bliss of Heaven.

Almost every stage of human life has its heavenly moments, in which mortal man feels himself, as it were, involuntarily raised above himself. Not what we possess or what we earn, not what we eat and drink, not our apparel, not what men think of us, but a pure heart, is the true source of happiness.

Have you witnessed, or have you read of how persecuted innocence has been rescued? how some meritorious benevolent man was long misjudged, and overwhelmed with accusations by his enemies, until at length the world learnt to see its own injustice, and every one sought to

make some amends? Do you recollect how that recognition of long oppressed innocence made your heart swell with emotion; how a quiet joy took possession of you, as though it was your own innocence that had been vindicated; how the happiness of that virtue which had at length received its reward, called tears of silent satisfaction into your eyes? On that occasion, you shared in spirit, with the person whose innocence was made manifest, a foretaste of Heaven. It was from your own virtuous feelings that sprang the joy you experienced. It was the germs of true happiness within you that were moved; it was the source of your eternal welfare that began to flow. Ah! why did you choke up this spring with the rubbish of lower desires and petty cares? Why did you not put forth your full strength to rise in future above all low tendencies, and make a resolve to remain forever the elevated being you were during those brief moments of emotion?

Childhood has its Eden. Adolescence has its hours of paradise. But at a later age also we behold from time to time a ray, as if from a better world, flashing across our path, and lighting up the common-place things around us. These are foretastes of Heaven, which Providence sends to poor mortals, to stimulate them to strive after that which can alone render lasting such blissful moments.

Hast thou known the feelings of a mother kindled by the smile of her child standing before her in the fresh bloom of its loveliness and grace, when in silent but holy love she bends over this angel of her life, and seems with her kisses to draw its pure soul over into her own? Hast thou known the delight of a father, when he beholds for the first time the new-born babe that owes its existence to him? when the infant smiles upon him for the first time? when the joyous child lisps its first word? when he sees it growing in health, industry, and virtue? Ah! the delights of those heavenly moments he would not exchange for all the treasures of the world! and the mother too feels this most deeply, and says, "Take all else from me, and I am nevertheless blessed!" Queens may be inexpressibly miserable, and beggar-women unutterably happy!

Such feelings are vibrations of the purest chords of the heart. Alas! why do we so often leave them untouched? What is it that draws us all so irresistibly towards the sweet world of childhood? What is the hidden power which, at the sight of an infant, moves even the barbarian, and which wins at once the stranger's heart? It is the guileless trust, the sweet innocence, the winning grace of childhood, that charms us. It is the spotless purity of the angelic nature; it is the vague anticipation of a brilliant future for the child, and of how deservedly—should these young beings

preserve their purity and their virtues in a later age—they will become objects of the world's devotion. We honour in the child the undeseccrated sanctuary of the heart, which as yet has no presentiment of evil. It is not the outward form, it is not flesh and blood, that excites our love and admiration; but the purity, the something Divine that speaks to us from the frank and open eye, the ingenuous countenance of the child. It is our own inborn sense of virtue, which, unconsciously to ourselves, animates us at such moments. In intercourse with the innocent little ones, we ourselves become more innocent, more noble and more wise; we are ashamed to appear before them in all our imperfections; and he who has not the courage to conquer his faults at least tries to conceal them. Verily, we may frequently learn more, improve more in wisdom and goodness, in the society of children, than in intercourse with the wisest of our acquaintance. "Suffer little children to come unto me," said Jesus; "for of such is the kingdom of Heaven."

(To be continued.)

SOCIAL READING IN THE HOME CIRCLE.

This is a reading age. It is an age of "steam" in book-making as well as in other arts. There is no one who can read, but can find something cheap enough or weak enough—costly enough or strong enough, to suit the purse or the taste.

How shall we guard our children and household circles from too much *story-reading*, and induce them, cheerfully and voluntarily, to select for their *principal* reading the *substantial and profitable* in our literature—that which will give them mental and moral sinew, muscle and bone?

We can *require* them to read certain books, and *forbid* them the perusal of others, but this is not the whole of the desired end to be sought.

Many facts might be adduced to prove that even a *compulsory* course of vigorous reading is far preferable to none. Thoughts do thus find lodgment in the mind, and eventually bear good fruit. Memory sometimes, in its office of gleaner, gathers up thus, precious treasures from the past, while conscience whispers of the time when these mental treasures were rudely thrust from the mind, and their perusal endured with many a frown and restless shrug, as almost intolerable tasks.

But it were better far if our dear home-circles could have such direction given their tastes, as to lead them to *seek* and *love* substantial aliment for their hungering miffs.

It requires tact and wisdom, when the influences set so strongly upon young minds towards a diluted and purely entertaining kind of reading, to bring them to desire, or cordially to

pursue, an opposite course. For from that which the mind loves and is attracted towards, it experiences a stronger influence, and while it enjoys more, also profits more in its pursuit.

One method among others which might be named, for interesting a family in vigorous and profitable reading, is that of a pleasant *family reading circle*, where new books, and all important reading, shall be mutually enjoyed, criticized, and canvassed—different members taking part in reading aloud. Many an otherwise-prosy work, which in solitary reading would soon be laid aside with a yawn of weariness and disgust, becomes eloquent with thought and brimming with interest by a perusal under such circumstances.

A book, or a course of reading with which the social life of a household circle has been blended, will live in the reminiscences of after years, glowing with home, intellect and affection, as well as with the direct instruction of the printed pages. Its truths shall have the sanction of the dear parents who listened, explained too, and presided over the social group, and silent whispers shall remind the soul of their interest or delight, their admonitions or encouragements in these reading hours, long after the books have become old and time-worn, and those parents have gone from the scenes of earth.

One word here respecting that much-to-be-coveted accomplishment—*good reading*. Would that it commanded far more consideration in family and school culture. Have we not all experienced the power of the effective and accomplished reader, in listening to the reading of the Scriptures, when a formerly obscure passage suddenly becomes clear to us, and luminous with the truth it expresses by the emphasis and inflection of some beautiful reader?

We can hardly expect our children to become perfect in this branch of culture, but we can secure for them very much more cultivation in the home-circle, and do far more to compensate for the deprivation of extensive advantages than we are apt to suppose.

Sound reading in the family, with free, kind criticisms from its different members, with a hearty sympathy in the spirit of the matter read, will do much towards forming accomplished readers. Attentive listening to good public elocutionists will prove a help to the self-cultivated reader. It is wonderful with what an interest any such art will inspire a family, when they mutually pursue it.

Trying to catch and give the delicate shades of meaning of various authors, endeavoring to modulate and cultivate the voice to varied and expressive tones, and to read so as to command attention and give pleasure, will afford an inspiring and laudable emulation to any domestic group.

Try it, young friends, and thus become eyes and voice to those whose own are failing them; and while you augment your attractiveness by your own home firesides, you will learn to love the reading that you may, perhaps, accept at first to please your parents, and you with them and all the household become together gleaners in the fields of truth and knowledge, and through this instrumentality be enabled to gather into the soul's garner a multitude of precious things.—*Advocate and Journal*.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, THIRD MONTH 24, 1866.

SALEM QUARTERLY MEETING.—A letter received from a Friend in attendance, informs us that Salem Quarterly Meeting was held at Woodstown on the 8th inst., and was large and interesting. The quiet attention and orderly deportment of many of the young people through a long sitting were encouraging. In the first meeting, testimonies were borne against formality, living upon the good name our fathers bore, and on our own present reputation for honesty, industry, frugality, plainness, &c.; also against the disposition to please the world, and join in its policies, with the instability resulting therefrom, in contrast with that Spirit so pre-eminently manifested by our worthy ancients, who bore obloquy, reproach, and some of them martyrdom, in defence of their principles. An abiding sense of the Omnipresence of God, and an earnest application of the heart to Him in whom are hid all the treasures of wisdom, love, justice, mercy and truth, which will be imparted to the sincere seekers, was declared to be the remedy for all our defects.

In the business meeting, the queries were all read, and the answers from the Monthly Meetings being comprised, were directed to be forwarded to the ensuing Yearly Meeting, to which representatives were appointed.

CONFERENCE FOR THE CONSIDERATION OF FRIENDS' TESTIMONIES.—At the meetings on the 7th and 14th insts., the subject of War was continued under consideration. The question, How far resistance is allowable "under the law of benevolence," that is, doing unto others as we would they, under similar circumstances, should do unto us, was dispassionately examined. The views of Jonathan Dymond, in relation to

it, were read, and many expressed coinciding sentiments.

On the other hand, it was maintained that the peace profession recognizes no resistance, but that, under all circumstances, our life and practice should, as far as possible, give evidence of that "Spirit which delights to do no evil, nor to revenge any wrong." Dymond was again quoted in confirmation of this view, and interesting circumstances were related in which the intention to injure was overcome by its being met in a different spirit.

In the last meeting, it was stated by one who had resided in Kansas, that during the late war, when Quantrell's raid visited a portion of that State, carrying death and desolation in its track, the raiders passed a settlement of Friends without offering them the least molestation, but at the first house beyond, they stopped, compelled the man to go with them, and soon after took his life. He also related the circumstance of a Friend who lived in an isolated situation, where it was expected an attack would be made. The Friend concluded to prepare for defence, and accordingly put his gun in order before retiring for the night. In vain he tried to compose his mind to slumber, and after several hours spent in the attempt, he arose, removed the ammunition from his gun, took it to pieces, put it entirely away, and then laid down again and slept sweetly.

Several other strong testimonies were borne by those in middle and active life to the beauty and efficiency of the peace principle, and urgent appeals were made in favor of its support.

Great harmony prevailed, and much interest was apparent throughout the meeting, and it was evident that the speakers differed mainly in the mode of expression. In essential points there was remarkable unanimity. The following essay, by a Friend present, was read during the evening:

"The civil governments now existing in the world are all evidently based upon the law of force, the power of the sword. The terrible contest through which our country has recently passed is a conclusive evidence of that fact. When we take into consideration the truth that many of the people are only *nominal* Christians, who have never practically known the Gospel dispensation, but are as much under the law as the Jews were formerly, it appears requisite for the security and welfare of the community

that such should be held in subjection to the law of force. The law based upon the sword may not always be visibly evident; though not seen, it is *ever present*, as it underlies and supports the civil power. How often have we seen that power set at defiance by mobs, and martial law proclaimed for their suppression.

It is unquestionably true, that if men were Christians in *reality* as in *name*, this state of things could not exist; but unhappily too many are Christians only to a very limited extent, and as there are various degrees of growth, such are Christians in a *degree*. Governments being composed of individuals in this condition can only *approximate* to Christianity; and the more Christianized and enlightened the people become, the nearer will such governments attain to the true standard of Christian perfection. In our national Government, the best now existing in the world, a great advance in that respect is apparent since the period of the American Revolution. Then Friends were persecuted, exiled, imprisoned, property of every kind taken from them, because they stood faithfully on the ground of true Christianity, which proclaims Peace on earth, and good will to men. Contrasting that time with the present, how great has been the change! In the recent contest through which our government has successfully maintained its existence, the conscientious convictions of Friends have been recognized and generally respected. The attention of the people has been directed towards us, and the truth of our principles and testimonies is more generally recognized and acknowledged by those around us than at any former period. We have a great mission and duty to perform in endeavoring to advance this most important testimony against war. It is only through individual faithfulness that the state is attainable in which "the sword will be beaten into a plowshare, and the spear into a pruning hook;" and as that becomes generally realized, we may hope that the time may come "when nation shall not lift up sword against nation, neither shall men learn war any more."

At the next meeting, on the 28th inst., it is expected that a new subject will be taken up.

MARRIED, on Fourth-day, the 14th of Second month, 1866, according to the order of Friends, GEORGE WEBSTER, of Sadsbury, Lancaster Co., to PHOEBE, daughter of Ezra Michener, M. D., of Avondale, Chester Co., Pa.

—, on the 17th of Eighth month, 1865, according to the order of Friends, BENJAMIN ROBERTS, son of Jonathan and Hannah Rogers, (the latter deceased,) to ANN L. THOMAS, daughter of Priscilla M. and the late Lewis W. Thomas, both members of Fall Creek Monthly Meeting, Madison Co., Ind.

—, at the same place, on the 21st of Twelfth month, 1865, AARON MORRIS, of Milton, Wayne Co., son of George D. and Rhoda A. Morris, (the former deceased,) to MARTHA M. THOMAS, daughter of Priscilla M. and the late Lewis W. Thomas.

DIED, on the 11th of Eleventh month, 1865, at La Grange, Dutchess Co., N. Y., ANDREW H. SKIDMORE, in the 67th year of his age; a member of Oswego Particular Meeting.

Although called suddenly from works to rewards, we believe the testimony given forth in the Scriptures applicable to him: show me thy faith without thy works, and I will show thee my faith by my works. He was a diligent attender of meeting, and by his upright walking had endeared himself to a large circle of friends.

—, on the morning of the 14th inst., at her residence in this city, BESSIE, daughter of the late William and Susan M. Walton, aged 22 years.

POST-OFFICE MONEY ORDERS.

During the past month subscriptions in money have been forwarded for our Agent which he has not received;—we therefore request those making remittances to him to procure "Post-Office Money Orders," whenever they can be obtained.

The Secretary of the Clothing Committee of "Friends Association for the Aid and Elevation of the Freedmen" requests that those who have obtained sewing from the room, Eighth and Arch Sts., will return the garments when finished to Henry Laing, No. 30 N. Third St., instead of to the former place. The room No. 800 Arch St. is closed for the present.

Letter from one of the Teachers of Friends' Association for the Aid and Elevation of the Freedmen.

MT. PLEASANT, S. C., 2d mo. 25, 1866.

Dear Friends,—I have thought a detailed account of one day spent here might be of interest to you. I will take First-day, as there is more variety in what I see on that day than when I am more closely confined to the school-room. The people are so desirous to have a First-day school, that I have kept one during the morning. The school is not as large as the week-day school, owing to the fact that they think they must be "dressed up" to come; and, as many of them possess but the one garment, made of shelter tents, they think it would be very wrong to appear so attired in First-day school. The effort made by some of them to be "dressed up" is laughable, consisting in many cases of a few artificial flowers pinned on. After the school closed, I walked out to a few of the adjoining plantations to see a number of old people reported in need of rations, which I found to be true. One man, nearly one hundred years old, was sitting in the chimney corner of an old house with his wife, a very small woman, evidently grown less by continued hard labor. I asked about their children,—a topic ever interesting to them. "Had ten and two, missis, but all done sold but one, and I am lost from them." "How," I asked, "do you live." "Sometimes don't live at all, missis," was the reply. "How do you intend to get your living," I said, and, to my astonishment, the old woman replied that she had her ground ready for a crop. I examined their bedding,

and found it to consist of two threadbare blankets and a wooden bedstead. I asked them how they got on in the cold nights, and the woman said they did not dare to go to bed at all, for fear they would freeze, but sat up in the fireplace all night. They deliberately ate, while I was with them, a few grits and the head of a oon, and in the act thanked God devoutly that they had that much. Since then the Bureau officer has procured government blankets and bedsacks, also rations, with which this family have been supplied. The old woman said she thanked God for sending her one good "missus" before she goes away. They always speak of death among the old as "going away." I try to impress them with the idea that the Government sends them these comforts. But they say that the Government never came to see them before.

The above description is a type of quite a large number of cases that I have been made acquainted with. In walking by a desolate-looking house, I inquired if any one was there, and receiving a very faint reply, I went in and found two colored soldiers lying very ill with small pox. They had resorted to this place for shelter, being turned from the village on account of the disease. They had been two days without food. On returning to the village and reporting to the Bureau officer, he carried rations to them. The regiment, while they were lying in this house, was mustered out; hence their neglected condition. In returning to the village, I saw a miserable-looking cart, and far more miserable mule, and a crowd of colored people around. On inquiry, I found it to be a funeral, and this arrangement was the hearse. I know it is a matter of little importance how the body is carried to its last resting place, but merely give this as an evidence of the extreme poverty of the country. I have not seen one animal that looked as if it could more than carry its own weight since I have been here. The resources of the country were indeed low when the war closed. Poverty stares nearly all the inhabitants in the face; and if President Johnson could only feel it in his heart to help the *loyal* people, both black and white, instead of the aristocrats who day by day are receiving back their lands, assuming their insolent demeanor, and straining every nerve that they may again rule the land. There seems to be no encouragement for the Union people of the South. The number is small, but they are tried, and I would be glad to see them more prosperous. Gen. Bucher has been relieved from duty in the Bureau. He had charge of the islands Edisto, Johns and Wadmalaw. His policy was lenient towards the planters, and very compulsory among the blacks. The people on those islands had possessory titles, but of course, in their ignorance, many of their titles were very defective. Many times they

sent only an aged relative there to stay upon the land, and the rest of the family would stay upon the mainland and work, thinking they could go to this land at any time. The Rebels, of course, have the sagacity to find some flaw in these titles, and have made this a plea for the restoration of their property. Of course, in these debatable questions, much depends upon the person who interprets the titles. If desirous of rebel favor, he will decide to restore the land; if desirous of helping struggling humanity, the lands will be kept for the blacks as long as possible.

I was present at a public meeting of the colored people on Edisto Island, addressed by Gen. Scott, (Gen. Saxton's successor.) The people were well dressed and very prosperous looking, but several times made demonstrations of strong determination not to give up the lands to the former owners, or even to contract with them. In most parts, however, they are quietly contracting under tolerably liberal contracts, and if the officers of the Bureau are faithful in their trust of seeing these contracts fulfilled, I hope all will work along for the best.

Whenever I hear any one talking of colonizing the blacks or removing them from where they now are, I am sure if they could see, as I have seen, the ill effects of their moving, they would never think it advisable. These people want now just laws to protect them; they are willing to work, and they will thrive. Every black man or woman's labor is needed on the spot where he or she now is, and just as soon as the dense ignorance that now overshadows their minds is dispelled, they will be intelligent citizens; therefore the greatest and most permanent good we can do them is to give them opportunity for an education. I feel it is a great privilege to be allowed, by the benevolence of Friends, to be situated in the midst of a people so very needy in almost every thing that makes life endurable, and I greatly enjoy the satisfaction of dispensing government or private benevolence to them. I would like to make a definite request to the association on behalf of a number of old people in our immediate vicinity, who are struggling to put in a crop with the poorest kind of implements. Can you send to them some hoes, rakes, spades and axes? The Forwarding Committee have supplied us with clothing for the present; the school is well supplied; and if I had these gardening implements, with the aid that government supplies, we may in a few months see these people prosperous for them. Even if the number of implements sent was small, I would be glad to have them for a few persons working ground close to the village, to whom the cultivation of vegetables will be especially profitable, as the market at Charleston is so near.

Your friend,
CORNELIA HANCOCK.

Review of "A Declaration," &c., published by order of the Yearly Meeting of Orthodox Friends (so called) held in Philadelphia in 1828. By WM. GIBBONS, M. D.

(Continued from page 27.)

ARTICLE XXIV. "If we believe that God is equal and righteous in all his ways,—that he has made of one blood all the families that dwell upon the earth, it is impossible that He should be partial; and therefore he has been as willing to reveal his will to every creature, as he was to our first parents, to Moses, and the prophets, to Jesus Christ and his apostles. *He never can set ANY OF THESE above us, because if he did, he would be partial.*"—*Philadelphia Sermon*, p. 292.

The matter which follows is necessary to a right understanding of the above extract, viz; "His love is the same for all."—"He comes alike into the hearts of all the children of men," &c. The meaning intended is that his love and light are extended to all. His will is revealed to all, without exception; and thus all in these respects are equal.

The meaning given to it by the authors of the Declaration is, not that Elias Hicks alone says,—but that "those who have separated from us" [that is, including the whole body of the Society, except themselves] "say that God never can set him [Jesus Christ] above us.—*See their Summary*, p. 24.

In the New York sermon, p. 96, Elias Hicks says that "the life and power of God in him, leavened him into his own holy nature, till he was swallowed up into the Divinity of his heavenly Father."—"Having been faithful to the Father in all things, his storehouse was opened to him; because his Father could trust him with all his treasures,"

"He had the fullness, [the Light,] as we have our several allotments."—*Philadelphia Sermon*, p. 10.

"He had a greater anointing than the rest of his brethren."—*Quaker*, vol. 1, p. 42.

Thus, it is clearly proved that the construction given by the Declaration is unfounded.

ARTICLE XXV. "From what Jesus himself said, HE WAS NOT GOD—*Declaration*, p. 22, *New York Sermons*, p. 96.

These few words are taken out of the middle of a paragraph; I will therefore give the whole; when the reason for its suppression will be readily discerned.

"Herein it was that Jesus became the Son of God, through the life and power of God in him, which leavened him into his own holy nature, till he was swallowed up into the Divinity of his heavenly Father. Having been faithful to the Father in all things, His storehouse was opened to him; because his father could trust him with all his treasures. He knew that he would not embezzle, nor make a wrong use of

these treasures; but that he would wait to know his Father's will, before he would dispose of the things that were open to his view. Now here is the full and complete Divinity of Jesus Christ. [*From what Jesus himself said, he was not God*] "and this is life eternal, that they might know thee, the only true God, and Jesus Christ whom thou hast sent." Who will venture to contradict Jesus Christ in his faithful testimony? Here he shows the distinction. He placed himself where his father had placed him, *as a sent offering*. He did not say that he did anything of himself; even the times and the seasons were in the hands of the Father, and entirely at his disposal; not even Jesus, nor the angels in heaven, were informed of them." p. 96.

I have before shown that William Penn, George Whitehead, Isaac Pennington, Daniel Phillips, Edward Burrough, George Fox, &c., have all said that Jesus was not God; and I refer the reader to the quotations which I have already made from their writings on this subject.

ARTICLE XXVI. "He was only an outward Saviour, that healed their outward diseases, and gave them strength of body to enjoy that outward good land. This was a figure of the great Comforter, which he would pray the Father to send them; an inward one that would heal all the diseases of their souls, and cleanse them from all their inward pollutions,—that thing of God—that thing of eternal life. It was the soul that wanted salvation; but this no outward Saviour could do, no external Saviour could have any hand in it."—*Philadelphia Sermons*, p. 50.

Parallel passages are here given from Wm. Penn, in the Christian Quaker, p. 199. G. Fox, Saul's Errand to Damascus, p. 596. James Parnell's writings, p. 104. Joshua Spriggs, quoted by Wm. Penn. To which the reader is referred.

The apostle is to the same point, where he says, "Wherefore, henceforth know we no man after the flesh; yes, though we have known Christ after the flesh; yet now, henceforth know we him no more." 2 Cor. v. 16.

"Many seem to think that if Christ in name be the object of their profession, they are certainly in the true faith: whereas, too few have any clear sense either *what or where* Christ is; and many are ready to quarrel with every thing that tends to open the mystery. I am as sure there is no salvation out of Christ, as I am of anything in the world. I am also as sure that the common ideas of salvation are very greatly beside the true doctrine of salvation by Christ. And moreover I am as easy to risk my everlasting condition upon the true faith and fellowship of Christ, AS INWARDLY REVEALED from glory to glory, to those who keep a single eye to his holy light within them, as I am in believing THAT GOD MADE THE HEAVENS AND THE EARTH. For I am indisputably ascertained in the life and

fundamental certainty of the true grounds of salvation by Christ: and that in all ages, it has been a real birth of God in the soul,—a substantial union of the human and Divine nature;—the son of God, and the son of man;—which is the true Emanuel-state,—God and man in an ever blessed oneness, and harmonious agreement. And I know Christ must sit at the right hand of eternal power in my soul till his and my soul's enemies be made his footstool, if ever I reign with him in fulness of glory.”—*Job Scott's Journal*, p. 475.

One of the last acts of Jesus was to eat the *Passover* with his disciples;—an institution belonging to the *old covenant*, which continued until the crucifixion, when “the veil of the temple was rent in twain from top to bottom,”—as an expressive sign or token, that the legal dispensation, with its worship, *was ended*, and that Moses should henceforth cease to be a veil upon the heart, being taken away in Christ's spiritual appearance. 2 Cor. iii. 14. The feast called *Pentecost* was instituted to commemorate the event of giving the law from Mount Sinai. And on this day, also, the day of Pentecost, it was, that the Holy Ghost descended upon the apostles. And as the one was attended with thunders and lightnings, so the other was equally signalized by “a sound from *heaven* as of a mighty rushing wind,” which “filled all the house where they were sitting.” And there appeared unto them cloven tongues like as of fire, and it sat upon each of them; and they were all filled with the Holy Ghost and began to speak with other tongues, as the spirit gave them utterance.”—“And the same day there were added unto them three thousand souls.” Acts, ch. 1.

Thus, the history of these great events, as recorded in the Bible, marks in the clearest manner, the periods of the beginning and end of the *outward*, and the introduction of the *inward* and more spiritual dispensation;—as well as the great offices performed by the Messiah in relation to both. He fulfilled the law, and *thus justified his Heavenly Father* in the giving of it; which he could not have done *otherwise*, as it would appear to us, than by acting, in every respect, in the same capacity, and with the *same ability*, as were conferred on his brethren according to flesh; thus proving that God had *not* given them a law, and withheld from them the means to fulfil it. And, increasing in wisdom and power, graciously bestowed by his heavenly Father, (for so the record of him states, and himself expressly declares,) he repealed that law, and thus “redeemed them that were under it:” for when there is no law, there is no transgression. In the progress of its repeal, he opened simultaneously the doctrines and precepts of the Gospel. “Ye have heard that it hath been said, ‘An eye for an eye and a tooth for a tooth,’ but I say unto you that ye resist not evil: but who-

soever shall smite thee on thy right cheek, turn to him the other also.”

After the same manner, the several parts of the outward or shadowy dispensation, with its legal ordinances, were abolished; and those of the gospel instituted and enforced by precepts the most sublime, and by the purest and most holy example ever offered for our imitation since the fall of man!

As the state of the Jews was *outward*, they did not, or could not generally so feel or appreciate his sublime precepts and doctrines, as to change their hearts: but they were as “bread cast upon the waters,” to return and be remembered when the Holy Spirit should be given, to open their understandings and effectually cleanse them of their corruptions. Thus, as it respects the effects produced, the ministrations of Jesus were outward. His miracles healed their bodies. His preaching, mediation, and intercession, partook of the outward nature of the dispensation under which he lived and taught. While they opened the way for the administration of the Spirit, they served as types and figures of its effectual, heart-searching operations, which were to be experienced from the baptism of the Holy Spirit within,—the Divine world,—the arm and power of God:—and which not a few, did then, by the Divine light in themselves, in a degree experience. Hence, Christ in the flesh, or in that prepared body, may be truly said to have been, comparatively, an *outward Saviour*.

On this subject, Isaac Pennington remarks: “This [healing diseases] with the other miracles which he wrought, was but a *shadow*, of what he would work and perform inwardly, in the day of his spirit and holy power.” Vol. 1, p. 695.

There is, perhaps, no part of the account transmitted to us, which more clearly confirms this view of the subject, than the remarkable evidence furnished by the conduct of his immediate followers;—who, with the fullest opportunity of profiting by his ministrations, and pure and holy example, when their love and faith were brought to trial, *forsook him and fled!* (See under Art. XXII.) And when he appeared unto them after he had risen, their question to him plainly shows that their *hopes* and expectations were *still fixed* upon an *outward kingdom*.

“Now when he ascends,” says Isaac Pennington, “he receives the Spirit from the Father, as the Father had promised him; and having so received him, he sends him to them for their Comforter. And may not this justly be termed, “another Comforter” than Christ was in his bodily presence? And yet is it not also the same Spirit of life that had been with them in that body? So that it is another in the way of administration, but the same in substance,—even

the Word which was from the beginning,—the Spirit which was from everlasting:—and to everlasting there is *no other*.”—*Isaac Pennington*, vol. 2, p. 18, *Second ed., Quarto, London, 1761*.

This subject of the two administrations, outward and inward, receives further illustration from the passage in John xiv. 10, “Verily, verily, I say unto you, he that believeth on me, the works that I do, shall he do also; and *GREATER works than these shall he do*: because I go unto my Father.” Were not these among the “greater works,” namely, that they (the apostles) were afterwards made instrumental in effectually *healing the souls of men*, and turning them from darkness to light, and from the power of satan unto God?

The Declaration carps at the word “thing” used in the Sermon, as if it were intended to designate Jesus Christ. Does not this afford a strong evidence (along with many others) of the spirit in which that production has been framed?—“Laying wait for him, and seeking to catch something out of his mouth that they might accuse him.” Luke xi. 54. THE ANGEL made use of this word, when he announced the glorious advent: and early Friends, in their writings, copied after his example; as may be seen in the quotations which I have made from them.

“Surely flesh and blood is not the Saviour, but the holy thing spoken of, which was of the Holy Ghost.”—*Light and life of Christ, by G. Whitehead*, p. 46.

(To be continued.)

From the Atlantic Monthly.

AN OLD MAN'S IDYL.

By the waters of Life we sat together,
Hand in hand in the golden days
Of the beautiful early summer weather,
When skies were purple and breath was praise,
When the heart kept tune to the carol of birds,
And the birds kept tune to the songs which ran
Through shimmer of flowers on grassy swards,
And trees with voices *Mellon*.

By the rivers of Life we walked together,
I and my dar-ling, unafraid;
And lighter than any linnets' feather
The burdens of Being on us weighed.
And Love's sweet miracles o'er us threw
Mantles of joy outlasting Time,
And up from the rosy morrows grew
A sound that seemed like a marriage chime.

In the gardens of Life we strayed together;
And the luscious apples were ripe and red,
And the languid lilac and honeyed heather
Swooned with the fragrance which they shed.
And under the trees the angels walked,
And up in the air a sense of wings
Awed us tenderly while we talked
Softly in sacred communings.

In the meadows of Life we strayed together,
Watching the waving harvests grow;
And under the benison of the Father
Our hearts, like the lambs, skipped to and fro.

And the cowslips, hearing our low replies,
Brodered fairer the emerald banks,
And glad tears shone in the daisies' eyes,
And the timid violet glistened thanks.

Who was with us, and what was round us,
Neither myself nor my darling guessed;
Only we knew that something crowned us
Out from the heavens with crowns of rest;
Only we knew that something bright
Lingered lovingly where we stood,
Clothed with the incandescent light
Of something higher than humanhood.

O the riches Love doth inherit!
Ah, the alchemy which doth change
Dross of body and dregs of spirit
Into sanctities rare and strange!
My flesh is feeble and dry and old,
My darling's beautiful hair is gray;
But our elixir and precious gold
Laugh at the footsteps of decay.

Harms of the world have come unto us,
Cups of sorrow we yet shall drain;
But we have a secret which doth show us
Wonderful rainbows in the rain.
And we hear the tread of the years move by,
And the sun is setting behind the hills;
But my darling does not fear to die,
And I am happy in what God wills.
So we sit by our household fires together,
Dreaming the dreams of long ago:
Then it was balmy summer weather,
And now the valleys are laid in snow.
Icicles hang from the slippery eaves;
The wind blows cold,—'t is growing late;
Well, well! we have garnered all our sheaves,
I and my darling, and we wait.

ADDRESS ON THE LIMITS OF EDUCATION.

(Concluded from page 31.)

It is not presumptuous to say that education to be useful must, as far as possible, be made simple, limited, practicable, acceptable to the learner, adapted to his character and wants, and brought home to his particular case by *subdivision* and *selection*. What is now called a liberal education is a term which means something and nothing. Among us it generally implies an attendance for four years upon the “curriculum,” or course of studies prescribed and pursued in some incorporated college or university. This attendance may be punctual and thorough, or it may be negligent and unprofitable, so that while one student makes a limited acquirement of multifarious knowledge, another forgets a great part of what he knew on entering the college, and prepares to forget the rest as soon as he enters upon active life.

Subdivision and selection afford the principal avenues through which men arrive at success in the humbler as well as the more conspicuous walks of life. The mechanical labor of artisans is best performed, and its best results obtained, by distributing its duties among a multitude of special agents, and this is more or less successfully done in proportion as a society, or a craft, is more or less perfectly organized. So likewise in the higher or more intel-

lectual pursuits of life, in which men procure bread by the labor of their heads instead of their hands, the number of learned professions has been within a short time wonderfully increased. In the days of our fathers, the learned professions were accounted three in number,—Law, Physic, and Divinity. But now more than three times that number afford means of honorable subsistence to multitudes of duly educated persons. We have now a profession of authors, of editors, of lecturers, of teachers, of engineers, of chemists, of inventors, of architects and other artists; and to these may be added the better class of soldiers and politicians. And all these professions are again subdivided in proportion as society advances in its requirements.

For precisely the same reason that it would not be profitable for experts in a mechanical vocation to distract and dissipate their attention among pursuits alien to their tastes and qualifications, it can hardly be advantageous for pupils and neophytes in learning to undertake to make themselves competent representatives of the various sciences, the literary studies, the languages, dead and living, which are now professedly taught in our colleges and seminaries. Every individual is by nature comparatively qualified to succeed in one path of life, and comparatively disqualified to shine in another. The first step in education should be for the parties most interested to study, and as far as possible to ascertain, the peculiar bent and capacity of a boy's mind. This being done, he should be put upon a course of intellectual and physical training corresponding, as far as possible, to that for which nature seems to have designed him. But in all cases a preparatory general elementary education, such as is furnished by our common schools, must be made a pre-requisite even to qualify him to inquire. The more thorough this preparatory training is made, the better it is for the student. But after this is completed, a special or departmental course of studies should be selected, such as appears most likely to conduct him to his appropriate sphere of usefulness. Collateral studies of different kinds may always be allowed, but they should be subordinate and subsidiary, and need not interfere with the great objects of his especial education.

A common college education now culminates in the student becoming what is called a master of arts. But this in a majority of instances means simply a master of nothing. It means that he has spent much time and some labor in besieging the many doors of the temple of knowledge, without effecting an entrance at any of them. In the practical life which he is about to follow he will often have occasion to lament, be he ever so exemplary and diligent, that he has wasted on subjects irrelevant to his voca-

tion, both time and labor, which, had they been otherwise devoted, would have prepared and assisted him in the particular work he is called on to do.

Young men, as well as their parents in their behalf, are justly ambitious of a collegiate education. Older men often regret that they have not had the opportunity to receive it when young. And this is because of the generally acknowledged fact, that four years spent under the tuition of faithful, accomplished and gentlemanly teachers, can hardly fail to improve their character, language and bearing, as well as their store of useful knowledge. It is the habitual contact and guidance of superior minds, as well as the progressive attrition with each other, which make young men proficient in rectitude, in honor, in science, in polite literature, in tact, and in manners. And this result will appear, whether they have been taught French at West Point, or Greek in Harvard or Yale.

It is the province of the Institute of Technology, so largely and liberally sustained by the Legislature, by the munificence of individuals, and by the untiring labors of its distinguished president, to endeavor within its sphere to assist in providing for the educational wants of the most practical and progressive people that the world has seen. By its programme of instruction a separate path is provided for all who require to accomplish themselves in any one or more of the especial branches of useful knowledge. It would not be just to ignore the fact that the same thing has long been doing in several of our larger universities, where the practical sciences and the modern languages are extensively taught. But these time-honored institutions exceed some of their younger associates in this respect, that under the name of classical literature they premise and afterwards carry on a cumbrous burden of dead languages, kept alive through the dark ages and now stereotyped in England by the persistent conservatism of a privileged order. I cannot here say much to add to the lucid, scholarly and convincing exposition of the state of education as it now is in the great schools of England, given in a recent lecture before this Institute, by one of its professors, on the subject of classical and scientific studies.* No one who examines this discourse can fail to be impressed with the injudicious exactions made in favor of the dead languages in the English schools and universities, their superfluity as means of intellectual training, and their limited applicability to the wants of the present advanced generation.

I would not underrate the value or interest of classical studies. They give pleasure, re-

* Professor W. Atkinson.

finement to taste, breadth to thought, and power and copiousness to expression. Any one who in this busy world has not much else to do, may well turn over by night and by day the "exemplaria Græca." But if, in a practical age and country, he is expected to get a useful education, a competent living, an enlarged power of serving others, or even of saving them from being burdened with his support, he can hardly afford to surrender four or five years of the most susceptible part of life to acquiring a minute familiarity with tongues which are daily becoming more obsolete, and each of which is obtained at the sacrifice of some more important science or some more desirable language. It may not be doubted that a few years devoted to the study of Greek will make a man a more elegant scholar, a more accomplished philologist, a more accurate and affluent writer, and, if all other things conspire, a more finished orator. But of themselves they will not make him what the world now demands, a better citizen, a more sagacious statesman, a more far-sighted economist, a more able financier, more skilful engineer, manufacturer, merchant, or military commander. They will not make him a better mathematician, physicist, agriculturist, chemist, navigator, physician, lawyer, architect, painter, or musician. The ancient Greeks knew but little, though they knew how to express that little well. The moderns know a great deal more, and know how to express it intelligibly. Antiquity has produced many great men. Modern times have produced equally great men, and more of them.

It is common at the present day to say that the Greek language disciplines the mind, extends the compass and application of thought, and that, by its copiousness, and by its versatility of inflection and arrangement, it trains the mind to a better comprehension of words, thoughts, and things. All this is no doubt true, and might have great weight as a governing motive in education, were it not that the same ends can be more cheaply obtained by the agency of other means. Unfortunately for the supremacy of classical literature, all civilized countries are at this moment full of distinguished men and women who write well and speak well, and who have never acquired the learned languages. It is easy to say that such persons would have been more distinguished if they had known the classics. It is easy to say that Laplace would have been a better mathematician, and Faraday a better chemist, if by chance they had been duly instructed in Greek. But this is gratuitous assumption. The contrary result is more probable, inasmuch as the pursuit of classical literature would have abstracted just so much time from more pertinent and profitable investigations. At this day nobody believes that Watt would have made a

better steam engine, or Stephenson a better locomotive, if they had been taught philosophy by Plato himself.

The ancient languages, if applied to use, are not adequate to supply the wants of modern cultivation. Truth and things have grown faster than words. Modern customs, arts and sciences can be expressed in French or German, but not in Greek and Latin. A French writer, Professor Goffaux, has undertaken to translate Robinson Crusoe into Latin. The translation is successful as far as easy diction and pure latinity are concerned. But the language of the Romans is at fault in the islands of the Pacific, and new words must be coined to express even imperfectly things which are not coeval with the language employed. The world-renowned "man Friday" is introduced to us under the vicarious name of "Vendredi," and when Friday goes a shooting, he loads his "sclopetum" with "pulvis nitalis." If modern Greece should ever become a first-class power among the nations, it will have to complete, as it is now trying to do, a vocabulary of new terms to express the arts and commerce, the facts and fancies, the business and belle lettres of the existing time. In other words, it must reënforce its language with a new half, not found in the ancient classics.

The admiration of the old Romans for the Greek language and literature had its origin in the fact that in that age of limited civilization they found not much else of the kind to admire. They looked to Greece as the fountain of what had been achieved in art, philosophy, poetry and eloquence. Of consequence it was chosen as the great place of resort for educational objects, and Athens became the emporium of literary and philosophic instruction. But the Roman youth would never have been sent to Athens, had there been, as now, a railroad to take them to Paris, or a steamship to bring them to America. They would not have consumed their time in the groves of Academus, if they could have gained admittance to the Ecole Polytechnique, or to the Royal Institution.

(To be concluded.)

ITEMS.

Jared Sparks, the historian, died on the 14th inst. at his residence in Cambridge. He was once president of Harvard College.

The act concerning the withdrawal of goods from bonded warehouses has been approved by President Johnson.

The Civil-Rights bill, declaring all persons born in this country to be citizens of the United States, excepting Indians not taxed, and to secure all persons in the enjoyment of their civil rights, has finally passed both Houses of Congress, and will soon be presented to the President.

CONGRESS.—A joint resolution was introduced into the Senate and referred, providing that the amount of United States notes and fractional currency shall

not be reduced below four hundred and twenty millions, and that all surplus in the treasury exceeding forty millions in coin and forty millions of currency, be applied to the purchase or payment of interest-bearing debt. The bill for the admission of Colorado was taken up, and after some debate, being refused a third reading, it was defeated. A joint resolution was offered presenting a new method of reconstruction, on the basis of repudiation of the rebel debt, yield of claim for compensation in slaves, and the abrogation of distinctions in civil rights among its population on account of race, color or previous condition of servitude. It was referred to the Committee on Reconstruction.

HOUSE.—The Court of Claims bill was passed. The bill fixing eight hours as a legal day's labor for mechanics, &c., employed by the United States Government, was referred to the Judiciary Committee. A joint resolution, having for its object the allowing of States and municipalities to tax certain Government securities, was discussed at some length, and then referred to the Committee on Ways and Means. The bill to provide for the expenses of attending the exhibition of products of the industry of the United States at Paris, in 1887, was taken up and discussed and after being amended, was passed. The Committee of Ways and Means was instructed to inquire into the expediency of amending the internal revenue act so as to remit the monthly duty on the average deposits of savings banks. The Committee on Indian Affairs was directed to inquire into the expediency of concentrating the bands of the Dakota and Sioux Indians in one reservation.

THE FREEDMEN.—Under all circumstances, the freedmen, under the supervision of the assistant commissioners, evince a commendable disposition to better their condition mentally and socially. This spirit is evident in innumerable applications for books, &c., and their general desire for educational privileges. In many of the Southern States schools have been established, preceptors engaged and their expenses paid by freed people. It is to be regretted that their former owners persistently oppose these schools, and throw obstacles in their way. The freedmen now are nearly self-supporting, and only the aged, infirm, or their children receive support and rations from the agents of the Government. Hospitals have been erected, and in many cases the expenses of employing physicians have been promptly met by the freedmen.

The assistant commissioner of freedmen's affairs in the State of Georgia gives the bureau an account of his visit to the Sea islands. He states that all the questions in dispute between the freed people on the islands and the former white residents are now amicably settled. Those having grants of land have had them consolidated on one part of the estate upon which they were given, as directed in special field orders No. 3. In addition to these satisfactory results, a saving of from 6,000 to 8,000 rations per month to the Government has been effected. The assistant commissioner fears that, owing to the want of implements, seeds, animals and food, the freedmen having grants of lands will fail in raising a fair crop. There are scarcely ten families of freed-people on the Sea islands whose grants of land are of any value whatever. Land is abundant enough, but labor is scarce and commands a very high price, and he thinks the freedmen would find it much more to their advantage to go to work for wages than to attempt to cultivate the land for themselves with inadequate means. He is fully convinced, from personal examination, that the question over which

there has been so much dispute, as to whether or not the freedmen shall retain their lands for a few years, has ceased, from the cheapness of the land and the scarcity of labor, to be of the slightest consequence to them. He says, that the real want in that State is a sufficient military force to insure the prompt arrest of criminals, and such an organization of the United States courts as shall enable people, white and black, to stand on an equality before the law and to obtain justice.—*Phila. Press.*

BOARDING SCHOOL PROPERTY FOR SALE.—The Springdale Boarding School Property, near Goose Creek Meeting House, Loudoun Co., Va., is now offered for sale on very advantageous terms, to any suitable Friend who will open a Boarding School. It is believed there is now a good opening for a school at this place, both Friends and others being desirous to see one established. For particulars apply to

824, 4t, 414, cexn. **SAMUEL M. JANNEY,**
Lincoln, Loudoun Co., Va.

WARNER JACKSON, Attorney at Law, 504 Walnut Street Philadelphia.
Particular attention paid to the preparation of Wills, Deeds, &c. 321.vt. mmp.

WANTED.—A situation, by a Female Teacher, qualified to instruct in the usual English branches, having several years' experience. *Friends' School preferred.* Good recommendations if required. Address or apply to **EMORY COMLY,** 310xt pmfo810. 131 N. Seventh St.

W. M. HEACOCK, General Furnishing Undertaker, No. 18 North Ninth Street.—A general assortment of ready-made Coffins, and every requisite for Funerals furnished.
Being entrusted with the oversight of "Fair Hill" Burial Ground,—Funerals, and all other business connected with the ground, will be promptly attended to. 311. 1y. was m p.

NEW ARTICLES.—The Graduated Measure and Funnel combined, Bone's Scissor Sharpener, Spring Scissors for Sewing Machines, the Clutch Brace, which does not require the bits to be fitted or notched, the Vegetable Slicer, for beets, cucumbers, &c. For sale at the Hardware Store of

TRUMAN & SHAW,
310xt. No. 335 (Right Thirty Five) Market St., below Ninth.

CHESTER ACADEMY.—A Boarding and Day School for both Sexes, Broad St., Chester, Pa. Every branch of a solid English Education is taught in this Academy, together with Latin, French and Drawing, in all its varieties. Thoroughness in all the studies is insisted upon, and special care will be taken to educate the morals as well as the intellect of the pupils. A Primary Department is connected with the School. Pupils can enter at any time.

EXTRACTS FROM CLARKSON'S "PORTRAITURE OF QUAKERISM." (Continued from page 25.)

Jesus Christ, as he was sitting at Jacob's well, and talking with the woman of Samaria, made use of the following, among other expressions, in his discourse: "Woman, believe me, the hour cometh when ye shall neither in this mountain, nor yet at Jerusalem, worship the Father. But the hour cometh, and now is, when the true worshippers shall worship the Father in spirit and in truth."

These expressions the Quakers generally render thus: I tell you that a new dispensation is at hand. Men will no longer worship at Jerusalem more acceptably than in any other place. Neither will it be expected of them, that they shall worship in temples, like the temple there. Neither the glory, nor the ornaments of gold and silver and precious stones, nor the splendid garments of the High Priest, will be any parts of the new worship that is approaching. All ceremonies will be done away, and men's religion will be reduced simply to the worshipping of God in spirit and in truth. In short, the Quakers believe, that, when Jesus came, he ended the temple, its ornaments, its music, its Levitical priesthood, its tithes, its new moons, and sabbaths, and the various ceremonial ordinances that had been engrafted into the religion of the Jews.

The Quakers reject every thing that appears to them to be superstitious, or formal, or cere-

monious, or ostentatious, or spiritless, from their worship.

They believe that no ground can be made holy; and therefore they do not allow the places on which their Meeting-houses are built to be consecrated by the use of any human forms.

Their Meeting-houses are singularly plain. There is nothing of decoration in the interior of them. They consist of a number of plain long benches with backs to them. There is one elevated seat at the end of these. This is for their ministers. It is elevated for no other reason, than that their ministers may be the better heard.

The women occupy one half of these benches, and sit apart from the men.

These benches are not intersected by partitions. Hence there are no distinct pews for the families of the rich, or of such as can afford to pay for them: for, in the first place, the Quakers pay nothing for their seats in their Meeting-houses; and, in the second, they pay no respect to the outward condition of one another. If they consider themselves, when out of doors, as all equal to one another in point of privileges, much more do they abolish all distinctions when professedly assembled in a place of worship. They sit therefore in their Meeting-houses undistinguished with respect to their outward circumstances,* as the children

* Spiritual officers, such as elders and overseers, sit at the upper part of the Meeting-house.

of the same parent, who stand equally in need of his assistance, and as in the sight of Him who is no respecter of persons, but who made of one blood all the nations of men who dwell on all the face of the earth.

The Quaker ministers are not distinguishable, when in their places of worship, by their dress. They wear neither black clothes, nor surplices, nor gowns, nor bands. Jesus Christ, when he preached to the multitude, is not recorded to have put on a dress different from that which he wore on other occasions. Neither do the Quakers believe that ministers of the church ought, under the new dispensation, to be a separate people, as the Levites were, or to be distinguished on account of their office from other men.

The Quakers differ from other Christians in the rejection of psalmody, as a service of the church. If persons feel themselves so influenced in their private devotions, that they can sing, as the Apostle says, "with the spirit and the understanding," or "can sing and make melody in their hearts to the Lord," the Quakers have no objection to this as an act of worship. But they conceive that music and psalmody, though they might have been adapted to the ceremonial religion of the Jews, are not congenial with the new dispensation that has followed; because this dispensation requires, that all worship should be performed in spirit and in truth. It requires that no act of religion should take place, unless the spirit influences an utterance, and that no words should be used, except they are in unison with the heart. Now this coincidence of spiritual impulse and feeling with this act, is not likely to happen, in the opinion of the Quakers, with public psalmody. It is not likely that all in the congregation will be impelled, in the same moment, to a spiritual song, or that all will be in the state of mind or spirit which the words of the psalm describe. Thus, how few will be able to sing truly with David, if the following verse should be brought before them: "As the hart panteth after the water-brooks, so panteth my soul after thee, O God." To this it may be added, that where men think about musical harmony or vocal tunes in their worship, the amusement of the creature will be so mixed with it, that it cannot be a pure oblation of the Spirit, and that those who think they can please the Divine Being by musical instruments, or the varied modulations of their own voices, must look upon him as a Being with corporeal organs, sensible, like a man, of fleshly delights, and not as a Spirit, who can only be pleased with the worship that is in spirit and in truth.

The Quakers reject also the consecration and solemnization of particular days and times. As the Jews, when they became Christians, were enjoined by the Apostle Paul, not to put too

great a value upon "days, and months, and times, and years," so the Quakers think it their duty as Christians to attend to the same injunction. They never meet upon saints' days, as such, that is, as days demanding the religious assemblings of men, more than others; first, because they conceive this would be giving into popish superstition; and secondly, because these days were originally the appointment of men and not of God, and no human appointment, they believe, can make one day holier than another.

For the latter reason also they do not assemble for worship on those days which their own government, though they are greatly attached to it, appoint as fasts. They are influenced also by another reason in this latter case. They conceive as religion is of a spiritual nature, and must depend upon the spirit of God, that true devotion cannot be excited for given purposes or at a given time. They are influenced again by the consideration, that the real fast is of a different nature from that required. "Is not this the fast, says Isaiah, that I have chosen, to loose the bands of wickedness, to undo the heavy burdens, and to let the oppressed go free, and that ye break every yoke? Is it not to deal thy bread to the hungry, and that thou bring the poor that are cast out to thy house? When thou seest the naked, that thou cover him, and that thou hide not thyself from thy own flesh?" This the Quakers believe to be the true fast, and not the work of a particular day, but to be the daily work of every real Christian.

Indeed no one day, in the estimation of the Quakers, can be made by human appointment either more holy or more proper for worship than another. They do not even believe that the Jewish Sabbath, which was by the appointment of God, continues in Gospel times, or that it has been handed down by divine authority as the true Sabbath for Christians. All days with the Quakers are equally holy, and all equally proper for the worship of God. In this opinion they coincide with the ever memorable John Hales. "For prayer, indeed, says this venerable man, was the Sabbath ordained: yet prayer itself is Sabbathless, and admits of no rest, no intermission at all. If our hands be clean, we must, as our Apostle commands us, lift them up every where, at all times, and make every place a church, every day a Sabbath-day, and every hour canonical. As you go to the market; as you stand in the street; as you walk in the fields—in all these places, you may pray as well, and with as good acceptance as in the church: for you yourselves are temples of the Holy Ghost, if the grace of God be in you, more precious than of those which are made with hands."

Though, however, the Quakers believe no

one day in the sight of God to be holier than another, and no one capable of being rendered so by human authority, yet they think that Christians ought to assemble for the public worship of God. They think they ought to bear an outward and public testimony for God; and this can only be done by becoming members of a visible church, where they may be seen to acknowledge him publicly in the face of men. They think also, that the public worship of God increases, as it were, the fire of devotion, and enlarges the sphere of spiritual life in the souls of men. "God causes the inward life, says Barclay, the more to abound when his children assemble themselves diligently together to wait upon him; so that as iron sharpeneth iron, the seeing the faces of one another, when both are inwardly gathered unto the life, giveth occasion for the life secretly to rise, and to pass from vessel to vessel: and as many candles lighted and put in one place, do greatly augment the light and make it more to shine forth, so when many are gathered together into the same life, there is more of the glory of God, and his power appears to the refreshment of each individual; for that he partakes not only of the light and life raised in himself, but in all the rest. And therefore Christ hath particularly promised a blessing to such as assemble in his name, seeing he will be in the midst of them." For these and other reasons, the Quakers think it proper, that men should be drawn together to the public worship of God: but if so, they must be drawn together at certain times. Now as one day has never been, in the eyes of the Quakers, more desirable for such an object than another, their ancestors chose the first day in the week, because the Apostles had chosen it for the religious assembling of themselves and their followers. And in addition to this, that more frequent opportunities might be afforded them of bearing their outward testimony publicly for God, and of enlarging the sphere of their spiritual life, they appointed a meeting on one other day in the week in most places, and two in some others, for the same purpose.

(To be continued.)

TRUE COMFORT IS TO BE SOUGHT IN GOD.

Whatsoever I can desire or imagine for my comfort, I look not for it here, but hereafter.—For, if I should alone possess all the comforts of this world, and could enjoy all the delights thereof, it is certain that they could not long endure. Wherefore, my soul, thou canst not be fully comforted, nor have perfect delight, but in God, the comforter of the poor and the receiver of the humble. Wait a little, my soul, wait for the divine promise, and thou shalt have abundance of all good things in heaven. If thou desire too inordinately these things that are

present thou shalt lose the celestial and eternal. Thou canst not be filled with any temporal goods, because thou art not created to enjoy them.

Although thou enjoyedst all created goods, yet canst thou not be happy thereby, nor blessed; but thy whole beatitude and happiness consists in God that hath created all things. Not indeed such as is seen and commended by the foolish lovers of the world, but such as the good faithful servants of Christ expect, and the spiritual and pure in heart, whose conversation is in heaven, sometimes have a foretaste of.

CHARITY AND CO-OPERATION.

The following admirable views are taken from "Essays on Woman's Work." By Bessie Rayner Parkes:—

"No one who accepts the Christian religion as a rule of life can deny, what Turks and Pagans both preach and practice,—that the simple direct effort to relieve pain and poverty is one of the primary duties of a human creature.

We must *not* train up any class to depend on the exertions of others; but we *must* set ourselves to work to help those who suffer, in such a way as may tend to lessen their present pain and their future need, without counting too closely the money value of the precious ointment bestowed upon that humanity which we share in common.

It is much to be doubted whether the action of our poor law, doling out scanty help with a grudging hand, which seems to offer an ill-defined right in the place of honest charity, is not more degrading to our lower orders than almsgiving. Assuredly it is more degrading than alms bestowed by those who throw their hearts in with them. But at any rate it is our plainest duty to feed the hungry and to clothe the naked, and to afford shelter to the aged, while striving that benefit to the individual shall not result in injury and degradation to the class.

For be it observed, life is no such smooth and easy matter that we can say of any one who has fallen into misfortune that it is his or her fault, or that of any one now living. It has pleased Providence to place us in a moral atmosphere of so many mingled elements that we cannot in many cases assign the particular causes of a particular poverty.

I have entered on this dry explanation of what I conceive to be the right way of viewing large public charities privately administered, because I believe there are many people of intellect and conscience, alike among the rich and the poor, who recoil from the idea of giving or receiving any material aid. I believe, with the whole weight of my convictions, that for human creatures to help one another freely, when that love which is the bread of life is given togeth-

er with the bread that perisheth, honor both the giver and the receiver, and can be degrading to none.

Mr. Mill says, 'The peculiar characteristic, in short, of civilized beings, is the capacity of co-operation, and this refers to moral as well as to all commercial co-operation. There are two conditions under which men associate firmly: the influence of intellectual ideas and moral feelings, such as swayed the Greek communities and the Roman republic; and of religion, which fuses the will of many into one.'

From "Reason in Religion."

THE REVELATION OF THE SPIRIT.

BY FREDERIC HENRY HEDGE.

(Concluded from page 39.)

"Grieve not the Spirit." Be true to your highest instinct! Often, in temporal matters, we are warned by a secret voice, which comes to us like a mandate from above, to do or forbear. It is always wise to accept such warnings. We cannot hope to prosper, if we sacrifice our own instinct to formal reason, and the judgment of others. People come to you when you are hesitating between two courses of conduct, and say, do thus and so. It is all very well so long as no instinct of your own prompts otherwise; but if something within you says, do no such thing, then be sure you do no such thing. If this is true doctrine in matters of temporal import, how much more in things pertaining to our spiritual well-being! Resist not this sacred force! Beware of alienating the Divine influence! Whenever you feel yourself prompted to any good work, to any act of kindness or self-denial, to any course of discipline or holy living, accept the impulse, hasten to obey while the fire burns. It is God that speaks in these secret promptings. Harden not your heart when you hear that voice. The Spirit will leave you if you refuse obedience; every warning disregarded is a door closed against future progress. If you do not now the good which you can, the time will come when you cannot do the good which you would.

If we would receive the divine influence in its fullest measure and its greatest force, we must earnestly desire it. God will help no one in that in which he is himself indifferent: he will not give his Spirit except to those that ask it. Other gifts do not wait our entreaty; the common bounties of Providence are not withheld from those who neglect to ask for them; but prayer is an indispensable condition of spiritual gifts. By prayer I mean not a form of words; but an earnest desire and a fervent affection. No needed gift is denied to the prayer of faith. Every thing may be had by him who earnestly desires what he should. If we fail to receive the grace we implore, it is because we ask with a wavering mind, and a

lazy desire, and a sluggish faith. It is because we asked as if we wished or expected to be denied; as a man asks a dentist to draw his tooth, or a surgeon to cut off a limb, or to execute any other painful operation which he supposes to be necessary, but would fain avoid if he could. "If we loved truly what we ask for daily," says Bishop Taylor, "we should ask with hearty desires and a fervent spirit. The river that runs slow and creeps by its banks, and begs leave of every turf to let it pass, is drawn into little hollows, and dies with diversion." So, if a man's prayer move upon the feet of an abated appetite, it wanders into the society of every trifling accident, and stays at the corners of the faney, and cannot arrive at heaven. But when it is carried upon the wings of strong desire and a hungry appetite, it passes on through all the intermediate region of the clouds, and stays not until it dwells at the foot of the throne, and draws down showers of refreshment.

Pray for the Spirit; for who in the world can do without it,—without its impulse, without its leaven, without its restraining and sustaining power! It has been affirmed that civilization and the progress of society are wholly and purely an intellectual product. To assert this, is to forget the gift of God, and what it is that keeps the human heart from dying out, and all the powers from perishing through utter corruption. It is not our laws and our courts, not well balanced constitutions and social devices, not science and steam and electro-magnetism,—not these alone that have brought us thus far, and made this world what it is; but beneath all these, and above them all, a divine impulse never wanting to the race of men; a divine Spirit forever haunting them with those two radical and universal ideas,—truth and duty, without whose penetrating and creative power, not one stone would ever have been laid upon another in all our cities; no tree ever felled, no human implement ever fashioned for its work. And, if God should now withdraw his Spirit, this proud civilization, with its gorgeous palaces and solemn temples; this shining and sounding culture, with its traffic and its arts, its stately conventions and fair humanities,—would tumble and dissolve; the wild beasts that are caged in these human frames, now awed and tamed by the presence of that Spirit, would creep forth, and rend and devour; and the civilized earth revert to chaos and night.

The individual, no more than Society can dispense with the Holy Ghost. The rich requires it as well as the poor. He needs its promptings, and he needs its peace; he needs its strength, and he needs its consolation. He needs it in smooth prosperity, and he needs it in the struggle and straits of life. He is subject to assaults from within and from without; he is tempted to transgress the law in his mind, to obey the

law in his members, to forsake himself; to swerve from the right. No earthly power can secure him against temptation, or deliver him when tempted. The Holy Spirit alone, can bring him safely through the wars, and save his feet from falling and his soul from death. He is subject to calamity and sharp distress, to grief and bereavement, the loss of his beloved, the wreck of his hopes. No earthly power can avert these woes, or sooth their sting. The Holy Spirit is the only comforter that can reach him in those deeps, and make the night seem light about him. This same Spirit is nearer to us all, and more to us, than any soul can fully know in this world, or is willing to believe. What is it, in fact, but the hidden life, the self of ourself, which now and then bursts into consciousness, and amazes us with a foreign presence in our private thoughts? Those lucid intervals in our experience, those clear spaces in our life, when the roar and hush of the world's torrent ceases, and the cloud rack lifts, and a bit of the blue sky struggles through, with revelation of immortal deeps; these are momentary realizations of the presence of the Holy Spirit, from which, at no time we are otherwise sundered than by the wanderings of our own thoughts and will.

But suppose this earthly world could be traversed, and this mortal life lived, without the gift of the Holy Ghost, how will it be when the gulf yawns, towards which we are momentarily drifting? No earthly power can bridge that gulf, or ferry us over it. There is no spring in this breast of ours by which we can throw off the clod that is laid upon it, and erect itself out of dusty death. There is no power in this soul to extricate itself out of the wreck of this mortal. Let philosophers say what they will, there is no natural immortality. If ever we rise again to conscious life, it will be by no native power; but by the operation of the Spirit of God on souls already possessed by it, and in some degree conformed to its likeness.

The doctrine of the Holy Spirit is peculiarly Christian. It is not a deduction of the human understanding, but a revelation from "the Father of Light." And without this revelation, the name of God is only a name, a vague abstraction, having no relation to the heart or life. It is only through his Spirit, that God becomes to us a person and a reality. You may gather—who does not?—from the visible creation the notion of almighty power and beneficent design. From the course of human affairs you may get—who does not?—the impression of a superintending Providence and an all-present Love. From the experiences of your moral nature, you infer,—who does not?—a moral government and a righteous law. But all this does not constitute the God of the Christian revelation, the Father of Spirits and of mercies. That idea could

never be wrought out of these materials. The idea of God is a revelation of his Spirit; and unless the Spirit of God dwell in us, superstition may have an idol, conscience a law, philosophy a name; but the heart has no God.

A FORETASTE OF HEAVEN.

(Concluded from page 39.)

The experience of every age proves and makes manifest, that the highest happiness of which man is capable, does not depend upon whether he has much or little, but upon *whether he has a pure heart*. In the moments of his highest bliss his sense of virtue is always most strongly excited. In such moments he is good; he rises above selfishness, malice, false pretences, and impure desires. In such moments he willingly shares with others what he possesses, he would fain make the world happy; he forgives his mortal enemy, and embraces all mankind in his love.

It is the power of virtue that is strong within him, and that bears witness to the truth of Jesus' promise: *Blessed are the pure in heart: for they shall see God!*

Be pure of heart, and all the sources of heavenly bliss within you will be opened up, and you will enjoy constantly that foretaste of Heaven, which hitherto has only been vouchsafed to you in your highest moments. For they were your highest moments, simply because while they lasted you had risen to be better men. Why did you not remain ever what you were then? Why did you become untrue to yourselves?

You were untrue to yourselves in giving yourselves up again to the outward world, and expecting from it pleasures which it does not afford. You deliberately became unfaithful to yourselves, because you cared not to be masters of yourselves; but preferred surrendering the mastery to things which could in no way contribute to your peace of mind. You abandon yourselves to excessive care connected with your outward circumstances, forgetting that it is your inward condition that is the chief object of life, and that when this is not what it ought to be, all outward honors, all comforts and luxuries, all pomp and grandeur, will be powerless to make you happy. Like madmen, you sacrifice life for death, peace of mind for constant anxiety, cheerfulness for sadness, the consciousness of innocence for pangs of conscience, the pride of independence for the shame of dependence, the sense of security for never-ceasing fears. Perhaps you have sent up the prayer: "Give me, O God, a pure heart; and let Thy Holy Spirit inspire me." But no sooner was the prayer uttered than you again gave way to anger against your brother, than you again hypocritically deceived some unsuspecting person, than you again allowed a sufferer to leave you

without being comforted, than you again began to amass money by unrighteous means, and allowed jealousy to fill your heart with hatred and malice. And what have you hitherto obtained in return for your many anxieties? Perhaps physical infirmities, which prevent you from enjoying what other advantages may be yours; perhaps a few more possessions than previously, but perhaps, also, fewer joys than when you had less worldly goods; perhaps a post of honor which exposes you to malicious attacks of envy, and heaps upon you responsibilities and cares. Is that a foretaste of Heaven? Can these gains bear comparison with the happiness you enjoyed in those higher moments, when you possessed none of these, but when you were pure in heart, and your mind was free and fearless?

He who is thoroughly happy within himself covets not other joys, asks for nothing more than to remain forever as he is. If outward circumstances make man happy, why then is he, even after he has attained the desired end, ever craving for something better, something different? Why, then, is he always pursuing happiness as the child pursues the glowing colors of the rainbow, without ever reaching them?

Pause, wonder, reflect upon the heavenly hours thou hast enjoyed in life, and ask thyself how they came to thee. Not to rank, nor riches, nor fine clothes, nor meat, nor drink, didst thou owe them, but to thy pure heart. Thou wert a better man in those hours, and therefore all that surrounded thee was better. Abandon the mistaken road towards happiness, and strive again to possess that which alone can lead thee back to thy paradise.

Live with God in childlike purity. Never allow thyself to be too much absorbed in care for outward circumstances. Do thy duty, keep thy conscience clear; for all else trust in Him, who knows best what is good for us. Root out thy faults and evil tendencies; when a child, thou hadst them not, and therefore thou wert happier then than now. First of all cast from thee the desires that cause thee most uneasiness; correct, by steadfast perseverance, those defects in thy disposition and thy conduct, which are the chief sources of disquietude to thee. Man has great, nay, incredible power over himself, if he will but exert it. Think not of gratifying thyself; but consider each day what good thou canst do to others. Demand what thou hast a right to; but on the other side, never in the smallest way do injustice to others. And in order that thou mayest continue to improve, study earnestly the spirit and precepts of Jesus. In these thou wilt discover the highest wisdom, and from them learn the way back into thy lost paradise. There thou wilt find thy God again, and even in the severest trials of life, an inward peace, cheerfulness, bliss, of which no mortal

can ever deprive thee. "Blessed are the pure in heart, for they shall see God!"

Merciful and eternal God, Love inexhaustible, Father of the universe, my Father! if I have but Thee, all that life may bring is but a shadowy phantasm. If I have but thee, I shall pass without fear through light and through darkness, and shall find my way, and shall not falter, though want and death may threaten. If I have but Thee, I am sufficiently rich, though all fail me that others call riches; I am sufficiently exalted, though all the world look down upon me; I am strong enough, though thousands conspire against me; I am safe, though disasters may befall me, and all my earthly possessions be lost. If I have but Thee, death itself cannot rob me of my joy, should it even tear from my bleeding heart all the beloved souls to whom I am attached. Ah! death is Thy angel messenger, he brings them to Thee, and in the bosom of Thy love I shall find them again. If I have but Thee, I possess all things! Amen.

For Friends' Intelligencer.

FAMILIAR INSECTS.

BY I. HICKS.

In penning the following, the scenes of last summer, with the varied forms of animal and vegetable life, have recurred to me with renewed pleasure.

That the younger members of our Society may be induced by these few sketches of insect life to further prosecute this interesting subject, and to cultivate habits of inquiry, is the main object of the writer.

As a further evidence of the great deficiency that exists in the knowledge of even our most common insects, I will mention an instance that occurred at the Farmers' Club of the American Institute, New York.

A person noted for his general intelligence presented a branch of grape vine, with two rows of grey-colored eggs on its surface, the size of flaxseed. These he said were the eggs of a new kind of curculio found in Ohio, which was producing fearful damage to the grapes there. The curculio that destroys our fruit, by laying an egg in the flesh, belongs to the tribe of weevils, all of which have snouts for boring into grain, fruit and other soft substances, for the purpose of depositing an egg, which in time hatches, and the worms produced live on the fruit for their support. Sometimes the plum weevil, not finding a sufficiency of plums, places its egg in the excrescences of plum and cherry trees, caused by the growth of a fungus, the spores of which, finding some roughness or break in the bark, gain foothold, and, preying on the sap, expand into those unsightly warts which we call black knots. But the curculio is not the cause any more than it is the cause

of the growth of fruit. She uses for the preparation of her offspring the best material she can get.

Those pretty eggs, lapping so nicely on the edges in two parallel rows, were deposited by our autumnal friend the katydid, to whose charge we can lay but few annoyances, unless it is that sometimes her husband is rather too noisy. The female uses her sword-like appendage to shave off or roughen the bark, so that her eggs will adhere, and then leaves them to be hatched by the warmth of the next summer's sun. The most curious thing about the katydid is how he makes these sharp notes reverberating among the trees. His wings somewhat resemble peapods in shape, and overlap each other. The surface of the edges in contact are sharp and rough, and, as the insect opens and closes his wing covers, they grate together, and, aided by the dome-shaped wing covers, creak out, "katydid," "katydid." We have another singing insect, that makes music through the day. He is commonly called the locust, but properly the cicada. He is a happy insect. We love to hear his notes of a bright summer day, as he drums away on the spreading apple tree. An author says, "To the ancient Greeks no sound was more agreeable than the chirping of the cicada, not only because it seemed to give life to the solitary grove, but because it always conveyed to the mind the idea of a perfectly happy being. It is regarded as the most innocent of insects; and as it only sucks the juice out of the plants, or drinks the dew, it does us but little hurt. These remarks do not apply to the Cicada septendecim, or seventeen years' locust. These locusts appear precisely every seventeen years. They insert their piercer into the twigs of trees, and place their eggs in the hole. They select branches of moderate size, and thrust their piercer into them obliquely, sawing a little with the notched edges, to assist in the work, until the opening is large enough to contain from twenty to forty eggs. After one aperture is filled, the insect goes to another twig, until the whole number of three hundred or four hundred is duly deposited. The punctured limbs soon die and fall to the earth, presenting a dreary spectacle, especially when their attacks are upon orchards and ornamental trees. After the insects are hatched, which occurs in from two to four weeks, they fall to the ground, which they penetrate until they reach the roots of the trees, and there fasten themselves. It is strange that they should remain so long—seventeen years nearly—sucking the juice from the roots, but such is the fact. They generally leave the ground in early summer in this section of country, and a visit to a place where this locust abounds in great numbers will long be remembered. A ride nearly thirty years ago through a piece of woods which

was visited by these insects is fresh in my memory. The unearthly singing of myriads of locusts, branches of trees, with their brown leaves clinging to them, lying on the ground, and others broken, but still hanging by the strip of bark, made it one of the most dismal scenes, and I gladly left the tract of desolation. But the grub affords a bountiful repast to the birds. The drum which they beat is so nicely hidden that we can scarcely notice it; indeed I have often watched them, but could detect no motion in their wing covers. The locusts mentioned in the Scriptures were undoubtedly grasshoppers, not unlike those that devastate the Western States.

(To be continued.)

A HAPPY HOME.

A pleasant and sensible writer says that in a happy home there will be no fault-finding, overbearing spirit—there will be no peevishness nor fretfulness. Unkindness will not dwell in the heart or be on the tongue. Oh, the tears, the sighs, the wasting of life and health, strength and time, of all that is most to be desired in a happy home, occasioned merely by unkind words! The celebrated Mr. Wesley remarks of this, that fretting and scolding seem like tearing the flesh from the bones, and that we have no more right to be guilty of this sin than we have to curse, and swear, and steal. In a perfectly happy home all selfishness will be removed. Even as "Christ pleased not himself," so the members of a happy home will not seek first to please themselves, but will seek to please each other.

Cheerfulness is another ingredient in a happy home. How much does a sweet smile, emanating from a heart fraught with love and kindness, contribute to render a home happy! How attractive, how soothing is that sweet cheerfulness that is borne on the countenance of a wife and mother! How do the parents and child, the brother and sister, the mistress and servant, dwell with delight on those cheerful looks, those confiding smiles that beam from the eye and burst from the inmost soul of those who are near and dear. How it hastens the return of the father, lightens the cares of the mother, renders it more easy for youth to resist temptation, and, drawn by the cords of affection, how it induces them with loving hearts to return to the parental roof. Oh, that parents would lay this subject to heart—by untiring effort they would so far render home more happy that their children and domestics shall not seek for happiness in forbidden paths.

MEETING AT THE TOP.

A hundred years ago, and more, a numerous body of Presbyterians, who had seceded from the Established Church of Scotland, was split

in two on a quarrel about a clause in the oath required of the freemen of certain Scottish boroughs, which expressed "their hearty allowance of the true religion at present professed within the realm, and authorized by the laws thereof." The party who held that the oath might be conscientiously taken by seceders were called "Burghers," and their opponents "Anti-burghers." Johnny Morton, a keen Burgher, and Andrew Gebbie, a decided Anti-burgher, both lived in the same house, but at opposite ends, and it was the bargain that each should keep his own side of the house well thatched. When the dispute about the principle of their kirks, and especially the offensive clause in the oath, grew hot, the two neighbors ceased to speak to each other.

But one day they happened to be on the roof at the same time, each repairing the thatch in the slope of the roof on his own side, and when they had worked up to the top, there they were—face to face. They couldn't flee, so at last Andrew took off his cap, and, scratching his head, said, "Johnnie, you and me, I think, hae been very foolish to dispute, as we hae done, concerning Christ's will about our kirks, until we hae clean forgot His will about ourselves; and so we hae fought aae bitterly for what we ca' the truth, that it has ended in spite. Whatever's wrang, it's perfectly certain that it never can be right to be uncivil, unneighborly, unkind, in fae, tae hate ane anither. Na, na, that's the deevil's wark, and no God's. Noo, it strikes me that may be it's wi' the kirk as wi' this house; your working on ae side and me on the t'ither, but if we only do our work weel, we will meet at the tap at last. Gie's your han', auld neighbor!" And so they shook han', and were the best o' freens ever after.—*Moravian.*

FRIENDS' INTELLIGENCER.

PHILADELPHIA, THIRD MONTH 31, 1866.

By notes received from some of our subscribers, it is evident they do not understand why their bills are sent so early in the volume. We must remind such that our terms are "payable in advance."

FRIENDS TRAVELLING IN THE MINISTRY.—Rebecca Price has obtained a minute from Little Falls Monthly Meeting, endorsed by Baltimore Quarter, to attend Genesee Yearly Meeting, and to appoint some meetings going to and returning therefrom.

BALTIMORE QUARTERLY MEETING.—A friend writing from Baltimore informs us of the late Quarterly Meeting held in that city on Second

day, the 12th inst. This Meeting is held alternately at Sandy Spring, Gunpowder, Little Falls and Baltimore. The Meeting for Ministers and Elders is held the Seventh-day previous, and on First-day the houses are opened for public worship. On the recent occasion an unusual number of young persons was present, who evinced much attention and interest. An appointed meeting in the evening was well attended, and proved to be a solemn, precious opportunity, giving evidence of the presence of the Great Head of the Church.

In the Quarterly Meeting, the subject of tale-bearing and detraction elicited considerable expression upon the evils attending the indulgence of this pernicious habit.

The same communication states that Friends in Baltimore appropriate an hour before their First-day morning meetings to the reading of the Scriptures and Friends' writings, and that considerable interest is manifested by the young people in these readings.

It also informs that a school is held in the afternoon for the children, who seem greatly to appreciate the efforts of those who are laboring for their advantage. "We feel," the account continues, "that we have cause for encouragement. We hope and believe there has been quite a revival of concern for our religious testimonies, and we trust these labors will be a benefit to all concerned in the work, and like bread cast upon the waters will be found after many days."

"THE FATHERS, WHERE ARE THEY, AND THE PROPHETS, DO THEY LIVE FOREVER?"—When those who have lived uprightly depart from this scene of action, there are sorrowful voids left. When those who stood as pillars in the militant church are removed, we can but mourn. Although we believe that having fulfilled their earthly missions they have entered into the saints rest, yet we mourn for the vacant places, and we greatly desire that a double portion of their spirit may be upon us: that as, of old, Elisha "took up the mantle of Elijah," there should be a preparation of heart realized to receive the mantles of the departing prophets. Thus there might be a beautiful succession of those upon whose shoulders the ark of the testimony could rest, and the blessed promise would be fulfilled,

"Judges shall be raised up as at the first, and counsellors as in the beginning."

These reflections have been awakened by the removal of our beloved and valued friend **James Martin**, an elder of Philadelphia Monthly Meeting, who died on the 3d inst., in the 76th year of his age. In reviewing his life, we are instructed by the evidence he gave in his daily walk among men, that he was actuated by that spirit which "seeketh not its own." When a young man, he left his country home and came to this city, to enter into mercantile pursuits. He had been trained with great care and in much simplicity by a loving, concerned mother, and for a time, when removed from the maternal influence, he was attracted by the novelties of city life, and imitated the frivolous fashions of the day. The plain dress to which he had been accustomed in his childhood, was exchanged for a gay attire, and thus arrayed, he returned to pay his first visit to his early home. His mother surveyed him from head to foot, greeted him affectionately, and then burst into tears. Her son was entirely overcome by her emotion. He could not continue in a course which so evidently grieved his parents. He resumed his simple dress, and never afterward deviated from it. This act of obedience to parental wishes was perhaps the beginning of a life of dedication to higher authority. As he grew in years, it was increasingly his concern to follow the Witness for truth, and he carried out in the domestic, social and business relations, the principles which were revealed unto him as right. Though decided in his own religious opinions, yet he was tolerant of the views of others, and by his example recognized the great truth, "One is your master even Christ, and all ye are brethren." "His heart, his hand and his purse" were ever open to the calls of those whose necessities claimed relief, and his ready sympathy drew those who differed from him in sentiment, near to him in love.

One of the last efforts of his life was to bring before the attention of our Yearly Meeting a desire for more harmonious affiliation with Orthodox Friends. Not with a view of the two societies becoming united in one body, but that the members when casually thrown together, may recognise each other as having a common mission, as the children of the one loving Father.

The following filial tribute to his memory has been sent us for insertion :—

"Few men have lived more loved or more respected, or have died more deeply or tenderly regretted.

Of all the changes Time so loudly rings, none perhaps more solemn sounds upon the ear than that quivering vibration which thrills the heart with such unutterable emotion, when from physical companionship forever has passed the spirit of the father beloved.

The raised hand that in its finite conception of the wisdom of the Infinite would have warded off the blow, is paralyzed in its puny effort by a higher power; upon the appealing lip the very finger of God is pressed, and to every member of the stricken household seem addressed the words, 'I love thee, I love thee, pass under the rod.'

Mute, therefore, in the presence of what seemeth so stern a decree, stand those who henceforth hold no more the guiding hand of an earthly father; who never more may turn for comfort or advice to one whose voice ever echoed the love of a heart that knew no failing in its warm affection.

But, looking onward, and upward, 'the dead who die in the Lord are revealed to spiritual vision, and there beside the 'river the streams whereof make glad the city of our God,' he whose daily life was an evidence that 'the work of righteousness is peace, and the effect of righteousness quietness, and assurance forever,' rests from his labors—no more to "hunger or thirst"—no more to be smitten 'by heat or by sun'—but to find, in the arms of that Saviour who was his rod and his staff as he walked through the valley of the shadow of Death, 'a hiding place from the wind,' and 'a covert from the tempest.'

Unto the God who was *his* refuge and strength, a very present help in all *his* time of trouble, may those so dear to him, for rest and comfort turn. 'Cast thy burden upon the Lord and he shall sustain thee,' is a promise *sure* in its fulfilment; and in the presence of a Father who hath loved us with an everlasting love, in whom there is no change nor shadow of turning, who will never, *never* leave, nor forsake his children—let the *tear* fall, but no *murmur* sound; for He indeed is good, His mercy endureth forever."

THE WOMEN'S HOSPITAL OF PHILADELPHIA,
—From the Fifth Annual Report of this Institution, we learn that twenty one hundred and twenty-seven patients have been treated in the various departments during the past year. Seventy-eight patients have been received into the house; of these 54 have been discharged well,

eighteen improved, two not benefited, and ten remained at the close of the year.

Fifteen hundred and thirty-eight patients have been prescribed for in the Dispensary, and furnished with medicines free of charge; and five hundred and five have been gratuitously attended at their own homes.

This philanthropic undertaking is worthy the co-operation of the benevolent; its objects are,—the treatment of diseases of women and children; to furnish facilities for clinical instruction to women engaged in the study of medicine, and the practical training of nurses.

In the treatment of diseases, the report says that "the Managers have found much to cheer them in the working of the Institution. They have seen some women sick, and apparently sinking under fatal disorders, too poor to secure the comforts indispensable to recovery, and sensitively shrinking from the almshouse, restored to health and active duty through the fostering care of this Hospital; and although limited means have sometimes made it a painful necessity to discriminate in favor of applicants who could make compensation for the advantages received, yet the managers rejoice that the blessings of some who were ready to perish have fallen upon this institution.

"Looking at the importance of the objects of the Institution, and the fact that this is the only one of the kind in this City and State, the Managers earnestly hope that donations, commensurate with the requirements of the case, will be received.

"In this advanced age, enlightened men and women are more and more realizing that the suffering and the needy have claims upon them, not as distant objects of a different class, but as members of a common Father's household to whom they owe protection; and that, in giving for these, they are not only lending to the Lord, but aiding that fraternal band whose health and happiness shall be reflected upon their own lives."

MARRIED, in this city, on the 15th of Third month 1866, by Friends' ceremony, ASA M. STABLER to ALBINA S. OSBORNE, both of Montgomery County, Maryland.

DIED, at Sandy Spring, Maryland, on the morning of the 18th instant, of rheumatic fever, EDWARD STABLER, eldest son of James S. and Margaret S. Hallowell, in the 19th year of his age.

DIED, suddenly, at Camden, Del., on Fifth-day morning, the 15th inst., ISAAC DOLBY, in the 67th year of his age; an esteemed member and elder of Camden Monthly Meeting. An honest, upright man, the noblest work of God. He was working in his garden and feeling poorly; went into his house and laid down. Within half an hour his daughter went to his room, and found his spirit had departed. Thus it is fully verified, 'In the midst of life we are in death.'

—, of bilious pneumonia, on the 5th of Third month, 1866, at his residence near Waynesville, Warren Co., Ohio, AMOS COOK, in the 81st year of his age; he was an esteemed member, and for many years an elder, of Miami Monthly Meeting. He was exemplary in his life and conversation. Being firmly attached to the doctrines and testimonies of the Society in all their primitive fullness, and concerned for the right administration and support of our wholesome discipline and order. Of him it might justly be said, "Behold an Israelite indeed, in whom there is no guile;" and the peaceful serenity of his close corresponded with the tenor of his life.

—, on the 7th of Third month, 1866, at his late residence in Bristol Township, Morgan Co., Ohio, AUGUSTUS KIRK, M.D., in the 79th year of his age.

Beloved and respected by all those who knew him. "Blessed are the dead who die in the Lord from henceforth; yea, saith the Spirit, that they may rest from their labors, and their works do follow them."

—, on the 3d inst., near Chester, Pa., RACHEL WEST, in the 91st year of her age.

—, on the 24th of Second month, 1866, at Darby, Delaware County, Pa., REECE HEACOCK, aged 75 years.

—, on the 20th of Third month, 1866, at Bellevue Institute, Attleboro', Pa., MATILDA J., daughter of Pearson Scarborough, of Solebury township, in her 17th year.

—, on the 21st of Third month, 1866, RICHARD V. HUMPHREYS, aged 53 years; a member of the Monthly Meeting of Friends of Philadelphia.

—, on the 23d of Third month, 1866, at the residence of her son-in-law, Ellwood Johnson, at Germantown, MARY BURR, in her 80th year; a member of same meeting.

—, on the 25th of Third month, 1866, SAMUEL C. COOPER, in his 69th year; a member of same meeting.

—, on the 21st of Third month, 1866, at Germantown, FLORENCE MARIA, daughter of Franklin and Mary H. Shoemaker, in the 12th year of her age; member of Green street Monthly Meeting.

POST-OFFICE MONEY ORDERS.

During the past month subscriptions in money have been forwarded for our Agent which he has not received; we therefore request those making remittances to him to procure "Post-Office Money Orders," whenever they can be obtained.

The Secretary of the Clothing Committee of "Friends Association for the Aid and Elevation of the Freedmen" requests that those who have obtained sewing from the room, Eighth and Arch Sts., will return the garments when finished to Henry Laing, No. 30 N. Third St., instead of to the former place. The room No. 800 Arch St. is closed for the present.

A mild answer to an angry man, like water cast upon fire, abateth his heat, and from an enemy he shall become thy friend.

Review of "A Declaration," &c., published by order of the Yearly Meeting of Orthodox Friends (so called) held in Philadelphia in 1828. By WM. GIBBONS, M. D.

(Continued from page 46.)

Articles 27th, 35th and 36th being of similar import, are taken together and commented upon. They have reference to the Berean and Quaker, and are therefore omitted.

The review proceeds.

As the next extract is *mutilated*, I will quote the whole paragraph, distinguishing the extracts as before.

ARTICLE XXVIII. "So here, my friends, we see the one thing needful; and there is nothing else to be come at, that can unite the children of men, but *this light and life in the soul*; [*it is truly God in man*: for as He fills all things, he cannot be located in any thing which is capable of being located: because, to suppose that all the fulness of God was in Christ, is to take him out of every other part of the world:] but as certainly as He was in Jesus Christ, so certainly He is in all the sons of God; and 'as many as are led by the Spirit of God, are the sons of God.' Here now, we see that God is *every where*, that He fills the immensity of space."—*Decl.*, p. 23. *Quaker*, vol. 1, p. 166.

The question respecting the fulness has been before examined; to which I refer the reader. It has been shown, that the *visible* person, or the man Jesus, was not, according to William Penn, Isaac Pennington, Daniel Phillips, George Whitehead, and others, "properly the Son of God:" and hence, that the fulness of the Godhead did not dwell in him; for the being possessing ~~that~~ can be nothing less than *God himself*. And George Fox pronounces it *blasphemy* to say that God was crucified; for that it was God that raised up Jesus, on the third day. The fulness spoken of, attaches only to *Christ in spirit*, the Word that was in the beginning with God, and was God.

The sentence following the extract, and which the Declaration has *suppressed*, is explanatory of what precedes it, viz.: "But as certainly as He [God] was in Jesus Christ, so certainly is He in all the sons of God," &c., which is equivalent to what Isaac Pennington (before quoted,) says, "He *partook* of the spirit, or 'eternal life,' as the rest of the children did."

Articles 29th, 31st, 32d, 33d, and 34th are omitted, as not having reference to E. H.

ARTICLE XXX. "Oh! dearly beloved friends, young and old, may you gather deeper and deeper to that which is within the veil, where we may have access to our God WITHOUT ANY MEDIATOR."—*Quaker*, vol 2, p. 277.

In the New York sermons, p. 99, Elias Hicks

says, "If they [our first parents] had never revolted, there never would have been any other mediator than the law in their own hearts." And in page 100, he says, "*Christ has led the way for us*," &c. Hence it is evident, that he does not deny the *necessity* of a mediator, until that state is attained which the apostle calls "the stature of the fulness of Christ," which is "within the veil;" and which he again speaks where he says, "And when all things shall be subdued unto him, then shall the Son also, himself, be subject unto Him that put all things under him, *that God may be all in all*." 1 Cor. xv. 28.

"But there is no *stopping* by the way," says Job Scott, "or sitting down at ease; for as certainly as we become wholly joined to the Lord in the one Spirit, we know Christ to reign in us, *till* he puts down all rule and authority; until all his and our enemies are put under his feet in us, until death is completely swallowed up in victory, and God becomes all in all. Then it is that the Son renders up the kingdom to the Father, and God over all sways the irresistible sceptre in his kingdom."—*Salvation by Christ*, p. 24.

"Destroy the veil, and destroy death; the taking away the veil is the taking away of death. Death upon a true account, is nothing but a veil upon God, who is our life. Even Christ's flesh was a veil: ordinances are veils; if God be our life, the less we are in these things, the more we are in life."—*G. Goad's last Testimony*, quoted by William Penn, vol. 2, folio, p. 421.

ARTICLE XXXVII. "On the offering of our Lord on the cross (says the Declaration,) as a sacrifice for sin, Elias Hicks remarks, 'But I do not consider that the crucifixion of the outward body of flesh and blood of Jesus on the cross, was an atonement for any sins but the legal sins of the Jews,' &c. 'Surely, is it possible that any rational being that has any right sense of justice or mercy, would be willing to accept forgiveness of his sins on such terms!! Would he not rather go forward, and offer himself wholly up to suffer all the penalties due his crimes, rather than the innocent should suffer? Nay, was he so hardy as to acknowledge a willingness to be saved through such a medium, would it not prove that he stood in direct opposition to every principle of justice and honesty, of mercy and love, and show himself to be a poor selfish creature, unworthy of notice!!'—"*Elias Hicks' letter to N. Shoemaker*."

The above extract is taken from a *private letter*, written by Elias Hicks to Nathan Shoemaker.

On this subject, William Penn says, "And further, you *blasphemously* charge Divine justice with punishing your sins to the full in Christ, or punishing him that was over innocent, to the

full for your sins ; so that you account it against justice, to punish your sins *again* in you, though you live and die in them. And yet you think it an excellent piece of justice to punish the innocent to the full of the guilty. But your mistake in this is gross, as will further appear, and you will not hereby be acquitted, nor cleared. This will not prove you invested with *Christ's everlasting righteousness* ; nor will this cover your own filthy rags, or hide your shame."

"And while you think that you are secured in your sins from the stroke of justice, as having been fully executed, and that by way of revenge upon the innocent Son of God, in punishing your sins to the full upon him ; I say, while you state this as the nature of the satisfaction by *Christ suffering* in your stead, the whole world may as well acquit itself thereby from punishment as you : for he died for all, and 'is the propitiation for the sins of the whole world.' And therefore, if this must be looked upon as the full punishment of sin, that it was laid upon *Christ*, and that 'the sin cannot be again punished after such satisfaction,' this may make a merry world in sin, once punished to the full in *Christ*, never to be punished again upon the offender which the law directly takes hold of. Oh ! soothing doctrine to sinners ! the plain effect of which is, to make the wicked world rejoice in a sinful state, and say, 'O admirable justice ! that was pleased thus to revenge thyself on an innocent man that never sinned, and to punish our sins to the full upon him ! O transcendent mercy, that hast found out this expedient, that we might be fully acquitted, pardoned and discharged from the penalty that is just, and due to us for all our sins, past, present, and to come.' Oh ! what glad tidings are these to the hypocrites and drunkards, &c. And how merry they are apt to be in their sins, upon their ministers' proclaiming such an act of indemnity of all offences and injuries past, present, and to come, not only against their neighbors, but against God himself."—*Christian Quaker*, pp. 404, 405.

William Penn, in his "Sandy Foundation Shaken," after exposing the anti-scriptural and irrational character of the common doctrine of Atonement, or Satisfaction, says, "It no way renders man beholding, [beholden,] or in the least obliged to God ; since by their doctrine, He would not have abated us, nor did He, *Christ*, the last farthing : so that the acknowledgments are peculiarly the Son's ; which destroys the whole current of Scripture testimony for his good will towards men. Oh ! the infamous portraiture this doctrine draws of the Infinite Goodness ! Is this your retribution, O injurious satisfactionists ?"

"No one can show from the Scriptures," says Luther to the people of Wittenberg, "that God's justice requires a penalty or satisfaction

from the sinner : the only duty it imposes on him, is, a true repentance, a sincere change of heart, a resolution to bear the cross of *Christ*, and to strive to do good works."—*D'Aubigne's Reformation*, p. 75.

(To be continued.)

BREATHINGS OF SPRING.

BY F. HEMANS.

"Thou givest me flowers, thou givest me songs—bring back the love that I have lost !"

What wakest thou, Spring !—sweet voices in the woods,

And reed-like echoes that have long been mute ;
Thou bringest back, to fill the solitudes,
The lark's clear pipe, the cuckoo's viewless flute,
Whose tone seems breathing mournfulness or glee,
E'en as our hearts may be.

And the leaves greet thee, Spring—the joyous leaves,
Whose tremblings gladden many a copse and glade,

Where each young spray a rosy flush receives,
When thy south wind hath pierced the whispery shade,

And happy murmurs, running through the grass,
Tell that thy footsteps pass.

And the bright waters—they too hear thy call,
Spring, the awakener ! thou hast burst their sleep !
Amidst the hollows of the rocks their fall
Makes melody, and in the forests deep,
Where sudden sparkles and blue gleams betray
Their windings to the day.

And flowers—the fairy-peopled world of flowers !
Thou from the dust hast set that glory free,
Coloring the cowslip with the sunny hours,
And pencilling the wood anemone ;
Silent they seem—yet each to thoughtful eye
Glow with mute poetry.

But what awakest thou in the heart, O Spring !
The human heart, with all its dreams and sighs ?
Thou that givest back so many a buried thing,
Restorer of forgotten harmonies !
Fresh songs and scents break forth where'er thou art,
What wakest thou in the heart ?

Too much, oh ! there too much—we know not well
Wherefore it should be thus, yet roused by thee,
What fond, strange yearnings, from the soul's deep cell,

Gush for the faces we no more may see !
How are we haunted, in thy wind's low tone,
By voices that are gone !

Looks of familiar love, that never more,
Never on earth, our aching eyes shall meet,
Past words of welcome to our household door,
And vanish'd smiles, and sounds of parted feet—
Spring ! 'midst the murmurs of thy flowering trees,
Why, why revivest thou these ?

Vain longings for the dead—why come they back
With thy young birds, and leaves, and living blooms ?

Oh ! is it not, that from thine earthly track
Hope to thy world may look beyond the tombs ?
Yes ! gentle Spring ; no sorrow dims thine air,
Breathed by our loved ones there.

It is not the gold or the diamonds about
A watch that keeps time !

ADDRESS ON THE LIMITS OF EDUCATION.

(Concluded from page 47.)

At the present day we relish the Greek language, from the mingled impression not only of its own superiority, but of the pleasure it gives us and the pains it has cost us. We relish it as the musician enjoys his music, the mathematician his geometry, and the antiquarian his diggings. We are pleased that it has been preserved with its euphonious intonations, its copious expressiveness, and its noble literature. We know that the spirit of Homer cannot be translated into English, any more than the soul of Shakspeare can be done into Greek. All languages have their idiomatic expressions of thought, and in all of them translation has a killing effect on the strong points of literature. It is highly probable that the half-savage accomplishments of Homer heroes and gods cannot be made duly appreciable in the English tongue. Nevertheless, the modern world can get on without them, and we may be excused for believing that if the study of Greek should be abandoned as a requisite in our universities, although it would still be cultivated, like other exceptional studies, with success and delight by a few devotees, yet our practical, bustling and overcrowded generation would never again postpone more useful occupations to adopt it as an indispensable academical study.

In regard to success in the world, at the present day, it is not an academic education, however desirable in any shape it may be, that gives a man access to the confidence and general favor of his fellow-men, or to the influential posts of society. It is native talent, reliability, perseverance and indomitable will, that conduct him to the high places of the world. In all countries, and most of all in our own country, a contest continually goes on between academic education and self-education, the education that comes from without, and the education that comes from within. The much cultivated boy, who, under favor of advantages, performs faithfully his allotted tasks, who fulfils the requirements of his teachers, who is accustomed to subordinate his own judgment to the dictation of others, although he may hold a high rank in the scale of proficiency and the amount of acquisition, is liable, on arriving at manhood, to continue to lean rather than to lead, and thence to occupy a secondary place in the struggle for worldly distinction. On the other hand, the neglected but independent youth, who is brought up in the suggestive school of necessity, who becomes original and inventive because his life is a continued contest with difficulties, who balances character against opportunity, and individual vigor and patience against external guidance; such an one, from the habit of directing himself, becomes more competent to direct others, and to wear more easily offices of

trust and responsibility. It is remarkable how many of our distinguished men have been self-educated, or at least without academic education. Franklin was a philosopher, Washington a statesman, Patrick Henry an orator, but not by the grace of classical education. Henry Clay knew nothing of the Greek language, nor did probably Thomas Benton. Rumford, Bowditch and Fulton did not develop their intellects under the shades of academic seclusion. And if we were to go abroad for examples, we should find that Napoleon was no classical scholar, and that Peter the Great, when he issued from his lair at Moscow to study the civilization of Western Europe, did not repair to the universities of Cambridge and Oxford, but entered as a working mechanic in the shipyards of Saardam and Deptford.

We need not regret that our country is the field of wholesome competition between the well taught and the self taught, between advantage on the one side and energy on the other, between early development under assistance and slow maturity under difficulties. The success of either condition awakens and stimulates the zeal of the other.

There are many persons who even in this age speak in terms of derogation of what are called utilitarian studies, in contrast with classical and ideal literature, as if pursuits which tend directly to the preservation and happiness of man were less worthy of his attention than those which may be founded in fancy, exaggeration and passion. Poetry, art and fiction have sought for the beautiful and sublime in creations which are imaginary and often untrue, which, "o'er-inform the pencil and the pen," and attract because they are mysterious and inaccessible. But in the present age, fact has overtaken fancy and passed beyond it. We have no need to create new miracles, nor imagine them, when the appetite for wonder is more than satiated with reality, and objects of delight and amazement confront us in the walks of daily life. I know nothing in nature or art more beautiful than a railroad train, when it shoots by us with a swiftness that renders its inmates invisible, and winds off its sinuous way among mountains and forests, spanning abysses, cleaving hills asunder, and travelling onward to its destination, steadily, smoothly, unerringly, as a migratory bird advances to the polar regions. And I know of nothing more sublime than in the hold of an ocean steamship, to look on the mightiest enginery that has been raised by man, as it wields its enormous limbs like a living thing, and heaves and pants and rolls and plunges,—urged onward by the struggling of the imprisoned elements.

The traveller passes daily by the never-ending rows of posts and wires which mark the pathway of the electric telegraph, until at

length, by their very frequency, they are blended in the inert features of the landscape, and cease to attract attention. Yet, all the while, invisible thought is riding on those wires, and mind is answering to mind over a thousand miles of distance.

It is a fact so generally admitted, in this country at least, as to have become almost a truism, that proscriptive and hereditary positions are declining in social influence. Personal unworthiness or incompetency cannot be covered up by personal privilege. It is better to be the founder of a great name, than its disreputable survivor. When a Marshal of France, Duke of Abrantes and Governor of Paris, was reminded by others of the obscurity of his birth, he proudly replied, "*Moi je suis mon ancêtre*" (I am my own ancestor.) In this great and original country, which is now treading in the van of a new reformation, we have thousands yet untaught, who are to become ancestors in fame, ancestors in fortune, ancestors in science, ancestors in virtue. May their descendants be worthy of them.

These are the men who may well claim to "constitute a State." They are, as it were, the granite substratum which underlies the rich coal fields and the arable soils of the earth's exterior surface. Like that they will last when softer and richer tracts shall have been swept away. Yet a continent as extensive and various as ours should be capable of furnishing all soils and materials for all needful and desirable productions. When the necessities which sustain life are provided, the luxuries which adorn and gratify it must follow in their order. "In every country," says Buckle, "as soon as the accumulation of wealth has reached a certain point, the produce of each man's labor becomes more than sufficient for his support; it is no longer necessary that all should work; and there is found a separate class, the members of which pass their lives for the most part in the pursuit of pleasure; a very few, however, in the acquisition and diffusion of knowledge." This statement is a good exposition of the law which rules in the affairs of this country; it contains the danger and the safety, the bane and the antidote, of our social destiny. In a nation in which "the government is made for the people, and not the people for the government," whose fundamental requisite is "the greatest good of the greatest number," education, elementary and practical, such as common schools can furnish, must be made accessible to all who can be withdrawn, either from labor or idleness, for a sufficient time to realize its advantage. Afterwards those whom favor of fortune or strength of will has qualified to approach higher paths of intellectual culture should be encouraged, assisted and excited to enter and occupy either one or many of the more difficult fields of literature and sci-

ence, preferring those that best harmonize with the adopted path which is to be the occupation of life. And as to the residuary class, not numerous in any country, to whom is left the option of pursuing pleasure or knowledge, it is fortunate when there is judgment enough to perceive that these two objects can be identified in one pursuit. Knowledge is never so successfully cultivated as when it becomes a pleasure, and no pleasure is more permanent than the successful pursuit of knowledge, combined, as it should be, with moral progress. Natural gifts and variations of aptitude qualify men to tread with advantage the special paths of art and science; and such gifts are most frequently born in and with them, and cannot be imparted from without. A musical ear, an artistic eye and a poetic sense are not to be created in any man. We might as well expect to endow him with the sagacity of the hound, the quick ear of the hare, or the lightning sense of danger which preserves and insures the perilous life of the summer insect.

The man of robust though ungainly frame, may make a first-rate laborer; the slender, shy and delicate youth may shine in the walks of literature; the man of strong voice and prompt and comprehensive intellect may take precedence as an orator. But transpose these conditions, and we have a result of mistakes and failures. What God hath put asunder, man cannot well join together.

I have dwelt on the importance of a special and well-selected path of study as leading to success in education, and not less in subsequent life. Nevertheless, the necessity of absolute confinement to this path is to be accepted with great modifications. A youth with vigorous and varied powers will not easily restrict himself to a beaten track, but as his mind grows he will become discursive in his aspirations. He will carry along with him, not only the adopted or select pursuits which have enabled him to serve, to impress or to excel others, but he will also be prompted, both before and after he has grown up, to entertain himself and to extend his relations with those who surround him, by devoting his surplus time, which his very success has given him, to the enlargement of his sphere of occupation. Every professional man, however efficient and prosperous he may be in the discharge of his daily routine, must have, if he would not rust, some collateral pursuits, some by-play of life, in which he may recreate himself and keep up a wholesome freshness by intercourse with congenial minds, and at times with the ideal world. Our country has been called in reproach the arena of a cultivated mediocrity. Happy would it be if all mankind could be brought up even to that level. A cultivated mediocrity is the boundless soil from out of which must spring at times the vigorous and

avored shoots of genius, sparse and exceptional though they may be, yet sufficient to supply the just needs of mankind,—various and eccentric in their character, yet conspiring to dignify and ennoble our race. Men cannot all be geniuses, yet there are many in whom exist the germs of art, poetry and eloquence, the love of beauty, the sense of the ideal, and the perception of the unseen. These are the men who, when discovered and brought out, delight, attract and impress the world; who are generally appreciated, though not often followed; whose presence and inspiration are necessary to the enjoyment and the upward progress of the human race. They spread the sails in the adventurous and perilous voyage of life, while others hold the helm and labor at the ropes.

Our country, with its vast territory, its inviting regions, its various population, its untrammelled freedom, looks forward now to a future which hitherto it has hardly dared to anticipate. Let us hopefully await the period when the world shall do homage to our national refinement, as it now does to our national strength; when the column shall have received its Corinthian capital; and when the proportions of the native oak shall be decorated, but not concealed, by the cultivated luxuriance of vines and flowers.

CARE OF CATTLE IN SWITZERLAND.

If there is one thing in which the Argovian takes particular pride, and in which he particularly excels, it is to the care of his cattle. They are elephants in size, and their glossy hides betoken some peculiar art on the part of their masters. Not a particle of dust or straw is allowed to cling to them, and they are combed and washed as only horses are elsewhere, not with a *curry-comb*, but with old cards, which, being finer and softer, are more agreeable to the animal, and improve the fineness of the hair. This receives an additional lustre by being rubbed with old flannel. They actually shine; and the gentle creatures have an evident consciousness of their beauty, for they are careful not to soil their ashy grey and chestnut robes, by lying in the mud when allowed to take a walk. Animals can acquire, if they have not by nature, a fine sensibility, and when they have once experienced the pleasant sensation of cleanliness, learn to take care of themselves. Not only do they exercise this care for the person of the animal, but are at the pains of removing every feather and unpalatable substance from their food; and the water-troughs from which they drink are kept as clean as if human beings resorted to them. If any body doubts the efficacy of these means, let him come and see not only how large, but how intelligent these dumb animals look; how they watch every motion of those who talk to them, and listen to all they say. What an affectionate moan they will

utter, to welcome the milkers, who are always men, as they say, "women tickle the cow, and never take all the milk from the udders, so that they give less and less." It is said of them that an Argovian will send for the doctor for his cow a great deal quicker than for his wife; but we did not see any evidence that he was not sufficiently attentive to both.—*Cottages of the Alps.*

For Friends' Intelligencer.

On the 14th and 15th inst., a Convention for the Promotion of Universal Peace was held in Boston, and proved highly interesting. Six sessions were held, and the Declaration of Sentiment unanimously adopted, of thorough opposition to all war and all resort to deadly force; of the universal fatherhood of God and brotherhood of man; of the supremacy of the divine law of love; to use all consistent means of self-sacrifice and moral suasion for the promotion of pure peace principles, and to recommend to all nations the settlement of difficulties by an international tribunal of arbitration.

No elaborate constitution was adopted, feeling that "the letter killeth and the spirit giveth life," the only organization being the appointment of officers to transact the necessary business, consisting of a President,—Adin Ballou, of Hopedale, Mass.,—three Vice Presidents, representing different localities, two Secretaries, a Treasurer, and a large Business Committee, composed of men and women from most of the Eastern, Middle and Western States.

Important propositions were presented, and received the consideration of able speakers. The various movements that make for peace were advocated, and remarkable unanimity prevailed.

Letters were received from many earnest friends of the cause, who were unable to be present.

The next meeting will be held in Providence, the 16th of Fifth month next, which will probably adjourn to meet in Philadelphia about the Ninth or Tenth month.

Communications should be addressed to Ly-sander S. Richards, of Boston.

ITEMS.

The New York Central Railroad, 556 miles long, cost \$31,787,397. The Southern Michigan and Northern Indiana, 525 miles long, cost \$17,107,632. The Pittsburg, Fort Wayne & Chicago, 467 miles long, cost \$17,736,353. The New York & Erie, 464 miles long, cost, \$31,223,834. The Pennsylvania Central, 411 miles long, cost \$31,787,397. The States having the greatest number of miles of railroad, are as follows: Pennsylvania 4364 miles, Ohio 3999 miles, Illinois 3759 miles, and New York 3278 miles. Railroads first began to be generally introduced here about the year 1830, a little over thirty-five years ago, and yet there are now completed and in progress of completion in the United States, 51,284 miles of railroad, more than sufficient to extend

twice around the globe. And there are invested in them upwards of \$450,000,000.

A workmen's dining-hall has been established in Dublin, on the principle of supplying wholesome food at cost prices. It accommodates nearly two thousand persons, daily, and the price of a good dinner of soup, beef, potatoes and pudding is only four and a-half pence. The waiters and dishwashers are ladies of rank and wealth, who have volunteered to give their services to the institution until it becomes self-supporting.

Recent accounts from Rio Janeiro state that Professor Agassiz has found in his explorations in the Valley of the Amazon more than seven hundred new species of fish—more than double the number he expected to discover.

CONGRESS.—Among others, the following bills were passed in the Senate. A bill appropriating twenty-five thousand dollars in aid of destitute colored people in the District of Columbia; the bill to authorize the establishment of telegraphic communication between the United States and the West Indies; a bill authorizing the construction of a bridge across the Mississippi river at St. Louis was passed; the bill to amend the act relating to the examiners of imported goods at New York; the naval appropriation bill was passed with some amendments, one of which provides that the carpets and furniture purchased under the act shall be of home manufacture: a bill to transfer the library of the Smithsonian Institute to the library of Congress was presented, but laid over. The House bill relating to habeas corpus was referred to the Judiciary Committee.

HOUSE.—A resolution was adopted calling for a statement of the expenditures made under the Indian appropriation bill of 1865. The habeas corpus bill was considered and passed, also the following: The bill making appropriations for the civil list. The bill to facilitate commercial, postal and military communication among the several States. The bill for the reimbursement of Pennsylvania for money expended by her during the war, on account of militia called into service to repel invasion. The bill authorizing the construction of a telegraph from the United States to the West Indies was referred to the Committee on Commerce. The loan bill was reported from the committee and discussed in Committee of the Whole, and afterwards passed.

The letter from the Secretary of War was read, stating that at a sale of lands for unpaid taxes on the 11th of First month, 1864, the Arlington estate, including the property referred to, had been bid in for the United States for \$26,800, and afterwards turned over to the military authorities. The certificate of sale was in the hands of the United States tax commissioner at Alexandria, but would soon be placed on file in the Treasury Department.

THE FREEDMEN.—Gen Howard attributes the difficulties of the freedmen quite as much to the hostility of the whites and their inability to comprehend the requirements of free labor as to any fault or deficiencies of the freedmen. "In spite of these serious difficulties," says the Press, "Gen Howard finds much to justify the impression that 'before five years, there will be no more use of an agency of the General Government in the Southern States than there is now in Ohio.' The thirst for knowledge among the negroes is almost universal. 'Whole regiments of grown men have learned to read and write during the past two years,' and there is scarcely 'a plantation where already a part of the people are not able to read.' In Virginia it is whispered that 'it is no longer a question whether the negro shall be taught, but who shall teach,' and some of the religious de-

nominations are now establishing schools in connection with their churches. A few industrial schools have been organized by the Quakers, at which 'young girls are learning all sorts of needlework of a practical kind,' as well as 'neatness, order, industry and self-dependence.' The attendance of upwards of seventy thousand colored children at regularly organized schools in the Southern States is reported. A continuance and extension of these efforts to spread enlightenment will eventually exercise a highly beneficial influence. There are many localities in which, even already, a much better practical system of labor has been established than was considered possible a year ago. It is only just to concede, too, that not a few of the people of the South are earnestly endeavoring to reorganize society on a fair basis."

BOARDING SCHOOL PROPERTY FOR SALE.—The Springdale Boarding School Property, near Goose Creek Meeting House, Loudoun Co., Va., is now offered for sale on very advantageous terms, to any suitable Friend who will open a Boarding School. It is believed there is now a good opening for a school at this place, both Friends and others being desirous to see one established. For particulars apply to

SAMUEL M. JANNEY,
Lincoln, Loudoun Co., Va.

324, 44, 414, oexn.

CHESTER ACADEMY.—A Boarding and Day School for both Sexes, Broad St., Chester, Pa. Every branch of a solid English Education is taught in this Academy, together with Latin, French and Drawing, in all its varieties. Thoroughness in all the studies is insisted upon, and especial care will be taken to educate the morals as well as the intellect of the pupils. A Primary Department is connected with the School. Pupils can enter at any time.

MEMOIR OF THE LATE JOHN WATSON.

(Compiled from his MS. notes, by JOHN J. CORNWELL.)

Under an humbling, abiding sense of my many infirmities, I am drawn to record a few of the events of my early life.

I was born at Deptford, near London, of respectable parents, on the 8th day of First month, 1779, and had the advantage of a good school education, which was partially improved and cultivated by a fondness for reading, and an association with some of the literary characters of that period. My father and most of the family were of the most rigid aristocracy, and, though I can hardly account for it, yet in early life I assumed and maintained a very different character; and though my associates were very different in their views, I became almost revolutionary in my principles, for a love of freedom, without any distinction of nation or color, seemed innate or natural to my early life; it grew with my growth, and strengthened with my strength.

My parents were members of the Episcopal Church. My mother was religiously inclined, and no sectarian, and sometimes attended the meetings of other denominations,—the Independents in particular. She instilled into my infant mind that important truth that God was a God hearing prayer, and taught me very early to repeat that excellent digest taught by Jesus, commonly called the Lord's Prayer, and some of Watts' hymns. To these early impressions,

with the visitations of Divine love to my soul from time to time extended, I may truly say, "By grace I am what I am."

My father placed me as an apprentice to a man of the city of London, then living at Deptford, a person of considerable property, a carpenter and joiner by trade, and who did much business as an appraiser. He left me at liberty to work or not, as pleased myself; frequently took me out to drive him in his carriage, and made much use of me in the appraisement of property. There were but few houses or taverns in our neighborhood, which were generally let from one to another, that he was not chosen to make an appraisement of.

Before I was 19 years of age, in taverns in particular, I went from the cellar to the attic, and made the appraisal, and he very rarely made any alteration in the price I affixed. His character, however, was loose, and his example bad. At his death, his heirs gave me my freedom and a chest of tools. Although left at liberty to work as I pleased, I had made myself at that time a very good joiner.

I then went to work with a man by the name of Dean, who was a goodly character. He had imbibed the doctrine of election and reprobation, and we often talked over these subjects, though I know not whether I convinced him or not; he was always friendly, and treated me with the utmost respect while I was with him, and for years afterwards.

After a time, I concluded to go into business.

for myself, and commenced with a partner, who turned out to be of licentious habits, and who was the instrument in leading me much astray, being too much like himself, easily captivated. I joined the society of Free Masons, became an Odd Fellow, and attended most of the balls, theatres, and almost every place of amusement.

When I look back to the early instruction by a fond mother, and the dealings of the Lord with me, I feel ready to say, "Didst thou not sow good seed in the field, from whence came the tares?" I sorrowfully realized the effects of being early subjected to improper influences, and, through yielding to evil example, I diverged more and more from the path of rectitude, till I became exceedingly sinful, and indulged myself in the gratification of my passions and propensities almost without limit; but though thus captivated and led astray, I was not always a willing captive for that spirit which, from the beginning is represented as striving with men, often strove with me.

It was Heaven from above, and consoling from within,
That often cried in my startled ear, do thou abstain from sin!
And as false pleasures do ever and anon bring pain,
I repented often, yet as often sinned again.

It is hard for those accustomed to do evil to learn to do good. The first wave of temptation generally sweeps away those resolutions and covenants which are made in our own strength; but thanks be unto God for his inestimable gift, which enabled me to pray, while partaking of the midnight bowl, or going up and down in the dance with my gay companions, that I might be brought out from these vain pursuits. I loved to hear of Christ; I felt the need of a Saviour; and at times went far and near to hear some who were extolled for being preachers of the Gospel. These spoke much of Christ, but did not administer so as to give me any comfort. Among those less noted, and among the Independents, I sometimes felt living aspirations to obtain a knowledge of the God of Truth.

My constitution became so much impaired by my excesses, that I had to resort to a strong draught of brandy as soon as I rose in the morning, to bear me up for a renewed day of vain pursuits. My concerned mother often labored with me, but as she thought ineffectually. I formed resolutions to break off from my evil ways of living, but my old companions would often draw me from my resolutions, till at length I dissolved my partnership, left many of my companions, and seemed to commence a new career. I then contracted new associates, some of whom had imbibed deistical opinions. These appeared to maintain a strictly moral character towards men, hated priestcraft, and ridiculed the idea of prayer; but I having realized that which was taught me by my mother to be

true, and a circumstance of great infidelity in one of that number coming to my knowledge, released me from the rut of Deism.

About this time my father deceased, proving, indeed, the uncertainty of human life, he being but little past the meridian.

It pleased the Lord in a few years to break up my false rests, my illusory prospects; disappointment and vanity seemed inscribed on all I met with; and having had a strong predilection for America, I mentioned the same to my mother, who, though her attachment to me seemed almost unbounded, fully consented thereto. Being somewhat embarrassed in my circumstances, she gave security to my principal, and made herself liable for the remaining debts. I took passage at London, in the ship Juno, Captain Clark, and sailed for Philadelphia, and after a passage of a little more than eight weeks, we landed there, a few days after the anniversary of Independence, in 1802.

I remained a few months in that city, board with a Catholic family, and went once or twice to their place of worship, no inclination presenting of attending any other meeting. A few cases of yellow fever occurring that season, I concluded to accompany a family who came over in the same ship with me, who were inclined to reside in a new settlement, in the western part of Pennsylvania. I there found, indeed, a lodge in the vast wilderness, where I remained for some time without going to any of the larger settlements; and here I retired more into myself, and contracted the reverse of that urbanity of manners to which I had been accustomed, and a taciturnity of disposition that has pretty much remained with me through the later periods of my life.

It was only now and then that I met with one who could recall recollections of my earlier reading in poetry or prose, or who revived my former relish for intellectual enjoyments.

In my passing along in this, my wilderness travel, I am sensible that I halted when I should have gone on, and too often followed courses that my sense of right did not approve, though I still felt some caution in respect to my movements.

While making a considerable stay in this settlement, which is called Ceres town, I occasionally went to Williamsport, the county town, where I received my letters from England, and where the market for store goods was kept. It generally took us three days to get there from Ceres town, sometimes laying out in the woods one or two nights without any human habitation near.

The first time I went to Williamsport, I found that a chest of tools I had left with a man who came over the sea with me, had been sold, and the man gone. On going into the Court-house, then nearly finished, I saw some of them,

which I purchased. While in that place, I made some acquaintance with young people, but here and at other places, I found that a young Englishman was not an object of much attraction.

On returning homeward from this first visit to the county town, after leaving a small village called Newburg, to cross the Alleghany mountains, Mary Witchell, a ministering Friend from England, with a female companion and some men Friends, overtook me, as I was walking and leading my horse. Mary thus accosted me, Art thou not an Englishman? To which I replied in the affirmative. I mounted my horse, and we rode on together (they being also on horseback) over the mountains, till we came to the Delmar settlement, where we all stopped at the house of a Friend by the name of Wilson, and where a religious opportunity was held. We then proceeded to Norrisville, where we stopped for the night. During our stay there, Mary Witchell had another sitting with the family, in which she was led to speak to me, saying, "If I sought the kingdom of Heaven and the righteousness thereof, all things necessary would be added."

From thence I passed onward to my home, and the Friends proceeded on their way to Canada. The conversation had with dear Mary Wichall, and the impressions received from her were long remembered.

(To be continued.)

ALL INVITED TO HEAVEN.

Behold, I stand at the door, and knock; if any man hear my voice, and open the door, I will come in unto him, and sup with him, and he with me." Rev. iii. 20.

"Be it known therefore that every man is born for heaven, and that he is received in heaven who receives heaven in himself while in the world, and he is excluded who does not."

For Friends' Intelligence.

BE YE READY TO DISTRIBUTE AND WILLING TO COMMUNICATE.

There are evidences of an increase of concern among Friends that the younger members of our Society may become more interested in its principles and testimonies, and that these should be better understood and appreciated. This may be well and deserving of encouragement. It has long been, I believe, the practice among Friends, to manifest a concern for and an interest in their members, encouraging them to faithfulness in the maintenance of their testimonies and to a life in accordance thereto, as is recommended by the rules and advices that have been adopted, in order that they may be one people wherever located. One of the most effectual means to this end, perhaps, has been visiting and mingling with those in the younger

walks of life for their encouragement; going into their families and small remotely-situated meetings, the more advanced in life giving their experience in the management of their families, the conducting of their business, as well as their religious experience in obedience to the requirements of Truth. Many young persons have their trials and discouragements, and many difficulties to overcome, in their setting out in life; towards these attention and care should be extended, and encouragement and relief administered. A love may thus be begotten in their minds for their friends, with a desire frequently to mingle with them in religious associations, where they could feel the flowings of Divine love to circulate as from vessel to vessel, uniting all into one feeling of harmony and good will, and separating with their spirits so refreshed, that when the appointed time of meeting again comes, the desire will be renewed to mingle in sweet communion with their friends, and come again under the comforting influence of the Father's Love. Although it may be true that the love of the world, the deceitfulness of riches and the pride of life may have choked the word in many, it remains also true that there are many sincere seekers after the bread of life, desiring to be fed and protected in the true fold.

A visit received about thirty years ago is still remembered with interest. A few Friends were remotely situated within the limits of a small meeting. Our friends John Tatum, Mary Biddle and Lucretia Mott paid them a visit, entered into feeling and sympathy with the visited, gave them their experience in the practice and management of their children and families and business, and manifested a general interest in that which most concerned them, greatly to their encouragement and comfort. It made a lasting impression, and was of enduring benefit to the then young persons who were the recipients of the visit. The feeling begotten then has not been forgotten since. Are not the fields now white unto harvest? Are not young Friends, and some more advanced, too, in want of this kind of notice and care? Let all be encouraged to faithfulness and simple obedience to impressions of interest and sympathy which at times flow towards the aged, the afflicted, the inexperienced, or to whomsoever or wherever the attention of the mind is directed by the inward Teacher,—the still small voice, which says, in the language of impression, "This is the way, walk thou in it."

EXTRACT FROM MY JOURNAL.

Feb'y. 2d 1866.—Paul said to Timothy "the time of my departure is at hand, I have fought a good fight, I have finished my course I

have kept the faith." How blessed so to live in the light of God's truth, and for the truth's sake, as that, at the last when the work is done—when the world is receding, material things are dimly seen, and the realities of an eternal world beyond, press themselves upon our sensitive spirits, we can say, in some measure at least, I have fought a good fight, I have finished my course, I have kept the faith." W.

LETTER FROM SIR WALTER SCOTT.

The following letter was addressed to a Friend in answer to one he had written to Sir Walter Scott, inquiring if he had ever met with any writings or Minute books belonging to their Monthly Meeting among his family papers:—

"I received your letter yesterday, and lose no time in replying. I have particular family reasons for desiring to oblige the society of Friends, as two of my ancestors, one by my mother's and the other by my father's side, were members of that respectable body. They were both persons of some worldly distinction; the first was that John Swinton, of Swinton, whose talents were much used by Cromwell in the administration of Scotland, and who narrowly escaped with life after the restoration. He is mentioned, I believe, in Cruise's History, and in most Scottish histories. He was great-grandfather to my late mother; his papers, if he left any, must be with the Swinton's of Swinton.

My great-grandfather's father was Walter Scott, first laird of Raeburn, third son of Sir Walter Scott, of Harden, and proprietor of those lands on which his descendant still resides; he suffered severely for his religious faith, being repeatedly thrown into prison by the orders of the Privy Council: and he, himself, and his wife Isabella MacDougal separated by violence from their children. I could point out some curious memoranda of his sufferings, if it would further the object of the meeting. My cousin, Mr. William Scott, of Raeburn, is likely to know what papers of his survive; their is some correspondence I know, besides what notices occur in the records of the Privy Council. I have a copy of a Pindarique poem on the death of this inoffensive and ill-used man, in which he is highly praised for his learning and talents; he was particularly skilful in the oriental languages. I believe he and his immediate elder brother, Sir Gideon Scott, of High Chester, from whom the present Mr. Scott of Harden is descended were proselytes to George Fox when he visited Scotland. The then head of the family continued a staunch Presbyterian, and it was at his instance that Walter, of Raeburn, was so ill-treated.

If any notices of such meetings as you inquire after are still in existence, they must be at the house of Lessudden; and as I said before my cousin, William Scott, now younger, of Raeburn, will, I am sure, give you access to them—

as though neither he nor I have retained the peculiar tenets of the Friends, we are happy to acknowledge ourselves the descendants of one who suffered much for conscience's sake. I have seen, in my cousin's hand, some of the religious discourses of Walter Scott, first laird of Raeburn, which seemed to go deep into the disputed points between the Society and the Church.

If these particulars are of little consequence to the purport of your enquiries, they will at least serve to show my kind feelings towards the Society, in which I have possessed some valued friends now removed, in addition to my claim of ancestral connection.

I am with respect, your friend and well-wisher,
WALTER SCOTT.

Abbottsford, Melrose, 1829

WALTER SCOTT AND JOHN SWINTON.

Gideon Scott, of High Chester, and Walter Scott, of Raeburn, joined the Society of Friends about 1660, and their elder brother used no gentle means to reclaim them to the Presbyterians, for we are told "The interest possessed by Sir William Scott, and MacDougal, (whose sister Isabella, Walter Scott had married, and who united with her husband in the Quaker tenets), was powerful enough to procure two acts of the Privy Council of Scotland, directed against Walter Scott of Raeburn, as a heretic and convert to Quakerism, appointing him to be imprisoned, first in Edinburgh jail, and then in that of Jedburgh; and his children to be taken by force from the society and direction of their parents, and educated at a distance from them. "The Lords of his Majesty's Privy Council doe modify the soume of two thousand pounds Scotts, to be paid yearly at the terme of Whitsunday, by the said Walter Scott of Raeburn, for the education and entertainment of the said children;" "and ordains the said Walter Scott be transported from the Tolbooth of Edinburgh to the prison of Jedburgh where his friends and others may have occasion to convert him." "The magistrates of Jedburgh were charged not to suffer any suspected of Quaker principles to have access to him, as it was thought his daily conversing with the Quakers in Edinburgh had hardened him in their principles, without hope of his recovery unless separated from such pernicious company."

Two sons and a daughter were thus separated from their parents—the sons both proved good scholars. The eldest, William, was like his father, a deep orientalist; the younger, Walter, became a good classical scholar; he was the author's great-grandfather.

The great-grandfather of the mother of Sir Walter Scott, the author, was John Swinton, nineteenth baron in descent of that ancient and once powerful family. He was the person whom Cromwell chiefly trusted in the management of

Scottish affairs during his usurpation. After the restoration, Swinton was devoted as a victim to the new order of things, and was brought down in the same vessel which conveyed the Marquis of Argyle to Edinburgh, where that nobleman was tried and executed. Swinton was destined to the same fate. He was attainted in the Parliament at Sterling, for going over to Cromwell, so he was brought before the Parliament to hear what he could say why his sentence should not be executed. He was now become a Quaker; and did with a sort of eloquence that moved the house, lay out all his own errors and the ill spirit that was in him when he committed the things that were charged on him. He renounced all legal defence, though several pleas were open to him, and answered in conformity with the principles of his sect, that at the time these crimes were imputed to him, he was in the gall of bitterness, and bond of iniquity; but that God Almighty having since called him to the light, he saw and acknowledged these errors, and did not refuse to pay the forfeit of them, even though, in the judgment of the Parliament, it should extend to life itself.

Respect to fallen greatness, and to the patience and calm resignation with which a man once in high power expressed himself under such a change of fortune, found Swinton friends, and with family connections and the Earl of Middleton (out of hate to the Earl of Lauderdale who had got the gift of Swinton's estate), united in recommending him to the king as a fit object of mercy. He was released after a long imprisonment, and much dilapidation of his estates.

It is said that Swinton's admonitions, while confined in the castle of Edinburgh, had a considerable share in converting to the tenets of the Friends, Colonel David Barclay, father of Robert Barclay, then lying there in garrison.—*Friends' Monthly Magazine.*

For Friends' Intelligencer.
"THE DUHOBORTSI."

In number 51 of the last volume of the Intelligencer, there is an account of a religious sect in Russia, called the Duhobortsi, with which I was much interested, and felt desirous of seeing a more full description of this remarkable people. I have since met with some extracts from Robert Pinkerton's work on Russia, ("Russia and its Inhabitants," published in 1833, which gives much additional information concerning the Duhobortsi, (the name is here given Duchobortzi), and will perhaps prove of sufficient interest for insertion in the Intelligencer." S. B. F.

"In 1816, after having visited the tribe of Nogay Tartars, that wander with their flocks and herds about the extensive steppes of

Little Tartary, on the sea of Azoff, and having made preparations for supplying the villages of German colonists recently settled there with the Holy Scriptures, I purposed, on my way towards the Crimea, to see the Dushobortzi, who live on the river Molochnia, and on the sea of Azoff.

"On approaching the first of their villages, on the Molochnia, I met with a female, and inquired of her where the chief person of the place resided. The answer she gave me was, 'Among us, no one is greater than another.' The next person I met was a shepherd attending his flock, an old man with gray hair. I made my driver stop, and beckoned to the man to draw near. This he did; and uncovering his head, he leaned over his staff, and replied to my inquiries. I asked him if he could read; he replied, 'Yes; I can read the Word of Life.' From this I naturally thought that he was able to read the Bible, and offered him a Tract on the Bible Society. He refused, however, to accept it; saying, that he could not read our books, but only the book of Life, which he had learnt by heart; in other words, that he could repeat the principal doctrines and moral articles of the sect. And when I touched upon some of the articles, as given in my work on the Greek Church, he repeated them distinctly; in others of them his memory failed him.

"I stopped in a second village, and without ceremony entered one of the best looking houses, requesting a glass of water; this a young man readily handed to me. After a little talk with him, I discovered I was in the Chancery, or place where the civil affairs of the sect are transacted. I told him distinctly what my object was in visiting them, and begged him to introduce me to some of their seniors. All this seemed rather suspicious to him; yet he sent for one of the elders who had been in Petersburg as a deputy to the government, and who, soon after, with several of his brethren, made his appearance. After a little talk about Senator Hoblitz, and other gentlemen who had shown them kindness during their stay in Petersburg, they seemed in some degree to lay aside their reserve, and replied more fully to my inquiries. I took out my volume on the Greek Church, and read to the assembly the passages which I had written concerning the Duchobortzi; and I had the satisfaction of hearing them distinctly state their principles in the very terms there given. As soon as I began any paragraph, by translating a few words, they generally gave the remainder exactly as stated in the book. The two prayers they repeated verbatim. One passage only was found to require explanation—that of their having all things in common, (page 312.) This was their practice when they came to the Molochnia; but now every family has its own private property,

cattle, fields, &c., &c. Still they have fields of corn, gardens, and flocks which belong to the whole community, and the revenues of which are applied for the common benefit of the Society. This is also the custom of the Mennonites, who live near them, and of other German colonists; a custom, in their case, independent of religious considerations.

"This extraordinary sect (the Duchobortzi) is settled in eight villages, and consists of about 2500 souls. I saw an individual of them who had been sixteen years exiled to Siberia for conscience's sake. He spoke with great feeling when contrasting his former sufferings with his present prosperous circumstances. He was a fine looking, middle-aged man, and was returning on horseback from viewing his cornfields and flocks, country-like, without his coat. They have been collected from every part of the empire, and are entirely separated from the Greek Church; indeed, it was the object of government in colonizing them here, to put it out of their power to make any more proselytes to their peculiar opinions. Their neat and clean dress, comfortable looking huts, and industrious habits, their numerous flocks, and extensive and well cultivated fields, widely distinguish them from the common Russian peasantry.

"Their neighbors, the Mennonites, and other German colonists, speak well of their morals; but all complain of the reserve and shyness of their character. No doubt they have been taught this by the severe persecutions to which they have for ages been exposed, and out of which they can scarcely yet believe themselves delivered. Their neighbors seem to know but little of their religious tenets. The Mennonites say they are a peaceable and industrious people, but accuse them of hypocrisy; hence, say they, when some of their members were convicted of drunkenness, they denied the fact, and maintained that their members were *all holy*. Very few among them appear to be capable of reading; yet their members seem to have had the doctrines of the sect instilled into them by oral instruction. These lessons are committed to memory. They have no schools for their children; nor did I see a book of any kind among them. I recommended to them the Bible, and offered to supply them with it; but they refused to accept any copies, saying, 'That what was in the Bible was in them also!' I told them that some of their neighbors suspected them of immoral habits; because in speaking of females and children, they did not use the common expressions of 'my wife,' 'my child,' &c.; but 'my sister,' 'our child,' &c. This insinuation they indignantly repelled, exclaiming, 'Are we then beasts!' 'But,' continued they, 'we are accustomed to every kind of false accusation.'

"Their whole aspect, and manner of inter-

course with strangers, indicate a degree of shyness and distrust which is quite extraordinary; hence, also, their evasive answers to all direct inquiries respecting their sect. Some of them, however, ventured to speak with me freely, and with warmth, against the use of images in worship. Their assemblies for religious purposes are held in the open air, or in private, according as the weather suits. They say their doctrines are as old as the world; and they either would not, or could not, give me any particulars of the rise of the sect in Russia. It was, doubtless, the heavy load of superstitious ceremonies in the service of the Greek Church which drove the founders of this sect to reject all ceremony and external ordinances of every kind.

"But we need not wonder at these indications of fear and distrust; for at the very time I visited them, as I afterwards learned, intrigues were on foot in order to ruin them, under the twofold accusation of their harboring deserters, and making proselytes. This attempt gave rise to the following rescript from the late Emperor Alexander to the Governor-General of Cherson.

To the Military Governor of Cherson.

"From two reports which you have sent to the minister of police, respecting the settlers in the district of Melitopol, usually denominated Duchobortzi, I observe that you desire to have them removed from their present situation and settled in another. You are led to make this proposition by certain rumors which have reached you respecting their alleged wicked lives and anti-social principles, and their efforts to propagate the same.

"In consequence of this, and also of petitions sent in by the Duchobortzi themselves, praying for protection from oppression, I have already ordered the minister of police to correspond with you, about procuring the most specific information respecting the Duchobortzi.

"At the same time I judge it necessary to call your attention, in a particular manner, to the original occasion of removing these people from the Ukraine and the other governments, and settling them in the Melitopol district of the Taurian Government, on the stream Molochnia. This removal and colonizing took place, as you may learn, expressly by my orders, given to the Governor of New Russia, Miklashefskoy, on the 26th of January, 1802; partly on account of the miseries which they had suffered, and partly with the view of protecting them from the improper and fruitless severities used against them on account of their peculiar religious opinions. They are now sufficiently separated from intercourse with the rest of the nation, and thereby a stop is put to the further extension of this sect. For several years past the Government has received no complaints

from any quarter respecting disorders among them; and, on this account, it has sufficient reason to believe the measures already adopted adequate.

"The secession of this people from the Orthodox Græco-Russian Church is certainly, on their side, an error, grounded on certain false opinions respecting real worship and the spirit of Christianity. This proceeds from a want of cultivation; for they have a seal of God, but not according to knowledge.

"But, is it proper for an enlightened Christian Government to attempt to bring back the strayed sheep into the bosom of the Church by severe and oppressive means? The doctrine of the Saviour of the world, who appeared on earth to seek and to save that which was lost, can never be instilled into men by force and oppression—can never justify the infliction of temporal ruin on him whom it seeks to bring into the way of truth. True, faith is produced by the grace of God, through conviction; and cometh through instruction, meekness, and, above all, good example. Severity, on the contrary, convinceth not; but hardeneth more and more. All the measures of severity exhausted upon the Duchobortzi, during the thirty years preceding 1801, not only did not root out this sect, but more and more increased the number of its adherents.

"The rulers of several provinces have repeatedly given very favorable reports of the behaviour of the Duchobortzi; though, at the same time, they complained of them for separating from the Orthodox church. The Senators Lapuhin and Neledinskoy Meletski, at the revision of the Government of Ukraine in 1801, having found them there, gave them, in many respects, though they did not defend their errors, a good character; because they judged of them impartially, and according to Christian charity. All these circumstances clearly prove that it is not a removal of these people to new settlements which demands my consideration, but the granting to them speedy protection from all superfluous severities on account of their peculiar opinions in the affairs of salvation and conscience, matters in which force and oppression ought never to have any part.

"The removal and re-settling of them for such a cause, would bring upon them new troubles; and they would thus be punished on account of a mere report, without having the truth of the accusation inquired into and proved. Government never acts thus, on any occasion, or with any person whatever; nor can the Orthodox church, however desirous of bringing back those children who have abandoned her communion, approve of persecution in this matter; which is so contrary to the Spirit of her Head, Christ the Saviour, that He has left to his followers this memorable saying: 'But if

ye had known what that meaneth, I will have mercy and not sacrifice, ye would not have condemned the guiltless.' Matt. xii. 7.

"It is only by acting according to this spirit, the spirit of true Christianity, that the desired object is ever likely to be attained.

"This colony I therefore commit to your own particular and immediate inspection and care. Not trusting to the reports of any one, you will not fail, impartially, to examine into all the circumstances of the case yourself; learn, in particular, their manner of life and conversation, viewing them with the eye of an impartial and watchful ruler, who seeks the prosperity of government in promoting the good of the different classes of its subjects committed to his care. It is necessary that all should feel that they live under the security and protection of the laws; then it may be expected that they will love and feel attachment to the Government, and look for justice consistent with the laws, which are so beneficent to them. Should you even discover that there are amongst the colonists those who conceal deserters—or they try to seduce others from the National Church into their own way of thinking about religion—then turn the force of the law against such acts only as are contrary to it, and thereby put a stop to the evil. But, even then, it must not be allowed that for the sake of one, or even several offenders convicted of these crimes, that the whole society of the settlers, who have had no part in them, should be involved or suffered persecution.

"On occasions of this kind, when reports and accusations are sent in, an attentive inquiry is necessary to ascertain by whom such accusations are made, and what may be their probable motive for making them. Thus the two Duchobortzi mentioned in your reports, who, after their return to the Orthodox church, accused this society of various crimes, and gave information respecting the wicked lives which its members led, may have done all this out of anger or revenge; for it may very easily have happened, that they themselves were excluded from the Society because of their bad conduct, or left it on account of some quarrel or enmity. The mere accusation of such persons hardly deserves attention at all, and ought never to serve as the foundation of an immediate and severe censure, apprehension, imprisonment, and persecution of people not yet convicted of any evil intentions or actions.

"Even the very examination into a suspected offence ought to be conducted in such a way that the innocent may on no occasion suffer in consequence of it. You will therefore not fail to conform punctually to these my sentiments here expressed; and from following this course I anticipate every possible success.

"In the mean time you will report to me

fully concerning the measures you adopt, and the discoveries you make, after taking this colony under your own immediate protection.

"ALEXANDER.

"St. Petersburg, Dec. 9, 1816."

I shall here insert a document which will furnish a clearer view of their principles, and also a specimen of the manner in which they used to be treated by their spiritual judges. It was transmitted to the Governor-General of Harkoff, by Gabriel, metropolitan of Novogrod and St. Petersburg, accompanied by the following letter, dated May 12, 1792:—

"Sir,—Michael Stehareff, Anikie and Timothy Suhareff, sent by your excellency from the vicinity of Harkoff, have been admonished by Innokentie, rector of the Nevskoy Seminary and Archimandrite. The conversation which took place between them I forward to you, along with this letter.

"I knew this sect as early as 1768. I then admonished them, and succeeded in turning several to the Church; but on their returning home, they again fell into their former errors. Since I became Archbishop of St. Petersburg, I have also spoken to some of the Don Kozacks; but they remain obstinate. Their obstinacy is founded on enthusiasm: all the demonstration which is presented to them they despise, saying, that 'God is present in their souls, and He instructs them; how then shall they harken to a man?' They have such exalted ideas of their own holiness, that they respect that man only in whom they see the image of God; that is perfect holiness. They say that every one of them may be a prophet or an apostle, and therefore they are zealous propagators of their own sect. They make the sacraments consist only in a spiritual reception of them, and therefore reject infant baptism. The opinions held by them not only establish equality, but also exclude the distinction of ruler and subject; such opinions are therefore the more dangerous, because they may become attractive to the peasantry. The truth of this Germany has experienced. Their origin is to be sought for among the Anabaptists or Quakers. I know the course of their opinions; and we can have no hope that they will desist from spreading abroad this evil.

"These are my thoughts, which I have considered it my duty to communicate to your excellency.

"With sincere respect, I am, &c.,

"GABRIEL,

"Metropolitan of Novogrod and St. Petersburg, May 12, 1792."

(To be continued.)

"*They shall know Me.*"—To know God indeed, is to have such a knowledge of His glorious goodness as shall fill us with holy *delight* in Him, intense desire after communion with

Him, and enjoyment of His favor. Farther, it is so to behold His glory, as to be ourselves *transformed* into the same image of holiness and goodness: to be ourselves "partakers of the divine nature."—*Goode.*

FRIENDS' INTELLIGENCER.

PHILADELPHIA, FOURTH MONTH 7, 1866.

READING MEETINGS AND CONFERENCES.—

We cannot regard with indifference the increasing earnestness for the prosperity of our Society, manifested in many places, by movements designed to stimulate and awaken religious feeling in the young. The various reading circles and meetings which have been established, are doubtless the result of a want that has long existed among us. The fact, that the young and the middle aged, who have many of them held the faith traditionally from their ancestors, are induced to inquire for themselves concerning this matter, is evidence of spiritual life, and it is greatly to be desired that this interest should be sympathized with, and responded to by their older friends.

The remarks of the late Thomas Pumphrey, at a conference of Friends in England to consider similar "means of religious edification," published several months since in the London Friend, are so pertinent to the subject, we offer them to our readers. "It is quite probable," he said, "that in the fervor of youthful earnestness, zeal might not always be sufficiently tempered with wisdom; but he would rather see a little excess in that direction, than the prevalence of that state of spiritual torpor and stagnation, which was not far removed from spiritual death.

The remedy for that which might otherwise run into excess or unadvised action, was not for our elder friends to stand aloof, and merely to lament over unhallowed activity or misdirected zeal, or for them to seek to put it down by a word of authority; but for them to unite with their younger friends in their meetings and classes, seeking to infuse, by a kindly genial influence, their own maturer wisdom; and to help by their enlarged experience. From his intercourse with his younger brethren and sisters, he was prepared to testify to the loving spirit in which the suggestions and cautions of their elders were received; and he felt sure

that such an intercourse as he recommended, would be useful alike to old and young."

The publication office of "Friends' Intelligencer" has been removed from No. 131, to No. 144 N. Seventh St., nearly opposite, a few doors below Race. Open from 8 o'clock in the morning, until 5 in the afternoon.

DIED, on the 3d of Third month, 1866, in Illinois, WOODEN FOWLER, in the 70th year of his age; a member of Purchase Monthly Meeting, N. Y.

—, suddenly, on the 19th of Third month, 1866, at West Chester, Chester Co., Pa., MARY L. TAYLOR, daughter of Joseph and the late Phebe Taylor, in the 44th year of her age.

Her many engaging and noble qualities attached her closely to her bereaved father and a large family of brothers and sisters. Her strong sympathetic and self-sacrificing nature won her many warm and true friends. Gifted with a fine mind, she was both lovely and interesting. We, who feel sensibly the great loss we have sustained, have the assurance her spirit now enjoys in her Father's house the full fruition of happiness that awaits the pure in heart.

—, of consumption, on the 10th of Twelfth mo., 1865, ELIZABETH A. wife of Thomas Williams, in the 36th year of her age; a member of Abington Monthly Meeting, and daughter of Lukens and Margaret Comly, of Horsham Monthly Meeting, Pa.

—, on 26th of Third month in Philadelphia, at her nephew's, George S. Truman, ESTHER KNIGHT, in her 78th year; a member of Middletown Monthly Meeting and Bristol Particular Meeting, Pennsylvania. Her deportment was that of a Christian; meek, childlike and unselfish.

—, on the 27th of Third month, 1866, MARY B., daughter of John W. and Anna B. Paxson, in her 13th year; belonging to Green street Monthly Meeting.

—, on the 31st of Third month, 1866, HETTY W. wife of W. R. Chapman, and daughter of Rachel and the late Amos Wheaton.

Thus after four days severe illness has been removed from the midst of loving friends one who endeavored to act out "pure religion and undefiled," which the apostle says consists in visiting the widows and the fatherless in their afflictions and keeping ourselves "unspotted from the world, and doubtless she has received the welcome of "well done good and faithful servant, enter thou into the joy of thy Lord."

The closing meeting of this season of Friends' Fuel Association for the Poor will be held this Seventh-day evening, 4th mo. 7th, at 8 o'clock.

JOS. M. TRUMAN, Jr., Clerk.

William Cobbett used to say—That no conversation not fit for the ears of a virtuous young woman was worth hearing, and used to set his face against all association that separated men, especially young men, from their families and members of the other sex. In this there is a sound philosophy. The influence of religion in checking evil conversation, cultivating refined habits and the intellectual and moral qualities in the conversation and deportment of a body of young men, is above every thing else.

For Friends' Intelligencer.

FRIENDS' SOCIAL LYCEUM.

The lecture on the 27th of Third month, was by Dr. Joseph Thomas, on Education. The universal interest and importance of the subject was first spoken of and the meaning of the term defined. To educate is from *e*, "out," and *ducre*, "to lead," means, in its widest sense, to lead out the mental powers, to enlighten the understanding and to develop the character. Viewed with reference to all the powers of man, it seems the great object of the Creator in placing him upon the earth that he should be educated.

Man, especially, of all animals, needs this; his long period of helplessness after birth is an efficient means of education to the parent as well as the to child, while it tends to develop those domestic affections which are so prominent in the human species. The religious sentiment was adverted to as the most distinguishing characteristic of humanity. No other animal but man looks up toward a Supreme being, and no race of men has ever been discovered which is destitute of the sentiment of reverence.

The characteristics of Greece, Rome, China and India, growing out of the predominance in each of a distinctive idea of education, were adverted to. In Greece, the beautiful—in Rome, the heroic—in China, utility—in India, ideality, have been the controlling ideas. Christianity is the only system of religion which has ever taught all the virtues in their fitting relations and proportions. The power of willing and choosing for himself is what makes man godlike; without it there could be no virtue and no sin. It was a fine saying of an eminent German writer, that, "as the strength of the light, so is the strength of the shadow." Moral infirmity and sin are but the gigantic shadow cast by the divine and immortal nature of man.

It is not what a man professes or attempts to teach to others, but what he *actually is*, that constitutes his real influence; the false man necessarily teaches a falsehood, however he may *profess* a respect for the truth. The worldly or covetous man inculcates as far as his influence goes, worldliness or covetousness, whatever profession he may make before the world.

In adverting to the value of education in its relations to the interests of the Society of Friends, Dr. Thomas spoke in warm commendation of the effort to establish Swarthmore College. Though not himself identified with the Society, he recognized the value of persevering and self-sacrificing efforts to promote any views which we fully adopt and approve. Such movements, beside their more direct and obvious results, are useful, as teaching individuals absorbed in the pursuit of wealth the great and indispensable lesson of liberality.

What education is most useful? This ques-

tion was discussed with much zeal and ability, and led to the recommendation of all such mental culture as develops and strengthens the mind. The object should not be to fit the young for the particular line of pursuit which will chiefly occupy their time, so much as to fit them for other and varied mental exercises calculated to relieve the monotony of business life, and to embellish and improve the hours of leisure.

Female education should not be less in extent and variety than that of men, though the tastes and capacities of pupils may be measurably consulted in giving direction to their studies. So great is the importance of habits acquired while young, that the primary school is, in some respects, the most important, and requires the highest capacities in the teacher. Our space will only allow us to give the concluding ideas of this excellent lecture. Dr. Thomas maintains that any teacher who follows the pursuit for merely mercenary motives is unworthy of it; in this respect teaching is like preaching. No teacher is worthy of the charge of the young who has not learned to control his own spirit, and to set a good example in all the great moral attributes, and especially in that strict justice, any departure from which is so easily and instantly recognized by the keen and observing mind of the young.

Review of "A Declaration," &c., published by order of the Yearly Meeting of Orthodox Friends (so called) held in Philadelphia in 1828. BY WM. GIBBONS, M. D.

(Continued from page 60.)

ARTICLE XXXVIII. The Declaration quotes as follows: "Did Jesus Christ, the Saviour, ever have any material blood? Not a drop of it, my friends,—not a drop of it. That blood which cleanseth from all sin was the life of the soul of Jesus."—*Decl.*, p. 25. *Quaker*, vol. 1, p. 41.

George Fox, in his *Doctrinals*, pp. 644–5, says, "So the blood of the *Old Covenant* was the life of the beasts and other creatures; and the blood of the *New Covenant* is the life of Christ Jesus, who saith, '*Except ye eat my flesh, and drink my blood, ye have no life in you.*' So it is by the life, the blood of this spotless lamb, that all his people are sanctified and redeemed to God, and sprinkled and washed, their hearts, consciences, tabernacles, vessels, and altar in the tabernacle; and the fat, or grossness consumed by his fire on the altar: by which they come to be a royal priesthood, offering up *spiritual sacrifices* to God through Jesus Christ. So the blood of the new and everlasting Covenant is the *life of Christ*, which all the believers in the *Light* are to walk in, and to be cleansed by it, giving all honor and glory to God and the Lamb, who hath redeemed us to God by his blood."

"And therefore hath He, out of his infinite love, and tender mercies to the sons of men, prepared a way to draw nigh unto them, even while they are in their sins; which he doth not, but through Jesus Christ the mediator of the new Covenant, whom he hath freely given to be a *LIGHT* unto the dark world, and that he should enlighten every one that cometh into the world: (John i. 9.) Of which number thou [reader] art one, whosoever thou art, and art enlightened by Christ, though thou be yet darkness in thyself, as the Ephesians once were: yet the light shineth in thy darkness, or else there would not be two contrary natures and seeds found working in thee, as there are. And this light wherewith thou art enlightened, is the *LIFE of Jesus*; (John i. 4,) which he hath given a ransom for man."—*Stephen Crisp's Works*, p. 125.

On the same subject, George Whitehead, in the *Christian Quaker*, says, "Was not the object and foundation of faith in *being* through all ages? Did not the prophets believe, and follow the spirit of Christ in them? (1 Peter i.) From whence then was the efficacy of salvation derived? Was it from Spirit, or from flesh? Surely it is the Spirit that quickens: if so, the efficacy was spiritual, *not natural*, or that which *could not be lost*. But whereas so much mention is made of the blood shedding, and so much virtue and efficacy seems to be derived from it, I ask, Is it not a *spiritual, supernatural, virtue, power and efficacy*; that cleanseth, saveth, and justifieth. If it be, how then does it proceed from the shedding of blood *outwardly*? (which shedding by the soldier's spear, was a wicked man's act.) Or from the essence of the blood, if it *perished* and be not in being, as is confessed? And is it good doctrine to say, that the blood, of life, which sanctifies and justifies true believers in all ages, is not in being? When sanctification, purging the conscience, &c., is a real work, can it be done by a thing that is not? And yet we know that Christ, the one offering, the *living sacrifice*, and the blood of the Covenant, which cleanseth them that walk in the Light (1 John i. 7,) is *STILL IN BEING, AND WAS THROUGHOUT ALL AGES.*"—*Christian Quaker*, pp. 45, 46.

"With what doth this Redeemer ['the Eternal Word,'] redeem? Answer. 'With his own life, with his own blood, with his own external virtue and purity. He descendeth into the lower parts of the earth,—becomes flesh there,—sows his own seed in the prepared earth,—begets of his flesh and of his bone, in his own likeness,—and nourisheth up his birth with his *flesh and blood, unto life everlasting.*'

"What is this life, or how doth it first manifest itself in the darkness? Ans. It is the *LIGHT OF MEN*. It is that which gave light to Adam at first,—again to him after the fall, and

to all men since the fall. It enlightens in nature; it enlightened under the law. It did enlighten under the Gospel before the apostasy; and again since the apostasy."—*Isaac Pennington*, vol. 2, p. 281.

"But in this notion of satisfaction, he [an opposer] appears very short and shallow; though it be not a Scripture phrase, as T. Danson grants; and though it depend but upon 'some notions of law,' as Doctor Owen saith,—That all men's debts should be so strictly paid, or such a severe satisfaction made, to vindicate justice, by Christ in their stead, which God never imposed on the Son of his love, and that for sins past, present, and to come, (as some say,) is inconsistent."—*George Whitehead in Christian Quaker*, p. 322.

The same writer says, "The Quakers see no need of directing men to the type for the antitype, viz., neither to the outward temple, nor yet to Jerusalem,—to Jesus Christ, or to his BLOOD; knowing that neither the righteousness of faith, nor the word of it, doth so direct. (Rom. x.) And is it the Baptist's doctrine to direct men to the material temple and Jerusalem,—the type for the antitype? What nonsense and darkness is this! And where do the Scriptures say, the blood was there shed for justification; and then men must be directed to Jerusalem to it? (whereas that blood shed, is not in being). But the true apostle directed them to the LIGHT, for the blood of Jesus Christ to cleanse them from all sin."—*George Whitehead's Life and Light of Christ within*, p. 34.

"For he that delighteth not in sacrifice and burnt-offerings, neither could he delight in hyssop, or water, or blood, outward or natural, but in that which melteth the heart, and purifieth the conscience from that which is dead and unclean, in that is God's delight; and in that which is melted and broken, and purified by it."—*I. Pennington*, vol. 4, p. 130.

"My first testimony," says William Penn, "is out of that great English author and worthy man, Bishop Jewell, who, speaking of what Christ was to the Jews in the wilderness, says thus: 'Christ had not yet taken upon him a natural body, yet they did eat his body. He had not yet shed his blood, yet they drank his blood.' St. Paul saith, 'All did eat the same spiritual meat;' that is, the body of Christ: 'all did drink the same spiritual drink;' that is, the blood of Christ; and that as verily and truly as we do now. And whosoever then did so eat, lived forever."—*Bishop Jewell's sermon*.

"I think," says William Penn, "a pregnant and apt testimony to Christ being the Christ of God, before his coming in the flesh."

ARTICLE XXXIX. "And there is nothing but a surrender of our own will, that can make

atonement for our sins."—*Quaker*, vol. 1, p. 196.

"Nothing can atone for sin, but that which induced us to sin."—Vol. 2, p. 271.

"And what are we to do? We are to give up this life [our will] to suffer, and die upon the cross; for this is the atonement for all our sins."—*Ibid*, p. 272.

This article is composed of detached sentences, taken from the sermons; and in order that the subject may be fairly represented, we will supply the context for explanation; the extracts being included in brackets.

"We must die to self, and all its operations. It is the death that is pointed out by the death of Jesus: that was outward, but we must die this inward death in our souls. And when this is the case, it will cause a resurrection by the grace and power of God. For He that raised up Jesus from the dead outwardly, will cause us to be raised up into newness of life; for they that are baptized into Christ, are baptized into his death. And all those that are willing to be baptized into his death, it must be by obedience to the grace of God,—by obedience to its teaching as to what we are to give up and surrender. And what is it? It is the life of man that is to be delivered up, as the natural life of Jesus was. And that answered a peculiar purpose to the Jewish nation, as it put an end to their testimonies, their law and covenant,—that they might enter into a better covenant, wherein the sacrifice was to be the life of the creature [for nothing can atone for sin, but that which induced us to sin.] Here we must die to all the sins which we have committed, in our own will."

"Jesus Christ did not come to do his own will; but the will of Him that sent him. Every thing that we do in our own will, will never do at all; it is transgression. For, by indulging this will, we continually oppose God, and reject his counsel; we take the seat of God in the heart, and exalt ourselves above all that is called God, or that is worshiped. [And what are we to do? We are to give up this life to suffer and die upon the cross: for this is the atonement for all our sins.] So far as we give up the life that causes us to sin, so far He is reconciled to us, as in the case of the prodigal."

This great Gospel doctrine was preached by Christ in that "prepared body," as recorded by all the evangelists. "Then said Jesus unto his disciples, 'If any man will come after me, let him deny himself, and take up his cross, and follow me. For whosoever will save his life, shall lose it; and whosoever will lose his life for my sake, shall find it.'"—*Matt. ch. xvi. 24, 25.*

"Ye must come to the Word of faith, to which Paul directs, (Rom. x. 6,) by the hearing whereof is the justification, and not by a

bare believing that Christ's blood was shed : for it is *the virtue of the blood which saves* ; which virtue is in the LIVING WORD, and is *felt and received in hearing, believing, and OBEYING that Word* ; thereby bringing into *unity and conformity* with him, both in his death, and in his resurrection and life. [That is, to 'give up this life to suffer and die upon the cross,' or surrendering 'our will.'] This is the ONLY WAY TO LIFE ; be not deceived : THERE IS NOT, NOR EVER WAS, ANY OTHER."—*Isaac Pennington*, vol. 2, p. 58 ; also parallel passages from *George Fox's Doctrinals*, p. 646, 775, and *Christian Quaker*, p. 205.

(To be continued.)

KNOCKING, EVER KNOCKING.

BY HARRIET BEECHER STOWE.

Suggested by Hunt's Picture of the 'Light of the World.'

"Behold, I stand at the door and knock.

Knocking, knocking, ever knocking ?
Who is there ?

'Tis a pilgrim strange and kingly,
Never such was seen before—
Ah, sweet soul, for such a wonder,
Undo the door.

No—that door is hard to open ;
Hinges rusty, latch is broken ;
Bid Him go.
Wherefore with that knocking dreary
Scare the sleep from one so weary
Say Him—no.

Knocking, knocking, ever knocking ?
What ! Still there ?
O, sweet soul, but once behold him,
With the glory-crowned hair ;
And those eyes, so strange and tender,
Waiting there ;
Open ! Open ! Once behold Him,
Him, so fair.

Ah, that door ? Why wilt Thou vex me.
Coming ever to perplex me ?
For the key is stiffly rusty,
And the bolt is clogged and dusty ;
Many-fingered ivy vine
Seals it fast with twist and twine ;
Weeds of years and years before,
Choke the passage of that door.

Knocking ! Knocking ! What ? Still knocking ?
He still there ?
What's the hour ? The night is waning—
In my heart a drear complaining,
And a chilly sad unrest !
Ah, this knocking ! It disturbs me,
Scares my sleep with dreams unblest !
Give me rest,
Rest—ah, rest !

Rest, dear soul, He longs to give thee ;
Thou hast only dreamed of pleasure,
Dreamed of gifts and golden treasure,
Dreamed of jewels in thy keeping,
Waked to weariness of weeping—
Open to thy soul's one Lover,
And thy night of dreams is over—
The true gifts He brings have seeming
More than all thy faded dreaming !

Did she open ? Doth she ? Will she ?
So, as wondering we behold,
Grows a picture to a sign
Pressed upon your soul and mine ;
For in every breath that liveth
Is that strange mysterious door ;
The forsaken and betangled,
Ivy-gnarled and weed-bejangled,
Dusty, rusty and forgotten—
There the pierced hand still knocketh,
And with ever patient watching,
With the sad eyes true and tender,
With the glory-crowned hair—
Still a God is waiting there.

For Friends' Intelligencer.

FAMILIAR INSECTS.

BY I. HICES.

(Concluded from page 55.)

The crickets are also singing insects, and as they are very common, we will give them a little notice. The "cricket on the hearth" is more poetical than useful, as we find them. Though they chirp away through the livelong night, we have recollections of carpets gnawed and woolen garments rendered useless by these insects.

Our common crickets are classed as house, field and tree crickets. The field crickets destroy large quantities of grain, grass and leaves of plants, and they do not refuse a bite of fruit. They are said to be very quarrelsome, and to have frequent battles ; and as the house cricket is the smallest, it is sometimes recommended to bring in a few field crickets, to clear the house of these unwelcome visitors. The field crickets make holes, into which they carry their provision, by boring with their long piercers into the ground, and they mostly back down into their holes on the approach of man. They deposit numerous eggs in the autumn, which are hatched out the succeeding summer, the old insects mostly dying before winter. We like to see the pigs rooting over the stones, turning up the sods and sticks, searching for crickets, and to watch them smack their mouths with satisfaction over the dainty morsel. Poultry are very fond of them, and the skunk makes a fine supper, in the fall of the year, where they are abundant. Tree crickets are pretty, delicate things, and quite innocent in their looks, and they are great musicians. This shrill sound is produced by rubbing one wing cover against the other. Should one of these little fellows obtain entrance to our chamber, we had better eject him at once, for to the nervous person sleep is out of the question. The wing covers of the male, who is the singer, are nearly white, and the other parts of the body yellowish. The female is pale green, mixed with darker colors on the body and legs.

The tiger beetles interested us very much last season. They deserve their name, for they are very tigers among insects, feeding on cater-

pillars, flies and bugs. On a warm summer day they will often be seen springing up before us, generally by the path or road, and flying ten or twenty feet and alighting again, and then repeating their flight. Their long cylindrical bodies are ornamented with splendid colors, reflecting on the sunshine green, olive and grey, and, when caught, which is not easily done, except when chilled, they are found to be of a brilliant green color. They are armed with long and very strong jaws, to hold their prey; and, from the great amount of noxious insects they destroy, they should be known and respected. There are many other beetles that destroy insects that are injurious, with which we should be acquainted, as through them we are informed of one of the methods the Ruler of the universe adopts to regulate life and production on our earth.

We perceive how wonderfully the Creator has built and formed with delicate nicety the structure of even the smallest insect; how he has provided it with senses and faculties for the end of its creation, and made it an essential part in the economy of nature.

We are well aware that the only true enjoyment is found in a life dedicated to the service of the Divine Master in whatever condition that life may be placed. But the lover of nature finds an added enjoyment, for in the plans, wisdom and beauty of creation he perceives that thousands of these glorious phenomena of life stand before him as monuments of Omnipresent goodness and love, and that ten thousand times ten thousand holy influences and monitions minister unto him.

For Friends' Intelligence.

PETROLEUM LAMP EXPLOSIONS.

These explosions, as they are generally called, are becoming so frequent as to give just cause for anxiety, especially in the rural districts, and in cities among that class who cannot command the conveniences of gas lights. When petroleum was first introduced for illuminating purposes, it was supposed we had found an article reliably safe; but experience has proved that it is liable to most dangerous accidents. Within a short time, the New York papers have reported two lamp explosions, causing the death of three or four persons, and a serious injury of as many more; resulting in one instance, it is said, from attempting to fill the lamp while burning; in the other, the cause not stated.

Perhaps the article is more inflammable now than formerly, and if so, it is probably caused by having combined with it more naphtha. Naphtha, or, as it is now called, "Gasolene," a name which represents both naphtha and benzine, is separated from petroleum in the process of refining, and being worth not more than one-third the value of refined petroleum, manufac-

turers or refiners find it advantageous to separate as little of it as possible; and being undistinguishable from petroleum by sight, it can be mixed with the merchantable article to great pecuniary profit to the vender, although to the great hazard of fatal accidents to the consumer. There is cause to believe that some accidents have occurred or been much aggravated by the presence of an undue proportion of gasolene. Consumers have to depend not only upon the care of inspectors, but also upon the fairness of venders; for the admixture of a few gallons of gasolene, worth twenty cents per gallon, with a barrel of petroleum, so greatly increases the profit of sales, as to present a strong temptation to adulterate.

Petroleum inspectors use a hydrometer, a small glass tube, about five inches long, provided with a grade of figures somewhat like a thermometer, numbering from ten to eighty. When this tube is immersed in water, it will settle to the figure ten: place it in petroleum, and it will sink to about fifty: when tried in gasolene it will sink as low as about seventy-five, indicating a levity, and of course, an inflammability, unsafe for purposes of illumination. A hydrometer, therefore, is a pretty accurate test of the presence of an undue proportion of gasolene, and costing only one dollar, is a neat and convenient test of the weight of other fluids compared with water.

Dealers have another instrument, called "The Oil Test," used for the purpose of ascertaining at what temperature a sample of oil will burn (not explode) upon applying a torch to the surface. This instrument is arranged by having a small metallic cup, with oil in it, placed over a lamp, but sufficiently disconnected to prevent communication between the blaze of the lamp and the oil which is about to be tested. Connected with or immersed in the oil, is the bulb of an ordinary thermometer, so arranged as to be influenced by the warmth of the oil. When the oil does not burn upon the surface, upon the application of a torch, until the thermometer indicates a temperature of 110° Fahrenheit, it is considered strictly merchantable; but either law or the custom of trade, it is said, does not reject an article if it inflames from the surface at a temperature as low as 92°.

This wide range indicates the presence of an additional proportion of gasolene, increasing as the temperature descends from 110° to 92°. The question is worthy of consideration, whether lamp explosions, as they are generally called, do not frequently proceed from, or have their consequences greatly aggravated by, an undue mixture of gasolene with petroleum, as indicated by the above stated range, in different specimens.

There are some circumstances, however, connected with the operations of the oil test, that

are calculated to throw a doubt over the theory that ascribes lamp explosions to the presence of gas in the lamp. It does not appear that any explosion has ever ensued in experimenting with the oil test, and yet as the gas extricated by the process is of the same nature as that which is supposed to produce explosions, it is difficult to understand why the oil in the test should not also explode, especially as it is experimented upon by firing the gas, the very thing which is supposed to explode lamps.

In investigating the causes of these disasters, the evidences strongly favor the opinion that in most instances the lamp does not break or burst in consequence of the gas or oil in the lamp becoming ignited; in other words, that no explosion takes place; but rather, like other glass vessels, they sometimes break from causes unexplainable; sometimes by an injury received at the moment, or at some previous unknown or unremembered period, but the extent of the injury was not indicated until it fell to pieces in the hand of the sufferer.

One instance has come to my knowledge of a lamp breaking some quarter of an hour after the light had been extinguished; there was no report like an explosion, and the only intimation heard was a sharp click, peculiar to the breaking of glass vessels. It was not produced by the ignition of gas in the lamp, or it would have been discovered the room being dark. The only change discovered was the fracture of the glass and the escape of the oil. If the lamp at that moment had been burning in a person's hand, it would doubtless have fallen to pieces, scattering the fluid, perhaps in a burning condition, over the person's apparel, and not unlikely, would have added another to the already numerous instances of death by this valuable yet dangerous element. Other instances could be cited corroborative of the sentiment that these disasters are not necessarily the result of what are supposed to be lamp explosions.

If the opinion should prove to be correct, that what are termed lamp explosions do not generally proceed from ignited gas, but from the fracture of the glass by other causes, then the substitution of metallic for glass lamps would greatly reduce the frequency of these disasters: and would also preclude another source of danger, arising from the lamp socket becoming loose in the neck of the lamp; this socket in glass lamps is secured generally by cement, and not unfrequently becomes so loose, that a small inclination of the lamp renders both socket and burner liable to fall over, in which case, the wick, dripping with oil, would be liable to inflame instantaneously.

But metallic lamps having the burner fixed by a screw fastening, could be so firmly secured as to preclude accidents of this kind, and also

to a great extent it is believed those disasters produced from the ignition of gas in the vessel, if such instances do really occur.

And even if the gas theory should prove to be correct, and the blaze of the wick should ignite the gas in the lamp, there is no reason to suppose that the expansive force would burst a metallic lamp, for it would expend its power, and become inert in a moment for want of a supply of oxygen. It would likely be otherwise with glass, whose power of resistance is exceedingly feeble.

The foregoing arguments favor the opinion that lamp disasters are liable to proceed from other causes than gas combustion, and also, that, whether these accidents arise from gas explosions, from a fracture of the glass lamp, or from other causes, their frequency and danger would probably be much reduced by substituting metallic lamps for glass.

These remarks are offered for the purpose of giving some direction to public opinion in relation to the subject treated upon, and also with the hope that they may lead to the discovery of some preventive, by which these sad visitations may be avoided.

Those who have never witnessed the sad effects of such an accident in their own neighborhood, or among their own kindred, may perhaps be excused for not feeling deeply for the sufferers; but having known, as I have, an interesting young married woman, the mother of two infant children, cut down in a moment, in the vigor of womanhood, and from the enjoyment of health and domestic felicity, prostrated at once upon the bed of death, my tenderest sensibility has been awakened, and has urged me to make an effort towards protecting others from a similar calamity.

The lines of the English Quaker poet, so pathetically describes the scene to which allusion has just been made, that I am more than willing to have them appended.

"A sister,—daughter,—mother,—wife!
At noon,—life smiled before thee,
Night,—brought nature's mortal strife
Day,—death's conquest o'er thee."

LONG ISLAND, 3d mo., 1866.

G. F.

Extract from Dr. Livingstone's "Narrative of an Expedition to Zambesi and its Tributaries: and of the Discovery of the Lakes Shirwa and Nyassa."

The first twenty miles of the Kongone are enclosed in a mangrove jungle; some of the trees are ornamented with orchilla weed, which appears never to have been gathered. Huge ferns, palm bushes, and occasionally wild date palms peer out in the forest, which consists of different species of mangroves; the bunches of bright yellow, though scarcely edible, fruit contrasting prettily with the graceful green

leaves. In some spots the milola, an umbrageous hibiscus, with large yellowish flowers, grows in masses along the bank. Its bark is made into cordage, and is especially valuable for the manufacture of ropes attached to harpoons for killing the hippopotamus. The pandanus, or screw palm, from which sugar bags are made in the Mauritius, also appears: and on coming out of the canal into the Zambesi, many are so tall as in the distance to remind us of the steeples of our native land, and make us relish the remark of an old sailor, "That but one thing was wanting to complete the picture, and that was 'a grog-shop near the church.'"

We find also a few guava and lime trees growing wild, but the natives claim the crops. The dark woods resound with the lively and exultant song of the kinghunter (*halcyon striolata*), as he sits perched on high among the trees. As the steamer moves on through the winding channel, a pretty little heron or bright kingfisher darts out in alarm from the edge of the bank, flies on ahead a short distance, and settles quietly down, to be again frightened off in a few seconds as we approach. The magnificent fish hawk (*halietus vocifer*) sits on the top of a mangrove tree, digesting his morning meal of fresh fish, and is clearly unwilling to stir until the imminence of the danger compels him at last to spread his great wings for flight. The glossy ibis, acute of ear to a remarkable degree, hears from afar the unwonted sound of the paddles, and, springing from the mud where his family has been quietly feasting, is off, screaming out his loud, harsh and defiant ha! ha! ha! long before the danger is near.

The mangroves are now left behind, and are succeeded by vast level plains of rich, dark soil covered with gigantic grasses, so tall that they tower over one's head, and render hunting impossible. Beginning in July, the grass is burned off every year after it has become dry. These fires prevent the growth of any great amount of timber, as only a few trees from among the more hardy kinds, such as the borassus palm and lignum vitæ, can live through the sea of fire, which annually roars across the plains. Several native huts now peep out from the bananas and cocoa palms on the right bank; they stand on piles a few feet above the low damp ground, and their owners enter them by means of ladders. The soil is wonderfully rich, and the gardens are really excellent. Rice is cultivated largely; sweet potatoes, pumpkins, tomatoes, cabbages, onions (shalots) peas, a little cotton, and sugar-cane are also raised. It is said that English potatoes, when planted at Quillimane on soil resembling this, in the course of two years become in taste like sweet-potatoes (*convolvulus batatas*), and are like our potato frosted.

The whole of the fertile region extending

from the Kongone canal to beyond Mazaro, some eighty miles in length and fifty in breadth, is admirably adapted for the growth of sugar-cane; and were it in the hands of our friends at the Cape would supply all Europe with sugar. The remarkably few people seen appeared to be tolerably well fed, but there was a shivering dearth of clothing among them. All were blacks, and nearly all Portuguese "colonos," or serfs. They manifested no fear of white men, and stood in groups on the bank, gazing in astonishment at the steamers, especially at the Pearl, which accompanied us thus far up the river. One old man who came on board remarked that never before had he seen any vessel so large as the Pearl; it was like a village: "Was it made out of one tree?" All were eager traders, and soon came off to the ship in light, swift canoes with every kind of fruit and food they possessed; a few brought honey and beeswax, which are found in quantities in the mangrove forests. As the ships steamed off, many anxious sellers ran along the bank, holding up fowls, baskets of rice and meal, and shouting "Malonda, malonda" (things for sale,) while others followed in canoes, which they sent through the water with great velocity by means of short broad-bladed paddles.

Genuine neighborly love knows no distinction of persons. It is like the Sun, which does not ask on what it shall shine, or what it shall warm; but shines and warms by the very law of its own being. So there is nothing hidden from its light and heat.

HENRY M. LAING, Treasurer,
No. 30 N. Third St.

Philada., 3d mo. 31, 1866.

ITEMS.

The Civil Right bill was vetoed by the President on the 27th ult.

Solomon Foot, a Senator in Congress from the State of Vermont, died in Washington, on the 28th of last month.

Congress.—In the Senate, the bill to provide for the transfer of the library of the Smithsonian institute to the library of Congress, was passed. Stewart, of Nevada, submitted a substitute for his recent joint resolution. It provides that there shall be no discrimination in civil rights and liabilities, nor in the exercise of the elective franchise, and extends general amnesty in exchange for universal suffrage.

House.—The bill amending the postal law, was

passed. The bill provides that letters endorsed shall be returned to the writers, that dead letters and prepaid letters, shall be forwarded, at the request of the writer, from one office to another without additional charge, and it increases the amount for which a money order may be issued to fifty dollars, and extends the time within which it is payable to a year. The following bills were introduced and appropriately referred: A bill to establish a bureau of manufacturing statistics in the Treasury Department; a bill to grant certain privileges to the American Sub-marine Telegraph Company; a bill to authorize a railroad from Cumberland, Md., to Pittsburgh, Pa.; a bill granting lands to the State of Michigan, to aid in the construction of a ship-canal to connect Lake Superior with Lake La Belle, in said State; a resolution was adopted instructing the Committee on Banks and Currency to inquire as to whether it would be expedient to make the stock of national banks taxable in the place where the holder thereof has his legal residence. The consideration of reports from the Committee on Indian Affairs occupied much attention.

INDIAN AFFAIRS.—The Commissioner of Indian Affairs has received advices that the Indians are "making ample arrangements to till their lands just as soon as the cold weather disappears."

The Commissioner recently forwarded to the Indian tribes in the Southern Superintendency a quantity of farming implements, seeds, and cereals.

An official proclamation has been made of the ratification of the treaty between the United States and the chiefs and headmen of the Winnecongan band of Dakota or Sioux Indians. These Indians bound themselves to discontinue for the future all attacks upon the persons or property of other tribes unless first assailed by them, and to use their influence to promote peace everywhere in the region occupied or frequented by them. The band agree to withdraw from the routes overland already established or hereafter to be established throughout their country, and in consideration of this the United States agree to pay them \$10,000 annually, for ten years, in such articles as the Secretary of the Interior may direct.

THE FREEDMEN.—The report of the superintendent of schools in Texas shows that there were twenty-seven day-schools, eight night-schools, and ten first-day schools, with twenty-eight teachers, and with a total attendance of 2,440 pupils, and these schools do not cost the Government a dollar, being supported by a monthly tuition fee of one dollar and a half paid by each scholar, which sum suffices to support the teachers.

The following circular from the freedmen's bureau, contains information for those applying for laborers.

WAR DEPARTMENT.

BUREAU OF REFUGEES, FREEDMEN AND ABANDONED LANDS,
WASHINGTON, March 8, 1866.
CIRCULAR LETTER.

As numerous communications are addressed to this office asking information in regard to procuring colored house servants, farm hands, and laborers, from the number of freedmen in this District, applying for situations through the intelligence office connected with the bureau, and under the charge of Captain Wm. F. Spurgeon, at Wisewell barracks, Seventh and O streets, Washington, D. C., and at the corner of St. Asaph and Cameron streets, Alexandria, under the charge of Major S. P. Lee, superintendent, the following is published for the information of all concerned:

Employees and freedmen agree upon the amount of wages to be paid and the period of service. Each

party is bound to a faithful performance of the contract; the freedmen agreeing that 25 per cent. of their monthly wages may be retained in the hands of the employer until the expiration of their term of service the employer binding himself to a faithful observance of the conditions of the contract in a sum of money equal to the yearly wages of the employes.

These contracts are made and recorded at the intelligence office. A fee of one dollar is charged for each male and fifty cents for each female employe.

Parties at a distance desiring servants and laborers are requested to give timely notice, stating particular locality, terms, wages, period for which service is desired, and other facts of interest, that the agents may be enabled to place the matter properly before the freedmen.

By order of Bvt. Brig. Gen. C. H. HOWARD.

W. W. RODGERS, Major and A. A. A. G.

CHESTERFIELD BOARDING SCHOOL FOR BOYS, situated on the Crosswicks Road, three miles from Bordentown, N. J. The Fifty-Second Session of this Institution will commence on the 21st of Fifth month, 1866, and continue twenty weeks. Terms, \$85; one-half payable in advance, the other in the middle of the session. For further particulars address

HELEW W. RIDGWAY,
47 & 60 av. Crosswicks P. O., Burlington Co., N. J.

BOARDING SCHOOL PROPERTY FOR SALE.—The Springdale Boarding School Property, near Goose Creek Meeting House, Loudoun Co., Va., is now offered for sale on very advantageous terms, to any suitable Friend who will open a Boarding School. It is believed there is now a good opening for a school at this place, both Friends and others being desirous to see one established. For particulars apply to

SAMUEL M. JANNEY,
Lincoln, Loudon Co., Va.

CHESTER ACADEMY.—A Boarding and Day School for both sexes, Broad St., Chester, Pa. Every branch of a solid English Education is taught in this Academy, together with Latin, French and Drawing, in all its varieties. Thoroughness in all the studies is insisted upon, and especial care will be taken to educate the morals as well as the intellect of the pupils. A Primary Department is connected with the school. Pupils can enter at any time.

MEMOIR OF THE LATE JOHN WATSON, OF CANADA WEST.

(Continued from page 67.)

In Ceresstown there were not many families, and though some of them were of the Society of Friends, I had never read of nor known their principles; but, as I was now desirous of becoming acquainted with them, I mingled with those making that profession. And here it pleased the Heavenly Father so to open my eyes, that I found that which I had been looking for abroad was to be found at home. I read Penn's No Cross No Crown, and Phipp on the State of Man. The scales fell from my eyes, and I found a Christ revealed in me the only hope of Glory. I now recognized that the Lord had been with me and I knew it not. I felt the love of God shed abroad and extended to me a poor creature, but the vastness of the work before me appeared to be great indeed. I saw I had much to unlearn before I could commence learning to profit in this, to me, new school. Greatly did I desire that I might obtain the righteousness of that kingdom of which dear Mary Witchell spake. I found I must know virtue to supplant vice, that the remainder of that which produced condemnation or wrath in myself I might be restrained. I often made covenants too much in my own strength; these seemed written on sand, and often I had to lament my weakness in bitterness of spirit. Still I felt the redeeming hand, the

restraining power of the Most High to be near at times. I said in mine heart, "Thy spirit is good, lead me into the land of uprightness." A departure from the leadings and guidance of this spirit is the source of all the errors, schisms, parties and sects there are in the world, too many being found teaching for doctrine the commandments of men. I have long been persuaded that differences in opinion do not hinder the operations of Divine Grace; that God is no respecter of persons. They that fear Him, and are by the assistance of His Holy Spirit led into the land of uprightness, will be accepted of Him, and this fear, a true Christian's fear, is that which love and gratitude inspire.

Having received an invitation from a young friend living at Ceresstown, who was about to be married to a member of the same Society at Muncy, to accompany him, I accepted it, and was permitted to sit in the Monthly Meeting with them. On account of the distance which they came, Friends allowed them to proceed differently from their usual way. This introduced me into an acquaintance with an interesting and exemplary family, with whom at a subsequent period I made some stay. The mother of this family in a particular manner reminded me of that pattern of perfection described by Milton, "Grace was in all her steps, in all her gestures, dignity and love." Here I saw the principles of Friends exemplified in practice, which helped to strengthen my convictions. After becoming an inmate for a while

of this interesting family, I requested to become a member of the Society of Friends. I thought their watchful care might help and preserve me, for I yet found the root of evil was not sufficiently subdued. My request was in much sincerity. Friends appointed a committee to visit me. I could say but little to them. One of the Friends, knowing I received very frequently letters from female friends, thought marriage was my object, which I could truly say was not; but as I was precluded from giving much of my experience, they were not hasty in receiving me into membership.

I think the report of the committee was that under all circumstances they thought it would be best to receive me. Sometime after I had been received, while still living at Muncy, I went to Williamsport and got into company with some young acquaintances there, and a dance being proposed, instead of leaving them, I concluded to stay awhile, but not to partake of the amusement; but, in an unguarded moment, a dance having been proposed, to which they were not accustomed, and I, having been taught by a professed teacher of dancing in England, thought I could show them the way. I got up, and was about giving them the figure, when I was struck with a remorse that went to my soul. I appeared like a fool, and left the company. The anguish of mind felt by me for this early departure, no language can portray. This circumstance occurred at a private house; and I went from there to the bank of the Susquehanna river, where I walked up and down under strong temptation, and from thence went to a tavern, where I found myself in the morning in bed, not knowing how I came there.

I then set out to return to Muncy. About half way there, while going down hill driving pretty fast, the wheel struck a stub or stone and upset the chaise; not being hurt, I lifted up the chaise, got in and drove on. The shock of upsetting roused my mind, and I was impressed with a sense of my deviation, and sought and obtained forgiveness from my Heavenly Father. I reached my destination in safety; said nothing of the circumstance to any at that time, and to but few since; but I have always considered it an eventful occurrence in my life, and as such, thus record it. This miss, though unknown to Friends, incited me to increasing watchfulness and to seek more earnestly for Divine preservation.

Soon after the occurrence just related, I felt my mind drawn to seek a companion, and I earnestly sought for right direction in this important concern; and a helpmeet indeed was given me. I was married, according to the order of Friends, at Fishing Creek, to Ann Eves, daughter of John and Edith Eves, on the 25th day of Ninth month, 1806. She was one of a

family of fifteen children, all of whom have now gone to their final rest.

Soon after our marriage we removed to Ceres-town, and with a partner who came over the sea with me, I commenced building a saw-mill on a heavy stream, the first one built in that section, with the intention of conveying lumber to a distant market. Most of the mill irons had to be obtained at Williamsport, and labor and provisions being very high, the expense of our undertaking was very great. The first dam, a very expensive one, was carried off by a freshet; the last one, I often thought, was remarkably preserved. We succeeded at length in doing a great business. But not having received much remuneration from my partner for my labor, I obtained a settlement with him, and took the whole of the business on myself; and after having sawed much lumber, and getting it nearly ready to raft, it was all, with the house for sawyers, stabling and other property, consumed by fire. But without asking or receiving any aid, I set about rebuilding the same; and while progressing in the work, was fully brought to the conclusion that I was not in the right place, because I found the lumbering and rafting business not adapted to the needs of my oft deeply-exercised mind, and at length gave up all my concerns in this settlement, and sold my interest in the saw-mill and other property for lumber, to be delivered to me at certain seasons. I then removed to Fishing Creek, where my wife's mother and friends resided. I believe I was right in thus moving, but I realized that if I could take the wings of the morning and fly to the uttermost parts of the earth, the Divine hand could there find me, and I have found that He had a furnace in every place. Then, and many times since, I knew the rod and who appointed it, and at times could acknowledge, "The Lord knoweth the way that I take, and when He hath tried me I shall come forth like gold." And if I had always hearkened to and obeyed the Divine counsel, the gold would not have become so much dimmed or the fine gold changed. If faithfulness had kept pace with knowledge, my usefulness in the Church Militant would have been much more enlarged than it yet has been. Now in these days last referred to, being much reduced in outward circumstances, with an increasing family to support, my soul was humbled. I looked to my Heavenly Father, and said, do with me what thou pleasest. I am the clay; Thou, O Lord, art the potter; make of me what thou wilt. I felt that I was passing through the ministration of death and condemnation, and that there was no other way but to abide therein the Lord's time. I saw the glory of it, and said, Let not thine eye pity nor thy hand spare till judgment is brought forth unto victory; "for if the ministration of condemnation be glory, much more doth the

ministration of righteousness exceed in glory." I bore the yoke and kept silence, for I had no liberty to open my mouth to any. My distress was so great, it seemed at times as if I could wish the mountains and the hills to cover me.

In these days of humiliation, it was given me to see that if I was faithful I should have to declare of the Lord's dealings with me and of His goodness to the children of men. The sense of my uncleanness and unfitness bore heavily upon me, but it pleased Infinite Goodness to sound in my ear, "What God hath cleansed, or is cleansing, call not thou common or unclean;" and I then said in my heart I would yield to the impressions of duty; but often when a word or two came for me to express in the assemblies of the people, I held back, and then sorrow and distress would cover my mind. At length I yielded to an intimation of duty, and broke the silence of a meeting in a few words, in a call to "Awaken unto righteousness and sin not, for some have not the knowledge of God. I speak this to your shame: too many have not that knowledge that enables them to bring forth the fruits of righteousness." Friends felt much sympathy with me, solemnity covered the meeting, and I returned home in peace.

(To be continued.)

CONTENTMENT.

There are a hundred successful men where there is one contented man. I can find a score of handsome faces where I can find one happy face—happy in all weathers, and radiant with the sunshine of the heart. I can even find a score of working, zealous Christians where I can encounter a single Christian who, under the o'erbrooding love of God, sits as a robin does on its bough, singing and swinging, without one trouble in its heart, or one discord in its minstrelsy. A downright contented Christian is rare, and all the more attractive for his rarity. What did Paul mean when he said, "I have learned in whatsoever state I am, therewith to be content?" He meant that he was perfectly willing to be just where God placed him, and to do just what God told him, and to suffer just what God laid on him, and to work out, through manifold pains and persecutions, his mighty mission to his race. He knew how to be abased and how to abound—how to be full and how to be hungry. He was not content without work, but content in his work.

Would you wish to live without a trial? Then you would wish to die but half a man.—Without trial you cannot guess at your own strength. Men do not learn to swim on a table; they must go into deep water, and buffet the surges. If you wish to understand their true character—if you would know their whole strength—of

what they are capable, throw them overboard! Over with them and if they are worth saving, they will swim ashore of themselves.

From Meditations on Death and Eternity.

THE WORLD A MIRROR OF ETERNITY.

How gloriously does not the God, who beams upon us from the Heavenly revelations of Jesus, harmonize with the wonderful God who majestically reveals Himself to me and to all nations, at all periods of time, in the varying beauty and grandeur of nature! Mysterious and grand He appears in His action on the world of spirits. Mysterious and grand in the order of the myriads of flaming worlds, which move in their eternally prescribed orbits, without ever diverging from their paths or coming into collision. Mercifully He reigns in the realm of immortal spirits, where His call to happiness penetrates all beings, and His justice rules; mercifully in the sublunary world, where His love is extended even to the lowliest creature.

The longer I consider and weigh the revelations of the Eternal Son, the longer I dwell upon the spectacle of the infinite creation, the more conscious I become of the proximity of God, the more vividly I feel this is not mere mechanical activity. In all the forms of this sublunary world, through all the play of the hidden spiritual forces, there is revealed a Will full of Almighty Power, an Almighty Power full of Wisdom, a Wisdom full of Holiness, full of Love—and this is God! But the nature of God I cannot fathom. A God whose nature I could fathom would not be God, for even the nature of my own soul is a dark riddle to me. Seek not to know wherein consists the essence of the Highest Being; for the essence of even the meanest creature that He has made is an insoluble mystery to thee. Audacious mortal, the longer thou gazest at the dazzling brightness of the sun, the more it blinds thee!

Our knowledge here on earth is but partial, said St. Paul, the wise Disciple of Jesus; "now we see through a glass, darkly, but then we see face to face; now I know in part, but then I shall know even as I also am known. And now abideth faith, hope, charity, these three; but the greatest of these is charity." (1 Cor. xiii. 12, 13.)

Yea, this world, which is for a short time assigned to us as a habitation, is to me as a darkened mirror of eternity. I see here in part that which I shall one day behold with delight in its wonderful totality. What I hope here, will there be fulfilled; and that which is here but an obscure foreshadowing, will there surround me as a bright reality. And the God of Life, whose glory I behold here only in reflection, will be revealed to me in full effulgence, when my immortal spirit shall be immersed in Him and in His bliss.

The world is to me a darkened mirror of eternity. That which I experience in detached fragments in this life, betrays to me what I shall one day experience in a more perfect life. For in the Divine creation all is unbroken unity; all things are connected; there is no interruption of continuity. In the chain of the infinite universe there are no missing links.

The here and the hereafter, life and eternity, are but ONE, form but ONE WHOLE, without interruption. Were my eyesight sufficiently strong, I should discover in the minute seed, which a single blade of grass suffices to conceal, the gigantic tree which at the end of a hundred years will overshadow a whole valley. In everything there is progress, development.

God has diffused throughout the wide universe a vital force, a secret power of animation. This all-animating power manifests itself on every side, yet how rarely do we notice it! All things are imbued with it, and it is constantly renovating the form of whatever is undergoing dissolution. It acts with wonderful energy in the innermost germ of every seed, draws nourishment from all the elements, attracts towards itself the crumbling dust of ages, spreads fresh life through it, and produces a new plant, whose beauty charms us in spring, whose radiant colors dazzle our eyes, whose fragrance delights us, or whose fruits afford us delicious nourishment.

This vital force resides in every part of animal nature, so that the part is hardly separated from the whole, before, in the midst of decay, new life begins to develop itself.

Thus our earthly body likewise is imbued with this vital force. In every minute part of our bodies, also, the wonderful power diffused throughout the universe is at work. It is placed at the service of our spirit as long as the latter dwells in the body. For the benefit of the spirit it animates the delicate nerve tissues, and causes the blood to flow through the labyrinthine passages of the arteries and veins; for the benefit of the spirit it draws nourishment from the elements, brightens the eye, sucks in the fragrant breath of flowers, and carries the tones of the outer world into the innermost recesses of the soul.

When, however, that which is immortal within us outstrips the earthly coil; when the thinking, freely willing, spontaneous power within us, which is subject to special laws of its own, and which we call our spirit, our real self, takes leave of the body, then the vital power ceases to perform its functions, and the body perishes.

But, in the same manner as these forces and life-impulses always find new materials which they work into new forms, so also the noblest of all forces, the immortal spirit, called to freedom, to bliss, and to eternal endurance, doth clothe

itself in a new vesture. It neither sleeps nor dies when its first body passes away; and it will not fail to find a new veil in which to shroud itself, when called, perhaps, to act more gloriously, more perfectly, in the sphere of eternal existence. It must be so,—for *naught perishes*. What is death? Nothing more than transformation. The dead flower is transformed into dust, which in time becomes parts of other flowers. And in like manner as the blind life-force, acting according to the eternal laws of God, continues without ceasing, so also the free spirit of man, when relieved from its earthly coil. Thus this world is to us a darkened mirror of eternity.

What eye can measure the boundless universe of God? The strongest telescope of the astronomer fails to discover its limits. Beyond all the stars or worlds which we discern through his instrument, we behold the faint gleams of the pale light of still more distant and unknown realms of space, which may be the reflection of still remoter stars, located in parts of the infinite universe which will ever remain hidden to man.

The wonderful rapidity with which light travels has been calculated; the relative distances have been measured between the sun and the planets that revolve round him, and which borrow their light from him; but to express the relative distances of the greater number of stellar systems, words and numbers fail us. Stars which we see glimmering in the heavens because their light is still-travelling towards us through immeasurable space, may have been long extinguished. New suns may have come into existence at inexpressible distances from us, which we do not see, because the light from them has not reached our eye. So immense is the universe!—Nay, not the universe, but merely the small part of it which we can discover from our earth; and this small part, according to the suppositions of the most distinguished astronomers, is far from the glorious centre round which the worlds revolve. The earth, the sun, the myriad stars, float in the great ocean of space, and revolve round a greater sun which, however, remains hidden from our mortal ken. Each hour the globe we inhabit moves fifteen thousand miles, and each day three hundred and fifty-five thousand miles, onward in space. Hourly and daily the sun, with the eleven planets, (worlds like our own,) and eighteen moons (all of which cannot be seen with the naked eye) belonging to his system, in like manner move along with inconceivable rapidity, without our being able to perceive it. So immeasurable are the distances that separate these worlds belonging to one and the same system, that even after a century's observation, we are hardly able to discern their motion round another—to us unknown—sun.

And these numberless spheres, almost all of which are of infinitely greater magnitude than the globe we inhabit, are intimately connected with each other, in spite of the enormous distances that separate them. Similar to each other in form, they mutually dispense to each other the light which they irradiate, and which is perhaps the same as that which flashes from the thunder cloud, and which beams so brightly in the Aurora Borealis.

Ah! what is the finest masterpiece from the hand of the first human artist compared with the great, the wonderful, the boundless universe whereon God is enthroned! And all these worlds form a unity—are the intimately connected, closely related parts of a continuous whole! From immeasurable distances the one acts upon the other. The moon moves our seas to ebb and flood, and influences the weather on our globe; and in like manner our earth is influenced by the sun, which holds in dependence upon itself, all the spheres floating in space at distances of hundreds of millions of miles from it. In virtue of the as yet undiscovered, and probably ever to us undiscoverable, matter that connects the countless worlds, they are constantly influencing each other. Thus all form but one whole; all are connected by the Almighty Hand of Divine Majesty! And thus this world, little as I know of it, is to me as a darkened mirror of eternity. In this boundless ocean of the universe, wherein nothing is ever annihilated, I also dwell. Like all that belongs to it, I can never cease to exist in it. I also am an inhabitant of the Divine edifice, and the All-Holy One, on whose breath hang myriads of suns, I may call Father! My Father! Here, as there, I am within the bounds of eternity! There is no difference, for all is one! The hours, the years which pass over my head on this earth, are parts of eternity, drops in its ocean in no way separate from it!

(To be continued.)

EFFECTS OF IMPATIENCE.—Nothing more incapacitates a man for the lead than impatience. No constitutionally impatient man, who has indulged his tendency, ever gets to the bottom of things, or knows with any nicety the standing, disposition and circumstances of the people he is thrown, or has thrown himself amongst. Certain salient points he is possessed of, but not what reconciles and accounts for them. Something in him—an obtrusive self, or a train of thought, or liking and antipathies—will always come between him and an impartial judgment. Neither does he win confidence, for he checks the coy, uncertain advances which are the precursors of it. We doubt if a thoroughly impatient man can read the heart or be a fair critic, or understand the rights of any knotty

question, or make himself master of any difficult situation. The power of waiting, deliberating, hanging in suspense, is necessary for all these—the power of staving off for considerable periods of time merely personal learnings.

THE PRISONER.

"My word shall not return unto me void."

Obedience to the Divine Light in the soul is our only safety. This is the distinguishing idea of our holy religion. In human weakness we may be overwhelmed with doubts if we will not lean trustfully upon the bosom of Him who is Infinite in wisdom and love. If we will hear and obey, the cloud will be lifted by the sun, and we shall learn lessons of instruction, often of solemn import to ourselves and others. A year ago when visiting prisons, on one occasion, while standing in one of the corridors where the silent or solitary system obtains, two hundred iron doors stood ajar, but so arranged that I could not see the human faces incarcerated behind them. After uttering a brief exhortation which they could distinctly hear, I felt oppressed with a *sense of discouragement*, fearing that I had not been sufficiently baptized into the condition of the criminals to say any thing that would do them good. Such was my depression on the subject that my spirit sank within me. I stood silent for a few minutes, when I was touched by an influence which said, "*Go to the cell door nearest thee!*" The impression was so imperative and the influence so powerful upon my prostrated spirit, that I did as I was commanded.

As I came in front of the iron bars, I saw a young man of a fine intellectual countenance. He was in tears; and, thrusting his hand between the grating, grasped my hand and said, "*May God bless you!*—you don't know how much good you have done me. How I wish *Friends* would come oftener to see us." This poor misguided man in turn became a minister to me; and there, in that solitary home of erring human beings, I learned a lesson not soon if ever to be forgotten.

Divine impressions are from the Author of all our sure mercies. Let us be passive to their influence, and in humble trustfulness obey the Heavenly Leader. We shall often find our false wisdom abased and the word of Life to reign triumphantly to the humbling and contriting of our souls.

I see by the Register of "*Friends in the Ministry*," that some of them are engaging in visits of gospel love to those in prison. May they keep near the guide, and trust in Him who hath said my word shall not return unto me void, but shall accomplish the thing whereunto I send it.

JOSEPH A. DUGDALE.

Mt. Pleasant, Iowa, 3d mo. 20th, 1866.

EXTRACT FROM "THE SYMPATHY OF CHRIST."
BY F. W. ROBERTSON.

Till we have reflected on it, we are scarcely aware how much the sum of human happiness in the world is indebted to this one feeling—sympathy. We get cheerfulness and vigor, we scarcely know how or when, from mere association with our fellow-men; and from the looks reflected on us of gladness and employment we catch inspiration and power to go on from human presence and cheerful looks. The workman works with added energy from having others by. The full family circle has a strength and life peculiarly its own. The substantial good and the effectual relief which men extend to one another is trifling. It is not by these, but by something far less costly, that the work is done. God has insured it by a much more simple machinery. He has given to the weakest and the poorest power to contribute largely to the common stock of gladness. The child's smile and laugh are mighty powers in this world. When bereavement has left you desolate, what substantial benefit is there which makes condolence acceptable? It cannot replace the loved ones you have lost. It can bestow upon you nothing permanent. But a warm hand has touched you, and its thrill told you that there was a living response there to your emotion. One look, one human sigh, has done more for you than the costliest present could convey.

And it is for want of remarking this that the effect of public charity falls often so far short of the expectations of those who give. The springs of men's generosity are dried up by hearing of the repining, and the envy, and the discontent, which have been sown by the general collection and the provision establishment, among cottages where all was harmony before. The famine and the pestilence are met by abundant liberality, and the apparent return for this is riot and sedition. But the secret lies all in this. It is not in channels such as these that the heart's gratitude can flow. Love is not bought by money, but by love. There has been all the machinery of a public distribution, but there has been no individual, personal interest.

The rich man who goes to his poor brother's cottage, and without affectation of humility, naturally and with the respect which man owes to man, enters into his circumstances, inquiring about his distresses, and hears his homely tale, has done more to establish an interchange of kindly feeling than he could have secured by the costliest present, by itself. Public donations have their value and their uses. Poor-laws keep human beings from starvation; but in the point of eliciting gratitude all these fail. Man has not been brought into contact close enough with man for this. They do not work by sympathy.

For Friends' Intelligence.

"THE DUCHOBORTSI."

(Continued from page 72.)

A conversation between the rector of the Nevskoy Seminary of St. Petersburg, Archimandrite, and three of the sect called Duchobortsi, Michael Stehireff, Anikie, and Timothy Suhareiff, in May, 1792.

Archimandrite. By what means are you come into this state that people confine you as men dangerous to society?

Duchobortsi. By the malice of our persecutors.

A. What is the cause of their persecuting you.

D. Because it is said that all who will live godly in Christ Jesus shall suffer persecution.

A. Whom do you call your persecutors?

D. Those who threw us into prison, and bound us with fetters.

A. How dare you in this way speak evil of the established government, founded and acting on principles of Christian piety, which deprives none of their liberty, except such as are disturbers of the public peace and prosperity.

D. There is no higher governor than God, who rules over the hearts of kings and men; but God does not bind in fetters, neither does he command those to be persecuted who will not give His glory to another, and who live in peace, and in perfect love and mutual service to each other.

A. What does that signify, "Who will not give His glory unto another." To whom other?

D. Read the second commandment, and you will know?

A. I perceive then that you mean to throw censure on those who bow before the images of the Saviour and of His holy ones?

D. He has placed His image in our souls. Again, it is said that those who worship Him, must worship Him in spirit and in truth.

A. From this it is evident that you have brought yourself into your present condition by falling into error, by misunderstanding the nature of piety, and entertaining opinions hurtful to the common faith and to your country.

D. It is not true.

A. How, then? Do you not err, when you think that there are "powers that be" which exist in opposition to the will of God, whereas, there is no power but of God? or that government, which is appointed to restrain and correct the disobedient and unruly, persecutes piety, "whereas he is the Minister of God, a revenger to execute wrath upon him that doeth evil."

D. What evil do we do? None.

A. Do you not hurt the faith by your false reasoning concerning our holy ordinances, and by your blind zeal against God; like the Jews

of old, whose zeal was not according to knowledge?

D. Let knowledge remain with you! Only do not molest us, who live in peace, pay the taxes, do harm to no one, and respect and obey earthly governments.

A. But perhaps your paying the taxes, harming no one, and obeying earthly governments, is only the effect of necessity, and of the weakness of your power, while your peace and love respect those only who are of your own opinion.

D. Construe our words as you choose.

A. At least, it is far from being disagreeable to you to behold your society increasing?

D. We desire good unto all men, and that all may be saved, and come to a knowledge of the truth.

A. Leave off your studied secrecy, and evasive and dubious answers. Explain and reveal to me your opinions candidly, like men who have nothing in view but to discover truth.

D. I understand you; for that same Spirit of truth, which enlightened us in things respecting faith and life, assists us also to discern affectation and deceit in every man. Nevertheless, in order to get rid of your importunity, and with boldness to preach the true faith, I shall answer your questions as I am able.

A. By what way—by the assistance of others, or by the use of your own reasoning powers only, did you obtain this Spirit of Truth?

D. He is near our heart, and therefore no assistance is necessary. A sincere desire and ardent prayers are alone requisite.

A. At least, you ground your opinions on the word of God, do you not?

D. I do ground myself on it.

A. But the word of God teaches us, that God has committed the true faith, and the dispensing of his ordinances, and of instruction in piety, to certain persons, chosen and ordained for this purpose:—"According to the grace of God given unto me," says St. Paul, "as a wise master builder I have laid the foundation."

D. True; and such were our deputies who were sent hither in 1767 and 1769. But what did the spirit of persecution and of wrath do to them? Some were taken for soldiers, others were sent into exile.

A. You doubtless intend by these deputies some well meaning people like yourself?

D. Yes.

A. But you, and people like you, though well meaning, cannot be either ministers or teachers of the holy faith.

D. Why not?

A. Because a church cannot be established by individual authority; as is manifest from 1 Cor 3: 5. Secondly, because special talents and gifts from above are requisite to "make us able ministers of the New Testament." 2 Cor. 3: 6. And thirdly, it is absolutely necessary to

this lawful and gracious calling, that we possess that ordination which hath remained in the holy church from the times of the apostles; as it is said, "And he gave some apostles and some prophets, and some evangelists, and some pastors and teachers, for the perfecting of the saints, for the work of the ministry, for the edifying of the body of Christ." Ephes. iv. 2.

D. There is no other calling to this office required, than that which crieth in our hearts, neither doth our learning consist in the words which man's wisdom teacheth, but in "demonstration of the Spirit and of power." Are the gifts which you require such as to be able to gabble Latin?

A. You do not understand the Holy Scriptures; and this is the source of all your errors. The apostle, in the words quoted by you, does not reject the talents and gifts of acquired knowledge, but contrasts the doctrines of Jesus Christ with the wisdom of the heathen, which was in repute at that time. And that the calling of pastors and teachers always depended on the church by which they were chosen, is manifest from the very history of those pastors and teachers of the church who are eternally glorified.

D. What Holy Scriptures? What church? What do you mean by the Holy Scriptures?

A. Did not you yourself say that you founded your opinions on the word of God? This is what I mean by the Holy Scriptures.

D. The word of God is spiritual, and immaterial; it can be written on nothing but on the heart and spirit.

A. Yet when the Saviour saith, "Search the Scriptures," and gives us the reason of this command—"for in them ye think ye have eternal life"—can He really understand thereby anything else than the written word of God? This is the treasure which He himself hath entrusted to his holy church as the unalterable rule of faith and life.

D. And what do you call a church?

A. An assembly of believers in Jesus Christ, governed by pastors, according to regulations founded on the word of God, and partakers of the ordinances of faith.

D. Not so; there is but one pastor, Jesus Christ, who laid down his life for the sheep; and one church, holy, apostolical, spiritual, invisible, of which it is said, "where two or three are gathered together in my name, there am I in the midst of them," in which no worship is paid to any material object; where those only are teachers who live virtuous lives; where the word of God is obeyed in the heart, on which it descends like dew upon the fleece, and out of which it flows as from a spring in the midst of the mountains; where there are no such noisy, ostentatious, offensive, and idolatrous meetings, and vain ceremonies as with you; no drunken

and insulting pastors and teachers like your's; nor such evil dispositions and corruptions as among you.

(To be concluded.)

A little thoughtful attention, how happy it makes the old! They have outlived most of the friends of their early youth. How lonely their hours! Often their partners in life have long filled silent graves; often their children they have followed to the tomb. They stand solitary, bending on their staff, waiting till the same call shall reach them. How often they must think of absent lamented faces; of the love which cherished them, and the tears of sympathy that fell with theirs, now all gone! Why should not the young cling around and comfort them, cheering their gloom with songs and happy smiles?

FRIENDS' INTELLIGENCER.

PHILADELPHIA, FOURTH MONTH 14, 1866.

FEMALE MEDICAL COLLEGE OF PENNSYLVANIA.—This College, located on north College Avenue, was the first in the world regularly organized for the instruction of women in the various departments of medical science. From the "Seventeenth Annual Announcement," we learn that the session which has recently closed was attended by a larger class of regular students than any previous one, and that the prospects of the Institution are more hopeful and encouraging than at any former time. Seventy-one students have received the diplomas of the College since its inception, and about two hundred and eighty have matriculated and attended its lectures. "Three of the chairs of the College," the Announcement states, "are filled by its graduates; many more now occupy honored and profitable positions in their respective localities, and others in their professional capacity have entered seminaries of learning, hospitals or establishments, where they receive good remuneration. The demand there is for the services of medical women as teachers and lecturers upon sanitary subjects, evinces, that if to thorough medical knowledge a woman unites high moral qualities and practical good sense, a full career of usefulness is open before her, and success is already assured."

"While the work," the Announcement continues, "has been developing in our own country, the needs of society have been forcing it into notice across the waters. In London,

the public papers inform us that 'Miss Garret has lately been admitted to practice as a druggist.* She went through the usual course, five years' apprenticeship, a preliminary examination in Arts, and two professional examinations, each comprising five subjects. It is said of Miss Garrett that her examination was particularly brilliant, and that the Chairman of the Apothecaries complimented her upon her attainments, expressing a wish that all men were as well prepared.'

The Ladies' Sanitary Association of England has for years been scattering its penny tracts broadcast over the kingdom, instituting lectures upon hygienic subjects, and sending capable women into dwellings of the poor, to teach them how to cook, ventilate and make homes healthful and attractive. Following upon the extensive labors of this association, we find that a 'Ladies' Medical College' was opened in London, Oct. 3d, 1864, under the auspices of a Female Medical Society, which had been formed previously for the avowed object of "promoting the proper education and employment of superior women in the practice of midwifery, and the diseases of women and children." The College commenced with two lectures.

In France, where Madame Boivin and Madame Lachapelle so ably illustrated some branches of the science, that they have been quoted as authorities by the profession ever since, the education of women for certain departments of practice has long been a governmental arrangement; and more than one student of our College has entered that great Hospital in Paris, where young women from the different departments of France, under the supervision of Madame Alliot, a successor of Madame Lachapelle, are trained for the practice of midwifery in their respective localities.

By a letter from Paris, we are informed that 'a French woman, having passed the *Baccalaureate*, has recently requested permission to study medicine as a whole, in France. This, the faculty at Montpellier refused. She then sent her request to the *Ministre de l'Interieur* at Paris. He acceded, but on the condition that she will only practice in Algeria, whence she comes.'

The tidal waves of this movement, rolling eastward, have also reached Russia. Within a few months a medical officer in the Russian service visited the New York Infirmary for Women and Children, to obtain information in reference to the medical education of women in America. He had been requested by the Emperor to institute the inquiry in consequence of the application of a dozen or more respectable Russian ladies for admission into the Medical College at St. Petersburg.

* Apothecaries in England are licensed to practice medicine.

Through another channel we learn 'that at this present moment there are two Russian ladies regularly admitted at the Medical University in Zurich, Switzerland—one of the best Universities in Europe.'

Thus we perceive that this movement is almost co-extensive with civilization. It has evidently occurred in the ripeness of time as a result of the growth of society: it is clearly a necessity of the age, that cannot be stopped or put aside.

What modifications it may yet induce in the state of medical practice, we cannot tell. But, as in all social movements where man and woman co-operate, the general standard has been refined, ennobled and enlarged, so we fully believe that the science and art of medicine will be made more complete and beneficent through the insight and knowledge of woman."

The publication office of "Friends Intelligencer" has been removed from No. 131 to 144 N. Seventh St., nearly opposite, a few doors below Race. Open from 8 o'clock in the morning, until 5 in the afternoon.

DIED, of typhoid fever, on the 10th of Tenth month, 1865, at the residence of his father, in New Castle Co., Del., WILLIAM, son of Amos and Martha Sharpless, in the 28th year of his age; a member of Hockessin Particular Meeting.

—, on the 14th of Third month, 1866, at Harrisville, Harrison Co., Ohio, MARY RHOADS, widow of Joseph Rhoads, in the 88th year of her age; a member of Short Creek Monthly Meeting. Innocence and trust were the characteristics of her life, and her end was peace.

—, on the 1st of Second month, 1866, at his residence near Fallston, Amos Benson, in the 87th year of his age; a member of Little Falls Particular and Monthly Meetings.

Our dear Friend lived a quiet, unobtrusive life, and during his sickness, which was protracted, he furnished comfortable evidence to his family and friends that he was prepared for an entrance into the blessed kingdom of eternal rest and peace. At one time he said, "I have always felt a care to do right, and though I have sometimes missed it, I do not feel it now to stand against me, as I see nothing in my way." He was much favored with clearness of mind, and gave suitable counsel to his children and descendants, advising them to live plainly and humbly, to live in peace with all, and not to be too much concerned for the world.

—, on the 7th of Second month, 1866, in Warminster, MARY D., wife of Morris P. Jarrett and daughter of the late Seth and Jane Davis, in the 36th year of her age; a member of Horsham Monthly Meeting, Pa.

—, on the 6th of Twelfth month, 1865, of diphtheria, EVALINA LUKENS, daughter of Allen and Mary Ann Lukens, aged 6 years; a member of Fall Creek Monthly Meeting Indiana.

—, on the 5th of First month, 1866, WILLIAM H. LUKENS, son of Allen and Mary Ann Lukens, aged nearly 22 years; a member of Fall Creek Monthly Meeting, Indiana.

Review of "A Declaration," &c., published by order of the Yearly Meeting of Orthodox Friends (so called) held in Philadelphia in 1828. BY WM. GIBBONS, M. D.

(Continued from page 76.)

ARTICLE XLIV. The Declaration proceeds as follows: "Besides the palpable errors we have enumerated, Elias Hicks and his adherents deny that mankind sustain any loss through the fall of Adam; asserting that children come into the world precisely in the condition he did."—*Dec.*, p. 31.

In proof of the above assertions, we are referred to The Quaker, vol. 1, p. 183, and Philadelphia Sermon, p. 64, from which I quote as follows:

"Now let us pause for a moment, and see what an unrighteous and wicked act it was in our first parents; *there never was a greater evil done*. And we see now that we are his successors, and that we have every one done the same thing: and not only once, as Adam did, but we have done it many thousand times over." "The desire after knowledge was the thing that tempted them, by presuming to know good and evil without the *Divine Light* that had been given to instruct them, and to keep them from going counter to the Divine command. They were pushed on to decide for themselves, from an apprehension that by so doing, by exercising their own abilities, they would become as Gods, knowing good and evil without the aid of the Divine mind, and counter to the Divine command; but their reward followed the act."—*Quaker*, vol. 1, p. 182.

"Here we don't find that Adam ever transgressed but once; we have no reason to suppose from the history that he did. I consider this view of great moment, for this reason; because people are so weak as to imagine, (and where do they get the idea from, but from the same source as Adam, by seeking to gain knowledge through an improper medium?) they have started the notion, that we are to stand *accountable* for Adam's sin; and that we are *losers* by it. But now, if we reflect rationally, I think we must be *gainers* by it. For if we act as rational creatures, we gain something by seeing a man drunk; for if we have never seen a man drunk before, is it not an example,—a *warning* for us to avoid such an act ourselves? Here we see, now, what the apostle says, and it is true, that 'The wisdom of the world is foolishness with God;' because, if we reasoned as we ought, this act of Adam would be a warning to all his offspring, and would certainly be a benefit to us, if we acted *rightly*. This is my view, and I give it to you to examine."—*Quaker*, p. 183.

"In his childhood, he [Jesus] was perfect in innocence,—free from all kinds of defilement,—as man was created in the beginning: and so

it *might have been* with all that God created, as the Scripture declaration proves. They [our first parents] were made innocent, undefiled, and unpolluted: but without knowledge, and without any capacity to obtain knowledge through *any other medium than their Creator*. They were endowed with a capacity to receive it from him, as a Teacher; but no capacity to obtain *true knowledge independently* of their Creator. This I consider to be the state of man in the beginning, and of every child when born into the world."—*Philada. Sermon*, p. 66.

In the above extracts, relating to the state of our first parents, there are some views *peculiar* to Elias Hicks; and therefore not chargeable on the Society.

The brevity of the scriptural account of the original state of our first parents, has opened a field for much speculation, and a diversity of opinions have been advanced by those who have written on the subject: and Elias Hicks has given his views for consideration. In alluding to them, the "Declaration" has used a form of expression which gives them an appearance of more *weight*, as a *charge*, than simply quoting the speaker's words would have done; whilst a part of the context, which is highly important to be known, in order to do justice to his whole view of the subject, is withheld. The *present condition* of man, and what is *needful* for him, is what chiefly concerns us. To this condition the Sermon speaks in the emphatic language of Scripture, "All have sinned, and fallen short of the glory of God," and stand in need of being born again.

The Society holds to the clear testimony of Ezekiel the prophet, and in other parts of Scripture, That no man is answerable for the sins of another; and hence, that none of Adam's posterity are accountable for his transgression; or, in other words, we deny the doctrine of *original sin*. Joseph Phipps, on this subject, says, "To account a child guilty or obnoxious to punishment, merely for an offence committed by its parents before it could have any consciousness of being, is inconsistent both with justice and mercy; therefore no infant can be born with guilt upon its head."—*Original and present state of Man*, p. 12.

In continuation of the subject in the Sermons, and in the *next* page to that from which the Declaration quotes, and directly *facing* it, we find the following: "As man was made in the image of God, every act would be a righteous act. But from this happy state *man fell*; from this blessed condition **WE ALL FALL**: for *all have sinned, and fallen short of the glory of God*; and, therefore, *stand in need of being born again*."—*Ibid*, p. 67.

The desires of every infant prompt it to the indulgence of the animal appetites, for the support of the natural life: and although this in-

dulgence may be in excess, it incurs no *guilt*, until it grows to the years of religious understanding, or until the command is given, "Thou shalt not eat." From this moment, every human being stands before his Creator as a probationer. For with the promulgation of the law, there is a capacity furnished to obey it, and a consciousness felt, on the part of the subject, of his free agency, as clearly as if it was announced to his outward ear, "Choose ye this day whom ye will serve." (Josh. xxiv. 15.) Taking up the present condition of man from this point, is there not a striking analogy between *his* condition and that of our first parents? And is not our own experience a confirmation of their history, as given by Moses? "And *when* the woman saw that the tree was good for food, and that it was *pleasant* to the eyes, and a tree *to be desired* to make one wise, [or happy,] she took of the fruit thereof and did eat, and gave also unto her husband with her, and he did eat." Gen. iii.

It would appear by this account, that our progenitors had desires and propensities conflicting with their Maker's command, as we now have them, and that they were *frail*, like ourselves; for they yielded, as it appears, to the *first temptation*. Hence, it is reasonable to conclude, that in *knowledge and experience* they were not far in advance of us. Yet they may be said to have been *perfect*: for a state of entire innocence, and an *obedience* to what is made known to us, however small that knowledge may be, is human perfection. "And they brought young children to him, that he should touch them: and his disciples rebuked them that brought them. But when Jesus saw it, he was much displeased, and said unto them, 'Suffer little children to come unto me, and forbid them not, for of such is the kingdom of God.' And he took them up in his arms, put his hands upon them, and blessed them." Mark x. 13—16.

Our first parents had God for their Teacher and Monitor, with no corrupting examples present to allure them from the path of duty. Now, if to these advantages be added that perfection in knowledge and acquirements which is ascribed to them, is it reasonable to suppose that they would have so easily given way to temptation? Granting the premises, they must have been more frail than their posterity.

ARTICLE XLV. "They [that is, Elias Hicks,] also deny the existence of any *evil* spirit, by which man is tempted, distinct from his own propensities."—*Philada. Sermons*, pp. 163, 166, 257, 258.

In page 293, of the Philadelphia Sermons, we read, "Faith is the gift of God. But this faith in creeds and the traditions of our fathers, what is it? It is worse than nothing. We had better have no faith at all. It is no better

than the faith of devils. 'Thou believest that there is one God; thou doest well: the devils also believe and tremble.' Who are the devils? Apostate men and women, who go contrary to God: they are all devils. Everything that is in opposition to the will of God, is a devil. In short, they are nothing but what *opposes* the law of light and the Spirit of truth in the heart; nothing but what is in *opposition* to the law of God: and that devil is in us all: assure as the kingdom of God is in us, so sure the devil is in us."

And in page 168—"Now all that seeking to know God, and this devil, or the serpent, *without*, is the work of darkness, superstition, and tradition. It hath no foundation; it is all breath and wind, without the power. We need not look *without* for enemies, or friends; for we shall not find them *without*. Our enemies are those of our own household: *our own propensities and unruly desires are our greatest, and I may almost say, our alone enemies.*"

"Now the serpent," says Francis Howgill, "was more subtle than all the beasts of the field; for that was *his nature, in which he was created; and it was good in the motion of the power*; and, therefore, Christ said, 'Be ye wise as serpents, and harmless as doves.' And *though* the serpent was *wise and subtle*, more than all the beasts of the field, till he acted and moved without commandment, and out of the motion of the power, *he was not cursed*. He that can receive this, let him." "And now he went and talked with the woman, and she was good before, being in the motion of the life and power: she also looked out, and not in the power, and reasoned with him out of the power, contrary to commandment;" "and here was the *beginning* of the father of lies, and of him who spoke of himself, out of the *power*, and out of the *truth*; and his beginning is *without foundation*; [that is, independent or distinct from man.] Now he that is wise in heart, read his *generation*, or *who made him*. Now appeared the angel of the bottomless pit, and *not before*,—and made war against the power,—against the Lamb. Pp. 185, 186.

All our propensities and desires are good, "in the motion of the power;" and whilst we remain here, moving and acting in and under this heavenly power, the serpent has no "foundation" in us. "The prince of this world cometh, and hath nothing in me." John xiv. 30. "From whence come wars and fightings among you? Come they not hence, *even of your lusts, that war in your members?*" ("The spirit that dwelleth in us lusteth to envy.") "Ye lust, and have not: ye kill, and desire to have, and cannot obtain: ye fight, and war, yet ye have not, because ye ask not. Ye ask, and receive not, because ye ask amiss, that ye may consume it upon your lusts. Ye adulterers

and adulteresses, know ye not that the friendship of the world is enmity with God? Who-soever, therefore, will be a friend of the world, is the enemy of God. Do you think that the Scripture saith in vain, 'The spirit that dwelleth in us lusteth to ENVY.'?" James iv.

According to Francis Howgill, the "angel of the bottomless pit" had his beginning in man's disobedience; and out of man, he is without foundation; and they who are wise may read his generation, and who made and makes him,—in *their own hearts*.

ARTICLE XLVI. "Heaven," they say, "is a *state*, and not a *place*, by any means."

The blessed Jesus taught the same doctrine. "The kingdom of God cometh not with observation; neither shall they say, Lo, here! or Lo there! for behold the kingdom of God is *within you*." Luke xvii. 20.

The apostle speaks of it as a "state." "For the kingdom of God is not meat and drink; but *righteousness, peace, and joy in the Holy Ghost*." Rom. xiv. 7.

"This kingdom," says Joseph Phipps, "stands not in locality, not in any here, or there. It stands in an infinite and heavenly spirit, life, and nature, wherein nothing impure can live or enter." P. 205.

(To be concluded.)

THE GIVER AND THE GIFTS.

The path I trod so pleasant was and fair,
I counted it life's best;
Forgetting that Thou, Lord, hadst placed me there,
To journey toward Thy rest.

Forgetting that the path was only good,
Because the homeward way;
I held its *fullest* beauty where I stood:—
I thought these *gleams* the day!

I know I might have seen in every star
That sheds its light on me,
A lamp of Thine, set out to guide from far
My steps toward home and Thee;—

Have heard in streams with bending grasses clad,
Which sparkled through the sod,
The music of the river that makes glad
The city of our God;—

In flowers plucked to wither in my hand,
Or passed with lingering feet,
Have read my Father's promise of a land
Where flowers are still more sweet.

And I have knelt, how often, thanking Thee
For what Thy love hath given!
Thou turned away to bend to these my knee,
And seek in these my Heaven!

Forgive me that I, looking for the day,
Forgot whence it would shine;
And turned *Thy helps* to reasons for delay,
And loved not Thee, but Thine.

Yet most for the cold heart with which I write
Of sin so faintly felt;—
This frost of doubt, this darkness as of night,
Thy love can cheer and melt.

On me, unworthy, shed, O Lord, the glow
 Of Thy dear light and love;
 That I may walk with trusting faith below,
 Toward the fair land above;
 That I may learn in all Thy gifts to see
 The love that on me smiled,
 And find in all I have a thought of Thee,
 Who thus has blessed Thy child:
 And most in what Thy tenderest love hath given—
 Those to my heart most dear;
 May I, thro' these, look upward to thy Heaven,
 In these find Thee most near.
 —Lucy Fletcher.

LINES.

Suggested by the appearance of a Butterfly in Winter.

Too frail for many a Summer day,
 When Sol admits his scantiest ray,
 How dare thou fly?
 Thou canst not hear a voice of Spring;
 Away o'er seas she folds her wing
 To pale and die.

Perhaps thou heardest the squirrels leap;
 Or did a worm disturb thy sleep?

In couch of mold?
 Say, did the tiny chickadee
 In wanton sport awaken thee
 To see thy gold?

For brighter than the mine or mint
 Is the rare beauty of thy tint,
 Thou almost naught.

If God so fashioned thee with care,
 Then they who His own image bear,
 Are strangely wrought.

Through Winter's icy mantle rent
 We hail thee as a blessing sent
 To cheer our way:
 For thou canst touch and teach the heart
 More than a thousand charms of art,
 In ambient play.

Thou hast no voice thou silent thing,
 Thou only hast a golden wing,
 And yet we love
 To see thee in the Winter air,
 Though but a breath may chill thee there
 From blast above.

It is a simple thought I know;
 But when the wintry tempests blow,
 Mayst thou be hid,
 Not in a silent grave to lie,
 But where, when Spring is passing by,
 Thou mayst be bid

To rise again—again to shine,
 A witness of the Power divine,
 In shadows set.
 A thing so simple, frail, and weak,
 May to some sceptic error speak
 Repentance yet.

Prophetstown, Ill.

S. A.

EXTENSIVE COAL FIELDS.—The extent of the bituminous coal field surrounding Pittsburg is fifteen thousand square miles, or eight million six hundred thousand acres. The upper seam of coal in this area, rating at an average depth of eight feet, is estimated to contain 53,516,430 000 tons of coal, which at two dollars per ton, or a little over seven cents per bushel, would be worth \$108,032,860,000—a sum equal to the payment of the national debt nearly twenty

seven times, supposing it to be four thousand millions; or an amount equal to the gold and silver products of California and Nevada for more than a thousand years, even if they yielded one hundred millions annually.

LLOYD'S

Everybody has heard of "Lloyd's." Everybody has seen the word a thousand times in the newspapers, and of all familiar names known to us in connection with commerce, whether at home or abroad, none is more familiar than this. Yet few people, comparatively, have any definite idea of what is comprised under this significant monosyllable, or of the real nature of the establishment to which it gives a name, and which is almost as well known among the merchants of every commercial country in the world as it is in London.

Near the eastern gate of the Royal Exchange, there is a rather confined area, from which a spacious winding flight of steps leads up to a sort of ante-chamber of no great dimensions. Up and down these stairs, between the hours of eleven or so in the forenoon, to five in the afternoon, there is a constant ebb and flow of business faces—not particularly jolly or merry faces at any time, but faces with a responsible expression about them, and of the reflective and calculating character. They are always going up and down, one current meeting the other, and passing, with few words of greeting and no delays. Arrived at the top of the stairs, we are in the presence of Gibson's grand marble statue of Huskisson, the effect of which is more than half lost, from the disadvantageous position it occupies. Then there is a statue of the Prince Consort, by Lough, much better seen, but, as a work of art, not so well worth seeing; besides which, there is Lyddehker's memorial, and that handsome tablet in the wall, placed there as a testimonial to the "Times" newspaper, in commemoration of the exposure by that journal of a gigantic commercial conspiracy which threatened the ruin of the whole of the trade of London.

From this ante-chamber are the entrances guarded by liveried functionaries, to the subscription rooms—for the chambers of Lloyd's are only open to the subscribers, or to those who have business with them. We are suffered to pass on, however, and the next minute are in the underwriters' room. This is a lofty apartment, about a hundred feet in length, and some fifty wide. There is nothing particularly striking in its appearance. A number of large tables and seats, ranged down each side and along the centre, with books, papers, and writing materials, present nothing extraordinary; and yet if you reflect for a moment, that here millions of money are literally at stake every hour—that not a breeze can blow in any latitude,

not a storm can burst, not a fog can rise, in any part of the wide ocean that girdles the world, without recording its history here, in such characters as tell of loss, discredit, perhaps utter ruin—you may well hold your breath, and acknowledge that, common-place and matter-of-fact as are the details of the spot, it is yet a centre of veritable and profound interest. For it is here that the business of marine insurance is transacted—a business the ramifications of which reach all round the world, and whose operations are so essential to the maintenance of the world's commerce, that were it to come suddenly to a stand-still, one half of the existing traffic of the nations would be paralyzed. Insurance is continually the basis of credit, even on shore. If you could not insure your life, you would hardly raise a loan on your personal security; and if you could not insure your house, the mortgagee would not lend you nearly the amount upon it which he now does. But at sea the risks are beyond all comparison greater, and the necessity of insuring against them, of course, correspondingly so. Every prudent man, therefore, who has capital thus endangered (unless it be such an amount as he can afford to lose, and he is inclined to speculate) insures it against loss; if the vessel which is, or which contains, his venture be lost, he recovers his capital because he has insured it; if it escape the perils of the sea and make a prosperous voyage, he can easily spare to pay the premium out of the profit. The insurers, or underwriters, must of course be men, or firms, who have large capital at command, and they ought to be men with sufficient prudence and integrity to restrain them from incurring liabilities which they are unable to meet. We need not say that the underwriters of Lloyd's stand pre-eminent throughout the world for these indispensable qualifications.

Those huge books on the tables near the bar contain daily entries regarding vessels at sea. The one on the right is filled with safe arrivals at the destined port—while that on the left records every species of accident, disaster, and loss, as soon as these casualties are known. There was a rather spiteful gale in the Channel for several entire days last week; and in consequence you see gloomy, prophetic faces bending over the "casualty book," looks ominous of disaster, and unfortunately not a few faces which tell that the omen has been fulfilled.

Cast your eye round the room, and you may see transactions of marine insurance actually negotiating in your presence. Yon sexagenarian, for example, sitting at the corner of that table, his chin resting on his clenched hand, and his eyebrows somewhat studiously knit, is listening to the under-toned but emphatic talk of the slim, wiry figure standing by his side. The latter is a ship-broker, who has come to effect an

insurance for a few thousands on the "Betsy Jane," which sailed for California, round Cape Horn, four months back. She was spoken in latitude 35° south, and longitude 40° west, all well, seven weeks out. The broker offers a certain per-centage for the risk; but the underwriter does not seem fascinated with the premium proposed, and keeps a rather stolid countenance while the other talks on. He knows the "Betsy Jane" to be A 1 on the list, and he knows too that she was spoken with, as the broker says, for that fact is duly recorded in the "books;" but it is a long while since that news came, and the last accounts from Valparaiso said nothing about her. The good ship, in all probability, is perfectly safe, and may be even now entering the harbor; but also, she may have gone to pieces on the South American coast, or on some coral reef in the South Seas, or she may have met with ice in beating round the Horn and foundered. Who knows? Such are the elements which an underwriter has to take into consideration in calculating the probabilities which guide his transactions. The "Betsy Jane" will be insured, notwithstanding, for the averages and the chances are all in her favor; but the broker will have to come down with a higher premium than he has offered.

To assist such calculations as have reference chiefly to the risks on our own and neighboring coasts, there is at the end of the room a curious piece of mechanism, called an anemometer, or windgauge. This instrument is so contrived as to register, by means of pencilled records of its own writing, the force of the wind as it is exerted against a large fan on the roof of the Exchange during both day and night, from one year's end to another. We know not what may be the actual utility of this instrument as yet. When the courses and revolutions of storm circles are better known—when the phenomena of air-currents can be delineated on the chart with something like certainty—when that science of which Lieutenant Maury is head and chief shall have been thoroughly thought out and its results fairly mastered—it may be that then every fitful mark of the anemometer may be fraught with sound knowledge, and form a key to the law of storms all the world over. In that case, and whenever that time shall arrive, we may feel assured that the risks of navigation will be less, and the costs of insurance in proportion.

(To be concluded.)

From the Evangelist.

NIAGARA IN WINTER.

The 24th of January, 1866, was a white day in my calendar. I passed it amongst the white wonders of the ice of Niagara. For a score or more of years, as old inhabitants assured me, there had been nothing like it. The marvels

of the grandest of the glaciers amongst the Alps did not surpass it. In some aspects they did not equal it.

The morning of Saturday, the 20th, was almost summer-like in mildness, and rainy. But before night the weather grew intensely cold, and the wind blew a gale. The morning of the Sabbath saw the waters of the cataract greatly swollen, and huge masses of ice dashing down the abyss. Whole fields of it, cracked and torn in the rapids above, plunged headlong into the awful cauldron, and were then ground and dashed into myriads of fragments. It must have been a magnificent sight.

But what was more marvellous, the ice had become jammed, or was jamming, from shore to shore; so that on the Sabbath, from the very foot of the Falls almost to the Suspension Bridge—two miles—there was one compact mass of it. The narrow channel could not disgorge the masses which had come from the broader surfaces above, and the accumulations, held more firmly by congelation, choked up the outlet; and when the wild waters swept and eddied underneath, the foot of man could pass in safety from the United States to Canada!

But water and ice had not finished their work in building this marble bridge. It must be lifted and torn and ridged. It must have profound fissures, into which one might look with awe, wild hummocks, and broad fields of terrific roughness—roughness which I can equal in memory only by the lava of Vesuvius, freely poured and cooled from the side of the rent crater, and this was effected by continuous accretions of ice, which, coming over the cataract, plunged under the surface, and by the violence of the water, swept onward, lifted the mighty mass bodily on its back. In this way the ice was perhaps from twenty to fifty feet in thickness!

It was thus that I saw it on the 24th. Going at once down, at the inclined plane, to the ferry—just below the cataract—I crossed over to the Canada side on foot, went to Table Rock, passed under the sheet, and came back as I went. Many others were performing the same feat.

It was a glorious morning, clear and brilliant, and a myriad icicles were pendent from every point where precipice projected. Just under Table Rock a vast column had formed, as if to say, "What is left of this ancient stand-point shall never perish!" Beside it, was an icestalagmite, perhaps two feet and a half in diameter, and just high enough to serve as an altar, and crowned with rounded crystals which might well be taken for crowded garlands. How Nature, in her most fantastic forms, seems to speak of God! Under the Fall, where the rock is hollowed from the above like a scallop-shell, was perhaps the highest concentration of beauty.

This was one incrustation of icicles, glittering like diamonds in the sun. Under foot, huge banks of ice had formed, inclining inward, so that the footing was more than safe; the only effort needed—to a certain distance—was to keep from sliding away from the water plump against the rocky wall.

Above, in the vicinity of Table Rock, the whole surface was one glare of ice to the very edge of the precipice; and I shuddered at the thought of a careless step plunging one downward to an awful death. At this point the icy spray was pouring like rain, making thicker and thicker the marble sheet which hid the ground.

In going over I had not sighted well my course, and so found myself in a world of whiteness and roughness. But in returning I marked a path where an eddy, apparently, had deposited a semi-circle of finely ground ice, almost from shore to shore; and on this I made the passage homeward with twice the ease that I had gone abroad. Blessed is the path ever that leads us HOME!

Just under the American Fall, and in front of it, I got a view the memory of which a lifetime could not efface. The spray, freezing as it fell, had built up on the icy foundation a succession of hills from thirty to fifty feet in height above the surrounding surface. They were beautifully rounded like a sugar loaf, and almost as white. One of these I climbed, and from it looked down into the awful gloom and madness of the plunging water. At my left, half hidden in the mist, was another, and apparently still another. It was at this point that the sense of awe culminated.

Reclimbing the bank, past ice encrusting rock, and tree, and shrub, ice everywhere, I crossed to Goat Island. The passage to Terapin Tower was barred and marked "Dangerous." But it was barred more effectively by the ice, which so covered the path by which you descend to it, that it was like letting yourself go from the ridge of the roof of a cathedral to start for it. But finding a place where a descent was possible I let myself down by trees and rocks, and was soon at the Tower. Here, amidst spray and thunder, I caught the final glory. The Sea of Ice was before me; the mad, cold waters rolled and plunged in their awful descent; terror and sublimity held high carnival; while on either hand, arching one from the American and one from the Canada side—as if to whisper of hope and heaven amidst those symbols of perdition and the pit—floated a quivering rainbow. J. A. P.

Culture is symbolized in a tree, whose best fruit is in the highest branches.

Feeling dissent, express it with moderation.

From Friends' Intelligencer.

REVIEW OF THE WEATHER, &c.

THIRD MONTH.

	1865.	1866.
Rain during some portion of the 24 hours,	13 days.	8 days.
Rain all or nearly all day,...	2 "	2 "
Snow—incl'g very slight falls	0 "	5 "
Cloudy, without storms,.....	8 "	7 "
Clear, in the ordinary acceptance of the term,.....	8 "	9 "
	31 "	31 "
TEMPERATURE, RAIN, DEATHS, &c.	1865.	1866.
Mean temperature of 3d month per Penna. Hospital,	47.49 deg.	40.85 deg.
Highest do. during month,	73.50 "	72.00 "
Lowest do. do. do.	25.00 "	18.00 "
Rain during the month,.....	4.71 in.	2.15 in.
Deaths during the month, being for 4 current weeks for 1865 and five for 1866,	1495	1381

Average of the mean temperature of 3d month for the past seventy-seven years,.....	39.08 deg.
Highest mean of do. during that entire period, 1859,.....	48.25 "
Lowest do. do. do. 1843	30.00 "

COMPARISON OF RAIN.

	1865.	1866.
First month	3.61 inch.	3.14 inch.
Second month.....	5.83 "	6.61 "
Third month.....	4.71 "	2.15 "
Totals,	14.15 in.	11.90 in.

The above exhibit shows the month under review of the present year to have been colder all through, including even the *extremes*, than last year.

It was supposed by many that the 15th of the month *this year* was almost unprecedented for heat; but we find that on the 31st of same month *last year*, only six days later, the temperature was a degree and a half higher!

Dr. Conrad, of the Pennsylvania Hospital, has kindly furnished us with some interesting statistical matter, from which we select the following as the lowest temperatures.

	1843.	1855.	1866.	1866.
March 24,	12 deg.	23	—	—
" 25,	20 "	23	—	20.50
" 26,	21 "	29	—	18.00
" 27,	26 "	35	—	26.00
" 28,	36 "	27	26	32.00
" 29,	33 "	27	27	—

Their record, as above, commences with 1825, and 18 degrees is the lowest temperature they have on record as late in the month as the 26th, and yet only two days earlier in 1843, it dropped to 12 deg!

It will be noticed that year has already been chronicled in this review as containing the coldest Third month on a record of seventy-six years.

The decrease of deaths this year as compared with *last* is worthy of notice. If we deduct the last week's number from this year, so as to make each month consist of *four weeks*, we will have them stand 1493 for 1865 and 1101 for 1866.

Total, 15 packages, containing 1294 garments; dry goods, books, garden tools, seeds, &c.

Information has been received that there are now in Washington one hundred and fifty freedmen who have obtained transportation to go East and North, but who are detained in that city for want of clothing, the "supply of men's garments having all been given out. The Bureau has a few shirts and drawers only,—no coats, pants, nor stockings." This committee solicit cast-off clothing of this description to meet the emergency. Contributions of all kinds may be sent to

HENRY M. LAINE, Treasurer,
No. 36 N. Third St.

Philadelphia, 4th mo. 4, 1866.

ITEMS.

EMANCIPATION COMPLETED IN RUSSIA.—A St. Petersburg letter says that an imperial ukase, just issued, completes the work of emancipation decreed five years ago by the regulation of Second month 19, 1861, and applies it to all the peasants of the state domains. That class, personally emancipated in 1861, had remained provisionally under the administration of the crown, but the government has entered resolutely on the task of throwing many of its works into the hands of private persons. Several factories and forges have already been given up. The new ukase prescribes to the Ministers of the interior and of the Domains the task of agreeing together for putting all the prescriptions into execution in the course of six months. On the 19th of Eighth month next there will be in Russia but one and the same class of peasant proprietors organized in communes.

CONGRESS.—Among the bills passed in the Senate was one incorporating the National Telegraph Company, and one to facilitate the settlement of outstanding treasury balances. The bill, amendatory of the *Asiatic corpus* act of 1863, and relieving United States officers from penalties under State laws, for acts done in their official capacity, was reported from

the Judiciary Committee. The bill to facilitate postal, military and commercial communication between the States was reported. A joint resolution was adopted, authorizing and requiring the Secretary of War to take measures to preserve from desecration the graves of Union soldiers who fell in the war or died in the hospital, and to secure proper burial-places where they may be interred, and the spot kept sacred forever. A bill to amend and reorganize the national currency act, prescribing new regulations for the delivery of circulating notes, was presented and referred. A reconstruction resolution, providing for the admission of the lately-rebellious States under certain conditions, one of which consists in conferring the privilege of voting upon colored persons who can read and write and pay taxes, was presented by Lane, of Kansas, as embodying the Presidential policy. The veto of civil rights bill was taken up and the objections of the President considered at length. It was finally carried over the objections by a vote of thirty-three to fifteen. The loan bill was taken up, it having been reported from the committee without amendment. After some debate it was passed. It now goes to the President for approval.

HOUSE.—The bill to establish a National Bureau of Education was reported from the committee. The design of the bill is not to attempt any control of the school system of States, but rather to assist and foster them. The bill to facilitate the payment of balances due to United States creditors, and the bill for the transfer of the Smithsonian Library to that of Congress, were passed. A report was made from the committee of conference on the disagreement between the two Houses on the matter of placing portraits of living persons on the Government bonds and currency. It was agreed upon that none such should in future be placed on the securities, and the report was adopted. A resolution declaring that the fraudulent collection and withholding of claims by self-styled claim agents shall be considered and punished as embezzlement and grand larceny are punished, was unanimously adopted. A message was received from the President recommending a modification of the test oath. The civil rights bill was taken up and passed—yeas 122—nays 41. The Speaker then announced that the bill having received the requisite vote of two-thirds in each House, over the veto, it had become a law.

THE FREEDMEN.—The assistant commissioner of the freedmen's bureau in the State of Arkansas, in his report for the 2nd month, says, on the question of free labor:

"Almost without exception the planters report that their freedmen laborers are working to their entire satisfaction. He thinks experience has fully demonstrated the fact that good and sufficient laws for the government of the whites are good and sufficient for the negroes; but the people who have been educated under the slave system cannot, or will not see this. They demand some compulsory system for the government of their late slaves, which is only a substitute for slavery by another name."

The Freedmen in Richmond, celebrated the first anniversary of their deliverance from bondage on the 3d inst. Several thousand men assembled in Capitol Square, where an address was delivered. Good order prevailed during the day.

BELLEVUE FEMALE INSTITUTE.—A BOARDING-SCHOOL FOR GIRLS. The Spring and Summer Term of this institution, will commence 6th mo. 21st, 1866, and continue in session twelve weeks. For details see Circular, to obtain which, address the Principals, Attleboro' P. O., Bucks county, Pa.

18. av nfr. 414.

ISABEL J. GRAHAM, } Principals.
JANE P. GRAHAM, }

THE Subscribers, Executors of Wm. Hopkins, of Samuel, deceased, will sell at Public Auction, on the premises, on Third-day, 24th of 4th Month, at 10 o'clock, A. M., (if fair, if not, the next fair day thereafter,) one of the most desirable farms on Deer Creek, Harford County, Maryland, known by the name of "Liberton," containing 110 acres, in a high state of cultivation, situated 2½ miles from Tide-Water Canal, and a half mile from the village of Darlington, convenient to various places of Public Worship, Mills, &c.; improved by a dwelling house and barn. Also, at the same time and place, a tract of land, principally wooded, containing 97 acres. Also, another tract of wood land containing 6 acres, ¼ mile from the village of Dublin. Also 10 acres of wood land, 3 miles north of Dublin, all in said county and State. Also, at the same time and place 8 head of Stock Cattle, &c., &c.

Terms for Real Estate—one-third cash on day of sale, one-third in six, and the balance in twelve months, the credit payment to bear interest, and to be secured by notes or bonds of the purchaser. Personal Property—Cash on day of Sale.

JOSHUA HUBBARD, } Executors.
SAM'L. H. MATTHEWS, }

STOKES & WOOD, 702 Arch St., would respectfully call attention of Friends to their large stock of Plain Goods. The Dress Goods and Silk Department contains all the new and choice styles of plain and medium fabrics, in silk and wool. Also Furnishing Department, Linen Sheetings, Table Linens, Napkins, Towelling, Tickings, Muslins, &c. Coats and Cassimeres for men and boys, in every variety. White Goods, including Book Muslins, Tarletons, &c.

STOKES & WOOD,
702, Arch Street, Philadelphia.

CHESTERFIELD BOARDING SCHOOL FOR BOYS, situated on the Crosswicks Road, three miles from Bordentown, N. J. The Fifty-second Session of this Institution will commence on the 21st of 5th month, 1866, and continue twenty weeks. Terms, \$85; one-half payable in advance, the other in the middle of the session. For further particulars address

HENRY W. RIDGWAY,
47 & 60 av. Crosswicks P. O., Burlington Co., N. J.

BOARDING SCHOOL PROPERTY FOR SALE.—The Springdale Boarding School Property, near Goose Creek Meeting House, Loudoun Co., Va., is now offered for sale on very advantageous terms, to any suitable Friend who will open a Boarding school. It is believed there is now a good opening for a school at this place, both Friends and others being desirous to see one established. For particulars apply to

SAMUEL M. JANNEY,
Lincoln, Loudoun Co., Va.

324, 4, 414, oexn.

CHESTER ACADEMY.—A Boarding and Day School for both Sexes, Broad St., Chester, Pa. Every branch of a solid English Education is taught in this Academy, together with Latin, French and Drawing, in all its varieties. Thoroughness in all the studies is insisted upon, and especial care will be taken to educate the morals as well as the intellect of the pupils. A Primary Department is connected with the School. Pupils can enter at any time.

MEMOIR OF THE LATE JOHN WATSON, OF CANADA WEST.

(Continued from page 82.)

I now thought the bitterness of death was past, but I had yet to taste the wormwood and the gall. I again felt a state of great desertion, wherein I was made to cry out, "My God, my God, why hast thou forsaken me!" I had to be baptized into the death of Christ, that I might know his resurrection unto life. The true followers of Christ must indeed drink of his cup and be baptized with the baptism he was baptized with. He suffered unto death, leaving us an example that we should follow his steps. Herein is the mystery of godliness, the mystery of Christianity, the mystery of the death and sufferings of Christ in the flesh, showing us that the way to life is through death, the death of the cross, the sacrifice of self. Every sin must be atoned for by suffering. If any man do wrong, he must suffer for the wrong which he doeth; this is the immutable law of our being. Adam had the commandment, and by disobedience received the penalty. Cain knew the law, and thus it was said to him, "If thou doest well, shalt not thine offering be accepted; if thou doest not well, sin lieth at thy door." By obedience to the working of the mighty power and spirit of Christ within us, we become crucified to the world and the world to us, and we obtain forgiveness for past transgressions and strength for days to come.

In a measure of this strength, and with the help afforded, I endeavored so to walk as to obtain the unity of my friends. A few years after my reception into membership, I was made use of as clerk to the Monthly Meeting of Muncy; and in the earlier part of this service attended a Monthly Meeting about to be established at Roaring Creek, and was made use of as clerk at the opening of the same. At the close of the meeting, (a number of Friends from Philadelphia being present,) Arthur Howell came to me, and in a most endearing manner laid one hand on my shoulder and the other on the flaps of my coat pockets, for I had not fully changed my dress. "John," said he, "these will have to come off, by and by;" and they did come off as Truth opened the way. I mention this trivial circumstance as a caution to those who may read this, that if they see a fault in a brother or sister, to use the most endearing language to reprehend the same, that they may tend to gather.

I was now made use of in disciplinary matters, and frequently had little openings in the meeting with the unity of my friends. The Monthly Meeting forwarded my name at two intervals to the Quarterly Meeting, expressive of their unity with me; but the sense of the Monthly Meeting not being united with, they were returned. At the last time, it was some discouragement to me, having a desire to attend a distant Monthly Meeting. I said in mine heart I was not worthy for whom they should do

this; but I found there were other causes operating. I had the full unity of my friends at home, and accompanied Jesse Haines in a visit to the meetings and families of another Monthly Meeting, and also united with a mother in Israel in the performance of other religious services.

But now was coming a trying time, a time in which I think it may be said, "The leaders of the people caused them to err," holding out the language, except ye believe in this or that, ye cannot be saved. It was a time, I thought, to try men's souls—mine to an hair's breadth. It did appear that for conscience' sake I should become separated in outward fellowship from some very near and dear friends. I prayed, yea, earnestly prayed, if I was wrong in my views, I might be taught the better way; and it pleased the Heavenly Father to revive in my listening ear (for it seemed to me like a voice from heaven,) the language of Simeon, "Lord, now lettest thou thy servant depart in peace, according to thy word, for mine eyes have seen thy salvation which thou hast prepared before the face of all people, a light to lighten the Gentiles, the glory of thy people Israel;" herein believing in the Light as Christ is the Light, and so walking therein, will give us fellowship with his true disciples here below, and in eternity fellowship with the saints in light. And I believe the Heavenly Father has children under every name who walk according to the light afforded them. I think the blessed Jesus is described as saying, "Other sheep have I than this or that fold; them also will I bring, and there shall be one fold and one shepherd;" and gladly do I anticipate a day as described by a friend,

"When sects and parties all shall fall,
And Christ acknowledged Lord of all."

My mind having for some time been drawn to look towards making a settlement in Canada, although doing a profitable business in a woolen factory, oil mill, &c., I began to make arrangements for carrying out such a purpose, and during this time several judicious, feeling Friends visited me and my family, and after a very solid opportunity concluded, though it seemed trying to us all, to leave us at liberty to pursue the course we apprehended best for us, and accordingly we removed.

My wife had a widowed sister with her family living in Canada; with these exceptions we went as strangers among strangers, and such was the agitated state of society here as well as in Pennsylvania, that we had deep trials to pass through. I had also thought myself weaned from any anxiety in reference to political concerns, but at this time great efforts were being made by a party then in power in favor of forming the Episcopal, or by some called English Church, as a dominant establishment, with its attendant loaves and fishes, (the clergy re-

serves.) My ardent feelings against intolerance, and a strong aversion to priestcraft, led me into some degree of activity, but yet I think with care. My motives were pure, though it might be that at times I felt too much excitement. I found more condemnation from some of our own Society, yea, from some that I much loved and oft felt that I could wash their feet, than I did from my Heavenly Father. This agitation lasted several years; but rectories were appointed, and at last the clergy reserves were divided among the different sects.

Some thought me to be an aspirant, and that I was seeking to undermine their influence; but I can truly say I never had such a thought, and I often wished they could see my heart. I rejoice now in the fact that I have for some time been better known and that there has been more unity felt with me.

In the earlier part of the season in the year 1830, my wife and myself went to Fishing Creek, and on our return from thence, as we took our seats in the stage at Lockport for Lewistown, it was nearly full, and all except ourselves were of the missionary character. One woman in particular, who was about to join in some missionary enterprise, spoke much of the circulation of the Scriptures over the world and the wonderful effects it would produce. I sat silent for some time, but at length I spoke and asked them if the Scriptures were the grace of God that brought salvation that had appeared to all men. They remained still; it was like a silent meeting. At length one spoke, and said it was not. I then gave my views. I told them I rarely passed a day without reading them. I then spoke of this grace, a teaching principle in man, and also of the manifestation of the Spirit of God, that had been given to every man whereby he may profit. I then directed them to Christ, who was before all scriptures were written, and who said, when speaking of them, they testified of him, but ye will not come unto me that ye might have life. They received my little efforts very kindly, and we parted with them in the most friendly manner.

In the 10th mo., 1833, I received a visit from Jonathan Backhouse, from England, who was then on a visit to Friends in Canada. It was to me a very interesting visit. Jonathan did not evince a dominant feeling, but we reasoned together on subjects relating to the differences among Friends.

Not long after this interview I entered into a public dispute with a Methodist minister, who gave me a number of questions to answer, mostly taken from the opposers to Elias Hicks. These I answered, and then asked him some. On the subject of original sin, I asked him, as to the soul or spirit of men, whether it was generated in man or was the gift of God. The question was so unexpected to him, that he re-

plied it was generated in man; but the whole assembly was against him, and this closed our debate; and I believe this little opportunity had a tendency to remove strong prejudices from some present.

(To be continued.)

John Howe says; "That it is not philosophy which is professed by this or that sect, but which is true of all sects; nor do I take that to be religion which is peculiar to this or that party of Christians, but that which is according to the mind of God among them all."

THE LATE RICHARD BROTHERTON.

The following additional account of this Friend has been sent us for publication.

Mr. Brotherton was descended from the first settlers of Randolph, and was so well acquainted with the early history of his native town that he was commonly regarded as the town oracle.

In 1682, the great Wm. Penn and his associates purchased East Jersey. Thirty-one years later, the first white man ever known to have made his way into this township purchased of the heirs of Wm. Penn a tract of land, a part of which was in 1774 purchased by Henry Brotherton, the grandfather of Richard; this property has ever since remained in the family. Richard Brotherton was accustomed to relate how his great grandfather on his mother's side, Wm. Schooley, came from Schooley's Mountain and purchased Mill Brook, and started the first grist mill ever known in this vicinity. He was a pioneer, and endured great hardships; once he was obliged to go thirty miles to buy corn of the Indians and to bring it home on his back, walking on the snow with snow-shoes. In 1740, known here as the hard winter, the snow was so deep that horses could not travel; and many cattle perished because it was impossible to get to them to feed them. A neighbor attempting to reach the next house, perished in the attempt, and in the spring was found dead near the gate. At the same time his wife perished alone in her own house.

The first settlers of this Township were Quakers, and the first church was the Quaker Meeting House, the frame of which was raised in 1748. In this house the distinguished Hartshorn Fitz Randolph, after whom the Township is named, was accustomed to worship. But of all those who belonged to the Society of Friends and worshipped in this Quaker Meeting House, no one was ever more esteemed for his kindness, his honesty, his consistency and his piety, than Richard Brotherton. And the respect which he commanded was not confined to the members of his own denomination.

His business (he was both a farmer and a butcher—sending his meat wagon for miles

around,) made him, in the course of years, familiar to all the inhabitants of the vicinity. Though these people were divided on other subjects, they were united in their favorable opinion of his character. Mr. Brotherton possessed a kind heart, always in sympathy with the poor and the afflicted. Often in driving his wagon, he has been known to go far out of his way to carry a piece of meat to a sick man or woman, when it was certain, from their circumstances, that he could never receive pay from them. He often received notes from those indebted to him, but never distressed any one for payment. On the contrary, he sometimes destroyed notes, lest, falling into other hands, the poor but worthy debtor might be involved in litigation, or be in some way distressed. This kind regard for the comfort of others, was a lifelong disposition, and continued with him to the last. On Christmas, the week of his death, when hardly able to speak, partly by signs and partly by words, he ordered a basket to be filled with provisions and sent to a destitute family, with the kind assurance that he did not forget them.

A thrifty farmer, he always had plenty of grain; and yet in seasons of scarcity, when the price was high, he has refused to sell, because he knew that his neighbors in the spring would want seed to sow their fields; and in the spring-time, when they came to him for this purpose, he let them have what they needed on the promise of being repaid from the next harvest.

He would at any time rather suffer wrong than do wrong. This generous trait of character developed itself in his sympathy for the colored man. The Quaker is by education opposed to slavery. He was so, also, by the instincts of his soul. It did not please him to hear men talk of giving to the colored man his rights. He would say, why deprive any one, especially the weak and helpless, of that which belongs to him. He loved his country, but he felt slavery to be a crime, and a blot on his country's character. Hence, when the fugitive from a government that would only recognize him as a chattel, on his way to a government that would recognize him as a man, stopped at his house, he did not betray him. He preferred even to suffer the penalty of the Fugitive Slave Law, sooner than see a human being in distress without a human sympathizer; and therefore, though a stranger, he took him in; hungry, he fed him; naked, he clothed him; and then, with kind words and a little ready cash, pointed him to the North star, and commended him to our Father in heaven.

Mr. Brotherton was a strictly honest man. He was honest to a proverb—for the phrase was current, "As honest as Richard Brotherton." Once, while a director of the bank, a person in drawing his check was supposed by mistake to have been overpaid, but there was

no proof. The other directors proposed to settle the case by putting the man under oath. But Mr. B. objected; saying, "If the man has received the money and will not own it, is it not probable that he will take a false oath, which would only increase his guilt without benefitting the bank? Better lose the money." And his counsel in this instance prevailed. Had he been sharper in trade, more severe with men, and more eager for gain, he might have died a richer man. But he strove to remember the interests of others, especially where his own interests were involved. He believed in goodness and loved it for its own sake; and if in consequence the casket of his soul was less ornamented, yet the gem which it contained shone with purer lustre. Nor did he ever regret it; for on reviewing his way of life, he said, "I know that my estate is less than most people suppose, and this is owing to the many losses I have met with through the leniency I have shown to others; for with all my imperfections I have not distressed any man for debt, nor indulged in a spirit of retaliation, but have aimed to do as I would be done by; nor could any amount of wealth now reconcile me to the idea of having pursued a different course." Earthly riches often perish in the getting; or if not then, they forsake us at death; but he that is rich toward God, has the good part which will never be taken away.

If there is one virtue in which the Quaker, who is true to his principles, is likely to excel, that virtue is patience, or the complete control of one's feelings. In this respect we never knew a man who equalled Mr. Brotherton. He was an exemplification of the words of the Saviour—"In your patience possess ye your souls." He was not a stoic, for the stoic aimed to destroy all feeling. He aimed to control his feelings, and not let them control his judgment. He was meek, and no amount of provocation disturbed his equanimity. He was gentle, for no one complained of provocation from him. He possessed "the ornament of a meek and quiet spirit, which is in the sight of God of great price." To his patience was added the spirit of resignation, and this resignation was subjected to a severe ordeal.

In the summer of '64, a painful swelling under his chin, which had slowly developed itself, was pronounced by the physicians whom he consulted to be an incurable cancer. His active life was at an end, and he considered his hours of enjoyment to be over, and the days which remained to be days of growing suffering, to terminate in death by starvation. Yet, in view, of this gloomy prospect, he said, "the will of the Lord be done." And through all this period of suffering, which proved to be longer than any one anticipated, not a sign of impatience was shown, not a single murmur escaped

his lips. He did not complain of his sufferings, nor of his nurse, nor of the doctor, nor of his lot in any respect. But patience and resignation enabled him to look at the things which are unseen; and this sight made his affliction seem light, while it was working for him, the far more exceeding and eternal weight of glory.

His mind was full of the goodness of God. In his youth he was feeble and expected to die—but his days had been prolonged beyond the average period of human life. His life had been a peaceful and happy one; and now as it was coming to a close, he had the prospect of a more glorious life in the future. Thus when most men would have seen nothing but darkness, he saw only light; and where to the natural eye, nothing was visible but the deepest gloom, he experienced the sweetest joy.

Mr. Brotherton was possessed of a good memory; or his habits of thinking were such that he remembered what he read or heard or saw. Fond of reading, he was more fond of reflection, so that important facts which came under his notice were thoroughly considered and digested. When he was but a lad, Napoleon was holding at bay the armies of all Europe, or invading the territory of each kingdom on the continent, and the accounts which were published at the time were by him so carefully considered, that he was ever after able to describe the principal battles with its chief actors, and to tell the numbers engaged and the numbers slain. The same remark is true respecting the leading events which took place during his life time, among the different nations and especially in his own country; and these events were not only remembered, but important principles were deduced from them, so that with him, history was God in his providence, interpreting the laws of his government as revealed in his word.

This habit of reflection which grew with his growth and strengthened with his years, and which was a part of his devotion, proved to be a source of sweet consolation to him in his sickness, for in his extreme bodily weakness he was able to concentrate his thoughts on God and kindred subjects.

One day he said to us, "I have had a most pleasant meditation; my soul is full of joy, my heart seems to be so sweetly drawn out in love to all mankind." He was much pleased to have his friends call in, especially when they entered into his spiritual state; and some went away bearing with them precious memories of that sick room.

Thankful for the blessings of God's providence, thankful for the kind offices of those who waited upon him, thankful for these friendly calls, and especially thankful for God's gracious presence, his heart at times overflowed with the joy of gratitude. And the pleasant

thoughts which were in his mind by day were in his head by night. Once at least he had a most delightful dream. It seemed that an angel had encamped about his bed and by his presence and conversation refreshed his soul. When about to leave him, he said to the angel, "I cannot let thee go except thou bless me." "Wherein shall I bless thee?" He said, "bless me not in my corn, or my wine, or my oil, but bless me in my devotion to the Lord." His joy on the following day could not have been much sweeter if he had indeed been blessed by some angelic visitor. But his most interesting experience occurred on this wise. He was sitting in an upper room alone, when all was quiet around, and in the stillness favorable to that divine communion which he so much enjoyed, while devoutly exercised in spirit, there seemed to stand before him a visible presence, indescribable, but real, which coming near, spread over him a beautiful white robe; then in an audible voice said, "the Lord Jehovah." This was followed by a state of mind so intensely delightful as to be beyond the power of language to describe, and this exquisite joy lasted for more than an hour. It would seem indeed as if the angel of the Lord had granted his request, and blest him in his devotion. Thus he continued through his sickness. While the outward man was perishing, the inward man was renewed day by day, until he fell asleep.

The writer of this article is a Presbyterian, yet takes pleasure in paying this tribute to the memory of the good Quaker whom he has known for more than a quarter of a century, and only known to love.

Mr. Brotherton is the last of his generation. In early youth he went to the sanctuary of his fathers to worship; and since their departure has continued to go, though sometimes he has there worshipped alone. On the first day of the present year his remains were taken to this old Meeting House, where a congregation larger than could get in had assembled, and there appropriate services were performed by members of the Society of Friends from abroad, who had known him in health and visited him in sickness. His grave will add an attraction to the old graveyard, and the fragrance of his memory will perfume the enclosure. None but the actions of the just, small sweet and blossom in the dust.

Metinks if you would know
How visitations of calamity
Affect the pious soul,—'tis shown you there!
Look yonder at that cloud, which thro' the sky
Sailing along, doth cross in her career
The rolling moon! I watched it as it came,
And deemed the deep opaque would blot her beams,
But melting like a wreath of snow, it hangs
In folds of wavy silver round, and clothes
The orb with richer beauties than her own;
Then passing leaves her in her light serene.—*Southey.*

THE WORLD A MIRROR OF ETERNITY.

(Concluded from page 85.)

When I learn from the observations of distinguished astronomers and natural philosophers, that the size of the sun is more than one million and a half greater than that of our globe; when I learn that the sun probably consists of earths and rocks similar to those of our sphere, that mountains and valleys really appear upon its surface, that it is not, as it seems, a glowing ball of fire, but that it is surrounded by an indescribable luminous vapor in the same manner as our earth is surrounded by clouds;—or when I learn, that even tolerably strong telescopes show upon the surface of the moon entire ranges of strangely-formed mountains and valleys, interspersed with dark spots, supposed to be oceans and plains;—or when I hear that in the sphere which we call our morning and evening star, mountains have been discovered, which far surpass in altitude those of our earth, I am seized with reverential awe, and my mind is lost in amazement at the incomprehensible vastness, at the wonderful construction of the universe, in which I perceive so many globes like our own, and probably—nay, certainly—inhabited like our own by living beings. Beings, the noblest of whom acknowledge and praise God—ah! perhaps more truly and worthily than I do.

Then I see the world as in a darkened mirror; then arise in me feelings never before experienced; then I become conscious that I belong, not alone to this earth, to this fleeting, insignificant life, but also to other kindred worlds; that I have brothers, more perfect and more happy, dwelling in immeasurably distant regions of the grand universe. Language fails me. My thoughts are confounded. I seem to have a presentiment of the infinite. I stand in the midst of eternity. I am immersed in its awful depths!

What manifold forms of life and existence may there not be in those great worlds, that roll so majestically through space! What an ascending scale of ever greater perfection and happiness, of which I, poor mortal, cannot form even a distant conception! Even here on earth I behold and admire the manifold differences which prevail in great and small things. Even here I behold strange inequalities. What variety of mental capacity and power of enjoyment, even among animals! What an inferior creature is not the mussel clinging to the rock on the sea-shore, when compared with the May-fly rising on golden wings through the balmy air of spring! What an exalted position does not the sagacious elephant, the intelligent courser, the dog, the faithful friend of man, maintain at the side of other individual species of the animal race! And what is the instinct of animals compared to the reason of man!

And can we suppose that after calling man into being the creative power of the Creator was exhausted? Can we suppose that man is the most perfect of created beings in the universe, because he is the highest and most glorious being on this globe? What is this earth of ours? Why, one of the smallest stars in the firmament. And even our sun, though one and a half million times larger than the earth, is but one of the smallest when compared to the suns which, placed at distances from us that no mortal can calculate, yet appear as stars of the first magnitude. If I may be allowed to draw conclusions from the comparative magnitudes of the heavenly bodies, oh, then, man must be one of the meanest and most insignificant of Divinely created beings; then there exist in the infinite creation, in the abodes of eternity, beings of far higher nature than ours, before whom we should appear but as the dust at our feet; and whose wisdom, holiness, perfection, happiness exceeds ours as much as our wisdom, holiness, happiness exceeds that of the lowly worm which we unconsciously trample under foot.

Yea, there are creatures, of higher nature than myself, far more holy and perfect, who, like myself, pray to the Highest of all Beings. Revelation mentions them as angels, as the exalted spirits of Heaven, as Cherubim and Seraphim. There are worlds above ours. There are inhabitants of the boundless universe, in comparison with whom I am a mere nothing. And had no revelation taught me so, I should have learnt it from what I observe even on this earth. Yea, verily, the world is to me a mirror of eternity; and though but a darkened mirror, the images I behold in it are mighty enough to stir up my innermost soul.

Only a darkened mirror, and yet how much do I not behold in it! My knowledge here below is but partial, yet how elevating even in its limited form! When my mind loses itself in the infinitude of Divine creations, I feel my insignificance, my nothingness, and yet at the same time a sweet pride and consolation come to me in the thought, that I, also, am worthy of God the Creator of the universe; that something Divine lives and thinks within me!

Alas for me, when from this sublime height, where I seem to have a presentiment of God, I look down upon my past life! Alas for me, what have I been? What have I done? The sorrows I have known, have they been nearer those of the angel or of the brute? Have I striven more to secure the sublime and intense gratification which the seraph enjoys in the consciousness of his perfection and holiness, or the sensual gratifications of my earthly body, which are common to the lower animals as well?

Blushing, I cast down my eyes before the incorruptible judge within me; before the Om-

niscience of the All Holy One. Fain would I hide myself—hide the whole course of my life, that no eye might behold it! For I have looked into the darkened mirror of eternity, but failed to be impressed by what I saw. I had an intuitive perception that a higher destiny awaited me, and that I must consecrate myself to it during my earthly life; but I did not raise myself up into the sphere of the angels, but sank down into the slough of animal life. I labored for my body only; took heed for naught but meat and drink; stretched out my hands with child-like folly after pomp and earthly glory, evanescent as dust; I neglected myself, lived not for my soul, my real self, but for my perishable body, which is mine only for a time. I looked into the darkened image of eternity; but, like the animal whose drooping head allows it only to gaze on the earth, I never lifted my face towards Heaven. The applause of men, so contemptible and so little enduring, I prized more highly than the consciousness that I was making myself worthy of God and my eternal destiny. Ah! how unutterably foolish I have been! how despicable I seem to myself! "Be perfect, as your Father in Heaven is perfect!" So saidst Thou, my holy, my Divine Teacher, Jesus Christ, who filled the spiritual world with Thy light, which was not of this world. Woe is me! I heard Thy voice, O faithful Shepherd of men, but I did not follow its call!

Alas! like my knowledge, so was also my willingness but partial and imperfect. But is it ever to remain so? Shall I become still more imperfect than I am? Shall I be precipitated from the place which I now hold in the scale of God-created beings? Eternity! Eternity! In thee dwells Eternal Love; but woe to me, sinner that I am, in thee dwells also the Eternal Judge whose Justice deals with us according to our deserts!

Console me, ye lovely daughters of Heaven, Faith, Hope, and Charity! Accompany me along the paths which I may still have to traverse. Strengthen me, O faith in God! and raise my mind above earthly cares and earthly wishes up to its true destination. Save me when my soul vacillates between time and eternity, when it is tempted to prefer the animal to the Divine. Save me when passion is nigh mastering me, and when sensuality threatens to carry the victory over principle and duty. And thou, O Hope, Divine gift of God, promise held out by the lips of Jesus himself, abandon me not in the most anxious hours of life! And when I sacrifice everything for the sake of righteousness and the purity of my soul, should I be poor and forsaken because of my virtue, and become a laughing-stock to men—oh, then, Hope in Eternity and Mercy, do not thou forsake me!

And thou, loveliest of all virtues, parent and

source of every spiritual perfection, Charity, love to God, and love to man, penetrate me so that in thee I may live, and breathe, and have my being. Only he who dwells in love, dwells in God; only to him who dwells in love, who is thoroughly imbued with love, is eternity opened here on earth; only he enjoys here below already a foretaste of its bliss. For he who dwelleth and ruleth in eternity is the all-animating Love, is God!

For Friends' Intelligence.

"THE DUHOBERTSI."

(Concluded from page 88.)

A conversation between the rector of the Nevakoy Seminary of St. Petersburg, Archimandite, and three of the sect called Duchobortsi, Michael Stihereff, Anekie, and Timothy Suhareff, in May, 1792.

A. You have here mixed up many things together; let us consider them one by one. 1st. That the Saviour, Christ, is the only chief pastor and head of the Church, is a truth; for He hath founded it by His own merits; under His Almighty providence it exists, is guarded and protected; and "the gates of hell shall never prevail against it." Spiritually, Christ is united to it; for, "behold! I am with you, even to the end of the world;" and by the power of His grace He helpeth the prayers and petitions of believers. But it does not seem good to the wisdom and majesty of God that all, without distinction, should be engaged in the external state and service of the church, which is so closely united to the internal; and therefore, from the very first ages, this has been committed unto worthy pastors and teachers, "as stewards of the mysteries of God." 2d. I said that the external state of the church is very closely united to the internal. Certainly it is so. Who does not know how powerfully the passions and the flesh work in us, both to good and evil, according to the nature of the object presented to them? We have need to recruit the efforts of our minds by such salutary aids; and to stir up the expiring flame of piety within us, by memorials of the goodness of God and of the example of holy men. Here is the whole of what you so improperly style material and idolatrous worships. So long as we are united to matter, that is, to the body, we can never reach that pure and inward spiritual worship of God, which the holy angels present unto Him, or such as that of the eternally glorified saints; and on this account, when God requires that we should worship Him in Spirit and in truth, it is to warn us against shameful hypocrisy, or other dispositions of mind not corresponding with our external worship. 3d. With respect to the scandalous lives of some pastors, they can never harm the essence of faith; for that is not the cause of their bad conduct. And that their ir-

regularities can never excuse those who on this account leave the church and despise her doctrines, is witnessed by the Saviour himself, in his discourse with the Pharisees. "The scribes and Pharisees sit in Moses' seat," saith He; "all, therefore, whatsoever they bid you observe, that observe and do; but do not ye after their works; for they say and do not." Moreover, Christian humility should have deterred you from judging so rashly concerning general corruption and evil dispositions. But I have purposely not yet answered several of your expressions, such as "idolatrous meetings and vain ceremonies," that I might first ask you what you mean by them?

D. You may conjecture that yourself.

A. Well: do not even you show becoming respect for the characters of those who have been distinguished for holiness, and after death glorified by God, as patterns of faith and virtue?

D. Where and whom hath God thus glorified?

A. Are the names of Chrysostom, Gregory the Great, and such like unknown to you?

D. I know them.

A. What do you think of them?

D. What do I think?—Why they were men.

A. But holy men, whose faith and lives were agreeable to God; and on this account they are miraculously glorified from above.

D. Well, let us suppose so.

A. Now it is to them that the church is indebted for all those offices and ceremonies which you denominate idolatrous and vain; and the worship of images has been declared not to be sinful by the council of the Holy Fathers;—how then will you make this agree with your views?

D. I know not; I only know that hell will be filled with priests and deacons and unjust judges. As for me, I will worship God as he instructs me.

A. But can you, without danger, depend upon yourself? Are you not afraid that sometimes you may mistake your own opinions, and even foolish imaginations, for Divine inspiration?

D. How?—To prevent this, reason is given unto us. I know what is good, and what is bad.

A. A poor dependence. With the best reason, sometimes, good appears to be evil, and evil to be good.

D. I will pray to God; He will send his word:—and God never deceives.

A. True, God never deceives; but you deceive yourself, assuring yourself of that, on His part, which never took place.

D. God does not reject the prayers of believers.

A. Believers—true: those regrets which are agreeable to the law of faith, Divine wisdom will not reject; but "ye ask and receive not, because ye ask amiss." For this purpose hath He given us the book of His Divine word, that in it we may behold His will, and that our

petitions may be directed according to it. But it is vain in the present to expect miraculous and immediate inspirations, without sufficient cause, particularly such as are unworthy of Him, and to pretend to such inspirations and revelations, is very hurtful to society, and therefore ought to be checked.

D. But to me they appear to be very useful, salutary, and worthy of acceptance.

A. What! to break off from the society of your countrymen, though united with you by the same laws and the same articles of faith, and to introduce strange doctrines and laws of your own making!—to begin to expound the doctrines of the gospel without the aid of an enlightened education, disregarding the advice of such men as are most versed and experienced in those things, and out of your own head to found upon this a separate society! Is it not also to rise against your country, when you refuse to serve it when the sanctity of an oath is required? Should not the simple command of the higher powers be sufficient to unite you with others to defend your country, your fellow citizens, and your faith?

D.

A. Why do you make no answer to this?

D. There is nothing to say. I am not so loquacious as you; neither have I need of it.

A. But do you not see, at least, whither your blind zeal is leading you, and that you deserve to suffer much more than all that has yet befallen you? We look for your repentance and amendment?

D. Do what you choose with us; we are happy to suffer for the faith! This is no new thing. Did you ever hear the old story?

A. Tell me, I pray you, what story?

D. "A certain man planted a vineyard, and set a hedge about it, and digged a place for the winefat, and built a tower, and let it out to husbandmen and went into a far country. And at the season he sent to the husbandmen a servant, that he might receive from the husbandmen of the fruit of the vineyard. And they caught him, and beat him, and sent him away empty. And again he sent another; and him they killed, and many others; beating some, and killing some. Having yet therefore one son, his well-beloved, he sent him also last unto them, saying, They will reverence my son. But those husbandmen said among themselves, this is the heir; come, let us kill him, and the inheritance shall be ours. And they took him, and killed him, and cast him out of the vineyard. What shall therefore the Lord of the vineyard do? He will come and destroy the husbandmen, and will give the vineyard unto others." Mark, xii. 1—9. Now I have done with you.

A. At least answer me this. How can it be reconciled that you reject the Holy Scriptures,

and at the same time endeavor to support yourself upon them?

D. Argue as you will. I have spoken what was necessary, and shall not say another word.

"Other documents of the same kind might be given. I shall only add, that the sect of the Duchobortzi, Molochani, or Spiritual Christians, is numerous in Russia; and that though in many points they agree, in essential things also they are found to differ.

"In March, 1822, I met with a most interesting Spiritual Christian, the minister of one of their assemblies in St. Petersburg, and had a long conversation with him in the house of a Russian noble. His name was Isaiah. He was a man about sixty years of age—in appearance, a simple bearded peasant, dressed in coarse, wide russet garments. I conversed with him for nearly three hours on the essential doctrines of the gospel, and found him in general very sound. His knowledge was taken solely from the Bible, of which he was one of the most powerful quoters I ever conversed with. His views of the faith and practice of a Christian, drawn from this source, were beautifully simple and harmonious. But, like the Duchobortzi, he rejected the external ordinances of baptism and the Lord's supper. He seemed to insist much upon the evidences of a living faith; and that nothing could entitle a person to the name of a Christian but Christianity in practice. As he had no acquaintance with scholastic theology, nor any systematic form of faith, I was astonished at his skill in illustrating one part of Scripture by another, comparing spiritual things with spiritual, and the wonderful facility with which he applied the whole force of truth to the regulation of the heart and life. In this poor peasant, I saw an illustrious example of the power of the Divine word, under the blessing of God, to make even the simple, and those who in respect of human learning are babes, truly wise. His congregation he told me consisted of about 500 souls, who formed a village near Mosdok. They had five elders to labor among them in spiritual things, who are chosen from among themselves, and ordained to their office by the laying on of the hands of the whole church, and prayer. He spoke of their brethren as being very numerous, and scattered over all the provinces of the empire; they were also known under the name of Molochani; but were not all equally pure in doctrine and practice. He said that he had been sent forth by his church for the express purpose of visiting the brethren, and ministering to their spiritual wants by doctrine and conversation; many of them, he added, were becoming purer in faith and practice.

"He stated that the great body of Molochani entertain superstitious ideas respecting 'the kiss of charity,' or form of salutation used among them;—that, on saluting each other, they pay a

kind of mutual devotional respect, by bowing themselves to the ground, as before the image of God, and the 'temple in which the Holy Ghost dwells';—that they therefore look upon the kiss of charity as one of the most sacred acts. In some provinces, he said he had found them denying the last judgment, saying that it was already come, and the second advent of Christ already past: it was one object of his travels to purify them of these errors; but he regretted that some of their congregation had unworthy teachers.

"In his views of the invocation of saints, the use of images, prayers for the dead, &c., he held pure protestant principles. He said that in public worship they use no books but the Bible. They practice no vows of celibacy;—he himself had a wife and children at home. Their ritual, he said, consists chiefly of extemporary prayer, and exposition of the Scriptures in a familiar and easy manner by their ministers. He said that many of the Duchobortzi are now become Nationalists, and reject the written word of God, saying that they have the Word of God in themselves. This seems to be a natural consequence of the singular error of the Molochani, above mentioned—that of paying a kind of worship to each other."

FRIENDS' INTELLIGENCE.

PHILADELPHIA, FOURTH MONTH 21, 1866.

FRIENDS TRAVELLING IN THE MINISTRY.—

Sidney Averill, having obtained a minute from Clear Creek Monthly Meeting, Illinois, has had appointed meetings in parts of that State wherever one, two or three families of Friends were to be found.

Scattered throughout the State of Illinois are many families and parts of families, who have a right of membership in our Society, and who retain a strong attachment to Friends, but, owing to their remoteness from each other, they are unable to assemble together for religious worship. Many of these feel it a great privation to be thus situated, and regard with desire the privileges from which they and their children are debarred.

We understand the visit of our friend Sidney Averill was gratefully received. He tells us that "though there are comparatively few who adhere to plainness of speech and apparel, yet the love of pure spiritual worship retains supremacy in their hearts," and that the visit left upon his mind two important impressions;

one was, that "a Friend who lives near the Fountain of Truth, and in the living maintenance of our peculiar testimonies has a tacit or admitted influence for miles around," the other, "the truth of the proverb, 'Train up a child in the way he should go: and when he is old, he will not depart from it.'"

We are not disposed to question either of these conclusions. Every upright, conscientious person who does each day the duty of the present, must exercise an influence for good upon those around, and though his sphere may be comparatively limited, yet the obligation is none the less imperative to do what the hand findeth to do. We also think that the advice and example of concerned parents, who endeavor to inculcate true principles, and to train the minds of their children to judge for themselves what is right, must have an effect, and though it may not immediately appear, yet when these children are far removed by years and distance from their childhood's home, the experience of life will verify parental teaching, and it will become as sacred truth in their estimation leading them into paths of wisdom.

With the present number, we close the extracts from Gibbons' Review, which have occupied a portion of our paper for some time past. We would remind those of our readers who have felt pained at its appearance, of the reluctance with which, at the request of some valued friends, we consented to revive the unpleasant subject. It seemed reasonable that the reiteration of charges long since disproved, should be met by the republication of that disapproval, particularly as the work had been sanctioned by our Yearly Meeting.

The cause of truth can never be advanced by misrepresentation, and it sometimes becomes the unpleasant duty of those who would otherwise shrink from what savors of religious controversy, to defend a society or an individual from unfair and unjust aspersions. This appears to have been the object of William Gibbons, the writer of the "Review." His biographer states that for many years his pen was freely employed in defending the Society of Friends, and elucidating their testimonies and doctrines.

As many of our readers may not be familiar with the interesting memoir of the author

appended to the "Review," we propose to commence the publication of it in our next number.

The Friends interested in the publication of "The Children's Friend," desire us to say that they have not, as yet, the requisite number of subscribers to justify the issuing of the paper, and they would request all who wish to encourage it by their subscriptions, or who have lists of names, to forward them without delay.

DIED, on the 6th of Twelfth month, 1865, at her residence in Middletown, MARY F. ASH, in the 63d year of her age; a member of Chester Monthly Meeting, Pa.

—, suddenly, on the 30th of Third month, 1866, at Chester, Pa., REBECCA P., relict of Wm. Eyre, Jr., in her 48th year.

—, on Third-day morning, the 3d of Fourth month, at Rahway, N. J., EDMUND SHOTWELL, aged 75 years, formerly of Philadelphia.

—, on the 4th of Fourth month, 1866, in Philadelphia, ELIZABETH ELY.

—, on the 12th of Fourth month, 1866, in Bensalem Township, Bucks Co., Pa., JOSEPH C. TOWNSEND, son of the late Ezra Townsend, of Byberry, in his 26th year.

FRIENDS' SOCIAL LYCEUM.

We have received from the Secretary an abstract of the proceedings of the Lyceum during the past winter, by which we are informed that the first meeting of the present term was held on Third-day evening, Tenth month 3d, 1865, and have been held weekly up to Third month 27th, 1866.

Twenty-five lectures have been delivered, a list of which, with the names of the lecturers, is appended.

The Founding of Pennsylvania,	by John J. White.
Specific Gravity,	Edward Parrish.
The Moon,	John G. Moore.
Ornithology,	Grace Anna Lewis.
His Travels in India,	Jos. Thomas, M. D.
The Circulation of Sap in Plants	
and Blood in Animals,	Dr. J. G. Hunt.
Force and Matter—their relation	
in the Universe,	Edward Parrish.
Selected Readings,	Esther J. Trimble.
Exhibition of Stereograms,	Dr. J. G. Hunt.
His Travels in India (continued)	Jos. Thomas, M. D.
Our Social and Domestic Life,	Ann Preston, M. D.
Comets,	T. Clarkson Taylor,
	Wilmington, Del.
Our Quaker Fathers,	Henry Peterson,
Mineral Veins and the manner of	
working them,	Joseph Wharton.
Stereorama,	Dr. J. G. Hunt.
The Teeth,	Newlin Peiros.
What we may learn from the lives	
of eminent men,	Caleb S. Hallowell.
English Literature,	H. R. Warriner.
Money,	Wm. H. Seaman.
Nitrous Oxide Gas,	Geo. T. Barker, M. D.
Stereorama,	Dr. J. G. Hunt.

Perfumes,
Animal Electricity and Phospho-
rescence,
Stereorama,
The Unity of the Human Species,
Study of Language,
Education,

Edward Parrish.

Dr. H. Allen.

Dr. J. G. Hunt.

Jos. Thomas, M. D.

Edward Parrish.

Jos. Thomas, M. D.

In addition to the above, four original essays have been read, three in poetry and one in prose. Ninety-five questions have been referred to members of the Lyceum, many of which were of an interesting character, and often called forth a free expression of individual views on the subjects referred to.

In the early part of the season, a correspondence was opened with some of the associations of a similar character in the neighboring sections of country, and the letters received have added interest and instruction to the meetings.

The Stereorama purchased one year ago for the illustration of History, Science and Art, has continued, in the hands of its custodian Dr. J. G. Hunt, to furnish entertainment on numerous occasions, which has been greatly enhanced by his appropriate remarks and explanations. The number in attendance during the season just passed has been greater than at any previous one, owing mainly, it is believed, to the active measures taken by the committee to procure suitable lecturers.

Review of "A Declaration," &c., published by order of the Yearly Meeting of Orthodox Friends (so called) held in Philadelphia in 1828. By WM. GIBBONS, M. D.

(Concluded from page 91.)

ARTICLE XLVII. "Belief," with them, "is no virtue; and unbelief no crime."

This, as quoted from Elias Hicks's sermon, without the context, amounts to a perversion of the speaker's meaning. Here follows the whole paragraph, which furnishes a satisfactory explanation.

"And when we come to this principle,—this gift of grace, this Light, there is no necessity for us to be careful about what we will believe, and what we won't believe; because nothing can give us a true belief, but this Light. It will give every one of the children of men, a belief sufficient to induce them to enter on the work of salvation aright. For, as this is the medium, and the only one, by which God continues with his rational creatures, there is no other way by which he gives them an evidence of what is right, and what is wrong; for he has set good and evil before us all, and left it for us to choose. 'Choose you this day whom you will serve.' Here, as you come to this, you need not trouble yourselves, or recommend to your friends what they must believe; that they must believe this or that; it is all nonsense; because a man cannot believe just what he wants to believe. He cannot believe any thing but what the Divine

Light gives him an evidence of; and this he must believe; and he cannot resist it. Here, then, we discover, that [*belief is no virtue, and unbelief no crime*;] because why? It is an involuntary thing to man. But when the soul is willing to be instructed by the grace of God, it will be instructed; and when it is instructed, it will have an evidence of the truth, and it cannot resist it; it is bound and forced to believe it; not from any compulsory measure, but from the clear force of the thing, because it is self-evident."—*Quaker*, vol. 1, pp. 145, 146.

In the third volume of the *Quaker*, page 94, we find a further explanation of this matter.

"For there is no man or woman," says Elias Hicks, "that has ever done an act of sin, but they have been reprov'd for it. This reprov'r, you know, was declared by Jesus to be the Comforter, the Saviour, the Deliverer of mankind from sin. He declared that he, the Spirit of Truth, when he should come, would 'reprove the world of sin.' And I know that you, my fellow-creatures, have known this witness, and have been reprov'd for sin; and you are obliged to BELIEVE this evidence, because you know it is your situation: and from this evidence, you never can extricate yourselves, and hence, it is not a voluntary act of the mind to believe. Then here we discover that our belief or unbelief, merely as men and creatures, is of no account; for what we have not evidence of, we cannot believe; and therefore unbelief in respect to that which we have no evidence of is no sin. But if we continue in those things which we have evidence are wrong, and have been reprov'd for, this is sin."

ARTICLE XLVIII. "Elias Hicks says, "In those things which relate to our moral conduct, we all have understandings alike, as reasonable beings; and we know when we do wrong to our fellow-creatures; we know it by our rational understanding; WE WANT NO OTHER INSPIRATION THAN REASON AND JUSTICE." Again: "If we transgress against God, or even against our fellow-creatures, the act hath its adequate reward, and it will make us sorry for what we have done; that is, we shall be losers, and gain nothing; for no man shall gain by doing evil."—*Quaker*, vol. 2, pp. 258-9. Decl. p. 31.

The unprejudiced reader will, I think, be apt to ask, Where lies the criminality of the sentiments contained in the above extract?

The Declaration makes the following comment: "As regards morality, they want no other revelation than reason and justice: and when we transgress against God, the act will make us sorry for what we have done; that is, we shall be losers, and gain nothing."

The first part of the discourse from which this extract is taken, and where it is found, treats upon moral conduct, the injury of others, by giving way to a spirit of calumny, hatred,

revenge, &c. And the speaker tells us, what we all know to be true, that reason [that is, right reason] and that abiding sense of justice, placed in the breast of every man, suffice to convict us of wrong, when we injure our neighbor.

The blessed Jesus wanted "no other inspiration than reason and justice" to convict the high professing Scribes and Pharisees of their enmity and injustice towards him. "And the ruler of the synagogue answered with indignation, because that Jesus had healed on the Sabbath day, and said unto the people, 'There are six days in which men ought to work: in them therefore come and be healed, and not on the Sabbath day.' The Lord then answered him and said, 'Thou hypocrite! Doth not each one of you, on the Sabbath, loose his ox or his ass from the stall, and lead him away to watering? And ought not this woman, being a daughter of Abraham, whom Satan hath bound, lo! these eighteen years, be loosed from this bond on the Sabbath day? And when he had said these things, all his adversaries were ashamed.'" Luke xiii. 14, 15, 16, 17.

And in the case of the woman taken in adultery, they said to him, "Now Moses, in the law, commanded us that such should be stoned, but what sayest thou? This they said, tempting him, that they might have to accuse him." "So when they continued asking him, he lifted up himself and said unto them, He that is without sin among you, let him first cast a stone at her. And they which heard it, being convicted by their own conscience, went out one by one, being at the elders, even unto the last," &c. John viii. 5, &c.

The authors of the Declaration make the few words which they quote the ground of a charge against the speaker of inconsistency, or of exalting reason at the expense of revelation,—than which, nothing can be more unjust; as the general tenor of this and other discourses of Elias Hicks plainly shows—to which we refer the reader, after giving the following quotations.

In page 261, he says, "So that here, all our happiness in time and eternity, depends on inward knowledge and right information, which we receive by communion with our heavenly Father."

And in page 262: "Revelation is the first thing; the first as it regards earthly things: and so it is with the revelation of God, who is the Sun of heaven. God is the Sun of the spiritual world; and the Light and Life of that Sun show his will to us with the same plainness that the outward sun shows outward things, when our eye is single to Him, and when we look within, and keep within; for it is there that he makes himself manifest to us fully, although it be in the least degree: for

having first convinced us what is right for us to do, the moment we transgress, we feel it, beyond any thing that the light of the outward sun can do for us. And we never can get away from this sense, however wicked a man or woman may be: and however they may endeavor to shelter themselves under earthly things and delights, and as it were for a time drown the reprover's voice, and silence, as it were, or slay the *two witnesses* for God in the soul. And what are these two witnesses? They are revelation and reason in the souls of men."—See also *Berean*, vol. 3, p. 366.

ARTICLE XLIX. "If we transgress against God, or even against our fellow-creatures, the act hath its adequate reward, and it will make us sorry for what we have done," &c.

In this extract there is a figure of speech, which is frequently used in Scripture and in common parlance; that is, to speak of the *right* and *wrong* acts that we do, as *rewarding* or *reproving* us, as the case may be; when we mean the Divine Monitor, within us. Thus it is said, "I have done an act that gives me pain, or that gives me peace and satisfaction; or an act that makes me sorry and uneasy," &c. "What hast thou done that disquiets thee? or that affords thee so much satisfaction or pleasure?" These are common expressions which no one misunderstands.

This figure of speech is called "metonymy," by which one word is put for another, or the cause for the effect, and is *usual in all sorts of authors*. (Dictionary.) Thus, the apostle: "Every transgression and disobedience [receiveth] a just recompense of reward." Heb. ii. 2. And in like manner the prophet says, "Thine own wickedness shall correct thee, and thy backslidings shall reprove thee." Jer. ii. 19.

Here, the words "transgression and disobedience" are used for the person by the apostle; and "wickedness," &c., by the prophet, instead of the Divine Monitor. So the "Sermon" uses the word "act" for the person, and the pronoun "it" for the Divine Monitor.

ARTICLE L. "He [the Almighty] has set good and evil before us, and left us to elect for ourselves."—*Quaker*, vol. 2, p. 259.

No candid reader would put the construction on the word "*left*" which the Declaration appears here to have given to it; and which I understand to be, that in leaving us to choose for ourselves, the Father of mercies *deserts* us!!

"And if it seem evil unto you to serve the Lord, choose you this day whom ye will serve; whether the Gods which your fathers served, or the gods of the Amorites," &c. Josh. xxiv. 15. Here, Joshua left them to choose for themselves.

"And Elijah said, If the Lord be God, fol-

low him; but if Baal, then follow him." 1 Kings xviii. 21.

In both cases, the plain meaning is, that the will was free, and a choice was "*left*" them, or given them; or they had the power or privilege of choosing for themselves.

Such then, is the conclusion of the catalogue of spurious charges laid against the Society of Friends; a conclusion which illustrates the character of the whole, and affords a clear evidence that the kind of criticism here resorted to, is the unsavory fruit of a spirit, the reverse of that which is "*kind*," and "*thinketh* no evil."

For Friends' Intelligence.

THE DESERT LAND.

Suggested by the remark of a friend that she had been dwelling in the Wilderness.

Yes, the Wilderness seems cheerless—
But a dreary place,—

Yet we there behold God's goodness,
All his footsteps trace.

To the wand'rer in the desert,
Not through pleasant meads,
But o'er mountain,—through the valley,
Of the pathway leads.

Yet upon the hoary summit
Holy angels bide—
Lo! their white tents thick and scattered
O'er its rugged tide!

Round the pilgrim band, the angels
Watch keep day and night—
With the weak and way-worn journey
Veiled from mortal sight.

Forty years the chosen people
Trod the desert sand,
Forty years they onward journeyed
Towards the promised land!

Lo! a barren waste they traversed,
Where no springs were found—
Where no waving harvests scattered
Smiling plenty round.

Yet Jehovah gently led them
Where no foot had trod;
By the fiery pillar guided,
To the mount of God!

Daily for his weary children
He a table spread;
In the desert, and there only
Gave them heavenly bread.

When they fainted at the noontide,
All the waters spent,
He beneath the palm's deep shadow
Bade them pitch their tent.

And from Elim's crystal fountains
Living waters gave—
Bade the stream to flow from Horeb,
Sweetened Marah's wave!

In the thorn-path, on the mountains,
Fairest flowers bloom;
Green oases in the desert
Banish all the gloom.

If the Father's loving presence
Only with us bide,
Fearless we may roam the desert,
He will safely guide!

He can give the heavenly manna—
Angels food—to eat;
Make the wilderness a garden—
Marah's fountain sweet!

Thirty-Sixth Annual Report of the "Female Association of Philadelphia for the Relief of the Sick and Infirm Poor with Clothing."

In reviewing the labors of the past winter, and submitting to our members and the public a report of the same, we feel confident in the belief that the efforts of the Association have been attended with the most gratifying and beneficial results. For the welcome aid that has been extended by our friends and contributors, in valuable donations of both money and goods, we would return our sincere thanks, with the assurance that the means thus placed at our disposal have enabled us to extend our labors, thereby giving assistance to many whose destitute condition rendered them worthy objects of our sympathy and care. By furnishing sewing to those whose support is mainly dependent upon the needle, and distributing the clothing thus made among the aged, sick and little children, we realize the gratifying results that accompany a twofold charity.

The continued high prices of provisions and clothing, added to the entire suspension of Government work, have brought before us many new and urgent demands for assistance, which we have endeavored to meet, by dispensing judiciously the funds we have received.

During the past winter, 865 garments have been distributed; most of these were previously made by poor women, who were paid for their work out of the funds of the Association.

The annual Treasurer's Report furnishes a statement of the receipts and expenditures of the Society the present season.

AMONGST THE FREEDMEN.—NO. I.

BY JACOB M. ELLIS.

"*The Association of Friends of Philadelphia for the Aid and Elevation of the Freedmen*" having decided to place eleven teachers in the field of labor, and having found it impossible after the most diligent correspondence to obtain from some localities the definite kind of information that appeared to be requisite, before taking the responsibility of sending females away from their homes, (some of whom were anxiously awaiting being assigned a post of duty), I was deputed to proceed to Fairfax county, Virginia, for the purpose of forwarding, as far as practicable, the interests of the Association.

I was accompanied by Mary-McBride, one of the teachers engaged, who was willing to locate at any point where a prospect opened of being useful. We left the city in the night train for Washington, where we arrived at six o'clock next morning, without any thing to notice other than the amusing scenes that an entire night passed in a railroad car is sure to develop. Here, some of the annoyances ever attendant upon travelling commenced. Our next point was Vienna, but in consequence of being misinformed by the conductor, confirmed by the baggage agent in the depot, our baggage came very near being carried to Richmond, as when the error was discovered, I had but just time to run and exchange my check for the trunk, and arrange for its delivery at the Vienna train, its regular time of starting being nine o'clock.

After a short stroll, and a tedious sojourn in the office, as the time neared the above named hour, we were told that they had concluded not to leave that day until eleven o'clock! This gave time for a more extended walk, which we endeavored to improve to the best advantage. Upon returning, we found, to our dismay, a trunk had been sent to the platform instead of the office, (these being situated some distance apart), and there being no one there to receive it, it had been taken away again,—there was no certainty whether to the baggage office or the depot. Time pressed, and upon my claiming that the train, under the circumstances, must wait, I received a gratuity of ten minutes. Passing over the details of taking a pilot with me, hiring a wagon to convey us and the trunk, when found, back again, suffice it to say, we succeeded, with a little time to spare. This was very fortunate, as otherwise, the Vienna train running only three times a week, and First-day intervening, we should have been detained in Washington for three days. Our accommodations were only a freight or baggage car, with two or three rough benches for seats; but we did not murmur.

Upon reaching *Vienna*, the trunk was again something of an annoyance; but as we were not "on time," the difficulty was soon overcome. Oh! for an invention whereby travellers can get along without baggage! Very soon after our arrival, I walked to the camp, to call on Capt. James A. Ross, (with whom I had previously been in correspondence.) He had left for the day. He, however, called on me in the evening, and we had a full and free conference as to the wants and facilities of *Fairfax* county. Nothing but discouragements presented themselves for the future, and we retired heavy-hearted; my own opinion being, that both of us would have to return to Philadelphia without accomplishing anything; and the unpleasant query again and again forced itself upon me, "How can I face my friends with such a result?"

Although the Captain coincided with me as to the fruitlessness of the undertaking, I determined to leave no stone unturned, and more particularly as he placed a four horse ambulance at my disposal, and generously offered to accompany me any and everywhere, and do what he could to forward the good object; and faithfully and fully did he redeem his word.

The next morning, "*Fairfax Station*," some nine miles distant, was first visited, and *desolation* is a tame word to define its condition. It is simply a station-house and small store combined, with several colored families scattered round in log shanties, and some Irish families herding under a hill some distance off. The building appropriated for a school was all well enough, but I could not conscientiously ask any lady to locate there with all the repulsive surroundings, neither would I be willing to leave her there, upon her cheerfully preferring so to do. The Captain again thought with me, and then offered, if we could find a lot for the school house, and board for our teacher at "*Fairfax Court-house*," some four miles nearer *Vienna*, he would move the building there without expense to us.

The opinion had always been entertained that it would be almost impossible to establish a colored school at that place; to such an extent does the spirit of rebellion still exist. Thither, however, we went, and the necessity for a school was soon made apparent, as upon merely driving through it I counted *thirteen* children playing about, who would be made better off in a school; and if this number could be seen out of doors, there must be many more not in sight. Knowing there must be plenty of room there, our first application for board was made to a gentleman who is the proprietor of a large boarding-school. He met us very blandly, but his excuses for not accommodating us were as awkward as they were amusing. He was an

Englishman, and they thought of the negro as other people did, (without, however informing us what that opinion was.) There might some feeling arise in the matter, and he did not think it would suit. Besides this, he had pretty much given up the establishment to his wife and daughter, (whom, however, he did not offer to consult.) When the John Brown raid passed through there he had eighty scholars, in consequence of which it fell off to twenty, &c., &c. A bitter repartee was at my tongue's end, but I wisely suppressed it.

Upon leaving, he gave us at our request the names of two or three in the neighborhood, who might possibly accommodate us. These all proved to be sound Union people. The first was the postmaster, who has a deep interest in our undertaking, would do all he could to forward it, but whose family is so situated they cannot take a boarder. A very cordial invitation, however, was given our teacher to mingle with them in social intercourse. He sent us to a widow lady, who has been thoroughly loyal throughout the war, and whose name our "Englishman" had already given us; and there we were successful. As to a site for the school house, time did not permit our attempting to procure one; but the Captain became so warmed up, that he declared, if refused, which would be very likely, military authority would be used to secure one.

Returning with far lighter hearts than when we commenced our ride, we had just time to take a slight lunch in lieu of dinner, when our faithful pilot was again at the door with his team, ready for our afternoon prospecting in a contrary direction.

The farm at Camp Wadsworth having been restored to its former owner, who has ordered off all the negroes on it, the breaking up of our school, formerly under the care of Mary K. Brosius, had become a necessity. We directed our attention to that point first, to look after a small house that had been purchased for us by her for a trifle, with the intention of removal to some other point, the demolition of which for that purpose had already been commenced. Having learned by a little experience that it would be useless to have a school room without board for the teacher, we drove to *Langley*, about a mile distant from the old camp. The first family we applied to stated they *could not*, and without knowing any thing about their political predilections, we were inclined, from what we saw, to believe them.

The next was an ordinary country tavern, and though not very prepossessing in its appearance or surroundings, we thought it possible, if they were so disposed, the interior arrangements might be made satisfactory. But they had "*never taken boarders!*" The "*house was small and they had not room!*" Our third and last application in that neighborhood was to

another publican, who we certainly thought could make no objection on account of want of room, his house being large, and withal a very pretty and good one; but he had, he feared, "*already engaged too many boarders, so many, indeed, that they would very probably interfere with his transient custom!*"

And all this equivocation, if nothing worse, because some noble-hearted female, too noble to retaliate, should opportunity offer, is willing to sacrifice the comforts of home and all its endearments, for the purpose of lending her aid to stamp the seal of manhood on the brows of a long oppressed race.

The weather is now very cold here for the season, (the latter part of the Third month.) A portion of the afternoon we have travelled through one of the most severe blows and snow storms I have ever experienced. Circumstances preventing any further efforts, we drove back again about dark, having passed through a day of considerable fatigue.

The next day, saw a site selected for the school house at "*Fairfax Court-house*," and the building at the "*Station*" sufficiently demolished to commence its removal to the first-named place. It is to be rebuilt on a little spot of ground facing the turnpike, and although there are no trees immediately shading it, there will be shade close by. The ground belongs to a Union man, but as the devastations of war have in many instances very much impoverished such as he, we have agreed to pay him a nominal rent annually for the use of it.

(To be continued.)

A MATCH FACTORY.

A match factory in Western New York is noted for the curious machinery used in the manufacture. 720,000 feet of pine of the best quality are used annually for the matches, and 400,000 feet of basswood for cases. The sulphur used annually for the matches is 400 barrels, and the phosphorus is 9,600 pounds. The machines run night and day, and 300 hands are employed at the works. 500 pounds of paper per day are used to make the light small boxes for holding the matches, and four tons of paste-board per week for the larger boxes. Sixty-six pounds of flour per day are used for paste, and the penny stamps required by government on the boxes amount to the snug little sum of \$1,440 per day.

There are four machines in use for cutting, dipping and delivering the matches. The two-inch pine plank is sawed up the length of the match, which is 2½ inches. These go into the machine for cutting, where at every stroke 12 matches are cut, and by the succeeding stroke pushed into slats arranged on a double chain 250 feet long, which carries them to the sulphur vat and from thence to the phosphorus vat, and

thus across the room and back, returning them at a point just in front of the cutting machine, and where they are delivered in their natural order, and are gathered up by a boy into trays and sent to the packing-room. Thus 1,000 gross or 144,000 small boxes of matches are made per day. The machines for making the small, thin paper boxes and their covers are quite as wonderful and ingeniously contrived as those that make the matches. A long coil of paper, as wide as the box is long, revolves on a wheel, one end being in the machine. It first passes through rollers, where the printing is done, from thence to the paste-boxes, where the sides and ends only are pasted; from thence to the folding apparatus, where the ends are nicely folded and the whole box is pasted together and drops into a basket. A similar machine is at work at the covers, and thus 144,000 boxes per day are manufactured."

THE DOOR YARD.—We love neatness. Our eyes take in a stranger's house at a glance.—We pity the man who has a slovenly housewife. Wealth may cast her favors around him, but dirt and disorder will make his dwelling a cheerless abode. As we traverse the country, we look in upon the door yards. The door yard is the programme of the order of internal arrangements. The clean swept door sill and walk and the flowers, are no unmeaning indications, and we stop with a sense of comfort where we know that "order reigns."—*Cayuga Chief*.

So do we love neatness, and we are of the opinion that a housewife's devotion to it often keeps her thin. She frets, as she rolls the old barrels out of the door-yard—gives a lecture on having a place for every thing and putting every thing in its proper place, as she carries the spade, grubbing hoe, and divers other things to the tool house—does wish husband and boys would empty the chaff from their shoes some where but on the clean swept door sill; fumes because all the flowers she planted and trained are rooted up by the hogs or nipped off by the horses, and is indignant because all the grass is destroyed by the horses being brought inside the yard to water. The husband declares, as he comes in and puts his hat on the table where his wife is kneading bread and his coat on a chair, for her to hang in their proper places, that if he had such an untidy wife as neighbor somebody, that he *could not live*. The sons follow the father's example with hopeful precision; the mother sees it all, puts on a worn out countenance, and says nothing. She sees there is no use in talking.

If both husband and wife oftener had a taste for neatness and a regard for each other's taste and comfort, much discouragement would never be caused that now is, and cleanliness, order and neatness would be much more usual among

us both in the internal and external arrangements.—*Indiana Farmer.*

Tears are Nature's lotion for the eyes. The eyes see better for being washed with them.

ITEMS.

President Johnson has signed the loan bill.

CONGRESS.—Both Houses have passed the concurrent resolution prohibiting the sale of spirituous liquors in the Capitol building and grounds. A resolution instructing the Secretary of the Senate to present the civil-rights bill, as passed by both Houses, to the Secretary of State, was passed. The Senate also passed bills to re-imburse Pennsylvania and Missouri for expenses incurred during the rebellion, and to amend the Agricultural College. The bill enacts that the time in which the several States may comply with the provisions of the act of 7th mo. 2, 1862, entitled "An act donating public lands to the several States and Territories which may provide colleges for the benefit of agriculture and the mechanic arts," is hereby extended, so that the acceptance of the benefits of the said act may be expressed within three years from the passage of this act, and the colleges required by the said act may be provided within five years from the date of the filing of such acceptance with the Commissioner of the General Land Office. A bill to equalize the circulation of the national currency was introduced. It provides for the retention of the amount in circulation at three hundred million dollars. New banks may be organized, but the circulation must be reduced to keep it within proper bounds.

HOUSE.—Among others, a bill was passed authorizing the coinage of five-cent pieces, to be made of copper and nickel. Also a bill to appropriate \$25,000 for the temporary relief of the destitute people in the District of Columbia, to be expended under the direction of the Freedmen's Bureau. The Senate joint resolution for the transfer of funds appropriated for the payment of salaries in the Post Office Department to the general salary account of the War Department, was reported back from the Committee on Appropriations with an amendment and passed. The amendment provides that it should not be construed to increase the appropriations already made for services in the Post Office Department.

INDIANS.—The President has proclaimed a treaty made between the United States and the Winnebago Indians. This tribe convey to the Government all their right, title and interest in their present reservation in the Territory of Dacotah. In consideration of this the United States cede the land to them in Nebraska, and agree to subsidize them for one year in their new homes, and furnish them with saw and grist mills, agricultural implements, guns, horses, and whatever may be necessary to their domestic comfort.

A treaty with the Bois Fort band of Chippewas was signed on the 7th inst., by Commissioners Cooley and L. E. Webb on the part of the Government. By this treaty the United States obtains the Vermillion lake gold fields, and the Bois Fort band a new reservation fifty miles further west. The Indians remain perfectly satisfied with the liberal spirit exhibited by the commissioners of the United States.

THE FREEDMEN.—The superintendent of the freedmen's bureau at the Sea Islands reports to the commissioner that the number of contracts made by him or the military authorities on Edisto and the other Sea Islands, during the 3d month 1868, was fifty-five,

including 2,338 freed people. Many more contracts have been made which were not reported in season to be embraced in the report.

We learn that H. De Mareil, editor of the *Messager Franco-Americain*, has established, with some assistance from the Government, upon a site of land, comprising one hundred acres, situated near Camp Barry, two-and-a-half miles from Washington, which was purchased by himself, a "Farm School" upon the model of similar institutions existing in France and Algeria.

At this institution, which comprises all the buildings and the appurtenances of both farm and school, two hundred colored orphan children will be educated and taught farming. The most liberal provisions have been made by H. De Mareil to insure the success of this charitable undertaking.

B. A. WILDMAN, Dealer in HOUSE-FURNISHING GOODS. A general assortment of Tin, Iron, Wooden and Willow Ware, Japanese and Britannia Ware, Cutlery, Spoons, &c., No. 925 Spring Garden St., Philadelphia. 421 104 pt.

THE Subscribers, Executors of Wm. Hopkins, of Samuel, deceased, will sell at Public Auction, on the premises, on Thursday, 24th of 4th Month, at 10 o'clock, A. M., (if fair, if not, the next fair day thereafter,) one of the most desirable farms on Deer Creek, Harford County, Maryland, known by the name of "Horton," containing 110 acres. In a high state of cultivation, situated 2½ miles from Tide-Water Canal, and a half mile from the village of Darlington, convenient to various places of Public Worship, Mills, &c.; improved by a dwelling house and barn. Also, at the same time and place, a tract of land, principally wooded, containing 97 acres. Also, another tract of wood land containing 5 acres, ¼ mile from the village of Dublin. Also, 10 acres of wood land, 3 miles north of Dublin, all in said county and State. Also, at the same time and place 8 head of Stock Cattle, &c., &c. Terms for Real Estate—one-third cash on day of sale, one-third in six, and the balance in twelve months, the credit payment to bear interest, and to be secured by notes or bonds of the purchaser. Personal Property—Cash on day of Sale.

JOSHUA HUSBAND, } Executors.

MEMOIR OF THE LATE JOHN WATSON, OF CANADA WEST.

(Continued from page 92.)

Having occasionally a few words to offer in public, the meeting of which I was a member, Yonge Street, after waiting deliberately, united with the Meeting of Ministers and Elders in the acknowledgment of my gift in the ministry. I had for some time thought if way was thus opened, enlargement would follow; though I had been instructed by a female minister, whom I much loved, and left in Pennsylvania, when I was about to start for Canada, not to seek great things for myself, and my life should be given me as a prey whithersoever I went.

I have thought for many years that there was too much looking for words, not only in those who spoke, but in the people, and have said in my heart the world has gone after the beast, our Society not excepted; and I have at times exemplified the feeling, Oh, inexpressible silence, muse His praise!

About this time there was still a great excitement in many minds on account of the Clergy Reserves. I felt less of it than formerly. Though from early life I have been a zealous friend to the civil and religious rights of mankind, and have thought with that eminent man, William Penn, "that we have civil as well as religious rights, and it is our duty to guard both; but how necessary it is in doing this that we do not mar our precious testimonies. I hope

there are many among us who are found praying, as ability is given, "Thy kingdom come." Who are those who are to bring this about? Satan will not be found casting out Satan, but it must be the righteous who are attending to that excellent maxim taught by Jesus, "Whatsoever ye would that men should do unto you, do ye the same unto them." "For with what measure ye mete, it shall be measured to you again." This law of retribution is contained and abundantly set forth in both the Old and the New Testament. In the latter it is described, "That which we sow, that also shall we reap." If we sow to the flesh, (the gratification of the flesh being uppermost in the mind), we shall of the flesh reap corruption; but if we sow to the spirit, we shall of the spirit reap everlasting life. Greatly do I desire to be found walking in the spirit, not fulfilling the lusts of the flesh. Those who are thus found are they that know "Thy kingdom come," and are seeking the righteousness of that kingdom; and unto these all things necessary are added.

By this we may understand why it is said ye need not say, "Lo here or Lo there is the kingdom of heaven, for it is within you." And by attending to, and being brought into obedience into the manifestations of Divine life and light revealed in the soul, we find this kingdom cometh not by observation, but is that which produceth peace and joy in the Holy Ghost; and thus being kept from right and left hand errors, we are made proportionally to enjoy it.

Though at times we find but little fruit apparent, yet at other times, I humbly trust, there has been a taking root downward in increasing humility, and a bearing fruit upward to the praise and glory of God.

The knowledge of Truth is progressive, of which the Apostle bears testimony when he says, "When I was a child I thought as a child, I spake as a child, I understood as a child, but when I became a man I put away childish things." How many childish things we have to part with, and however much we may attain to either temporally or spiritually, we know only in part or prophecy in part; but when that which is perfect (heavenly knowledge) is fully come, then that which is in part shall be done away. I have no doubt that the faithful in all ages have experienced, according to their measure, somewhat of an increase of light, the light of the moon becoming as the light of the sun, and the light of the sun as the light of seven days.

And I believe that Truth is so progressive that nations professing Christianity, as well as those considered by some as being comparatively in a state of darkness, shall see a great light, and the glory of the Lord will be revealed and rest upon them. "For he hath made of one blood all nations of men." He is indeed good to all, and His tender mercies are over all His works. A part of the law is spiritual, for it is said, "He that gathered much had nothing over, and he that gathered little had no lack."

Being favored to feel that my mind was gathered in humble confidence to my Heavenly Father, I considered it would be right for me to visit my old friends at Fishing Creek and Muney, and attend the Yearly Meeting to be held in Philadelphia. At our Monthly Meeting held the 14th of Third month, 1839, my prospect was submitted to my friends, and obtained their concurrence. I accordingly left home the latter end of the Fourth month, in littleness of feeling, having not much prospect of ministering to others, but rather looking to be ministered unto. I was very cordially received by my friends at Fishing Creek, more so than I had reason to expect. This manifestation of love and friendly feeling was a help to me. On my way my soul was in a deep state of abasement, and under much poverty, yet I could not feel that I was moving out from the direction of Divine counsel. In this state, with now and then a little light appearing, and a little strength afforded, I continued through the Yearly Meeting. During the meeting I suffered much from a severe pain in my leg and ankle. The meeting was, notwithstanding my peculiar situation, a very interesting one to me, and though I felt nothing of my own deserving or meriting love, yet I was a little comforted by that declaration, "Whom the Father loveth

He chasteneth, and scourgeth every son whom He receiveth." I have said, particularly since returning home, that it was all right.

I afterward attended our Yearly Meeting at Farmington, under much of the same feeling, though I was not supported with as much patience and cheerfulness as in Philadelphia and Fishing Creek. How much are my desires enlisted that the Lord's service may indeed be my greatest delight under the influence of His holy spirit, and that every performance in religious worship may come fresh from my soul.

First-day, 20th of 7th month, 1839.—Having returned from the accomplishment of the above visit, and recovered from an attack of the scarlet fever, with which I was seized soon after my return, I was to-day enabled to attend our little meeting, and once more associate with my brethren and sisters in a religious capacity. In our silent sitting, the awful responsibility which rests upon those who are called to speak to the people was peculiarly brought to my view; and I had a few words to communicate on the subject of Christ, as the object of the true Christian faith,—“Except ye believe that I am He, ye shall die in your sins.” That He is thus exhibited as the object of faith and belief, is evident. Christ being the Light whereby we discover our sins, if we attend to it, and to the reproofs and convictions it works on the mind, it will bring us to repentance and desires for future preservation. The meeting ended with supplication and thanksgiving—thanks for continued mercies, and prayers for the continued goodness of the Heavenly Father.

First-day, 4th of 8th month.—In our meeting to-day, it appeared to me that most of us had come together without any offering. Under the law, if they came without any, they could not worship God acceptably; and if our minds are not prepared with the offering required of us in this our day, to wit, the humble and contrite heart, true worship cannot be performed by us. A little life appeared near the close of the meeting, but not sufficient to warrant communication.

7th of 8th month.—In our little meeting to-day, though but few attended, we were favored with the incomes of Divine grace, and a little encouragement was afforded to endeavor, through faith, to obtain the promise.

Eighth mo. 15.—I was favored once more to associate with my friends in our Monthly Meeting, and I rejoiced again in not only seeing, but feeling a near unity with those whom I had not seen for several months. The little meeting of ministers and elders yesterday, as also the meeting to-day, were truly owned by the great Master. The travellers Zionward were encouraged, a word of comfort was afforded to the tried and afflicted, and endeavors were used to animate the lukewarm and careless.

Eleventh mo. 17th.—I have mostly attended all the meetings, some to satisfaction and some otherwise. Though I have not been able to record much, my experience has been varied; but surely it is a favor that we know through these changes where our strength lies. In my humility, the Most High has been graciously pleased to manifest himself to my peace and edification.

Fifth mo., 1843.—In company with a friend, I paid a visit to a small settlement of Friends and other people several miles distant from any established meeting; and at the suggestion of said Friend, proposed having a meeting at Whit-Church on First-day morning, and at a school-house, a few miles distant, in the afternoon. Few besides Friends attended the morning meeting, but a considerable number of people were convened at the school-house. I felt satisfied that it was right for me to be there, though my mouth was closed as to any communication. My mind was clothed with peace in thus attending to the Key of David, which, when it opens, none can properly shut, and when it shuts none can profitably open.

Seventh mo. 15th.—About this time I was taken unwell with a disorder which affected my nervous system, and my mind was much depressed in consequence. I had to look about me to see whether I was prepared for the final change, but it seemed to me that I had not sufficiently died unto the world, and I was reminded of the saying of the blessed Jesus, "He that loveth his life shall lose it, and he that hateth his life in this world shall keep it unto life eternal." Those that are willing to give up all for Christ's sake, can only realize that the life we lose in this world will give us an inheritance with the saints in light.

Seventh mo., 1845.—Attended the Quarterly Meeting at Farmington, by appointment of the Yearly Meeting with other Friends, and trust, through Divine favor, I was preserved and enabled to keep my habitation in the Truth.

(To be continued.)

There are bridal moments of the soul; and not easily forgiven are those who would utter the secrets of its high intercourse with its Lord. There is a certain spiritual indelicacy in persons who cannot conceive that not every thing which is matter of experience and knowledge is, therefore, a subject for conversation.

There are some things in this world too low to be spoken of, and some things too high. You cannot discuss such subjects without vulgarizing them.

Thus when Elijah and Elisha went together from Gilgal to Jordan, the sons of the prophets came to Elisha with that confidential gossip which is common in those who think to understand mysteries by talking of them. "Knowest thou," they asked, "that the Lord will take

away thy master to day?" "Yea, I know it: hold ye your peace."

God dwells in the thick darkness. Silence knows more of Him than speech. His name is secret: therefore beware how you profane his stillnesses. To each of His servants he giveth "a white stone, and in the stone a new name written, which no man knoweth, save he that receiveth it."

For Friends' Intelligencer.

DAILY EFFORT.

When infirmities press upon us, and heart and flesh fail, and the stir of the elements within is like the roar of wild beasts in the desert, let us look to Christ our Rock, to the holy one of Israel our Redeemer. Let us remember what He has done for his children in past ages,—in *all* ages; how he has stood between them and death, when destruction seemed to threaten an entire extinction. When hunger pressed them, He gave them bread from heaven; when by thirst they were ready to famish, he cleft the rock and supplied their need. Notwithstanding the discontent and the repining spirit that prevailed among them, their wants were met, and their necessities relieved. But there was something required of them. In their great strait they must use their own energies. Enough was placed within their reach every day for that day; it came in small particles, like hoar frost, and lay all around, requiring labor and close attention, too, to gather it. They must be up and doing early to secure it, for when the sun was up it was soon dissolved and gone. If they overslept, or became absorbed in other things, they lost that day's provision, but they had no reason to complain; the fault was their own for neglecting to improve the right time—idling when they should have been at work. This manna was white,—the emblem of purity,—the size like coriander seed, small, requiring close attention to gather, the taste like wafers made of honey. Every day it must be gathered; every morning they must look to it in season. What was left over was worse than useless. O! how beautifully this applies to present duties, that open to individual minds, when light from above dawns upon the understanding, showing the way and work we ought to be engaged in, to procure sustenance for the soul! Small, perhaps very small and insignificant this work may appear, and yet our daily bread depends upon our prompt attention and cheerful obedience, for through this the inner man is fed with bread from heaven and receives present good, that strengthens, because it comes from God: The incomes of Divine Love are sweet to the soul and doubly precious, as the answer of Well done, received on the performance of some little duty.

Let us then pursue our allotted course faithfully, performing our present duties, putting no stone of stumbling in our brother's way; then we may pass through Jordan a united band, and rejoice in plucking the grapes of Escol and possessing fields and vineyards, knowing the power of grace to overcome human infirmity and transform the image of the earthly into the image of the heavenly.

4th mo. 3d, 1866.

S. HUNT.

GYMOND ON FREE GOSPEL MINISTRY.

That this system possesses many advantages over a legal provision we have already seen. But this does not imply that even voluntary payment is conformable with the dignity of the Christian ministry, with its usefulness, or with the requisitions of the Christian law.

And here I am disposed, in the outset, to acknowledge that the question of payment is involved in an antecedent question,—the necessary qualifications of a Christian minister. If one of these necessary qualifications be, that he should devote his youth and early manhood to theological studies, or to studies or exercises of any kind, I do not perceive how the propriety of voluntary payment can be disputed: for, when a man who might otherwise have fitted himself, in a counting-house or an office, for procuring his after support, employs his time necessarily in qualifying himself for a Christian instructor, it is indispensable that he should be paid for his instructions. Or, if, after he has assumed the ministerial function, it be his indispensable business to devote all or the greater portion of his time to studies or other preparations for the pulpit, the same necessity remains. He must be paid for his ministry, because, in order to be a minister, he is prevented from maintaining himself.

But the necessary qualifications of a minister of the Gospel cannot here be discussed. We pass on therefore with the simple expression of the sentiment, that how beneficial soever a theological education and theological inquiries may be in the exercise of the office, yet that they form no necessary qualifications; that men may be, and that some are, true and sound ministers of that gospel without them.

Now, in inquiring into the Christian character and tendency of payment for preaching Christianity, one position will perhaps be recognized as universally true,—that if the same ability and zeal in the exercise of the ministry could be attained without payment as with it, the payment might reasonably and rightfully be forborne. Nor will it perhaps be disputed, that if Christian teachers of the present day were possessed of some good portion of the qualifications, and were actuated by the motives of the first teachers of our religion,—stated remuneration would not be needed. If love for

mankind, and "the ability which God giveth," were strong enough to induce and to enable men to preach the gospel without payment, the employment of money as a motive would be without use or propriety. Remuneration is a contrivance adapted to an imperfect state of the Christian church: nothing but imperfection can make it needful; and when that imperfection shall be removed, it will cease to be needful again.

Other modes of voluntary payment may be and perhaps they are adopted, but the effect will not be essentially different. Subscriptions may be collected from a number of congregations and thrown into a common fund, which fund may be appropriated by a directory or conference: but the objections still apply; for he who wishes to obtain an income as a preacher has then to try to propitiate the directory instead of a congregation, and the temptation to sacrifice his independence and his conscience remains.

There is no way of obtaining emancipation from this subjection, no way of avoiding this temptation, but by a system in which the Christian ministry is absolutely free.

But the ill effects of thus paying preachers are not confined to those who preach. The habitual consciousness that the preacher is paid, and the notion which some men take no pains to separate from this consciousness, that he preaches *because* he is paid, have a powerful tendency to diminish the influence of his exhortations and the general effect of his labors. The vulgarly irreligious think, or pretend to think, that it is a sufficient excuse for disregarding these labors to say, They are a matter of course,—preachers must say something, because it is their trade. And it is more than to be feared that notions, the same in kind however different in extent, operate upon a large proportion of the community. It is not probable that it should be otherwise; and thus it is that a continual deduction is made by the hearer from the preacher's disinterestedness or sincerity, and a continual deduction therefore from the effect of his labors.

How seldom can such a pastor say, with full demonstration of sincerity, "I seek not yours, but you." The flock may indeed be, and happily it often is, his first and greatest motive to exertion; but the demonstrative evidence that it is so can only be afforded by those whose ministrations are absolutely free. The deduction which is thus made from the practical influence of the labors of stipended preachers is the same in kind (though differing in amount) as that which is made from a pleader's addresses in court. He pleads because he is paid for pleading. Who does not perceive that if an able man came forward and pleaded in a cause without a retainer, and simply from the desire that justice should be awarded, he would be

listened to with much more of confidence, and that his arguments would have much more weight, than if the same words were uttered by a barrister who was paid? A similar deduction is made from the *writings* of paid ministers, especially if they advocate their own particular faith. "He is interested evidence," says the reader,—he has got a retainer, and of course argues for his client; and thus arguments that may be invincible, and facts that may be incontrovertibly true, lose some portion of their effect, even upon virtuous men, and a large portion upon the bad, *because the preacher is paid*. If, as is sometimes the case, "the amount of the salary given is regulated very precisely by the frequency of the ministry required,"—so that a hearer may possibly allow the reflection, The preacher will get half a guinea for the sermon he is going to preach,—it is almost impossible that the dignity of the Christian ministry should not be reduced, as well as that the influence of his exhortations should not be diminished. "It is however more desirable," says Milton, "for example to be, and for the preventing of offence or suspicion, as well as more noble and honorable in itself, and conducive to our more complete glorying in God, to render an unpaid service to the church, in this as well as in all other instances; and after the example of our Lord, to minister and serve gratuitously."*

Some ministers expend all the income which they derive from their office in acts of beneficence. To these we may safely appeal for confirmation of these remarks. Do you not find that the consciousness, in the minds of your hearers, that you gain nothing by your labor, greatly increases its influence upon them? Do you not find that they listen to you with more confidence and regard, and more willingly admit the truths which you inculcate and conform to the advices which you impart? If these things be so,—and who will dispute it?—how great must be the aggregate obstruction which pecuniary remuneration opposes to the influence of religion in the world!

But indeed it is not practicable to the writer to illustrate the whole of what he conceives to be the truth upon this subject, without a brief advertence to the qualifications of the minister of the gospel: because, if his view of these qualifications be just, the stipulation for such and such exercise of the ministry, and such and such payment, is *impossible*. If it is "admitted that the ministry of the gospel is the work of the Lord, that it can be rightly exercised only in virtue of his appointment," and only when "a necessity is laid upon the minister to preach the gospel,"—it is manifest, that he *cannot* engage beforehand to preach when others desire it. It is manifest, that "the compact which

binds the minister to preach on the condition that his hearers shall pay him for his preaching, assumes the character of absolute inconsistency with the spirituality of the Christian religion."*

Freely ye have received, freely give. When we contemplate a Christian minister who illustrates both in his commission and in his practice, this language of his Lord; who teaches, advises, reproves, with the authority and affection of a commissioned teacher; who fears not to displease his hearers, and desires not to receive their reward; who is under no temptation to withhold, and does not withhold, any portion of that counsel which he thinks God designs for his church; when we contemplate such a man, we may feel somewhat of thankfulness and of joy; of thankfulness and joy that the Universal Parent thus enables his creatures to labor for the good of one another, in that same spirit in which he cares for them and blesses them himself.

I censure not, either in word or in thought, him, who, in sincerity of mind, accepts remuneration for his labors in the church. It may not be inconsistent with the dispensations of Providence, that in the present imperfect condition of the Christian family, imperfect principles respecting the ministry should be permitted to prevail: nor is it to be questioned that some of those who do receive remuneration are fulfilling *their* proper allotments in the universal church. But this does not evince that we should not anticipate the arrival, and promote the extension of a more perfect state. It does not evince that a higher allotment may not await their successors,—that days of greater purity and brightness may not arrive: of purity, when every motive of the Christian minister shall be simply Christian; and of brightness, when the light of truth shall be displayed with greater effulgence. When the Great Parent of all shall thus turn his favor towards his people; when He shall supply them with teachers ex-

* I would venture to suggest to some of those to whom these considerations are offered, whether the notion that a preacher is a *sine qua non* of the exercise of public worship, is not taken up without sufficient consideration of the principles which it involves. If, "where two or three are gathered together in the name" of Christ, there he, the minister of the sanctuary, is "in the midst of them," it surely, cannot be *necessary* to the exercise of such worship that another preacher should be there. Surely too, it derogates something from the excellence, something from the glory of the Christian dispensation, to assume that if a number of Christians should be so situated as to be without a preacher, there the public worship of God cannot be performed. This may often happen in remote places, in voyages, or the like: and I have sometimes been impressed with the importance of these considerations when I have heard a person say "— is absent, and therefore there will be no divine service this morning."

* Christian Doctrine, p. 484.

clusively of his own appointment, it will be perceived that the ordinary present state of the Christian ministry is adapted only to the *twilight* of the Christian day; and some of those who now faithfully labor in this hour of twilight will be among the first to rejoice in the greater glory of the noon.

The greatest man is he who chooses the right with invincible resolution, who resists the sorest temptations from within and without, who bears the heaviest burdens cheerfully, who is calmest in storms and most fearless under menaces and frowns, whose reliance on truth, on virtue, on God, is unfaltering."

Biographical Notice of WILLIAM GIBBONS, M. D., late of Wilmington, Del. Written by one of his Sons.

James and Eleanor Gibbons, the parents of the subject of this narrative, resided in Chester county during the period of the American Revolution. They lived on the "Institution Farm," near West Chester, which was afterwards purchased from them by the Yearly Meeting, to found the Westtown school. Not long before the close of the Revolutionary war, they removed to Philadelphia, where James pursued the occupation of surveyor and conveyancer. He also taught school in "Friends' Academy," the building which is still standing in Fourth street below Chestnut.

The paternal ancestor, of James Gibbons emigrated from England to Pennsylvania, some years prior to the arrival of William Penn. But little is known of his history. He was, it is believed, a member of the Society of Friends. His descendants are numerous, and many of them now reside in Lancaster, Chester and Delaware Counties, and remain principally attached to the Society.

James and his wife were members of the Society of Friends. During the Revolutionary contest, whilst Philadelphia was occupied by the British, and the American army was encamped at Valley Forge, they shared largely in the sufferings of those who refused to take part in the struggle. Being within reach of the foraging parties of both armies, they were a prey to both, and were despoiled of nearly every thing that could be carried off.

James was a very unpretending man in his person and manners, though quite a linguist, and much attached to his books. One day, a foraging party was seen approaching the house, when the family had scarcely anything left that could be converted into food, except a valuable cow, which they had contrived, up to this time, to hide in the cellar. Now, however, the cow happened to be in the yard, and it was too late to secrete her. Accordingly, they made up their minds to part with their favorite animal.

The officer in command of the party rode up to the door, and stationing his soldiers without, entered the house, and passed into the study, where James was sitting, surrounded by his books. The officer, who was an educated man, glanced his eye over the library, and observing a variety of books in the dead languages, enquired of James if he could read those books. On receiving an affirmative answer, he said, "You are a clergyman, I presume." "No," said James. "Are you a lawyer?" "I am not." "Then you are a doctor." James still answered in the negative, without manifesting any disposition to cultivate the acquaintance of his visitor. "What then is your occupation?" enquired the officer with some surprise. "A farmer," said James. On this, the officer, appearing somewhat astonished, took a seat and entered into conversation on the subject of the French and other languages. At the close of the interview, he withdrew with his men, forbidding them to touch anything on the place. Before night, however, another party came that way seized on the cow.*

During their residence in Philadelphia, in the year 1780, William was born. On the night of his birth, an older child, named William, who had been lying ill for some time, breathed his last. The mother gave to her new-born infant the name of him whose eyes she had just closed. William was the youngest of a large and number of children.

Soon afterwards, his parents removed to their farm in Chester County, where they continued to reside till it was sold for the purpose of a school. On the subject of education James Gibbons was deeply interested, and in order to promote the establishment of Westtown school, he sold the farm for a sum below its value, on condition that it should be appropriated to no other purpose.

* The trials encountered in those days by all who refused to take up the sword, we of the present generation can hardly estimate. Among other means adopted to gain subsistence for the armies, bands of soldiers were sent to the various farm houses, to thresh out the stores of winter grain and bear it off. While they were engaged in the work, they were quartered on the family of the farmer, and were often very annoying and insulting to the females of the household. A party of soldiers were sent on this errand to James's place. His wife, thinking it an imposition to be compelled to board them under such circumstances, determined that, at least, they should behave themselves decently while in her house. When they came in from their day's work in the barn, they found a large pot of boiling water over the fire, with an iron ladle in it. The idea soon entered their minds that the scalding water was intended to keep them in order—an idea which Eleanor took no pains to remove, and which was confirmed in their apprehension, by observing that she was a woman of uncommon energy and determination. The result was that they comported themselves with scrupulous propriety as long as they remained about the premises.

After parting with the Westtown property, James removed with his family to a farm at Dilworthtown, a few miles south of West Chester, where he spent the remainder of his life. He died in the year 1822, and his widow followed him to the grave in a few months. James was eighty-four years old, and his wife a few months younger. They had dwelt together in the marriage relation sixty years. Their lives were prolonged into a ripe old age, in which they enjoyed the full possession of their bodily and mental faculties. They were laid side by side in Friends' burying ground at Concord.

Early in life, William Gibbons evinced a fondness for mental pursuits. The facilities for acquiring knowledge were, at that period, extremely limited, in comparison with the present time. He managed, however, mainly by his own efforts, and with the aid of his father, who was fully competent to the task, to lay up a considerable store of knowledge, which became available to him through life. Engaging in the study of medicine, he graduated in the year 1805, and settled about five miles from Wilmington, near the present village of Centerville. A few years afterwards he removed to Wilmington, where he resided for the remainder of his life, continuing the practice of his profession.

In the year 1806, he was married to Rebecca Donaldson, the youngest daughter of John and Sarah Donaldson. She was a few years younger than her husband, and a woman of great activity and energy, and well qualified to share with him the allotments of a somewhat eventful life.

In early manhood, William Gibbons was the subject of deep and enduring religious impressions. His views on questions of religion were not *opinions* merely, but they resulted from close enquiry and serious meditation; they were solemn *convictions*. The principles and testimonies of Friends, he always regarded as of momentous importance in working out the design of man's creation. Believing those principles and testimonies to be in accordance with the example and precepts of Jesus, he strove to be faithful and diligent, in all the circumstances to which he was exposed, in maintaining before the world the character of a practical and consistent Quaker.

In the affairs of the church, he bore prominent part. His judgment was never hasty, but always the result of calm and deliberate reflection. Conclusions thus formed, he maintained with conscientious firmness. His words were few, and to the purpose.

The grand cardinal testimonies of Friends, he was zealous to promote, both within the pale of Society, and in the world at large. The religion which teaches universal love, and the entire incompatibility of war with the Divine

economy, he pressed on the attention of the professed followers of Christ, as the only true religion. He regarded with great interest and satisfaction, the labors of many sincere and upright men, in various parts of the world, to promulgate the doctrine of peace, both as individuals and associated as "Peace Societies." With William Ladd, the distinguished and devoted advocate of universal peace, he enjoyed a personal acquaintance, esteeming him as an exemplary and self sacrificing Christian.*

Of the colored people, he was an early and constant friend. On numerous occasions he took a prominent part in movements on their behalf, in the Monthly, Quarterly and Yearly Meetings; in memorializing the state and national legislatures against slavery, and in diffusing correct information and proper feelings on that important question, both among Friends and throughout the community in general. He was for many years one of the most active members of the "Abolition Society" of the State of Delaware—a society which was the means, under Providence, of illustrating the parable of the Good Samaritan, in relation to a large number of persecuted and oppressed children of Africa. He was also one of the principal members of the "African School Society," for the education of colored people, through which hundreds of colored children, who were deprived of other means of instruction, have been taught the rudiments of education, and placed in a position where they could elevate themselves and their race. This society, in which he never ceased to take a deep interest, had in its charge, at the time of his death, two flourishing schools, one for each sex.

(To be continued.)

PRAYER.

All prayer is to change the will human into the will Divine; and that prayer which does not succeed in moderating our wish, in changing the passionate desire into still submission, the anxious tumultuous expectation into silent surrender, is no true prayer, and proves that we have not the spirit of true prayer. That life is most holy in which their is least of petition and desire, and most of waiting upon God: that

* About the year 1837, William Ladd, then travelling for the promotion of his favorite concern, called on William Gibbons, to whom he was an entire stranger, and, without formality, introduced himself, in connection with the object of his mission. He was received with coolness and suspicion; but after a short time, as the conversation opened, William Gibbons became more interested in his visitor, and meeting with an entire coincidence of sentiment in relation to the Christian doctrine of non-resistance, he invited a repetition of the visit. Out of this circumstance grew a mutual attachment, which continued till William Ladd's death. Wm. Gibbons was in the habit of alluding, with much interest, to their first interview, as above related.

in which petition most often passes into thanksgiving. In the prayer taught by Christ there is only one petition for personal good, and that a singularly simple and modest one, "Give us this day our daily bread," and even that expresses dependence rather than anxiety or desire.

From this we understand the spirit of that retirement for prayer into lonely tops of mountains and deep shades of night, of which we read so often in His life. It was not so much to secure any definite event, as from the need of holy communion with his Father,—prayer without any definite wish; for we must distinguish two things which are often confounded. Prayer for specific blessing is a very different thing from communion with God. Prayer is one thing, petition is quite another. Indeed hints are given us which make it seem that a time will come when spirituality shall be so complete, and acquiescence in the will of God so entire, that petition shall be superseded. "In that day ye shall ask me nothing." "Again I say not, I will pray the Father for you, for the Father Himself loveth you." The Divine wisdom has given us prayer, not as a means whereby to obtain the good things of earth, but as a means whereby we learn to do without them; not as a means whereby we escape evil, but as means whereby we become strong to meet it. "There appeared an angel unto Him from heaven strengthening Him." That was the true reply to His prayer.—*Robertson.*

FRIENDS' INTELLIGENCER.

PHILADELPHIA, FOURTH MONTH 28, 1866.

FRIENDS TRAVELLING IN THE MINISTRY.—Elizabeth Comfort has obtained a minute from Falls Monthly Meeting, Pennsylvania, to attend the Monthly Meetings of Abington Quarter.

Mark and Rachel Palmer are her companions in the service.

As it is desirable that the Representatives and other Friends attending our approaching Yearly Meeting, should be comfortably provided for, during their stay in our city, (several Friends whose houses were open for that purpose having recently deceased or removed,) the committee who have the matter in charge, request those city Friends who have room, and are willing to accommodate strangers, to leave word at the office of Friends' Intelligencer, No. 144 N. Seventh street, as early as practicable.

SWARTHMORE COLLEGE.—We are glad to inform the numerous inquirers in regard to the

progress of this concern that the building has been commenced, and will be pushed forward during the coming summer and autumn with a view to getting it under roof before the next winter fairly sets in. The digging of the cellar, quarrying, hauling and laying the stone, the making and laying of the bricks, and the making of the necessary window-frames, have all been contracted for, at prices rather under than over the estimates. At the present enhanced prices of lumber, the building committee have thought it prudent to postpone the purchase of this material until it is absolutely required by the progress of the building.

Some Friends have thought it unwise to enter upon this work until the funds should be in hand to finish it; but the demand from all sources for the speedy supply of the educational facilities, which it is designed to furnish, and the general promise that when the work is begun and the funds for its completion are needed, they will be subscribed, have induced the managers to proceed as far as the money at their disposal, will allow.

In the meantime, the Committee appointed at the Annual Meeting, to solicit subscriptions are laboring to accomplish their part of the work, confining themselves especially to the city of Philadelphia. They propose, however, to extend their labors to New York and other sections of the country, throughout the current year, so that, if successful, the year 1867 may see the completion of the buildings and the organization of the School.

MEETINGS FOR THE CONSIDERATION OF THE TESTIMONIES HELD BY FRIENDS.—At the meeting on the 28th ult., that part of the Discipline was read relating to the establishment and arrangement of meetings, and the organization of women's meetings; followed by considerable expression on the advantage of social mingling among Friends. The benefit resulting from the familiar intercourse of the older and younger members was conclusively shown, and both classes were advised to do their part in effecting this object. A Friend remarked, that his venerable father impressed upon him when he was young, to turn towards his neighbor at the close of a meeting and extend to him the hand of greeting. This custom he had observed from youth to mature age, and he believed it tended

to promote kind feeling and to strengthen the interest we should feel for each other.

At the meeting on the 11th inst., the subject of a true Gospel ministry was introduced, by reading in relation to it from our Discipline and from the writings of Jonathan Dymond, who, a friend reminded us, was a Linen Draper, in the Southwest of England, probably in Exeter, and that he wrote a great part of his Essays in a little room adjoining his shop subject to frequent interruptions from customers, in the midst of his profound interesting speculations. With rare talents and exalted piety, he died before reaching the meridian of life, in the year 1828.

The social character of these meetings was adverted to, and the young, or those who desired more thorough information affecting our testimony to a free Gospel ministry, were invited to inquire concerning any point not fully understood. The question was then asked, Whether the writings of the Apostle Paul do not to some extent convey the idea, that he approved of ministers receiving pecuniary compensation? This led to an interesting and animated discussion, during which the Epistle to the Corinthians was alluded to by several, to show that while Paul admitted the custom, and argued that, under the church regulations, he, with the other Apostles, was entitled to compensation; and while he queried with them, "If we have sown unto you spiritual things, is it a great thing if we shall reap your carnal things," and while he referred them to the law of Moses, which saith, "Thou shalt not muzzle the mouth of the ox that treadeth out the corn,"—yet nevertheless he tells them plainly, "I have used none of these things, neither have I written these things that it should be so done unto me;" "for necessity is laid upon me: yea, woe is unto me, if I preach not the gospel;" and he continued, "What is my reward, then? verily that, when I preach the gospel, I may make the gospel of Christ without charge, that I abuse not my power in the gospel."

The sentiment was advanced that while our own ministers are looked up to as exponents of our opinions and definers of our faith, we cannot be firmly established on the ground of this great testimony: that according to the central idea of our profession, every member of the body,

however humble, should seek after a qualification to judge righteous judgment; and while a spirit of caviling is to be avoided, an undue deference to the authority of the preacher, however worthy and gifted, should not blind us to the sense of truth and right which is vouchsafed to all who diligently seek it. Truth, it was said, is equally precious, whether conveyed to us from the gallery at the stated times appointed for religious meetings, or spoken by those making less claim to Divine authority, on other occasions; and we were encouraged always to keep our minds open to its reception, whether conveyed to us through instrumental means, or by the direct influence of the Spirit of Truth upon our minds: thus we should grow in grace and increase in that knowledge which will make for peace.

While some of the speakers appeared not clearly to discriminate between the system of a salaried ministry and the individual acting under it, others drew a definite distinction, and fully recognized that many who received pecuniary compensation for preaching were faithfully and conscientiously devoting their time and talents to the work; and although these accepted remuneration, the term "hireling" could not justly be applied to them. Many objected to the use of this term as opprobrious, considering that the words "compensated" and "salaried" more correctly and charitably expressed the class designated. Some thought the term "hireling ministry," appropriate as it might have been at the time it was first used, did not now convey a correct impression of the meaning intended. Others argued that it was Scriptural, and preferred retaining the old Saxon phraseology.

The exclusion of women from ministerial service, and the conferring of the gift of prophecy upon one alone, thus making a monopoly of the pulpit, to the spiritual disadvantage of numbers to whom a similar mission may have been entrusted, were shown to be objectionable features in the system.

A desire was expressed that, in the advocacy of this testimony, zeal should be tempered with knowledge, lest by an uncharitable and unjust censure some may be alienated, who, were the word seasoned with wisdom, might be induced to examine and consider for themselves. A circumstance was related which came under

the observation of the narrator. A Friend had an appointed meeting in a neighborhood where there lived a Baptist minister, who had been strongly prejudiced against Friends, and would not attend any of their meetings. On this occasion, however, he concluded to go. The subject treated of was a free Gospel ministry, which was so dispassionately and powerfully elucidated, that the minister was convinced of its truth, and on the next First-day morning told his congregation that he could no longer receive pay for preaching. He told them he was willing to remain in the parsonage adjoining the church, but that henceforth his own hands must minister to his necessities. He continued to live upon the premises and cultivate his farm, preaching only as the spirit gave authority.

As this was understood to be the last meeting, a proposition was introduced to adjourn until next fall, but it was finally concluded to bring this series to a close, with the probability, however, that they will be resumed another season. These meetings have throughout been well attended, and conducted in great harmony and courtesy. While there has been a freedom of honest expression, there has been no disposition to cavil at established truths, nor to remove the ancient landmarks. The influence exerted appears to have been salutary. In another column will be found the chapter from Dymond above alluded to.

MARRIED, on Fifth-day, the 12th of Fourth month, 1866, according to the order of Friends, HENRY K. SMITH to MARY, daughter of Amos and Anna Wilson, of Putnam county, Ill.

—, on the 12th inst., at Dunning's Creek, Pa., in accordance with the order of the Society of Friends, ELI BLACKBURN and MARTHA PENROSE, daughter of Amos and Sophia Penrose, (deceased), of the same place.

DIED, of consumption, on the 11th of First month, 1866, ELIZABETH W. HENCOCK, in the 41st year of her age; a member of Clear Creek Monthly Meeting of Friends, Illinois.

—, of diphtheria, on the 25th of Third month, 1866, at the residence of her parents, in the City of Baltimore, LIZZIE, daughter of E. G. and Susan R. Penrose, in the 6th year of her age.

—, on the 15th of Fourth month, 1866, in Troy, N. Y., JOSEPH BRINTNALL, in the 95th year of his age; a worthy Elder of Troy Monthly Meeting.

The following notice of Joseph Walker, an esteemed member of New York Monthly Meeting, whose death occurred several weeks

since, has been forwarded to us for publication :—

From the N. Y. Evening Post.
THE LATE JOSEPH WALKER.

The funeral of Joseph Walker, attended by hundreds of our citizens desiring to testify their respect to his memory, closed the earthly record of a life of singular excellence and beauty. His career has been one of noiseless and unobtrusive goodness, exhibited alike in the activities of business, in works of private and public beneficence, and in the retirement of his home, claiming no notice from others, and yet so proverbial in all our highest business circles for its exceeding purity and grace, that by the concurrent testimony of all who knew him, he has long been singled out as one of whom it could be said with the utmost fitness: "Mark the perfect man, and behold the upright."

Mr. Walker was a man of large ability as a merchant. He was cautious, systematic and circumspect, but his views were liberal and extended, and his sense of justice was uniform and inflexible.

But the great charm of his character was its benevolence. It was of that rare type which is not limited to specific acts of charity, though in these he was unwearied, but which irradiates and transforms the whole man—body, soul and spirit. It was in the glance of his eye, it was in the tone of his voice, it was in the gesture of his hand, so habitual as to seem like an impulse of nature, and so unselfish and pure as to wear in its minutest traits the marks of a high Christian culture. Those who met him in the ordinary intercourse of life were apt to carry away from every fresh interview a renewed sense of obligation for some unlooked-for courtesy or some kindness beyond their expectation; while to any who brought special claims to his sympathy, his goodness was like an overflowing fountain to a thirsty man.

Such men confer more benefits upon the callings which they pursue than they can possibly derive from them in reputation or wealth or social esteem. It is to the honor of our mercantile community, that amidst all the rivalries and competitions of trade and enterprise, it can present the example of a life so elevated and faultless. Mr. Walker was a merchant and an underwriter, devoted, until his impaired health compelled his retirement, to the duties of a laborious and exacting business, and yet he filled up a measure of usefulness which could hardly have been surpassed if he had given his whole life to acts of charity. He is another of the many bright examples of high personal character and true Christian aims, which have adorned the annals of the commerce of New York, differing in nationality, in education, in modes of life and in the forms of belief, but

alike in their devotion to duty, in their sympathy with misfortune, and in the unselfish purity of their lives. "There are diversities of operation, but the same spirit." W. A. B.

For Friends' Intelligence.

AMONGST THE FREEDMEN.—NO. II.

BY JACOB M. ELLIS.

(Continued from page 111.)

No arrangements being yet perfected for a school to take the place of that formerly located at *Camp Wadsworth*, the matter claimed attention the last day of my stay. We drove to *Lewansville*, about a mile distant from the camp, near which one load of the lumber from the old school-house had already been carted.

Here, upon the second application for board for a teacher, and which, it was thought, was the last resource in that neighborhood, we succeeded. Having again visited *Camp Wadsworth*, to make further arrangements about the removal of the building, our horses' heads were once more turned, and we drove back to the Captain's quarters. Although my mission appeared to be nearly ended, I was determined not to leave for home without knowing definitely whether *Martha A. Wright*, for whom this school had been previously intended, would accept it, and the board selected or not, although the waiting for that information would lose one train, and cost either a drive of nine miles to *Fairfax Station*, to meet the *Washington* train, or the remaining another day in this vicinity. Here, then, our worthy Captain was ready for any emergency, and despatched an orderly on horseback to *M. A. W.*, who lives distant about two miles, promising to remedy the delay by conveying me to the station.

In due time an affirmative answer was returned, and I was soon ready to bid adieu to my kind friends. I omitted to mention in the proper place the gratification I experienced in witnessing the mutual interest manifested in each other, between *Mary K. Brosius* and her former pupils, as well as others of the colored people at *Camp Wadsworth*. My narrative will doubtless be deemed by some too prolix and minute, but I have gone more into detail than would otherwise have been proper, were it not that I think Friends should know that it is not always an easy task to locate teachers, and because some have already felt uneasy with what appeared to be an unnecessary delay. The little that has even now been accomplished since leaving home, has consumed four days, and yet I am amply compensated for the expenditure of time in the belief that, our duty to the teachers we are sending away from home is not discharged until every responsibility resting on us is as fully considered as possible.

For much, I might say almost all, of the successful results that have been attained, are we

indebted to Captain Ross. He was ever ready to second any suggestion or effort, and I desire to record my appreciation of his kindness and his services. To some of my acknowledgments of this character, his response was, that he was sufficiently rewarded with any success attained; that he was determined to have schools if possible, and must exert himself to that effect during the short time he would be likely to remain in service, as it is rumored his company is soon to be mustered out.

Nor can I close this portion of my narrative without an expression of gratitude towards the members of the family with whom we have boarded the past few days, and where I now leave *Mary K. Brosius* and *Mary McBride*,—the latter only temporarily, and the former as her home while on duty here. Truly loyal, frank open, and generous, conversant with some of our best authors, lauding some, and criticising others, one hours' intercourse made me at home with them, and I doubt not but their worth, industry and enterprise will meet with a merited reward.

The new school at *Vienna*, under the care of *M. K. B.*, although opened only one week since, promises a success. Its existence is not so extensively known as it should be, and yet she had on one occasion *twenty-three* pupils, all anxious to learn.

It may be well to recapitulate a little as to our schools in *Fairfax County*, within a range of eight miles, viz:—

MARY K. BROSIUS, located at *Vienna*.
MARY McBRIDE, " " *Fairfax C. H.*
MARTHA A. WRIGHT, " " *Lewansville*.

The two last named will doubtless be in operation before this appears in print, as the rebuilding at the "*Court House*" was to be completed *within a week*, and the other within the next. Funds have been furnished the teachers, and the requisite arrangements made to have the books, &c., they need, sent from *Washington*, to avoid delay. Desks and benches will also be furnished us free of expense, the Captain having a colored man in his regiment who is a carpenter. I ought to have mentioned that, so earnest is he on the subject of education, he has been teaching a school in his camp this winter, and, as some of his men show, with considerable success. I also omitted to state, that our two teachers, *M. K. B.* and *M. McB.*, accompanied us in most of our rough prospecting rides. In reference to other teachers in the employ of our Association, it may be appropriate to say that we have *six* in *South Carolina*, from whom we are in the frequent receipt of interesting letters, showing a satisfactory progress in the good work in which they are engaged.

The weather has been exceedingly cold. On two successive mornings it had frozen so in my

room, that I was obliged to break a hole in the ice in my pitcher, before I could get any water, which froze almost immediately upon pouring it into the bowl. Vegetation does not appear to be any more forward here than at home.

No time was at command for visiting various points which have become noted in this section of country as being connected in some way or other with the late rebellion. We drove, however, over a portion of it where the army retreated during the disastrous battle of Bull Run: were in and examined some of the stockades, &c. Desolation has truly stamped its impress everywhere around us. The tillers of the soil are for the most part fenceless, and almost every other *less* that tends to impoverish man. Chimneys are to be seen without houses; charred stumps of trees; and indeed whole woods have been either cut or burned down. In most places in this section, so complete has this kind of desolation been, that there is not enough wood left to fence the ground. Efforts at resuscitation, however, are beginning to show themselves here and there; occasionally a short pannel of new fence may be seen, though in most instances there is nothing more than an impromptu one, made of the tops of pine trees driven down diagonally and crossing each other. Give them one year's crops, and teachers for *all*, irrespective of color, and a marked change will soon be apparent. I am certain, in the *North*, under the same circumstances, this change would have been developed long ere this.

Arrived at *Fairfax Station*, and finding I had considerable time to spare before the train would arrive, I spent a portion of it in visiting the colored families clustered there, giving them such counsel as I thought appropriate, and querying of them as to their prospect for the future when they leave here, which must take place sooner or later. Poor creatures, I had almost said they had no prospective future; not being in a condition to command any definite purpose, they know not where to go nor what to do. Two things, however, pre-eminently occupy places in their hearts: the possession of a cabin of their own, with a little spot of ground for a garden, and the means of education. One poor fellow, who has a wife and four children, is now offered *seventy-five* cents per day for his labor, and thinks he had better accept it for the present. He is now indebted to the proprietor of a small store at the station, to the amount of several dollars.

With this storekeeper I had half an hour's conversation. As he is the agent of the Railroad Company, I should suppose his proclivities were *Southern*. Though apparently very poor, I found him kind and good-hearted. When I went in, he was writing a letter for one of the colored women, who, he informed me, was also in his debt. I was glad to find there was some

one to whom they could appeal in this desolate place. He alluded to the gradual increasing indebtedness of this class as one of the things he could not help. I ought to have spoken of some of the impositions that are practised on them. While at *Vienna*, I was present when two complaints were made to Captain Ross. One had purchased a horse, had paid the seller ten dollars on account, and the balance was to be given in work. Subsequently, a man came, and claiming the animal as belonging to his mother, broke open the stable and took the horse away. The poor purchaser had offered to say nothing about his labor if the money was returned to him. This had been promised, but for months had remained unfulfilled.

The other party had agreed to do certain work in a swamp and to the fence around it, and in which he was also promised a subsequent interest for the use of a house for himself and family. The owner now wishes to make some other arrangement about the work that has been done, and demands four dollars per month rent in *cash* for the time the house has been occupied.

These cases may seem to the general reader to be very trifling matters to put in print, but could they be present, and hear their simple unvarnished stories, as I did, they could not but be interested. Three more complaints of the like character were made the same day. Captain Ross made very careful notes of each case, and made special appointments to go and attend to them during the week. These things cost him much time and labor in riding all over the county, for the purpose of examining into and settling them, although the amount involved is frequently very trifling. If any confirmation were wanting as to the necessity for a "*Freedmen's Bureau*," such cases as these will furnish it, as showing the *spirit* of oppression and injustice still existing, irrespective of the *amount* of fraud committed. May these poor creatures ever and everywhere find as faithful a protector!

Having now fulfilled the object of my mission as far as practicable, and feeling something like doing a little travelling on my own account, I took the night train at the "*Station*" at eight o'clock, and after changing cars at *Gordonsville*, at midnight, arrived at *Richmond* a quarter past five next morning. It was a beautiful moonlight night, and I felt little or no inclination to sleep. The imperfect view I had of the country disclosed much of a continuation of the same desolate appearances, until some time before we reached *Gordonsville*. Previous to that, I had noticed but very few houses, and those were apparently the abodes of poverty. After leaving *Gordonsville*, the want of improvement was again apparent until we neared *Richmond*.

In the car I had quite an interesting conver-

sation with an intelligent gentlemen, who had himself been a slaveholder, and his father before him. I told him I had been an unconditional opponent of slavery all my life; while he assented to my view that both master and slave would be ultimately benefitted by the great change that has been brought about. On the suffrage question, he thought if the North would only wait a little while, their purpose would be as fully effected as they could desire; he himself would be entirely willing for it under a *qualification*, (reading, writing, &c.,) that when they reached a point of intelligence, where they would be competent to judge, it should be granted them, and the knowledge of this would be an incentive to exertion on their parts to attain this point of intelligence; expressing the opinion at the same time, that the South generally was prepared for this. At present, they were such an impressible people, that without sufficient knowledge, unprincipled politicians could, with the aid of intoxicating drinks, mould and shape their votes in any way they pleased.

He deplored the degeneracy of the Virginia Legislature as compared with past times, quoting, in his comparisons some of its antecedents, and altogether the interview was very pleasant if not instructive.

(To be continued.)

LIFE.

BY CAROLINE A. BRIGGS.

"Perish through suffering."—PAUL.

Must I suffer ere my spirit
Shall attain its highest goal?
Opens there no smoother pathway
To the upward struggling soul?
No—like seed that through thick darkness
Gropes its way above the sod,
So this soul of mine must ever
Struggle through the dark to God!

Light untempered pales the Blossom,
Suns unclouded blight the Grain—
So the Love that's winged with Wisdom
Calls His clouds and gives them Rain.
I, a Plant in God's great Garden,
Grain within His guarded Field,
Need I not, as well as Sunshine,
Rain to make me thrive and yield?

In the Day the great Earth wearies,
Sickens 'neath the burning Sun;
In the Night she rallies nobly
Till her strength is all re-won.
Dews fresh dropt from Nature's chalice,
Cool and quicken all her powers,
Fit her for another morrow's
Struggle through the sultry hours.

In the light my soul grows sickly,
Sluggish, faint—until, at length,
In the Dark how strong it struggles,
Battling for its bartered strength!
Tears, like dews, refresh and hallow
All its powers for noble strife;
Fit and nerve it for another
Upward effort into Life.

Life is Toll—He lives, He only,
Who, amid his daily cares,
Sees a mighty End upspringing,
Like choice Wheat among the Tares.
He who Patience gleans from Trial,
Strength from Struggle, Hope from Pain,
He twice lives—on Earth—in Heaven—
He who lives once, lives again!

—National Era.

LLOYD'S

(Concluded from page 63.)

The reading-room, which is next to the under-writers' room, is supplied with the commercial journals of all nations; and here may be seen from time to time the merchants of foreign lands, as well as our home capitalists, gleaning from unnumbered documents, written and printed, the information they want. An orderly, almost perfect silence, prevails, and waiters, who only whisper, are ever on the alert to supply the lists as they are called for, and the very last intelligence from any and every port on the seas, at an instant's notice. For in this spot is concentrated all that is positively known concerning every civilized venture afloat, from whatever port it may have sailed and to whatever region it may be bound. Sail from whence it will, a vessel may be insured at Lloyd's, and in practice there is hardly ever a barque sailing from a Christian country that is not so insured in whole or in part. This is managed by the medium of a vast system of agency, which is ever active among all maritime peoples—the agents of the United Kingdom amounting to a hundred and fifty, and the foreign agents nearly doubling that number. It is from these agents, who write by every mail and telegraph every serious casualty, that that vast mass of intelligence is received which renders Lloyd's the never-failing source of information on all marine matters.

The merchants' room, which is frequented by a different class of subscribers, not insurers, is under the management of a master, speaking several languages; is supplied with duplicates of the "books," and with the English and foreign newspapers, and is the centre of various mercantile transactions other than insurance. The captains' room, to which the readiest access is by the captains' entrance on the north side of the Exchange, is for the transaction of captains' business by appointment with their owners, and for sales and transfers of ships' and ship stores. It is, further, a commodious coffee and refreshment room, where the viands are supplied at moderate price. On the floor above the subscription rooms are the chart-room, the committee-rooms, and the various domestic offices.

The above is about as much as can be learned by a casual visit to this unique establishment, which certainly never had its like in any other age or country. It may be regarded as a colossal

institution for rendering the destructive forces of nature, harmless against the enterprise of commerce. In one respect it does this, for it prevents the diminution of what is literally "floating capital," and keeps the keels of commerce for ever gliding in their ocean path. But there is another and a grim side to this bold picture. Yon moneyed arbiter may underwrite the "Betsy Jane," and if she is crunched to atoms by the grinding ice-drift, or founders like lead in the bosom of the tempest, he may set her duplicate afloat with timbers as sound and a cargo as rich. But what of the thirty men and seven or eight boys, who started so merrily on their voyage four months ago—now perished for ever in those dismal gulfs? Can he underwrite them? can he set them afloat once more, and quench the mothers' sobs, and dry the windows' tears? It is a ghastly thought that the increase of our commercial marine is marked by concurrent increase of death by drowning, and the horrors of shipwreck. The proof of this is afforded by the books of Lloyd's, whose evidence is not to be gainsayed. We speak within the mark when we affirm that the loss of life by casualties at sea, reported at Lloyd's, averages not less than twelve hundred men and boys per year. Of these as many, probably, as four to five hundred form the crews of vessels sailing from our island ports every year, which are *never heard of again*; for it is a fact, that fifty vessels on an average annually leave our harbors, which never arrive anywhere, and the cause of whose total destruction remains for ever unknown. The next most fatal class are those which founder at sea, leaving survivors to tell the sad history of loss and suffering—and these amount annually to about two hundred and twenty. Almost as large a number are every year abandoned by their crews, who take to their boats to save their lives if possible. Those totally wrecked in the same space of time are about five hundred and seventy; while those driven ashore and partially wrecked are over twelve hundred. Serious damage by collision, in which vessels only save themselves from sinking, by running into the nearest port, occurs six hundred times, while various other casualties of less frequent occurrence, including casualties by fire, by ice, by pirates, etc., etc., raise the whole list to no less than three thousand in a single year, in sailing vessels alone. Among steamers the loss and damage, proportionably to tonnage, is not nearly so great, but still the array of accidents is a gloomy one.

The question naturally arises, on contemplating such a portentous list of calamities, what class of vessels is most liable to them? Out of the three thousand casualties recorded in Lloyd's books in a year, not more than sixteen are set down against vessels of seven hundred tons

burden and upwards. The rule would appear to be, that the larger the vessel, or the more valuable the venture, the less liable it is to suffer wreck or accident. Not that there is any protective property in the mere element of size, but because in large vessels there will be found a well qualified commander and an efficient crew, while smaller vessels are often kept weak-handed from false notions of economy, and thus in the hour of storm and peril they are wrecked from the want of sufficient skill and strength on board to navigate them safely. It is of course impossible that the whole of our mercantile marine should consist of large vessels of great tonnage; in such vessels many branches of commerce could only be carried on at a ruinous loss, if at all. There must be small vessels for the coast, the European and the Mediterranean traffic; but there is no reason why they should not be as well manned and commanded as the monster merchantmen that trade with China and the Indies. We hold that a vessel of four hundred to five hundred tons, fairly manned, and free from the incubus of a deck cargo, inasmuch as she is more manageable, is safer in the narrow seas than one of two thousand; but the mischief is, that such vessels, being mostly commanded by men who are part owners, and who, heedless of their responsibilities, are interested in saving expense, seldom are fairly manned, and carry very little of the science of navigation on board. These are conclusions which, however unwilling we may be to arrive at them, we cannot escape, for "Lloyd's List" brings them home to us with irresistible force, speaking in facts which cannot be tampered with or eluded. The remedy, then, so far as a remedy is obtainable against the overwhelming loss of life at sea, annually suffered by this country, will come with a better educated class of sea captains, and crews of well-trained, disciplined, and well-paid seamen.

The total loss, either of life or property, cannot be accurately arrived at through the information concentrated at Lloyd's, as casualties must occasionally happen which do not get reported in their books. As to life we have given an approximation above; as to property it has been calculated that about 250,000 tons of shipping are lost every year. At the cost for building, of £10 a ton, this would give £2,500,000 as the money loss incurred by owners, or by the underwriters in the case of such vessels as are insured, every year for the vessels alone. If the value of the cargoes amount to only as much, then £5,000,000 sterling in value of the products of human industry are swamped in the fathomless ocean, and lost to the communities for whom they were designed. Verily there is room for underwriting, and reason enough why the underwriter should not feel himself on a bed of roses,

"When the stormy winds do blow, do blow—
When the stormy winds do blow."

"But" says the reader, "who is, or was Lloyd, the founder of this responsible and ubiquitous institution? you have not introduced us to him after all." Well, that is rather a difficult question. We can get at nothing like a detailed account of the man. Some two centuries ago he was described in a title-page as a "Gentleman well known for obliging the Public with the Freshest and most Authentic Ship News;" and forty years before that, he or his progenitor, was mentioned in the "Tatler;" and again, ten years before that he was referred to in a poem which had but an ephemeral existence. All search for him previous to the date of 1700 is vain, and who he was cannot be told at this time of day. The man himself has been forgotten for many a long year; but—*at nominis umbra*—the shadow of his name does indeed stand, a beneficent power looming over land and sea; and it may be said, in poetical phrase,

"To brood o'er the waters wherever they roll,
From the day-darting zone to the night shadowed pole.

From the Boston Medical and Surgical Journal.

WHETHER CHOLERA IS CONTAGIOUS.

BY JACOB BIGELOW, M. D.

Within the present century, cholera, a disease indigenous in hot climates of the East, has, at various intervals, made its appearance in the temperate latitudes of Europe and America. It is now again exciting interest from its possible and perhaps probable approach to this country.

The experience of the last thirty or forty years has led a majority of medical men who had observed the disease to believe, that, as a general law, it is not contagious. In this belief I must individually remain, until evidence more satisfactory than any which has yet appeared shall justify an opposite conviction.

The great epidemics of 1830 and 1847 had a remarkable coincidence in the path which they pursued, and in the order and dates of their arrival in different cities. They seem to have followed certain great routes of travel, and to have avoided others equally frequented. According to Leségué, they both visited consecutively, and in corresponding months, Tiflis, Astrachan, Moscow, Petersburg and Berlin. In 1831, cholera did not take the most frequented route from Berlin to Paris, but passed along the shores of the Baltic, crossed over to Sunderland, went down to London, and again crossed the channel and arrived in Paris about six months after its appearance in Berlin. A disease propagated by contagion of any kind would hardly have avoided the most frequented thoroughfares from Berlin to Paris, while it occupied half a year in going round by England.

The epidemic now or lately prevailing in Europe appears to date back at least nine months, at which time it existed among the caravans of pilgrims visiting or returning from the city of Mecca. In the middle of May last it was at Alexandria and Cairo, in June at Constantinople, Ancona and Marseilles, and in November at Paris, Havre and other European cities.

Thus it appears that cholera has now existed in Europe from three to eight months, among cities having constant commercial intercourse with seaports of the United States during which time thousands of passengers and tens of thousands of bales and packages have been landed in our maritime cities. If cholera were as contagious or portable as many believe it to be, it ought to have begun and perhaps finished its work in many of our seaports before this time.

Epidemic require two things for their introduction and extension. These are—first, predisposition in the inhabitants of the place visited; and, second, the arrival or presence of an exciting cause. This cause in some epidemics, such as small-pox, is contagion. In others it is an occult influence, not yet discovered nor understood, nor known to be controlled, except in some instances, by hygienic agencies. No country, I believe, has succeeded in keeping out cholera by quarantines, and no country, as far as we know, can produce it artificially or retain it after the predisposition has disappeared. In its own time it moves on thoroughfares where men are travelling, and spreads into cities where they are stationary, for no better known reason than that mankind are its necessary food, and that where there are no people there can be no cholera. But why, of two frequented roads or cities, it selects one and avoids the other, investigators have not yet been able to satisfy us.

The credit of having introduced the present epidemic into Europe is by a sort of popular acclamation assigned to the hosts of squalid devotees who perform an annual pilgrimage to Mecca. Yet we are told that "the cholera exists every year among the caravans of Musselmans arriving at the holy cities," so that their supposed mission of forwarding the cholera to Europe in most years fails to be performed.

Cholera, like influenza and some other migratory diseases, has usually but not always advanced from east to west. Of the vehicle in which it travels, or the course it is next to take, we know about as much as mankind knew of the cause of lightning before the discovery of electricity. Its conveyance and propagation have been ascribed to air, to water, to material foci, to electricity, to ozone or to the want of it. Of late, in consequence of the vast develop-

ment by the microscope, of the existence everywhere of minute living organisms, it has become more common to ascribe the arrival of this and other like epidemics to certain unseen "germs" which are called seeds or ova, cryptogamic or animalcular, according as the fancy of the theorist inclines him to adopt a vegetable or an animal nomenclature.

But in this, as in many other cases, it is easier to trace an analogy, or to assume a cause, than it is to prevent an effect. Although inquirers have been indefatigable in their attempts to enlighten the world on the means of ridding ourselves of the presence of the various offensive co-tenants of our globe, yet no crusade has yet succeeded in banishing from our fields and houses the unwelcome swarms of mosquitoes, worms, grubs and flies, which molest us with their annual presence; nor in suppressing the blight of grain, the potato rot, or the peach tree disease. Happily some if not most of these have their periods of abatement or disappearance, and this rather through the order of Providence than the agency of man. Cholera seems to abide in the same category. We know little of its exciting cause, and not much of its prevention, except, that by following in our personal habits the dictates of reason and experience, we diminish both the frequency and danger of its occurrence.

ITEMS.

CONGRESS.—In the Senate a resolution was adopted to print four hundred thousand copies of the Patent Office Report; also a resolution appropriating \$121,785 for fulfilling certain treaties with Indians on the Upper Missouri and Upper Platte rivers. A resolution to discontinue the branch mint at New Orleans and transfer it to Nevada was referred. The habeas corpus bill was considered and finally passed with some amendments. The bill to grant American registers to certain English-built vessels was reported from the Committee of Commerce and agreed to. A bill was offered providing for the establishment of melting and assaying offices at various points in the gold and silver regions of the Rocky mountain basins.

IN THE HOUSE.—A resolution was offered, as an amendment to the Constitution, to apportion representation according to the number of voters in the several States. The Committee on Military Affairs were instructed to inquire into the propriety of providing by law for the punishment of fraudulent claim agents. A resolution prescribing eight hours as the legal limit of a day's work in the District of Columbia was postponed. The Judiciary Committee were instructed to inquire what legislation was necessary for the confiscation of lands purchased by the rebel Government and used as prison camps. The bill providing for deficiencies in the appropriation for public printing was passed. Memorials of the Wisconsin Legislature asking Congress to give consent to the change in the route of the land-grant railway from Portage to Bayfield and thence to Superior, and asking a grant of lands to aid in the construction of such of the Portage and Superior railroad as extends from Fox du Lac to Ripon, were referred to

the Committee on Public Lands. An invitation from the colored citizens of the District to the members of the House, to be present at the celebration of the anniversary of their emancipation, was presented and read.

THE FREEDMEN.—The colored people celebrated the fourth anniversary of emancipation in the District of Columbia, in Washington city, on the 19th inst.

John Ely, Chief Superintendent in charge of Freedmen in State of Kentucky, writing to "Friends' Association for the Aid and Elevation of Freedmen," says, "The Freedmen, as a class, are well employed in this State, and all who are able show a laudable disposition to aid and assist their poor brethren. All classes of them, old as well as young, evince a desire to learn to read and write; many schools have been established throughout the State, especially in the larger towns, all taught by black people, and supported entirely by contributions from the Freedmen themselves."

Under the civil-rights law, in a recent case in Anne Arundel county, Maryland, a colored man was placed on the witness stand; a new thing in that State.

INDWIN HALL & CO., 28 South Second St., would inform the Friends of this city, and those who contemplate visiting it, that they keep a large stock of goods adapted to their wants. Plain Silks, Neat style Silks, Neat style Poplins, Plain Poplins, Plain Mohairs, Neat style Mohairs, Neat style Lawns, with many other style of goods suitable for a neat plain taste. Plain style Shawls, Shetland Shawls, Barge shawls.
42855512.

CLARK & BIDDLE, JEWELLERS, (Successors to Thos. C. Garrett), No. 712 Chestnut St., invite attention to their large stock of American, English, and Swiss Watches, which they offer at the lowest gold rates. Also a fine assortment of Silver and Silver-plated Ware. Prices reduced to correspond with the heavy decline in gold.
428555128t.

THOS. M. SEEDS, HATTER, 41 N. 2d St. Always on hand, and made to order, a large assortment of Friends' Hats; as he makes a specialty of that part of the Hatter's Business.
4285551200.

B. A. WILLMAN, Dealer in HOUSE-FURNISHING GOODS. A general assortment of Tin, Iron, Wooden and Willow Ware, Japanese and Britannia Ware, Cutlery, Spoons, &c., No. 925 Spring Garden St., Philadelphia. 421 104 pt.

STOKES & WOOD, 702 Arch St., would respectfully call the attention of Friends to their large stock of Plain Goods. The Dress Goods and Silk Department contains all the new and choice styles of plain and medium fabric, in silk and wool. House Furnishing Department, Linen Sheetings, Table Linens, Napkins, Towelling, Tickings, Muslins, &c. Cloths and Casimeres for men and boys, in every variety. White Goods, including Book Muslins, Tarletons, &c.
STOKES & WOOD,
702, Arch Street, Philadelphia.

BELLEVEU FEMALE INSTITUTE.—A BOARDING-SCHOOL for GIRLS. The Spring and Summer Term of this Institution, will commence 5th mo. 21st, 1866, and continue in session twelve weeks. For details see Circular, to obtain which, address the Principals, Attleboro' P. O., Bucks county, Pa.
ISRAEL J. GRAHAM, } Principals.
JANE F. GRAHAM,
No. 47 N. 4th St.

CHESTERFIELD BOARDING SCHOOL FOR BOYS, situated on the Crosswicks Road, three miles from Bordentown, N. J. The Fifty-Second Session of this Institution will commence on the 21st of Fifth month, 1866, and continue twenty weeks Terms, \$35. For further particulars address
HENRY W. RIDGWAY,
4766 t 3867 pmms pa in. Crosswicks P.O., Burlington Co., N.J.

WM. HEMCOCK, General Furnishing Undertaker, No. 18 North Ninth Street.—A general assortment of ready-made Coffins, and every requisite for a funeral furnished. Being entrusted with the oversight of "Fair Hill" Burial Ground,—Funerals, and all other business connected with the ground, will be promptly attended to. 311. ly. was m p.

NEW ARTICLES.—The Graduated Measure and Funnel combined, Russ' Schaefer Sharpener, Spring Scissors for Sewing Machines, the Clutch Brace, which does not require the bits to be fitted or notched, the Vegetable Slicer, for beets, cucumbers, &c. For sale at the Hardware Store of
TRUMAN & SHAW,
3104t. No. 535 (Eight Thirty Five) Market St., below Ninth.

FRIENDS' INTELLIGENCER.

MEMOIR OF THE LATE JOHN WATSON, OF CANADA WEST.

(Continued from page 115.)

Eighth mo. 12th, 1847. To-day I laid before the Monthly Meeting a prospect of paying a visit, with a desire I might perform it in Gospel love, to that class of persons who have been disowned from Society, since the Separation, within the limits of our Half-Years' Meeting, and obtained liberty from the Meeting to proceed therein. A few months after, I returned the minute, with the information that the visit had been performed as far as way opened, mostly to my satisfaction, and that I was cordially received by all the visited.

I have learned through much of my life that all the dispensations of Providence, whether of prosperity or adversity, are meted out to us by the Almighty hand that holds the golden balance in which is poised this or that the most calculated to keep us in a state of entire dependence on Him in whom we live, and move, and have our being, supporting us at times by consolation, and at times exercising our faith by trials; the latter being now, no doubt, in wisdom dispensed to us in this neighborhood, as we have been visited by sickness, and a lovely daughter has been taken away from her husband and little children,—one, too, who was very much the hope and comfort to our declining years. And within a few weeks after, my affectionate and loving companion was also removed. She had

participated with me in the ups and downs of life for forty years, the latter part attended with increasing enjoyment, being blessed with a competency of this world's goods, our children all settled around us, and privileged with a meeting that has grown up since our coming into the neighborhood. I feel now more and more my dependence on that Almighty Power who giveth and can take away, and can therefore testify that through all the vicissitudes of life I can see the hand of Providence guiding me along. Divine mercy forgiving my many aberrations, and knowing in some degree that redemption that cometh through those visitations of love which have been marvelously extended to me a poor creature, and looking at the past, and feeling hope for the future, I can truly acknowledge with the Psalmist, "surely goodness and mercy hath followed me all my life long;" and may I so end that I may have the assurance that I shall dwell in the house of the Lord forever.

Having been favored to attend all our meetings for worship and discipline for some time past, with now and then a little strength afforded to minister in, I have often prayed that the Lord would still lead me in the way I should go. After a time a way was made for me (by providential occurrences,) to take a second companion for my future life, and I was united in marriage with Mary H. Brownlow, of Philadelphia.

I have learned that happiness depends less upon external things than most men imagine:

may our happiness consist in doing the will of our Heavenly Father. Being much united together in gospel fellowship, we each are endeavoring to fulfil our respective duties.

Seventeenth of 4th mo., 1851. My wife and I laid before our Monthly Meeting a prospect we had of attending the Yearly Meetings of Philadelphia and New York, and received their concurrence, and a minute of unity with us as ministers in esteem with them.

Seventeenth of 7th mo. We returned the minute granted us for the above mentioned visit, and informed the meeting it had been accomplished to our peace and satisfaction. And at the same meeting we opened a prospect of attending Pelham Half-Year's Meeting, and some of the meetings constituting the same, which we were enabled to perform to our satisfaction, and we hope to the honor of the Great Head of the Church.

God is our maker and our preserver, and I ever bear in mind that the spirit of God and the spirit of Christ are one, and whosoever believes in Christ and receives him as manifested in their own hearts, to these the Almighty will give power to become the sons of God.

Marvel not, said the blessed Jesus, that ye must be born again. We are all the children of God by creation, but none can truly call God Father but by and through the eternal spirit; and I believe a manifestation of this spirit, according to our different measures, is given to every man that cometh into the world. Every man hath this in himself, "If thou doest well, shalt thou not be accepted? and if thou doest not well sin lieth at thy door."

Fifth mo. 22d, 1852. We may not expect to be exempt from trials in this life; they are extended to us for our purification. At this time we have met with a sore trial. My son, John E. Watson, living a little more than a mile from us, had his house, barn and much valuable property consumed by fire about midnight. Only a part of the family escaped, without having time to put on their clothes. Two hired men and two lovely daughters, one aged 8 and the other 10 years, perished by the devouring element. My son himself was considerably injured. He opened a door where the fire originated, and the flames burst upon him, burning him severely, and in his attempts to save his children he narrowly escaped with his own life. Afflictions are not joyous but grievous, but afterward they yield the peaceable fruits of righteousness to those who are profitably exercised thereby.

We mourned, we wept, but not without hope that all things shall work together for good (even to us, though we feel unworthy of it) to all those who truly love God. "For God doth not afflict willingly, nor grieve the children of men."

It drawing near the time of our Yearly Meeting, in our tried situation we gave up all hopes of attending it, though I have rarely missed; but, as the time drew near, my companion and I felt our inclination so strengthened that we proceeded, and were met by our many friends with such sympathy and fellow feeling that the remembrance brings tears from my eyes while I record it. We had a very favored Yearly Meeting, and we could set our seals to this truth, that "God is the God of all comfort, who comforteth us in our varied tribulations." I may say of this meeting, we met in love, we parted in love, many of us greeting one another with the kiss of charity and affection.

After a considerable exercise of mind, I laid before our Monthly Meeting, on the 15th of 1st mo., 1853, a prospect that had for some time dwelt with me to pay a religious visit to the meetings comprising Farmington Quarterly Meeting, and as many of the families thereof as way might open for. In which concern I was joined by my wife. Much sympathy and unity were expressed, and we were allowed to proceed as truth may direct.

In our prospect in this concern we were mercifully preserved. It was a time to try our own souls, and those we were with. We visited all the meetings, and nearly all the families composing this large Quarterly Meeting, and a hope was felt at seasons that the trial of our faith would work experience, and experience hope. The love of God was abundantly evinced to ourselves and to those we visited, affording an evidence that our little labor of love would not be in vain in the Lord.

Being favored with usual health, we attended all our religious meetings to the beginning of the year 1855. Nothing occurred worthy of particular remark, save that we felt, in much humility, a little deepening in the root of life. The Lord knoweth them that are His. May our souls ever trust in Him to redeem from all iniquity.

Seventeenth of 5th mo., 1855. Myself and wife, with Joel and Sarah Hughes as companions, obtained the concurrence of our Monthly Meeting to pay a religious visit to Friends of Fishing Creek Half-Year's Meeting, which visit we were favored to accomplish to our mutual satisfaction, and we hope to the edification of the visited.

Those who are directed by infinite wisdom, will realize that peace which is past the understanding of men. May that peace be mine, and may it be thine, I would say to every son and daughter throughout the world; for those who are led by the spirit of God will be acknowledged to be the sons of God.

The Lord gives health, the Lord gives strength, both temporally and spiritually, for truly it may be said, "that in Him we live, and

move, and have our being." "Oh, that men would praise the Lord for His goodness, and for His wonderful works; for His mercy is from everlasting to everlasting. Oh, that we may ever trust in Him who is the living God, the Saviour of all men, especially of those that believe. "Lord, I believe, help thou mine unbelief." The Lord is Omnipotent in all His works of Providence. I see how I have erred, and how God, by his infinite goodness, loving kindness and preserving power, hath saved me. Surely, I may say all glory be to God. If an apostle said, "by grace I am what I am," how much cause have I to say by "grace I am what I am." God is unchangeable; His mercy and goodness continue forever; therefore, poor worm Jacob is not yet consumed.

First mo. 18th, 1856. Oh, Thou all-wise and almighty one, bring to pass whatsoever will be for my good, both temporally and spiritually, that so I may be enabled to say the Lord reigneth. Cause, O gracious God, every thing Thou hast made to be subservient to Thy infinite wisdom and most holy perfection, that all may praise Thee, and say with myself at this time, "Thou art my God, I will praise Thee; Thou art my God, I will exalt Thee."

Truth leads into a oneness of principle, and very much of practice when taken generally; yet, in regard to the sacrifices we offer and the services we are called to perform, how varied are the allotments of each member of the church militant. There is force in the injunction, "Whatsoever the Master bids you, that do."

I have endeavored to keep my place, my habitation in the truth, and have been favored to attend all our religious meetings, and a little service has been given me.

There is a deficiency in the above account, owing to my having been attacked with some thing like paralysis, which for sometime benumbed my feelings and impaired my memory, but I have now some ability to relate the following incidents of my later life.

(To be continued.)

"It matters infinitely less what we do, than what we are. When we see old age restless in its infirmity; activity disappointed of its scope or instruments; and the most useful agents of society, the most indispensable members of families, paralysed by disease—we must remember that the work of life is our's still—the formation of a heavenly soul within us. If we cannot pursue a trade or a science, or keep house, or help the State, or write books, or earn our own bread or that of others—we can do the work to which all this is only subsidiary, —we can cherish a sacred and holy temper; we can vindicate the supremacy of mind over body; we can, here, as well as in heaven's courts hereafter, reveal the angel growing into

its immortal aspect; which is the highest achievement we could propose to ourselves, or that grace from above could propose to us, if we had a free choice of all possible conditions of human life."

LETTERS OF LYDIA P. MOTT.

A few letters written some years since by our friend Lydia P. Mott, of Skaneateles, have been sent us by the friend to whom they were addressed. They have so revived in our remembrance her devoted, humble, cheerful spirit, that we do not doubt they will be acceptable to those who knew and loved her.

If material could be found for a memoir of one so devoted, and whose long life was chequered by many trials, through which cheerful faith and patience were maintained to the end, it would be both instructive and interesting.

SUMMIT, WAUKESHAU CO., WIS., 12th mo. 15, 1851.

Dear H.,—I am under the impression that I have replied to thy interesting letter, but as it is so long since I heard from Cincinnati, I feel very desirous of some tidings from my friends there; my attachments there suffering no diminution by the distance that sunders us. The blustering winds and driving snows have no power to scatter and lessen the warm influences of substantial friendship founded in congeniality of religious views, the firmest bond that can unite sincere hearts,—than gold more precious. California has her glittering pretensions, but vicious associations, whose base is paltry gold; disease and misfortune alike dissipate or alienate. Such has been the case in instances which have come to my knowledge, and the disappointed individuals have returned friendless and penniless, to lament over what they call a deceitful world!

To me the world appears better and better with advancing age, and I have daily cause to admire the numerous sources of comfort, under a sense of gratitude for its numberless blessings, which are new every morning, causing me mentally to exclaim with David of old, "Surely goodness and mercy have followed me all the days of my life." Among which blessings I number the sweet solace of true friendship. Young says,

"From friendship, fair, that flower of heavenly seed,
The wise extract earth's most Hyblean bliss,
Superior wisdom, crown'd with smiling joy."

The greatest want I have experienced since quitting the loved society of dear Burlington, has been a friend of congenial views,—the cordial warmth and elevating spirit of a friend!

My dear affectionate nephew and wife are staunch Presbyterians, and their visitors are of

their church generally; of course there is no congeniality on religious topics; on the contrary, on my part, silence. Thus we avoid opposition. The superiority of Quaker doctrines and Quaker habits and manners never were higher in my estimation than they have been these two years past, raising an aspiration of deepest gratitude that I was early brought acquainted with Friends, and subsequently received into the bosom of Society amid spiritual nursing fathers and mothers.

Such, emphatically, were my devoted father-in-law, James Mott, and Rebecca Grellet, then Collins,—two pure and heavenly minds, with the most winning simplicity and gentleness of manner,—besides a host of public members of Society whose lives and doctrines won my ardent admiration. Among these were the Seer, Daniel Haviland, of prophetic gift, J. and J. Simpson, Peter Yarnall, John Cox, the Hoags, the Hallocks, Geo. Dillwyn, Jesse, the potter's boy, of fascinating eloquence, the thundering Hugh Judge, D. Offley, Arthur Howell, Saml. Emlen, (another Seer,) Job Scott, and, not behind any of them, the powerful Elias Hicks, beside such women as Rebecca Jones, Hannah Fisher, Esther Griffin and her two sisters, Naomi Halstead and Hannah Field, E. Coggeshall and hosts of both sexes whom I might enumerate, who adorned their profession and glorified God by a consistent walk, and the exercise of their various gifts. The recollection of all these worthies, and the remembrance that most of them honored my Robert and self by making our house their home, during Yearly Meeting week, bring a fresh sense of my shortcomings after so many bright examples of Christian virtue, self-denial and wisdom. Ah! my dear friend, were we the people we ought to be, the inhabitants of the world would yield to our influence, when viewing its peaceful and harmonious effects. Oh! that our young people, taught by their wanderings and deviation from our excellent discipline, (the purest code of laws on earth,) would return and build up our waste places, and once more cause the voice of thanksgiving and praise to crown our assemblies!

SKANBATELES, 4th mo. 4, 1854.

Oceans may roll between, and mountains intervene between real friends, dear H., without changing the precious tie; and so, long silence may occur, as it has done between us the past season, and yet I trust the links in our chain are unbroken, nay unimpaired.

The winter here has not been severe, but it has been broken, and abounded with dark, heavy weather, which has kept me a prisoner to the house most of the time, the roads being neither fit for carriage or sleigh; indeed the only snow we had to make a sleigh run was for a few days last month. I had planned to make

a visit to a cousin in Scipio, when, lo! our horse was taken lame, and all others were had in requisition. Confinement, however, has not impaired my health, which is more uniform than it was two years back. We have a piazza on two sides of the house, and I have made it a practice to walk on it daily when it has not actually stormed; and this exercise in the open air, and strict attention to my diet, have contributed, together with the kind care of my son, to preserve my health, which I can gratefully acknowledge is better than most persons at 79, which I can scarcely believe is my age, after all the bitter trials and severe losses I have experienced. Through all these I can humbly say, "Goodness and mercy have followed me," as they did the tried King of Israel, and I have never been forsaken.

How wonderful are the dealings of the All-wise with us through the chequered scene of human life! How often cast down, yet sustained!

I believe I told thee in one of my former letters that I had comfortable rooms, with my own furniture for our own use, and a spare chamber, and a first rate farmer's table to welcome thee to, if thou wilt come and visit us,—with a few valuable friends to introduce thee to.

Ah! dear H., the lack of such society as I have been accustomed to, and a good meeting, easy of access,—these are the things that I continually miss and deplore the want of. Frequently I pass not only days alone, but several weeks at a time, and not a familiar face enters my apartments; no well-known voice of by-gone days greets my ear, no hearty shake of the hand animates my frame, no society concerns kindle dormant sympathies, no earnest inquiries after old friends, no information of those left far away spoken of,—those who have been as bone of my bone, and flesh of my flesh—these, these I miss, for it is these that are the spice of life, and give a social charm which not mere victuals and drink, furniture and clothing, can impart. I crave society and relish it, and often recall those beautiful lines,

"Society, friendship and love, divinely bestowed upon man,

O had I the wings of a dove, how soon would I taste you again."

Dear friend, keep near thy children, cultivate society, keep active and useful as long as possible; a hermit's life is not enjoyment,—is not the life of a Christian. Intercourse with mankind, acts of kindness, prompted by seeing what is promotive of another's happiness or comfort, or even mere support, this is what ennobles our being and gives a zest to life. But I need not say all this to thee, nor need I admonish thee to seek out the hidden poor, for I am aware thou hast long practiced this, and had its sweet reward. I have lately been more

pleased with anecdotes of the bountiful charities of the great Dr. Johnson, than with his fine remarks, for words are easily uttered; but to give to the extent of our means to those who need our aid and sympathy, goes deeper, and must spring from the heart, unless it springs from the unworthy motive of human applause. When we let not the left hand know what the right hand doeth, then we are certain from whence the approval comes and its value. There is, however, a charity too much neglected,—that of reading to the sick and ignorant poor, as well as calling in to see how some dear, tried women get along with their little families, cheering them by manifesting an interest in their small concerns. The tenderness of thy nature, my dear friend, fits thee, I apprehend, for this blessed though humble office in no ordinary degree; and now that thou art unshackled from domestic cares, thou canst more readily attend to it. O how I should enjoy it could we go hand in hand together to some such places, and enter into the secret chambers of sorrow, with the hope of alleviating them. In the country, where we are miles off, and require horses and carriages and drivers to accomplish such a purpose, it is very difficult. I have endeavored during the confinement of this winter to employ myself in making a wardrobe of small garments, chiefly intended for a poor woman, which, trifling as the value is, has afforded me satisfaction while prevented entirely from acts of greater assistance. It is comfortable to recall to mind the beneficent approval of the widow's mite by the great Teacher.

All things wear a wintry aspect yet; no green foliage to bless our sight, nor much appearance of the return of spring, except the pensive note of the robins, the thump of the woodpecker on the old trees, and a few sparrows and other small birds flitting about.

My sight, though considerably impaired, still holds out, so that I continue to do my own and A's sewing. I am now engaged finishing some shirts for him, which I consider a great favor at my age, which, on reference to the record lately, I find to be 79 last month. Scarcely can I believe it. Young says,

"Since oft man must compute that age he cannot feel,
He scarce believes he's older for his years;
And all mankind mistake their time of day,
Even age itself."

And yet how plainly we can reach the pages of our lives at times, as the leaves of a book. In looking over mine, how much I see of mispent time from inattention of that secret monitor which would have kept all right, all fit for heaven. Would that this doctrine were more believed and enforced on the youthful mind. The language now is, "Repent, for the kingdom of heaven is at hand;" and I hope I do

repent of all my life that has not been spent in obedience to the inspeaking voice of divine grace. To keep to this is Christian perfection, to which we are all called; but O how far short of this I fall! This doctrine of Christ's is not enough preached. It is not even tolerated now-a-days by high professors—not held up as practical. O my beloved friend, living among other denominations increases my love for genuine Quakers and the pure doctrines they hold. Did they but live up to them, what lights they would be in the world!

THE CASTLE, 1st mo. 30, 1856.

So I have fancied to call our little cottage on the hill at Skaneateles, where I should be much pleased to receive my dear, very dear friend, in my humble style, but with unchanged affection; and I flatter myself I could make her humble heart happy,—for happiness we have both learned to know, does not consist in display or empty formality, but in the genuine expression of mutual love. This I trust has and will endure, though miles and mountains intervene between us. So also it feels to me it subsists between us and dear A. S. T., even as a threefold cord, which may not be easily broken. Last week I received a letter from her dated at Keokuck. She mentioned thee in connexion with the precious little meeting at Cincinnati, stripped and peeled as it is; and she is feeling the loss of a meeting to attend where her sons live. Perhaps it may prove to them as it did to a young friend of mine, who, after her removal to the West, was brought to feel the loss of those privileges which she had even dispised when in her power, and to write to her mother, on a page blotted with many tears, expressing that her estimate of religious opportunities was so changed that she felt as if she would be willing to go on her hands and knees, if she might again attend meetings. "How blessings brighten as they take their flight!" And well for those who learn to prize them while offered to their acceptance; well indeed would it have been for thy unworthy friend had she not slighted them to her irreparable loss, for "our not doing is set down among our darkest deeds," and we are too apt to forget that time lost can never be recalled. May we, then, who are monuments of long-suffering mercy, henceforth let the time past suffice, and double our diligence in the Lord's work, both to the stirring up of the pure mind and arousing the unthoughtful of the divine blessings. Truly I can say his mercies are new every morning, and call for daily gratitude and thanksgiving; for my health and that of my dear son have been renewed to my surprise, for I am able to perform my little house-work without fatigue. To be sure our domicile is small and our cooking simple; and I have long believed the true secret of the enjoyment of life was to endeavor to

life, an exhaustless mine of instruction and enjoyment, in the pages of that diversified and magnificent volume which Providence has spread before our eyes.

In social intercourse he was entertaining and instructive. His conversation, though habitually cheerful and even sprightly, was never light and trivial. He never related an anecdote but for the purpose of illustrating a truth, or pointing a moral. His anecdotes were mostly biographical incidents, appertaining to the character of distinguished men.

In every movement calculated to affect the general welfare of the community, William Gibbons always manifested a lively concern. He was much interested in promoting the tillage of the soil, and improving the arts of husbandry. At a time when little attention was directed to the cultivation of fruit, he established a nursery of fruit trees at Wilmington, from which the surrounding country was first supplied with improved and choice varieties. He had an orchard of carefully selected fruits, the products of which it gratified him to share with his neighbors, and also with the birds, which he sedulously protected from the murderous aim of the sportsman. He was so much attached to the feathered songsters which nestled in the shady orchard, that, to avoid annoying them or driving them from their home, he would not allow a gun to be fired on the premises.

For many years, his pen was freely employed in defending the Society of Friends, and elucidating their testimonies and doctrines. This brought him in frequent conflict with the opinions and prejudices of religious professors of other denominations. For "modes of faith" he cared but little. He never judged men by their creeds. However widely they might differ from him, the difference gave him no anxiety, provided they were honest and conscientious, and evinced by an upright life the fruits of practical religion. The same toleration that he extended to others, he claimed for himself and the Society to which he was attached. It was chiefly when the character and doctrines of the Society were assailed and misrepresented, that he came forward to advocate and defend them before the world.

An extensive medical practice, in which he was engaged for forty years, brought him continually in contact with persons of various religious tenets. These individuals were frequently induced, by their regard for his professional character and his private worth, to inquire into the nature of Friends' principles, and the grounds on which they placed their testimonies. Though he never obtruded his sentiments on the notice of others, he was always ready to declare them to the honest inquirer, and to give a reason for his faith. On

such occasions, whether he succeeded or not in making a convert to his views, he never failed to produce a salutary impression, manifesting that his heart was imbued with the Christian graces.

In defending what he believed to be truth, and condemning what he regarded as error, he never permitted motives of policy or interest to impose on him any restraint. Acting on the maxim that "Honesty is the best policy," he bore his testimony in direct, unequivocal language. Individuals who may have felt themselves at times implicated in his censure, could not but honor and esteem him for his honest and faithful discharge of apprehended duty. Many such persons, members of other religious persuasions, were among his most attached friends. The "Orthodox" Friends, with whom he had formerly enjoyed religious fellowship, he continued to cherish and to love, and it was a source of high gratification to him to feel that differences in religious profession had not disturbed the harmony of their social intercourse.

As a physician, he gained the affectionate regard of his patients, with whom he was ever ready to sympathize in their sufferings. To witness bodily pain, excited his keenest sensibilities. So far from becoming inured to scenes of pain and suffering, these scenes became more distressing to him as he advanced in life. When opportunity presented, he was mindful to direct the attention of the sufferer, languishing on a bed of sickness, to a source of comfort and of hope beyond the realms of time.

As a parent to whom was delegated the care of a large family of children, he was deeply impressed with the responsibility of his position, and discharged his duties to them with religious assiduity. The first child died in early infancy; but after that occurrence, the angel of death did not enter the threshold until he came to summon the head of the family. The flock was then thirteen in number, and most of them had grown up to adult life. The ties that bound him to his family were remarkably strong, and he often expressed his gratitude to Divine Providence for this extraordinary exemption from the visitations of death.

For a number of years, he had labored under the apprehension that his life would be terminated suddenly, by disease of the heart. Within a few months of his last illness, he had several alarming attacks, which confirmed him in that view. These attacks, however, passed off speedily, so as not in any great degree to interrupt his visits to the sick. His habits, both of body and mind, were very active, and he was industriously engaged in medical practice when the hand of sickness was laid on him for the last time.

(To be continued.)

ALL INVITED TO HEAVEN.

"Beheld, I stand at the door and knock; if any man hear my voice, and open the door, I will come in unto him, and sup with him, and be with me." Rev. iii. 20.

Be it known therefore that every man is born for heaven; and that he is received in heaven who receives heaven in himself while in the world.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, FIFTH MONTH 5, 1866.

FRIENDS TRAVELLING IN THE MINISTRY.

—Rachel Wilson Moore has obtained from Green Street Monthly Meeting, Philadelphia, a minute to attend New York Yearly Meeting.

OUR APPROACHING YEARLY MEETING.—

Are we ready for it, and is it to be to us a time of spiritual refreshment? If in answer to the first inquiry, our consideration embraces only *externals*, we shall fall short of its full significance, that upon which depends in great measure our ability to answer satisfactorily the second question, "Is it to be to us a time of spiritual refreshment?"

We acknowledge the necessity of providing for our physical wants, and of seeing that all things are in order; but our inquiry points more directly to a preparation for the higher wants of the spiritual life. Let these wants be considered and ministered unto by an individual home-work which will so attune our spirits to the harmony of the Gospel of Christ, that when we come together in a Yearly Meeting capacity, there will be no jar, but we shall be "kindly affectioned one to another in brotherly love, in honor preferring one another."

"There are diversities of gifts, but the same spirit, and there are differences of administration, but the same Lord; and there are diversities of operations, but it is the same God that worketh all in all. For to one is given by the spirit the word of wisdom; to another the word of knowledge by the same spirit."

There is much comprehended in this Scripture testimony, and in this connection it is worthy of all acceptance. Some of the members of the church militant are called into very active and extended service in a wide spread field, and power is given them according

therewith, and implements are placed in their hands fitted for the labor they are to perform. Others may have but a little corner of the great vineyard allotted them, wherein their service chiefly lies, and within which there is no room for the kind of implements wielded in the more extensive field. Herein let not one servant judge another, but let each perform his own service under the direction of the self-same spirit, which divideth unto every man severally as He will.

A practical acknowledgment of the great truth, "That one is your Master, even Christ, and all ye are brethren," places us upon a ground which forbids the exercise of a spirit of harsh criticism and judgment. This spirit is at variance with true Christian charity, and will not be known among us if we come up to the feast, having made the needful preparation.

Let us then all see to it, that when the time comes we may be found ready—our spirits clothed upon with the preserving influence of Divine Love, which will be a shield of defence so effective, that no evil can find entrance among us. Then, standing in our respective ranks, as with shoulder to shoulder, we may happily realize the testimony as addressed to some formerly, "Ye are strong through the word of God, which abideth in you." And may we all remember the apostolic language, Those who are strong ought to bear the infirmities of the weak, and not to please themselves.

MARRIED, on the 5th of Fourth month, 1866, at the residence of Wm. P. Sharpless, under the care of Philadelphia Monthly Meeting, JOHN S. PARRY, M. D., and RACHEL P. SHARPLESS, all of this city.

DIED, on the 3d of Fourth month, 1866, at his residence in Delaware Co., Pa., RANDALL PRATT, in his 65th year; a member of Goshen Monthly Meeting.

—, on the 11th of Fourth month, 1866, at Sandy Spring, Montgomery Co., Md., BRULAH N. JACKSON, daughter of the late Levin H. Jackson, of Lancaster Co., Pa., in the 58th year of her age.

—, on the 12th of Fourth month, 1866, at Riverton, N. J., LOUIS D. SEBAST.

—, on the 14th of Fourth month, 1866, at Abington, ELLEN, wife of Chas. Bradfield, and daughter of the late Jacob and Elizabeth Mattee, in her 32d year.

—, on the 22d of Fourth month, 1866, JOSIAS BOND, in his 61st year.

—, on First-day morning, the 22d of Fourth month, 1866, of heart disease, WM. PENN, youngest and beloved son of B. F. and Mary C. Starr, aged 4 years and 27 days; members of Baltimore Monthly Meeting.

DIED, on the 23d of Fourth month, 1866, JOHN BEDELL, son of Enos T. and Huldah H. Doron, aged 1 year and 10 months.

—, on Fifth-day, the 26th of Fourth month, 1866, in Philadelphia, WM. S. HALLOWELL, in his 66th year.

—, on the 26th of Fourth month, 1866, ISABELLA G. MAREH, wife of Napoleon Bancroft, aged 32 years.

The Executive Committee to promote Subscriptions to Swarthmore College will meet on Sixth-day morning, 11th of Fifth month, 1866, at 11 o'clock. Reports of the progress of this concern within different parts of Philadelphia Yearly Meeting are requested.

JOS. M. TRUMAN, JR., *Clerk.*

From the Sunday-School Times.

THE TRIAL OF PROSPERITY.

We often speak of the trial which adversity makes of the hidden springs of character, but there is another arch inquisitor more searching still. Adversity may try a man's faith, and patience, and energy, but prosperity tries his whole nature. Many who can stand the test of the first, fall before the last. What strange developments it often makes of those who before had stood fair in their professions before the world! Hazael rejected with scorn the prophet's prediction of his great wickedness, but Elisha's answer was full of meaning when he simply said, "The Lord hath showed me that thou shalt be king over Syria."

How often have the tender-hearted become hardened and inured to scenes of oppression and cruelty when the power has been placed in their hands!

Pliny, the younger, seemed a marked example of all lovely and noble virtues. His benevolence to the poor, his espousal of their cause when pleading at the bar, and his generosity in never taking a fee, called down blessings upon him from thousands of households. His beautiful letters have awakened the deepest admiration at their spirit of benevolence and philanthropy. Yet this same man, when proconsul under Trajan, proceeded coolly to torture two Christian women, in a manner the most excruciating, in order to extort from them something to the disadvantage of Christians. Many were executed by his order for their adherence to the faith, and pity for their sufferings seemed excluded from his breast. How few, even of the most gentle hearted, are able to stand the test of absolute power!

Not only does worldly prosperity develop hidden, social traits to which the person was before a stranger, but it also shuts out too much of heaven from the soul, if it does not in the end shut out the soul itself from heaven.

"When I was in a low estate," said Pius Quintus, "I had some hopes of salvation; but when I was advanced to be a cardinal I greatly doubted; but since I came to the papedom I

have no hope at all." It is a great help to contentment to keep ever in view the dying day, and estimate all things as loss that tend to make that day one of gloom and dread to us.

J. E. L.

For Friends' Intelligencer.

AMONG THE FREEDMEN.—NO. III.

BY JACOB M. ELLIS.

(Continued from page 125.)

Arrived at the *Richmond* depot between 5 and 6 this morning, but as the steamer "*Milton Martin*" left a wharf at the extreme lower part of the city at the last-named hour, I had but just time to reach it comfortably. Much interest certainly does attach to the *James river*. The records of history will claim an importance for its various landings, attained at the terrible price of the devastation of war, that is fearful to contemplate, notwithstanding the glorious result of emancipation.

Not the least of these are *Bermuda Hundred* and *City Point*. At the last-named place, a day or two since, a large Government warehouse, situated on the wharf, was totally destroyed by fire, involving great loss. The splendid wharf itself had well nigh shared the same fate, built as it is, on piles, a considerable distance out over the river.

The upper portion of this river is, for its length and size, the most tortuous stream I have ever seen. The curves are very short, and one spot was pointed out to me, where, could we go in a direct line to a certain point, the distance was about eight miles, while by the river it was said to be about twenty-five. The famous *Dutch Gap canal* is an illustration of this. We reached one end of it about half past seven o'clock, and although it is certainly very much less than a mile in length, it took just twenty minutes to reach the other end, by following the river round. I heard some one remark in reference to it that "Butler had done one good thing, anyhow." I believe it is the purpose of the Virginians to make this canal available. Much anxiety is manifested by passengers to get a view of it, every one being on tip-toe long before it is reached.

Butler's "Look-out" also elicits considerable attention; and perched as it is on a commanding eminence, it must, with the assistance of a strong glass, have offered a good view of all the military operations of the surrounding country.

I was much chagrined to find that the boat in its downward passage does not stop at *Fortress Monroe*, but proceeds on to *Portsmouth* and *Norfolk*. Passengers who desire either to go to the Fortress, or to take the night boat for Baltimore, which many do, must land at Portsmouth, where they wait some three quarters of an hour, until said Baltimore boat touches there on her way up from Norfolk, and by which

they go back again to the Fortress. When I landed, I supposed I was in Norfolk, and should so have dotted it down, had I not some time after accidentally discovered a sign on the ferry house, "*Ferry for Norfolk.*" Had I have used my own judgment instead of making inquiries, I should have availed myself of the facilities of this ferry, and thus have been subjected to a day's delay instead of the two or three hours over which I was then grieving, as being a large slice taken out of a short afternoon, and particularly as Portsmouth appears to contain a little or nothing to interest a stranger. I strolled through it, and noticed in one of the store windows an engraving bearing the cognomen, "Burning of the rebel ram *Arkansas*;" a trifling matter, it is true; and yet, as the old adage, "straws show which way the wind blows," is often very appropriate, may not this be indicative of a better state of feeling than exists in some portions of the South—the word "*rebel*" being used in such a connexion thus publicly exposed.

At half-past four o'clock I re-embarked for *Fortress Monroe*, which was reached in about an hour, being eleven and a half hours since leaving *Richmond*. Some of my friends are cognizant of the fact that I have a niece engaged here as a teacher amongst the freedmen, (Susan F. Clark, one or more of whose letters were published in the *Intelligencer* some time since), who has been in the service some three years, and that our Freedmen's Association of Philadelphia on two occasions rendered that school some assistance. A desire to see her, and to witness the practical operation of the school, were the main promptings of my visit, though considerable interest is attached to the place itself.

Upon making inquiry of some colored persons, I found the school was about two miles up the beach, not readily found by a stranger, except by repeated inquiry; but I was fortunate enough to find a colored woman having two children in one of their schools, who offered to pilot me, as she had to pass it on her way home. As my coming was entirely unheralded, it may well be supposed my unexpected visit was the occasion of an affectionate and hearty greeting. I found that my relative, two other young ladies and a gentleman, have jointly *three* schools taught in three separate places; the combined number of pupils amounting to about two hundred and forty. Being anxious to see all I could, I made a hasty meal and accompanied them to one of their evening schools, composed principally of *adult* males and females, and a few boys some sixteen to eighteen years of age. Most of these are engaged in foundries or other heavy manual labor through the day, and some have to walk a considerable distance, and yet such is their thirst for knowledge, that they are found *here*, diligent and attentive.

Their exercises in *orthography*, *reading* and *arithmetic* were more than creditable; and as to their copy books, the whole of which I examined, I have never seen any thing to excel, if to equal them, in a school of that grade composed of *white* pupils. From what I saw, I formed a very high estimate of the thoroughness of their teaching, particularly of orthography and arithmetic, not being satisfied with the pupils being able to attain certain results by *rote*, but the sounds of the vowels in the one case, and the why and the wherefore, &c., in the other, must be given. A hearty interest appears to be taken by the teachers, and though subject to many privations, keeping house in a very primitive way, they form a happy group of earnest workers: laboring in the good cause from a sense of duty.

Upon making some inquiries of the male teacher, as to the physical condition of the colored population, he stated that while there were many cases of positive destitution, the Sanitary and Christian Commissions and various beneficial associations had done so much for them, and had in many cases made distributions with so little care, that the recipients had come to look for such charities as a matter of course, if not as a matter of right. It was his opinion this had been a great disadvantage to them, and had induced a spirit of improvidence amongst them. The subject is introduced here as a caution to our own friends, that in the distribution of what may be entrusted to them it may be done carefully and judiciously. He also instanced another trait in the colored people here, contrasting strongly and very unfavorably with what we have always heard of them from almost every other point; and a query arises, whether it may not in some measure have grown out of the lavish distribution just alluded to. It was this while they are kind to their teachers, and entirely respectful in their intercourse, the scholars manifest no regret whatever in parting with them when circumstances demand their removal to any other point, which he could not account for while in possession of the information from other localities, that under similar circumstances strong manifestations of affection were exhibited, even to the shedding of tears. And further, that this want of a proper appreciation of benefits conferred, appeared to be too much of a prevailing disposition amongst the colored population of this place.

It was with sincere regret I parted with my friends—mentally desiring and believing, however, that their disinterested labors, as indeed all such labors of love, wherever found, might meet with their reward. I have never heard the population of *Fortress Monroe* estimated, but the place is very much larger than I supposed—quite a town, extending a considerable distance up the beach. The morning I left, rain

that had been previously threatening came down in earnest, continuing at intervals through the day. I enjoyed the ride up this beautiful river much more than down; possibly previous loss of sleep and fatigue had unfitted me for a proper appreciation of it.

Though consuming the greater portion of the day, it was not tedious, occupying as I did a seat in the upper cabin, or promenade deck, as it is sometimes called, alternately scribbling these hasty notes and making the most of the scenery around me. In due time arrived at *Richmond* again: of which more in my next.

(To be continued.)

TRAINING CHILDREN.

Whatever you wish your child to be, be yourself. If you wish it to be happy, healthy, sober, truthful, affectionate, honest and godly, be yourself all these. If you wish it to be lazy and sulky, and a liar, and a thief, and a drunkard, and a swearer, be yourself these. You remember who said, "Train up a child in the way he should go, and when he is old he will not depart from it." And you may, as a general rule, as soon expect to gather grapes from thorns and figs from thistles, as to get good, healthy, happy children from diseased, lazy, and wicked parents.

Be always frank and open with your children. Make them trust you, and tell you all their secrets. Make them feel at ease with you, and make free with them. There is no such play thing for grown-up children like you and me, as "weans,"—wee ones. It is wonderful what you can get them to do with a little coaxing and fun. You all know this as well as I do, and will practice it every day in your own families. Here is a pleasant story out of an old book:—"A gentleman having led a company of children beyond their usual journey, they began to get weary, and all cried to him to carry them on his back, but because of their multitude he could not do this. 'But,' says he, 'I'll get horses for us all;' then cutting little wands out of the hedges as ponies for them, and a great stake as a charger for himself, this put mettle in their legs, and they rode cheerily home." So much for a bit of ingenious fun.
—*Dr. John Brown's Essay on Health.*

What is the nature of your inward spirit? Are you of those whose life exhales unceasing fragrance upon those that are around about you? And is your life such a life of love that every one who comes near you feels warmer and happier? Or are you full of selfishness and pride? Are you cold and forbidding? Are you hard? Do you bind burdens on men that you do not help to carry? Do you pay tithe of mint, anise, and cummin, and omit the weightier matters of the law?

SUBMISSION.

When success has crowned our efforts, heaping up the golden store,
When ease rests within our dwelling, and fat plenty at our door,
When our larders groan with dainties, and our cellars flow with wine,
Then how easy 'tis to utter, "Not my will, O Lord, but Thine."

When beside our cheerful fireside we behold so vacant chair,
But can gaze on childish faces, gathered nightly round us there,
With what quiet resignation, from the volume on our knee,
Can we read the invitation, "Suffer such to come to me."

But when changes come, and with them ease and plenty both have fled,
When the "Not my will, O Father," turns to cries for "Daily Bread;"
Then amid our want and sorrow, hunger's pinches, winter's chill,
Shall we bow in true submission to our Heavenly Father's will?

Or when Death, with icy fingers, lays upon our darling's head,
For the asphodels that crowned her, amaranthine wreaths instead,
In our hour of deep affliction, from the heart's Gethsemane,
Will the prayer not rise, "O Father, pass this bitter cup from me?"

For Friends' Intelligencer.

FOLLEN.

The flowers are gay at Follen now,
And green are all the trees;
I stand beneath their leafy shade,
And feel the summer breeze;
And every flower and every tree
Speaks to my lonely heart of thee.
The birds have come to Follen now;
They've built their nests in every tree;
All day I hear their little songs,
But 'tis a saddened melody.
Once every song in every tree
Was music sweet to thee and me.
The stream glides on at Follen now,
Nor dreams of Winter's ice and snow,
And from our window I can see
The vessels sailing to and fro.
On this dear stream—our "Follen Sea"—
How many sails I've had with thee!
The fields are ripe at Follen now,
And all the reapers reaping grain;
And, as of old, I hear them say,
"Please Heaven that it may not rain."
How oft, when they would troubled be,
I've heard them say those words to thee.
Sad are the days at Follen now—
How sad, thou can'st not know;
But I will smile and cheer my heart,
For thou would'st have it so.
And ever I will turn to thee,
For in spirit thou wilt be with me.

He who adopts a just thought, participates in the merit that originated it.

From the Reader.

BELGIAN BONE CAVES.

The explorations of the Belgian bone caves, which have been carried on for some time past by MM. Van Beneden and Dupont, have been referred to several times in the pages of *The Reader*. We have now to lay before our readers an account of the progress of the work up to the end of November last, and for this purpose we make use of a report recently presented by M. Dupont to the Belgian Minister of the Interior. We may premise that all the bone caves in this locality furnish indisputable evidence of one fact—viz., that the cave-dwellers were destroyed by a sudden inundation, which covered the whole of Belgium and the North of France, the evidences of which M. Dupont finds in the *limon* of Hesbaye and the yellow clay of the fields, and in the peculiar arrangement of the *débris* in the caverns. The cave at present under examination was discovered in May last, and is situated on the banks of the river Lesse, opposite the hamlet of Chaleux, about a mile and a half from the well-known Furfooz cave.

At an epoch long before that of its habitation by man, this cavern was traversed by a thermal spring. It is well lighted, is easy of access, and its situation is most picturesque. The number of objects found in this cave is enormous, and would appear to point to an extended period of occupation by these primitive people. The *grand trou de Chaleux*, as M. Van Beneden has proposed to call it, has also been subjected to the inundation, but the contents have been preserved almost intact, and this circumstance gives a value to the discoveries which was to some extent wanting in the Furfooz caves. According to M. Dupont's theory, the former inhabitants of the cave, warned by the dangerous cracks in the walls and ceiling, suddenly abandoned their dwelling-place, leaving behind them their tools, ornaments, and the remains of their meals. Soon afterwards the roof and sides fell in, and the pieces thus detached covered the floor. In this manner the remains have been preserved from the action of the waters, and have remained undisturbed until the present day. The unfortunate inhabitants doubtless saw in this occurrence the manifestation of a superior power, since the cavern does not appear to have been inhabited after this period, only a few worked flints and bones, probably the result of an occasional visit, having been discovered on the upper surface of the cavern.

An important point seems to be established by M. Dupont's researches—viz., the extended commercial relations of these primitive peoples. The flint which was used for the manufacture of their implements is not that of Belgium, but according to M. de Mortillet, was brought from

Touraine. Several specimens of fossil shells, most of which had been perforated, probably for the purpose of being strung together, and worn as ornaments, were collected, and were submitted to M. Nyst, the well known palæontologist. He recognized most of them as belonging to the *calcaire grossier* of Courtagnon, near Rheims. Two species belonged to the department of Seine-et-Oise. Some fragments of jet and a few sharks' teeth were from the same locality. "We cannot, therefore, deny," says M. Dupont, "the relations of these men with Champagne, whilst there is no evidence to show their connexion with Hainaut, and the province of Liege, which could have also furnished them with their flint."

Amongst other objects brought to light during the excavations was the forearm of an elephant, which appears to be that of the mammoth of Siberia, an animal which did not exist in Belgium at that epoch. "When we reflect that, till within a comparatively short time, these bones were looked upon as those of a race of giants, and gifted with miraculous powers, we cannot be surprised that our inhabitants of the cavern of the Lesse, whose civilization may be compared to that of those African nations who are sunk in the darkest depths of fetichism, attributed similar properties to those enormous bones which were placed as a fetich near their hearth."

Judging from the quantity of bones found in the cavern, the principal food of these cave-dwellers was the flesh of the horse. M. Dupont collected 937 molar teeth belonging to this animal, a number which corresponds to about forty heads, supposing each set of teeth to be complete. The marrow seems to have been in great request, all the long bones having been broken, so as to extract it. Most of them retain traces of incisions made by their flint tools. The large number of bones of water rats would also lead us to suppose that they formed a part of the food of these people, as did the badger, hare, and boar.

The number of objects obtained from this cavern is greater than that obtained from the whole of the caves previously explored. Of worked flints, in various stages of manufacture, 30,000 were collected. Besides these, M. Dupont obtained several cubic metres of bones of all kinds, the horses' teeth already mentioned, and a vast quantity of miscellaneous articles.

The facts acquired by the excavations at Chaleux, combined with those obtained at the Furfooz caves, form a striking picture of the early ages of man in Belgium. "These ancient people and their customs re-appear, after having been forgotten for thousands of years, and like the fabulous bird in whose ashes are found the germs of a new life, antiquity becomes regenerated from its own *débris*. We see them

in their dark, subterranean dwellings surrounding the hearth, which is protected by the supernatural power of immense fantastically-shaped bones, engaged in patiently making their flint tools and utensils of reindeer horn, in the midst of pestilential emanations from the animal remains, which their indifference allowed them to retain in their dwelling. The skins of wild beasts, having the hair removed, were stitched together by the aid of their sharpened flints and ivory needles, and served as clothing. We see them pursuing wild animals armed with arrows and lances tipped with a barb of flint. We take part in their feasts, where a horse, bear, or reindeer, replaces, on days when their hunting has been successful, the tainted flesh of the rat, their only resource against famine. Their trading extended as far as the regions now forming part of France, from whose inhabitants they obtained shells, jet, with which they delight to ornament themselves, and the flint which is so valuable to them. But a falling-in of the roof drives them from their principal dwelling, in which lie buried the objects of their faith and their domestic utensils, and they are forced to seek another habitation.

We know nothing certain of the relation of these people with those of earlier times. Had they ancestors in this country? The great discoveries of our illustrious compatriot Schmerling, and those which Professor Malaise has made at Engihoul, seem to prove that the men whose traces I have brought to light on the Lesse, did not belong to the indigenous races of Belgium, but were the only successors of the more ancient population. I have even met with certain evidences of our primordial ancestors at Chaleux, but the trail was lost as soon as found. Our knowledge of these ancestors stops short at this point."

We have given in the above abstract an account of the most important feature in M. Dupont's report, which is of great interest. We trust that these explorations, which have been carried on at the expense of the Government, will be continued.

Philology tells us that there is no limit to the variation of dialect. The simplicity and intricacy of truth, as together revealed and reconciled in this branch of science, consist in the phenomenon, that while the original unity of all human speech is traceable in the actual presence or legible history of certain radical forms, the diversities of usage are as unlimited as the diversities of national, and of provincial, and even of individual character. It is now an indisputable truth, that every man, so far as he thinks for himself, makes his own language; although it must remain to be an indisputable blessing in a world which has been enlightened by any revelation of truth, that individuals are capable

of adopting both their thoughts and their language, for the most part, "at second hand." So far as we speak intelligently or appreciatingly, we must speak originally, because thought is antecedent to language. And for the same reason we may speak intelligibly and yet not with perfect intelligence or appreciation of our words, when we are merely uttering borrowed thoughts.

WHETHER CHOLERA IS CONTAGIOUS.

BY JACOB BIGELOW, M. D.

(Concluded from page 123.)

Whatever may be the cause or vehicle of cholera, credulous and excitable persons are impatient of suspense, and are prone to cut a knot which they fail to untie. When an epidemic disease first appears, some coincidence is brought to light which is supposed capable of accounting for it. The arrival of a ship, the opening of a trunk, or the washing of a garment, are among the most frequently accepted causes. But as these events have happened a thousand times before, and apparently under like circumstances, without any known results, it has been thought necessary by some of our later writers to narrow the compass of actual exposure down to the reception of the morbid excretions of one individual into the digestive canal of another. The first impression made by this announcement must, if true, be one of relief, the danger not seeming likely to happen very often. But to the possibility of such danger we can never oppose an absolute negative, so long as we persist in eating smelts and flounders caught about the mouths of our drains, or even turnips, salads, and strawberries raised at Brighton. The risk, however, is so small, that most persons will prefer to take it rather than to deprive themselves of food or luxuries. Of the many sensation tales printed and reprinted about cholera, and the supposed instances of remarkable communications or arrestation, it is sufficient to say that they are frequently interesting, being fully as dramatic as they are probable.

In the same regard we cannot help noticing that credulity, and perhaps private cupidity, have caused much stress to be laid on the supposed preventive efficacy of what are called "disinfectants," a mysterious word which implies a thing assumed but not proved to exist. We have deodorizers, such as chlorine, charcoal, &c., which by their combinations render certain effluvia imperceptible to our senses. But that these are not *disinfectants*, there is most abundant evidence. The narrative, then, of the physician at Malta, who covered certain surfaces in vessels with oil, and had them "disinfected by chlorine gas," after which "no new cases occurred," is to be classed with other like

reputa, with which the medical press always abounds at the close of epidemics.

In clean and well-regulated cities of temperate climates, cholera is far from being the most formidable of epidemics. A greater part of its victims are the miserably poor, the worn out, the ill provided, and the intemperate, in whom this disease only anticipates the date, but does not greatly increase the annual or biennial number of deaths. Its mortality in our northern Atlantic cities rarely amount to one per cent. of the population in a given place or year, so that a man may reside through an epidemic in one of these cities with less risk than he can take a pleasure voyage to Europe. After having witnessed many cases of cholera in this and other cities, I am farther satisfied that it affords one of the easiest modes of exit from the world.

People who would avoid or prevent cholera, should cultivate equanimity, regularity of life and habits, cleanliness, salubrious exercise, temperance, and avoidance of all excesses. When they have done their duty in providing for the care of the sick, allaying public panics, and abating public nuisances, they may safely dismiss their apprehensions. Little good and some harm is always done by the indiscreet agitation of a subject which is to a great extent beyond our control. A single or sporadic case of cholera occurring in a village of a thousand inhabitants may attract little notice, and perhaps pass without record; but a hundred cases in a city of a hundred thousand inhabitants make an aggregate which generally causes some panic, though the proportion is exactly the same, and the panic equally unnecessary. It is possible that the supposed immunity of country districts in comparison with cities may be accounted for by the fact, that in the sparse population of country towns cases are less liable to be detected and published.

I may be excused for repeating the following remark from among some "Aphorisms" published by me about thirty years ago, when the disease was new and little known among us. "Should the cholera continue to prevail for three years throughout this continent, it would cease to interrupt either business or recreation. Mankind cannot always stand aghast, and the wheels of society at length would be no more impeded by its presence than they now are by the existence of consumption, of old age, or of drunkenness."

No person is qualified to speak of a Christian's life of joy until he has been in the inner circle of communion with God; and when once there he has been able to say, "Thou art my Father," and has heard God saying, "Thou art my son." No other joy is comparable with that which he experiences; none lasts so long; none is so sweet in the memory; none

strengthens the soul so much; none has so little alloy, or leaves absolutely so little pain behind.

Remember, then, that "love is the fulfilling of the law."

Report of "The Women's Association of New York Friends for the Employment and Relief by Clothing of the Suffering Poor."

This organization has completed its fifth year, and the managers feel assured that the good resulting from it has been sufficient to induce those interested to continue their effort another winter—giving employment to the industrious poor. Although the falling off of the subscriptions and donations for the past year has been discouraging, we cannot but hope that the ensuing winter will find our Treasury better filled, and our committee strengthened by an increased energy of its members.

The distribution of work commenced First month 13th, and continued weekly until Third month 30th, during which time 296 garments were made by the poor women, for which the sum of \$135.86 was paid.

Almost every applicant claimed our deep sympathy; and we have only to regret the small number of subscribers, and that there are not more, earnestly interested in promoting such a true and healthful charity, helping the poor to sustain a proper self-respect by industriously earning a living, rather than by making them mere recipients of alms.

This Association will resume its operations next autumn, and trust by a timely notice of its first meeting to elicit a larger interest in its worthy object.

ITEMS.

CONGRESS.—The Senate adopted a resolution instructing the Committee on Commerce to inquire into the expediency of providing against the importation into, and the transportation or manufacture of nitro-glycerine in the United States. The Cuba telegraph bill was taken up. The Senate refused to concur in the House amendment and called for a committee of conference. The bill for the admission of Colorado was taken up, which, after a long debate, was passed. A resolution was adopted to print

ten thousand copies of the communication of the Commissioner of Agriculture on the subject of the rinderpest; also one appropriating \$2,100,000 to pay the expenses of collecting the revenue from customs. Bills and resolutions were offered to reorganize the clerical force of the Interior Department; the consular and diplomatic appropriation bill; for the coinage of new five-cent pieces; for the payment of loyal citizens in certain counties of West Virginia for stores furnished by them to the army. All were appropriately referred.

The House passed a resolution directing the Committee on the District of Columbia to inquire into the expediency of establishing the eight-hour system in the District; also a resolution requesting the President to cause to be communicated to the House the provisions in the amended constitutions of the Southern States, and all laws passed by such States since the close of the rebellion in regard to the freedmen. A joint resolution was passed authorizing the President to carry into effect such orders and regulations of quarantine as may be deemed necessary in aid of municipal or State authorities to guard against the introduction of cholera. The Senate joint resolution making appropriations for the expenses of collecting the revenue from customs was referred to the Committee on Appropriations. The Senate bill to encourage telegraphic communication between the United States and the island of Cuba, the other West India islands and the Bahamas, was reported back, with amendments, from the Committee on Commerce, and passed.

THE FREEDMEN.—From a recent report made by the Rev. J. W. Alvord, General Howard's Inspector of schools and finance, who spent three months among the freedmen and refugees in the performance of his duties, I gather some overwhelming facts.

In the eleven States lately in insurrection, including Kentucky, Missouri, Maryland and the District of Columbia, up to recent accounts, there were 96,299 colored children in course of education, in 762 schools, employing 1,453 teachers. In reply to a letter addressed to Gen. Howard, he informed me that there are six newspapers at the South conducted exclusively by colored men, and three in the North under similar management, while many others are supported by heavy contributions from the colored people. The rivalry is universal among the colored children to acquire education, the average attendance being nearly equal to that usually found in the North. In the District of Columbia the daily attendance of the whites is forty-one per cent., while the colored attendance is 75 per cent.; in the State of New York the daily attendance of the whites is 43 per cent., and in the city of Memphis the colored attendance is 72 per cent. Although there is a general prejudice against the education of the colored people among what are called the respectable classes, Mr. Alvord says nothing can defeat or greatly delay the mighty missionary movement. In the first place, the ignorant white population feel the salutary effects of these schools and newspapers, even while they object to them. The poor whites are excited by hearing negroes read while they are ignorant, and some of the religious denominations, seeing that the schools must go on, are beginning to say they will undertake the work themselves. As if inspired by some providential message, the whole mass, from Maryland to the Gulf, like a mighty army long perishing of thirst and suddenly beholding the waters of eternal life flowing at their feet, rush to their primers, books and newspapers, to their schools and their teachers. Clustering together at intervals of work,

and meeting after their days of toil in their little cabins and wherever they can assemble, their industry is at once a loving and a holy sight.

J. W. FORNEY.

EDWIN HALL & CO., 28 South Second St., would inform the Friends of this city, and those who contemplate visiting it, that they keep a large stock of goods adapted to their wash Plain Silks, Neat style Silks, Neat style Poplins, Plain Poplins, Plain Mohairs, Neat style Mohairs, Neat style Lawns, with many other styles of goods suitable for a neat plain taste. Plain style Shawls, Shetland Shawls, Barge Shawls.
42855612.

CLARK & BIDDLE, JEWELLERS, (Successors to Thos. C. Garrett), No. 712 Chestnut St., invite attention to their large stock of American, English, and Swiss Watches, which they offer at the lowest gold rates. Also a fine assortment of Silver and Silver-plated Ware. Prices reduced to correspond with the heavy decline in gold.
428556123.

THOS. M. SEEDS, HATTER, 41 N. 2d St. Always on hand, and made to order, a large assortment of Friends' Hats; as he makes a specialty of that part of the Hatter's Business.

MEMOIR OF THE LATE JOHN WATSON, OF CANADA WEST.

(Continued from page 151.)

I became much attached to a dear grandchild, with whose parents we lived, who would frequently, as I walked out for exercise, walk with me. He was taken poorly, and after lingering with a heart disease for some time, consumption followed, which soon closed his earthly existence. From the earliest part of his sickness he had thoughts of death and was much humbled in mind. He saw something sweet before him, and seemed to have a glimpse of future joys. Two of his schoolmates coming in the afternoon previous to his decease, he called them each by name, bade them farewell, and said he was going to a better world. I had frequently impressed upon his mind, that good boys if taken away would go to the good place; and during his sickness he said he had often remembered it. He took an affectionate leave of all, and died on the 17th of Third month, 1858, in the 12th year of his age.

Dark and gloomy times are permitted to come over us, to show us our own insufficiency, and from whom our help cometh.

"Learn of me," saith the blessed Jesus. We may be ever learning and not come to the knowledge of the Truth; and we may be ever learning and increase in knowledge, and this is when Christ teaches us, and we continue to learn of Him. Let not imagination nor the

things of our own minds influence us, but what God is pleased to reveal in us and unto us; and what Christ by his spirit teaches us, that let us speak. We never can too well learn this lesson that God worketh in us to will and to do, of his own good pleasure, if we are submissive to the operations of his spirit.

When returning from our Monthly Meeting at Whitechurch, we went to visit a granddaughter of my son John; here I was taken suddenly very ill, and it seemed probable that my end was approaching. I continued ill many days, and many of my relatives and friends from home came to visit me. In this neighborhood were many Methodists, who, with their minister, also came to see me. I was several times called to give, in much meekness and fear, the reasons for the hope of eternal life that was in me, and had much to say in respect to the things of God, and have often wished since that at the closing period of my life I might have the same well-grounded hope. In looking back it has seemed good to me that I was thus afflicted, and in mercy preserved for further usefulness. What we know not at the time is made known to us afterwards.

It was not long after this that another trial was passed through in the removal of a dear granddaughter of my children Thomas N. and Clarina Watson, with whom we live. She was a lovely child, and was removed in the 8th year of her age, from all the evil to come, to join the angelic host in heaven.

We—my wife and I—have for some time been favored with tolerable health, and have attended nearly all our religious meetings. Our Yearly Meeting was this year (1861) held at Farmington. We felt loth to go, as we have a son who has been suffering for some time with consumption; but at his desire we went. We think it was one of the best we ever attended. I was led to consider the all-seeing providence of God, that he was omnipotent in all his ways, wonderful in all his works; and had to proclaim, "Shall not the Lord of all the earth do right?"

On our return home we found our son much as we left him; but he soon after declined, and in about two weeks he left us, in the 47th year of his age. For some time previous to his dissolution, he read every day a portion of Scripture, the New Testament in particular; and we have no doubt he was blessed with a visitation of Divine love, which led him to seek Christ, as revealed in himself, for eternal happiness.

I have often spoken on the divinity of Christ, and have written more or less on the subject; but I now feel it right to bring into view several portions of Scripture testimony to the same import, as corresponding with the evidence of the Spirit of Christ dwelling in myself.

"In the beginning was the Word, and the Word was with God, and the Word was God. The same was in the beginning with God. All things were made by Him, and without Him was not any thing made that was made. In Him was life, and the life was the light of men."

The apostle Paul said he would "preach among the Gentiles the unsearchable riches of Christ; and to make all men see what is the fellowship of the mystery, which from the beginning of the world hath been hid in God, who created all things by Jesus Christ." Eph. iii. 9.

"Christ, the image of the invisible God, the first born of every creature: for by him were all things created that are in Heaven and that are on the earth, visible and invisible, whether there be thrones, or dominions, or principalities, or powers. All things are created by Him and for Him: and He is before all things, and by Him all things consist." Col. i. "God hath spoken to us by his Son, whom he hath appointed heir of all things, by whom He made the world." Heb. "Christ is the Alpha and Omega, the beginning and the end, saith the Lord, which is, and which was, and which is to come, the Almighty." Rev. Before Abraham was "I am," (the representation of Deity.) Jesus said of himself, "That the Father is in me and I in Him. I and my Father are one; and as to his eternal divinity." "Now glorify thee me with the glory I had with Thee before the

world was." "No man can come unto me except the Father draw him." "Verily, verily, I say unto you, He that believeth in me hath everlasting life." "Except ye eat of my flesh and drink of my blood, ye have no life in you." "The words I speak unto you, they are spirit and life. It is the spirit that quickeneth, the flesh profiteth nothing." "I am the resurrection and the life; he that believeth in me, though he were dead, yet shall he live; believest thou this?" "Let not your hearts be troubled; ye believe in God, believe also in me, who am the way, the truth and the life. No man cometh to the Father but by me. If ye had known me, ye should have known my Father also; and from henceforth ye know Him and have seen Him."

In 1862, my son, John Eves Watson, was in a declining state, and for many months was deprived of the power of speech. As the time drew nigh for the holding of our Yearly Meeting at Pickering, his health seemed so precarious that we dared not leave him; but he survived till two weeks after the meeting closed. He was conscious to the last, and though unable to express his feelings, we were made fully sensible that he was aware of the change that awaited him. Though it seemed hard for him to part with a beloved wife and dear children, yet he was made willing to submit; and we have no doubt that he has entered into rest. He was in the 54th year of his age, and much beloved by all who knew him. His funeral was large. I was enabled to speak on the occasion from the text, "I know that I have passed from death unto life because I love the brethren."

As age increases, the infirmities of body also increase; but I esteem it a great favor that though the outward man perisheth, the inward man is renewed day by day, and though apparently left at times a prey to my own weakness, this is surely to let me know from whence my strength cometh. I am yet favored to attend the most of our little meetings at home, and now and then our Monthly Meetings at Yonge Street and Whitechurch, but infirmities of body prevented my attending the Yearly Meeting for this year (1863.)

Surely afflictions abide me, for I have now been stripped of my only remaining son, Thomas N., with whom I lived. Thus the last of my three sons has been taken, and all in a little less than three years; and now out of six children there are but two daughters left. Oh, I mourn, I cannot help mourning; surely with sorrow shall I go to my grave. But sorrow may endure for the night, (the season of affliction,) yet joy cometh in the morning, when God ariseth by his life-giving presence in the heart. There is a little consolation afforded in the assurance that my three sons each believed

in the light of Truth, inwardly revealed, and frequently brought their deeds to it, that it might be made manifest that through Divine Grace they were wrought in God. My last son was a little like myself, alive to the distress of all classes; his soul rejoiced with mine when he witnessed a release of mankind from the dominion of priestcraft, and from every thing like bigotry and oppression. He wanted man kept by Divine power in the image of Him who created him; for male and female created He them that they should enjoy happiness here, and in the end, eternal felicity.

Oh, that men would praise the Lord for his goodness and for His wonderful works to the children of men. I write this under a feeling that there are not many steps to that period, when to me all outward works shall fail; and I have thought much at this time of that testimony, "That knowledge puffeth up, but charity edifieth." The knowledge which we obtain by reading the best of books and other religious publications, without religious feeling, and an earnest desire for divine instruction, and all that we obtain by the light of men instead of the light of God, is the knowledge which puffeth up; but charity, Divine charity, is that which edifieth; and these reflections lead me to adopt the language of the poet.

(To be continued.)

TRUTH ITS OWN POWER.

John of Goch, writing in the middle ages, thus distinguished truth:—"What a man says or writes is authentic, not because he who says it is great and honorable, but because what he says is true. For it is truth alone which every where evinces its efficacy and invincible force, and gives authority to all speakers."

For Friends' Intelligencer.

ON THE ACCUMULATION OF WEALTH.

The following selections from an anonymous pamphlet published in London, in the year 1824, with the above title, places the subject of which it treats in a more serious and striking light than it has been generally viewed. The author considers the command, "Lay not up for yourselves treasures on earth," upon the same level with that of "Swear not at all;" and argues, that, being of equal force and authority, there is an obvious inconsistency in the practice of many in the Society; that while they will not swear, but disown for it, there is no peremptory rule against accumulating all the treasures a Friend can reputably acquire; and that no little fondness for wealth is discoverable even among the leaders of the people. When we consider the increased temptations for indulging in fine houses, rich furniture, and the numerous superfluities which a state of riches places within the grasp of its possessor, there

would seem to be much truth in the remark, "That if men grow rich in the Society, their grandchildren generally leave it."

An ancient Friend, (William Edmundson,) remarking upon the state of the Society in relation to this subject, says, "If any one weakness more than another may be termed the besetting sin of our Society, the pursuit and the accumulation of wealth, and the conformity to vain and expensive fashions which is consequent upon it, deserve that application. It lurks in every department of the church, and hides itself under so many specious and goodly disguises, that its real character is often scarcely suspected, even when it has taken almost exclusive possession of the heart. 'How hardly shall a rich man enter into the kingdom of heaven,' is an exclamation which, though it fell from the lips of Him in whom are hid all the treasures of wisdom and knowledge, and who perfectly understood all the frailty and corruption of the human heart, seems to have lost all its force and application in the view of many. Their conduct is a direct and palpable contradiction to the Saviour's words, and to judge of his meaning by their actions we should reverse the text, and say, 'How hardly shall a poor man enter into the kingdom of heaven.' Labor, therefore, for the meat that perisheth, but not for that meat which endureth unto everlasting life."

Such is the practical exposition which results from their conduct, they go on year after year, augmenting their estates, and fearfully increasing their responsibility; while the desire after wealth becomes more and more intense, and goads them on to greater exertions to satisfy what is insatiable, till at last the messenger of death summons them before the bar of that tribunal from whose righteous condemnation of time misspent, of talents misemployed, and wealth injuriously hoarded, not all the untold treasures of a thousand worlds could possibly save them."

S. B. F.

"Appeal on the subject of the Accumulation of Wealth, addressed to the Society of Friends, usually called Quakers, individually and collectively."

It is declared by a late writer, that "throughout the religious system adopted by Friends, there exists an unbroken harmony, a real adaptation of practice with practice, and of part with part; and no sooner is any one of our testimonies forsaken, than this harmony is interrupted, and the work is in some degree (whether greater or less) marred on the wheel." He also, observes that "on two practical points, (war and oaths,) 'Friends have been led to adopt a higher and purer standard of action, and one which appears to be more exactly conformed to the requisitions of the divine law, than that which generally prevails among Christians.'"

Again, "The religious system of Friends is bottomed on the unvarying principles of the law of God."

The estimable and amiable John Woolthan says, "Wealth desired for its own sake obstructs the increase of virtue." But if the reader should not think the sentiment of this humble individual of sufficient authority on so momentous a question, he will at least be inclined to listen to what has been said by William Penn, a name forever connected with the good and the great of this world, for the wise and splendid actions of a life devoted to God and man. He was born in an elevated rank of life, but he forsook the allurements of wealth and ease for the accomplishment of duties connected with his religious views; and being of an acute and intelligent mind, and greatly conversant with men, we can scarcely find, in the annals of man, a higher authority than the sentiments of this illustrious individual. In his "Reflections and Maxims," he says, "Too few know when they have enough, and fewer know how to employ it." "But certainly he that covets, can no more be a moral man than he that steals." "It shows a depraved state of mind to carp and care for that which one does not need." "The generality are worse for their riches." "To strive to get and keep it (wealth) sordidly, is a sin against Providence, a vice in governments and an injury to their neighbor." "This (avarice) is the worst sort of idolatry, because there can be no religion in it."

And in his advice to his children, he says, "Be plain in clothes, furniture, and food, but clean, and then the coarser the better; the rest is folly and a snare. Therefore, next to sin, avoid dainties, and choiceness about your persons and houses; for, if it be not an evil in itself, it is a temptation to it, and may be accounted a nest for sin to brood in."

But if we would take a wider range, and survey the writings of virtuous men of other persuasions, that is, of those whose "standard of action" has been less "high" and less "pure" than that of the Society of Friends, there would be no difficulty in collecting from them more than sufficient evidence to prove that, in the estimation of many wise men, great accumulation is unfavorable to virtue. Seneca, in allusion to the practice prevalent in his time, of poisoning those of whom it was desirable to get rid, says, "*Venenum in auro bibit*;" alluding to the fact, that they who had great possessions were most liable to that species of destruction, when they drank out of gold. The celebrated Lord Bacon says, "Certainly great riches have sold more men than they have bought out." "The ways to enrich are many, and most of them foul." "Seek not proud riches, but such as thou mayst get justly, use soberly, distribute cheerfully, and leave contentedly." "I cannot

call riches better than the *baggage* of virtue; the Roman word is better, *impedimenta*. For as baggage is to an army, so are riches to virtue. It cannot be spared or left behind, but it hindereth the march; yea, and the care of it sometimes loseth or disturbeth the victory. Of great riches there is no real use, except it be in the distribution; the rest is but conceit." An author of more modern times has observed, that "Avarice hangs like a dead weight upon the soul, always pulling it to the earth. We might as well expect to see a plant grown upon a flint, as virtue in the breast of a miser."

It were an easy task to multiply extracts of this tendency, even to satiety; but the writer is anxious to avoid a prolixity that might defeat the very objects of his solicitude. If then the mere moralist,—a man whose sensations are regulated, in the estimation of the religionist, rather by external decorum than by any higher impulse,—if the mere moralist views the ceaseless attention to the acquirement of wealth as being injurious to the better feelings, as destructive of that balance which it is his pride to maintain, by how much the more sensitive must he be, who, in addition to all the finer discriminations of the moralist, professes to be regulated in the totality of his conduct and conversation by higher and purer motives, by him whose "religious system is bottomed on the unvarying principles of the law of God."

This law, the Society of Friends must doubtless, as Christians, believe to have been promulgated by Christ himself; and if so, we must look into the records of the New Testament for it, where alone all that is pure in religion is to be found connected with all that is perfect in morals. And as it is conceded by the Quaker, that man cannot resort to a higher written authority for his government than is to be found in that book, he will doubtless consent that his conduct should be adjudged by the sayings of Christ, who declared himself to be "the way, the truth and the life," and who uttered, for the instruction and guidance of his followers, the annexed injunctions on the subject of accumulating wealth. "Lay not up for yourselves treasures upon earth." (Matt. vi. 19.) "The cares of this world and the deceitfulness of riches choke the word." (Matt. xiii. 22.)

And to the young man who inquired of him, "What good thing shall I do to inherit eternal life?" and who could reply, that he had kept, from his youth up, all the moral obligations of the commandments propounded to him, the reply of the Founder of the Christian faith was memorable, "If thou wilt be perfect, go and sell all that thou hast, and give to the poor, and thou shalt have treasure in heaven: and come and follow me." (Matt. xix. 21.) "Verily, I say unto you, that a rich man shall hardly enter

into the kingdom of heaven." (Matt. xix. 23.) "It is easier for a camel to go through the eye of a needle, than for a rich man to enter the kingdom of God." (Matt. xix. 24.) "Take heed and beware of covetousness." (Luke xii. 15. "Ye cannot serve God and Mammon." (Luke xvii. 13.)

It must be acknowledged to be somewhat remarkable, that if we peruse the account of Lazarus and the rich man, with a view to discover why the one ascended into "Abraham's bosom," and the other "in hell lifted up his eyes in torments," the only part of the reply of Abraham to the appeal of the rich man, which related to their earthly circumstances, is couched in these terms: "Son, remember that thou in thy lifetime received thy good things, and likewise Lazarus his evil things, but now he is comforted and thou art tormented." Are we then to conclude that the crime of the rich man was the possession of riches?

Clarkson says, "Quakerism may be defined to be an attempt, under the divine influence, at practical Christianity, as far as it can be carried. They who profess it, consider themselves bound to regulate their opinions, words, actions, and even outward demeanor, by Christianity, and Christianity alone. They consider themselves bound to give up such of the customs or fashions of men, however general or generally approved, as militate in any manner against the letter or spirit of the Gospel." If this be Quakerism, and who will deny it? why, it may be asked, is it the practice of the Society, firmly and conscientiously to suffer all the pains and penalties annexed by man to the observance of some of the declarations of Christ, and on the other hand, voluntarily to set others at naught? His commands are, "Thou shalt not swear," and "Lay not up for yourselves treasures."

Gurney observes (p. 248) that obedience to the doctrine against swearing is "both justified and required; first, by certain plain, moral principles, and secondly, by divine commands of the most impressive and comprehensive character." And are the commands against the accumulation of wealth less impressive and less comprehensive? Both were delivered as commands; why, then, it may be asked, was obedience to the one insisted upon by that author as being essential to the Quaker, while the other occupies only a note appended to a chapter appropriated to the moral views of the Society? How comes it to pass, that the Society itself is still so rigid on the one point, and so lax on the other? Was it, that early persecution strengthened it so greatly in the former, that the breaking of the command is considered to be so heinous a sin against Christianity, that he who ventures so to do, and persists in the practice, is, by the laws of the Society, placed beyond its pale; while the latter command, viewed

as we have already seen, merely as a moral point, has no disqualification annexed to it, even in the most flagrant instances? And how can this be explained? Is it that the "generality" of the early members having been, as is said by Barclay, in his magnanimous letter to Charles the Second, "poor and illiterate," and little versed in the book of human nature, never supposed the possibility that the "*true, the daily self-denying Quaker*"—"aiming, under divine influence, at practical Christianity,"—could ever seek to become rich, and, therefore, judged it useless to legislate on the subject beyond the pointed and early injunctions already quoted, "Let none strive nor covet to be rich?" &c.

And is it that when persecution ceased, the Quakers, finding the power of accumulating, and the sweets of ease, and the conveniences of wealth, suffered, almost without a struggle, the violation of the positive command and example of the Founder of their faith, as well as the consonant injunction contained in the "Epistle" of 1676?

What, in this case, is become of that "unbroken harmony," that "real adaptation of practice with practice, and of part with part?" Is not one of their testimonies forsaken, and thus this "harmony" interrupted, and "the work marred on the wheel?"

A Friend, or, to use the term which began in reproach, but is become familiar by usage, a Quaker, in reality wants less money, has fewer luxuries to gratify than other men. He admits no large parties, keeps no expensive company, does not frequent the theatre, loses no money at cards, has no extravagant furniture, or useless personal ornaments; for his aim is "more exactly conformed to the requisition of the divine law, than that which generally prevails among his fellow Christians," and he consequently aims at plainness of speech, and at that simplicity of behaviour and appeal, so conspicuously eminent in the great Founder of his religion, who wore a garment without a seam.

Yet it were vain to deny the existence of rich men in the Society, even though it is extremely difficult to define in words what a rich man is. Of this, however, we may feel assured that he who makes haste to be rich, who seeks to accumulate greatly, desiring to rise above that moderate possession which alone is agreeable to his faith, who has a large income and little demand on it, either by education or habit, who, possessing riches, cannot enjoy the elevation of rank and circumstance belonging to them, who cannot spend and will not dispense with them, such a man must be avaricious,—of the "earth, earthly,"—and is at open war with the declaration of the Lawgiver, "Lay not up for yourselves treasures," &c.

Now it may be observed, that the "Portraiture" of Clarkson, that ingenious historian of

Quakerism, has been read, and admired, and quoted; and its author has most deservedly been caressed by the Society, for his dignified labors in the cause of the abolition of the detestable trade in men. And this author, who will be acknowledged to have possessed great opportunities of seeing the Quakers in their homes, and their avocations, and pursuits, and to whom the facilities of close observation and discrimination will not be denied, has in that work this memorable passage, "The Quakers appear to me to be in danger of contracting a money-getting spirit, which is, as I conceive, the worst feature that can exist in their character."

The same author observes that this "money-getting spirit, wherever it may be chargeable upon the members of the Society, seldom belongs to that species which is called avarice." What, then, is avarice as regards a Quaker? If he seek more than he dare use, in other words, if he seek possession for possession's sake, if he seek to enrich his children,—to make them independent as it is termed,—is not this avarice, a greediness of wealth, a trusting in riches for some purpose definite or indefinite?

Clarkson further observes: "That independence for children is the general aim of the world, I know well. But I know, also, that Christianity has no such word as independence in her book. For of what do people wish to make their children independent? Certainly not of Providence, for that would be in sanity, indeed. Of the poor, then shall I say? That is impossible; for how could they get their daily bread? Of the rich, then, like themselves? That would be folly; for where would they form their friendships or connubial connections, in which they must place a portion of the happiness of their lives? Do they wish to make them independent of society at large, so as not to do it good? That is against all religion. In short, it is impossible, while we exist in this life, to be independent one of another. We are bound by Christianity in one great chain, every link of which supports the next or the bond is broken."

(To be continued.)

EXTRACTS FROM JOHN WOOLMAN.

Remember, O my soul! the quietude of those in whom Christ governs, and in all thy proceedings feel after it!

Doth he condescend to bless thee with His presence? To move and influence to action? To dwell in thee and walk in thee? Remember then thy station, as a being sacred to God; accept of the strength freely offered thee; and take heed that no weakness, in conforming to extensive, unwise and hard-hearted customs, gendering to discord and strife, be given way

to. Doth He claim my body as His temple? And graciously grant that I may be sacred to Him. Oh! that I may prize this favor; and that my whole life may be conformable to this character. Remember, O my soul! that the Prince of peace is thy Lord: that he communicates His unmixed wisdom to His family; that they, living in perfect simplicity, may give no just cause of offence to any creature, but may walk as he walked.

Biographical Notice of WILLIAM GIBBONS, M. D., late of Wilmington, Del. Written by one of his Sons.

(Continued from page 136.)

On the 16th of the Fourth month, 1845, he was suddenly seized with symptoms of paralysis, which satisfied him that his earthly course was about to terminate. Anticipating the event, he was not unprepared for its approach. On receiving the summons, he instantly addressed himself to prayer. The physicians who were present, objected to his rising in bed. "I must," he exclaimed, "I must,—I feel it to be my duty." He continued on his knees for some time, with great fervency addressing the throne of Grace. His language gave evidence of the support and comfort he experienced from his trust and faith in God. "Oh, Lord! I praise thee! I desire to magnify thy name! Into thy hands I commit my spirit! Glory to God! he supports me!"

On concluding this earnest and solemn devotional exercise, he lay down quietly in bed. Observing one of his most intimate friends standing at the bed side, he grasped his hand, saying: "We have passed many pleasant hours together, but now they must all end." After this, his articulation became so much affected that it was difficult at times to understand him. It was evident, however, that his mind dwelt, almost without interruption, on the change that he felt awaited him. During the night he said to one of his daughters, after kissing her: "It will not be long—on earth no more." At another time he remarked: "Oh! it will soon be over. This poor, shattered body will then be at rest, and I shall be in that city, none of whose inhabitants can say, 'I am sick.'"

It was his anxious desire that he might have a clear vision of the state in which he was about to enter. On several occasions, during the first few days of his illness, he referred to this subject, apparently disappointed in not being able to penetrate the veil which still shut him out from the immortal world. "I cannot see clearly," he would say, "but I feel the fulness of the glory of God." At one time he remarked, "There is nothing in my way, but I do not see as clearly as I would wish;" and afterwards seemed depressed, and remained in silent exercise for about half an hour. Then

arousing suddenly, he exclaimed in tones of triumph, "Rejoice! Oh come and rejoice with me, for I have found the sheep which was lost; and quoting from the Psalms, "What shall I render unto the Lord for all his benefits!" he requested to have the Psalm read to him. He had wrestled with the angel for the blessing, and had gained it.

On the day after his attack, he began to repeat to a friend, the quotation, "Glory to God in the highest, peace on earth," &c. Before he had concluded, his friend endeavored to anticipate him by adding, "and good will to men." "No, no," said he emphatically, raising his hand, "good will to *all* men." He frequently afterwards recited the same text, always in the same manner, laying great stress on the latter part.

During the whole course of his illness, which lasted nine days, he was almost constantly engaged in religious exercise, the general tenor of which was expressive of his gratitude to God for his mercies, and entire resignation to the Divine will. "I have no desire to live," said he, "I would be a burthen to myself and to all around me. But not my will, but thine be done!" When the physicians, on one of their visits, had a consultation, he requested to be apprized, without reserve, what was their view of his case. He was informed that they could see no indications of immediate danger, and that ample warning would probably be given, should an unfavorable result occur. "I am *willing* to live," he replied, "but I wish to get entirely rid of *self*, and to have no will of my own."

He frequently desired the Bible to be brought, and a portion read to him—mostly designating the chapter and verse. His selections were made from the New Testament, and once or twice from the Psalms. The first time, perhaps, when he made this request, it was objected to, because he had not slept for many hours, and his condition of body required rest. He was told of this, and advised to compose himself to sleep. "That is just what I want," said he; "my mind is excited and on the wing, and I wish to settle it." His request was immediately complied with, and whilst one of his children was reading to him, he sank into a refreshing slumber. Afterwards, whenever he renewed the request, it was instantly acceded to, partly with a view to the tranquillizing effects.

On the morning of Sixth day, two days after the commencement of his illness, he called his children to him one by one, and addressed to them, in the most affectionate and emphatic manner, the following, among other expressions: "Turn to thy heavenly Father, for thou wilt soon have no earthly one."—"Turn unto the Lord and he will turn to thee."—"Oh! leave

the world. Seek the kingdom of God and his righteousness, and it will be well with thee."—"Lay not up for yourselves treasures on earth. Money—wealth—nothing *earthly* can bring you happiness. Salvation is through Christ"—laying his hand upon his breast. "It is an inward work—Christ within, the hope of glory." Turning to his younger sons, he said, "Be kind to your mother!" and then looking round upon her, he wept aloud. The sundering of earthly ties seemed almost to overpower him; but again he rose above all, transported into higher and holier communion.

On Seventh day, 19th of the month, he appeared to be a little better. By noon, those of his children who lived abroad had all arrived, except one who was in the West, at a great distance. He had been very desirous to see all his children, and he looked round on them, remarking, "all here but one, and he so far away. I want to see him." He then prayed for his absent son, weeping much at the time. The presence of his wife and children during his sickness, was a great comfort to him; it gave him much happiness to have them constantly around his bed. On First-day, he said to a friend, "I thought it was opened to me yesterday that I should remain a little longer,—that the Master had more work for me to do; but now I have no confirmation of continued life, and I await his will." In the evening, he observed that it was First-day, and desired the family to be collected in his chamber, and the Bible read. He specified the portion: "He that would save his life shall lose it, and he that would lose his life for my sake shall save it," dwelling on the passage with marked satisfaction.

On Second-day he renewed the request that the physicians should state to him precisely their view of his case; adding that there was no danger of alarming him. In the afternoon, he prescribed for himself with much judgment, as he continued frequently to do the last few days of his illness. Alluding to his condition, he expressed a desire to be released from life.—"In case I should recover, I would only be a burthen to those around me." Much of his time was spent, as usual, in devotional exercise, and in offering religious counsel to his children.

Third day, he was evidently growing weaker. Speaking of Christ as the Saviour—the light and the life—he added, "not only the life, but the Resurrection." He then placed his hand on his breast and said: "The Resurrection is here; I know it is so—I feel it, and desire you may all feel it too. Blessed be God, for his love and mercy to his poor creature, man." He was deeply touched by the attentions of his physicians and friends, and spoke of them with strong affection.

On Fifth-day he appeared better, being more free from bodily pain and distress, so that some hope began to be entertained of his recovery. One of the physicians assured him that he was better, but he shook his head, and answered, "No." After resting a while very tranquilly, he said to his wife that he wished a plain, walnut coffin. And fearing that this was not understood, he asked for a slate, on which he drew the outline of a coffin; and thus satisfied himself that his wish in this respect was known. Soon afterwards, he waved his hand upwards, exclaiming, "Passing—passing away!" Notwithstanding the signs of amendment which others observed, and on which they began to build flattering hopes, he felt that the end was nigh. He was indeed passing away! In the night a change took place, and about sunrise next morning, after sinking quietly and gently for some hours, his spirit was translated to the mansions of rest.

The circumstances attending the last illness of William Gibbons were, in some respects, peculiar. Enjoying the perfect exercise of his mental faculties, his knowledge of the human frame enabled him fully to appreciate his condition, and to contemplate the course of disease, as it invaded the vital organs, and sapped the springs of life. The ties of family, which bind the heart to earth, are mostly sundered, to some extent, long before we reach the meridian of life. Death mostly singles out some of our loved ones, and bears them to the home eternal; as if in kindness to wean the traveller from this world of care, and invite him to a world of rest and joy. Not so with him. Save the first born, which, many long years ago, had been torn from its mother's arms, his flock was spared, until it numbered thirteen sons and daughters, several of them heads of families. And there they were, with their weeping mother, gathered around his dying couch. His affections were strong—no man could love his family more tenderly. But the time of parting was at hand—he knew it. At a single blow, all those ties, which had multiplied and strengthened with the lapse of years, were to be severed. The trial was severe. Even in death, his heart yearned on the patriarchal flock. But he asked not for the life of the body. He knew that a better life was in store for him. His pathway was not in the dark. He heard his Father's voice, and, in all confidence and resignation, he obeyed and followed. He died exulting over death—declaring the glory of the Christian's future, and beckoning the loved ones who wept around him to follow. May his hopes be realized! May they meet again, father, mother, children, never to part!

Augustine thinks that Stephen's prayer for his enemies was the great means of Paul's con-

version. The patience and meekness of other Christians have turned all the injuries thrown at them into precious stones; the spirits of others have been raised in blessing God, when they have been loaded with reproaches from the world; they have bound them as an ornament to their necks.—*Flavel*.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, FIFTH MONTH 12, 1866.

FRIENDS TRAVELLING IN THE MINISTRY.

—Ann P. Jackson has obtained from Birmingham Monthly Meeting, Pa., a minute to attend New York Yearly Meeting.

"LET THE SAME MIND BE IN YOU THAT WAS ALSO IN CHRIST JESUS."—During the progress of the late rebellion, much sectional and party feeling was stirred up. Love of country and of a stable government readily led to disapproval of those who would overturn it; and when to this was added sympathy and interest in a class whose liberties and rights seemed involved in the struggle, the indignation felt against our Southern brethren exceeded, in some minds, the bounds of Christian love and forgiveness. Now that the occasion which called forth this animosity has passed, there is danger still, lest the sectional feelings then aroused, should continue to be felt and expressed.

Such is the influence of party spirit that many an individual too just and dispassionate to join in wholesale censure of any class, and independent enough to express charitable feelings towards the erring and mistaken, has been suspected of secret disaffection, and has had his name coupled with one of the opprobrious epithets which the spirit of party, whether in civil or religious society, is so ready to invent.

In the present case we have need to summon to our aid every corrective of this feeling which calm reflection can suggest. To put ourselves, by an effort of the imagination, in the place of those we condemn, and to remember how few comparatively of the inhabitants of the rebellious States were actively engaged in the struggle, and of those who were thus engaged, how many were drawn into it by other motives than a full approval—by the influence of popular opinion, so powerful for good or evil, truth or error.

It was, no doubt, a knowledge of this tendency

of party spirit to make men unjust to each other that induced the advice so often given to Friends to keep out of party heats and strifes.

In times of warlike commotion, such as we have recently passed through, there seems little for the advocates of peace to do but to stand firm and immovable upon their own principles, like the rock which, though motionless, breaks the force of the waves that beat against it. But when this state of things passes by, may they not actively use their influence to allay and soothe what remains of animosity and bitterness. This may be done, to a considerable extent, in the social circle by avoiding terms of opprobrium and all indiscriminate censure of any class, by construing favorably and charitably the sentiments of those who seem to be too slowly awakening to a recognition of the rights of all, and by remembering the patience of Him who waits long to be gracious to his erring children.

DIED, on the 29th of Fourth month, 1866, THOMAS L. WOOLSTON, in the 57th year of his age; a member of Green Street Monthly Meeting.

—, on the 2d of Fifth month, 1866, WALLACE MARSHALL, of Philadelphia.

The Annual Meeting of "Friends' Association of Philadelphia for the Aid and Elevation of the Freedmen" will be held on Fourth day evening, the 16th inst., at 8 o'clock.

WILLIAM C. BIDDLE, } Secretaries.
MARGARET A. GRISCOM, }

A General Meeting on the subject of Education, particularly in connection with the establishment of an Institution where Children can receive a first class education under the care of Friends, will be held on Third-day evening, the 15th inst., at Race St. Meeting-house. All interested in this important subject are invited.

WANTED, a few Nos. 39, 40 and 41, Vol. 22d Friends' Intelligencer, in nice order, for which full subscription price will be paid.

EMOR COMLY,
144 N. Seventh Street.

When a man has been faithful in the honest performance of his duty, he is thought better off if success attend him in this world. But if it so happens, in the providence of God, that these material results do not follow that performance, still he carries in his own mind the consciousness that he has tried to do what is right in the sight of God, rendering to everybody his due, contributing all he can to the general happiness and improvement, diffusing as much enjoyment and contentment as he can in the little circle of which he is the centre; with this consciousness he goes through life "happy as a king, though he may not be the

king," ends it in felicity, and goes where there is an end of all those controversies, because there is but one God and one Father, before whom all his children are equal.—*Chief Justice Chase.*

For Friends' Intelligencer.

AMONG THE FREEDMEN.—NO. IV.

BY JACOB M. ELLIS.

(Concluded from page 140.)

My last number left me in Richmond. As I had seen it some years since, in its palmy days, (if not a misnomer to apply that term to any place where the system of slavery, with its horrors and auction blocks, existed,) and where I had witnessed the sale of three human beings at public auction, like so many horses, accompanied in fact with more brutality and degradation (although there was no separation of families) than I ever saw at a horse market, I felt little interest in any thing else than what is called "*the burnt district*," with its devastation caused by the late war.

And truly never have I had such evidence of the destructive power of modern military inventions. It was a mournful sight, and a sad example of the results growing out of a departure from the golden rule of doing unto others as we would they should do unto us. I endeavored to ascertain the number of houses destroyed, but could not obtain the desired information; suffice it to say they number hundreds upon hundreds. In some places they have been replaced by buildings constructed entirely of wood, and very roughly; in others, the walls have been built of old bricks, a portion of which are rough-cast, while a number are good, substantial four-story stores, a few of which are of a very imposing character.

But enough remains untouched to stamp the reality of desolation over the whole "district." Whole blocks or squares have only the cellar walls standing, with piles of the old bricks in them awaiting the time of their resuscitation; in others again the bricks have been merely thrown in in heaps. One thing was clearly manifest; every brickbat appears to have been scrupulously saved, so very valuable has the article of bricks been with them. It must have been a terrible scene while this destruction was being carried on; and even after hostilities had ceased, as I was informed by eye witnesses, it was an almost sickening sight with the debris lying round, partially if not wholly blocking up some of the streets.

I strolled through its business thoroughfares, and the stores appeared to be well supplied with merchandize of every description,—the fancy as well as the useful; and where goods were marked, they appeared not to vary much in price from those of our northern cities. I noticed calicoes at from sixteen to twenty cents;

and in one window I espied a piece ticketed with the old-fashioned figures of "*twelve and a half cents!*"—at that time a price almost unknown with us. Although these things give some evidence of returning prosperity, the resurrection must necessarily be slow; but it is to be hoped, as the lesson has been a bitter one, if slow, it will be none the less sure. As in many other places South, there is still a disposition here to keep alive the spirit of rebellion and hostility to the North, one little evidence of which was manifested by placards pasted all over the city, containing the words, "*Lecture and Readings—War Poetry of the South*"—as descriptive of the character of an evening entertainment.

Once more in the cars, I reached in due time Alexandria. As I was desirous to get some information as to the condition of schools here, and to inquire particularly after one visited by L. J. R. and myself last summer, then in want of a teacher, I sought the official of the Freedmen's Bureau having these matters in charge. My interview with him, though short, was very satisfactory, learning as I did that all their previous wants had been supplied, and that very excellent teachers had been sent,—I think he said from Massachusetts. Promising him a teacher from our Association, should one be needed, and a satisfactory opening offer, we parted, and I was soon in Washington.

It would be time misspent to attempt detailing the "*sights*" of this place. I spent a number of hours in it, visiting amongst other places the *Smithsonian Institution*, and having an interview with some of its officials on behalf of our *Friends' Library* of Philadelphia. Having been in Washington repeatedly, I found very little to arrest my attention. I, however, thought it right to report to GEN. HOWARD in person what we had done in reference to schools in Fairfax county; and, while there, I felt called upon to bear my testimony to the worth and disinterested services of Capt. Ross in behalf of the Freedmen; both of which were received with evident satisfaction. My mission was now fully ended, and my next point was home, which was reached in due time, and where, of course, I was warmly welcomed. If I have consumed too much time in my narrative, I hope to be excused. I have not intended to be tedious; but I saw and felt more than I have even attempted to express.

It may be well to add, that since my return I am in the receipt of two letters from Mary McBride, whom it will be remembered I accompanied first to Vienna, and subsequently to *Fairfax Court House*. She has met with considerable opposition and indignity, accompanied with threats of personal violence, the latter, however, confined to a plentiful throwing of stones at her, on one or two occasions, on her

way to the school-house. Notwithstanding this, she perseveres with a firm and dignified determination, will not give up the work unless forced to do so by the "authorities," and has now *forty pupils* in attendance, with good progress. From the seeds thus sown good fruit must certainly be produced, and we cannot but desire her encouragement. Much sympathy has been felt and expressed for her in her trying position, accompanied with the hope and belief that the offenders themselves will ere long become ashamed of their conduct, and desist from annoying her; in fact, the last letter received narrates an occurrence or two corroborative of this opinion. Accounts from *Mary K. Brosius* also show that her new school is prospering, and likely to be productive of much good. Nothing has yet been heard from *Martha A. Wright*, but we have no reason to doubt her success also.

CONVERSATION.

BY MARY G. CHANDLER.

In an intellectual point of view, the correct use of words is of the utmost importance, if one would speak well. To attain this, it is necessary to have a distinct idea of the meaning of words, and then to endeavor to use such words as truly express the ideas of the mind. The use of pet phrases and words is entirely at war with correctness in this respect. With some persons, everything is pretty, from *Niagara Falls* to the last new ribbon; while others find, or rather make, everything nice, splendid, or glorious. It would be esteemed an insult to the understanding of any person to suppose that the same idea or emotion could be aroused in his mind by the sight of the sublimest work of nature as by a trifling article of dress; yet if he use the same term to describe it in each instance, he certainly lays himself open to such an imputation. Want of thorough education is an inadequate excuse for follies of this sort, because common sense combined with far less knowledge than may be acquired in a common school is more than sufficient to enable every one to use his native tongue with sufficient propriety to save him from being ridiculous.

There is one specious gift which is almost sure to mislead those who are largely endowed with it, and that is fluency. We listen with pain to one who speaks hesitatingly and with difficulty, and who is obliged to search his memory for words that will correctly represent his thoughts; but if, when the words come, we find they really tell us something worth waiting for, we feel far less weariness than in following the unhesitating flow of words that are but empty sound. There is always peculiar ease and pleasure in the exercise of a natural talent, and those naturally possessed of fluency

most of course find it hard to restrain the tide of words that is perpetually flowing up to the lips; but if they desire to converse agreeably, the effort must be made, and self-denial must be attained. The benefit derived by an over-fluent talker from self-restraint will be quite commensurate with the effort, no less than with the added pleasure of the listener, for he will gain in the power of accurate thought every time that he resists the inclination to utter an unmeaning sentence.

A clear and distinct utterance is another faculty that should be cultivated, for the effect of an otherwise interesting conversation may be seriously impaired, and perhaps destroyed, by a slovenly or indistinct articulation. Every word and syllable should receive its due quantity of sound, yet without drawing or stiffness; while the voice should be so modulated as to be heard without effort, and yet the opposite fault of speaking too loud be avoided.

Correct pronunciation is a very desirable accomplishment, though somewhat difficult to attain in its details, authorities are so various; but probably the most comprehensive rule that can be observed is, as far as possible to avoid provincialisms. A person's pronunciation can hardly be elegant if it reveal at once of what State or city he is a native; while freedom from local peculiarities is of itself a promise of good pronunciation, as it shows either that the individual has taken pains to weed out such peculiarities, or that he has been bred among those who have done so. The pronunciation of the best scholars in every part of our country is very similar, while the difference becomes more and more strongly marked between the inhabitants of the various States of the Union as we descend in the scale of education.

Do not fear to be silent when you have nothing to say. Do not talk for the mere sake of talking. To sit silently and abstractedly, as if one were among, but not of, the company in which one may chance to be, is discourteous; because it implies a fancied superiority, or an unkind indifference. Good manners require that in company one should be alive to what is going on, but this does not imply the necessity of always talking. There is, almost always, in a mixed company, some conversation to which a third person may listen without intrusion; but if this should not happen to be the case, it is far better to wait until something occurs that gives one an opportunity of talking to some rational purpose, than to insist that one's tongue shall incessantly utter articulate sounds whether the brain give it anything to say or not. This sort of purposeless talking exerts a positively injurious influence upon the mind, by leading it into the too common error of mistaking sound for sense, words for ideas.

Before quitting this important subject, there

is a general view to be taken of it in its universal bearings upon Character, which places it among the most important branches of a wise education.

The true signification of education, according to one derivation of the word, is the bringing or leading out of the faculties. The best educated person is not he who has stored up in his memory the greatest number of facts, but he whose faculties have become most strengthened and perfected by what he has learned.

There are several studies pursued in our schools and colleges, such as Greek, Latin, and Mathematics, rather because they are looked upon as a kind of gymnastics, whereby the mental faculties in general are educated, or developed and invigorated, than because they bring a direct practical benefit to life; for of the numbers who exercise their faculties upon them, while in the schools, not one in ten makes any direct use of them afterwards. These studies require expensive books and teachers, and a greater amount of time than can be given by the majority of men and women; and moreover they cultivate the intellect without doing anything for the heart. Without in any degree questioning or undervaluing the great and varied benefit derived to the mind from these studies in added accuracy, strength, and richness, there is still room for wonder that Conversation, both as a science and an art, has no place in our systems of education; since its practice is a daily necessity to all, while its power, when wielded with skill, is second to none other that is brought to bear upon the social circle.

Our young girls are nearly all of them taught music with great expenditure of money, time, and labor; but whether we look to the cultivation of actual talent, to the improvement of Character, or to accomplishment as a means of making ourselves agreeable in society, how profitably could a part of this time and labor be employed in acquiring the power and the habit of accurate language, agreeable modulation, distinct utterance, and courteous attention; and it can hardly be doubted that a person who possesses the power of conversing well finds and gives more pleasure in society than a person skilled to an equal degree in music.

Conversation has, indeed, this advantage over all school studies; in order to obtain its best requisites, no books are needed beyond such as are accessible to all, while its best teachers are the suggestions of common sense, and the conscientious love of the true and the good. Still there are few persons whose efforts would not be crowned with a higher success if aided by the criticism and the guidance of a competent instructor. Those who are competent

to self-instruction in this, as in all other accomplishments, are exceptional examples, and it may be doubted if even these might not have reached a higher excellence, aided by the suggestions of another mind. Properly cultivated, Conversation would have an influence in developing the whole being, of a kind and degree that could hardly be over-estimated. In its exercise, Thought and Affection have full play, while all the stores of Memory and the wealth of Imagination find ample field for display.

Conversation is so comprehensive in its manifestations and necessities, that it can reach its perfection only through the development of the whole being, moral as well as intellectual; and it will constantly become more finished in proportion as this development becomes more complete. Its universality, its hourly necessity, should impress us with its value; for the mercy of the Lord, as it gives light and air, sunshine and shower, seed-time and harvest, in short, all the essentials of physical development to the whole human race, so it supplies to all the power and the essential means for disciplining and cultivating the whole Character.

SANCTIFIED BY SORROW.

Open the shutters wide my child !
Though sorely we're bereft,
We may not shut the sunshine out,
Nor scorn the blessings left.

Thy father loved the sunshine well ;
And we will love it too ;
He called it each day's precious gift,
And every morning new !

The simple things he used to love
No bitter memories bring ;
The trees, the grass, the early birds ;
Oh ! how he loved the Spring !

It gave new vigor to his frame,
New color to his cheek ;
Ah ! he has known that Spring, of which
Our's can but faintly speak.

No sable weeds for thee and me ;
We need not lay aside
The garments, that were never meant
To nourish human pride.

Our simple garb forbids no joy
That's innocent and pure,
Nor will it mock the chastened grief,
That must with life endure.

We will not mourn beside his grave,—
Our eyes may never dare
To look beneath that grassy mound ;
Why should we seek him there ?

The spirits of the loved and good,
They say, are round us still ;
And that they know our fond regrets,
And our submissive will :

And that our Father gives them leave
His ministers to be ;
To draw our hearts through human love
To Heavenly purity.

It may be so ; the poor heart clings
To shadows,—some would say ;
But substance, too, when shadows come,
Cannot be far away.

Is that the little ones at play ?
Their laughter do I hear ?
Nay, chide them not ; like morning dew
Is childhood's transient tear.

Light burthens suit their tender years,
And thou and I must try
To lay our mournful looks aside,
And smile when they are by.

But when they fold their tired wings
At evening, like the birds,
We'll speak of their dear father then,
With loving, cheerful words.

And they will kiss us tenderly,
And turn themselves to sleep ;
And then, my daughter, we will have
Our quiet time to weep.

I fear I've too unmindful been
Of those who pine alone ;
I scarcely knew what sorrow was,
Until I knew my own.

And we will seek these sad ones out,
Secluded though they be :
For we have more to give them now,—
A store of sympathy.

And thus, we'll try to live the life
Our Father will approve ;
And they most truly mourn the dead,
Who live the life of love. S.

From the N. Y. Evening Post.

GATHERING SEA-MOSSES.

HOW TO GATHER MOSSES.

Go to the shore at low tide, after a blow from the sea. The best time is after the moon falls, for the tides are lowest then. Examine narrowly everything on the sand and on the rocks, and take up with your stick (which you had better have stout enough somewhat to steady your steps in passing over slimy rocks) everything you see that looks nearest like *nothing*. Then fish all you can of the same sort from the waves. Pick for bright colors ; but do not always reject dull ones. They often change to bright, or at least *deep* hues after pressing. Put them, with salt water, in your pail, and when you get home take a fine stick, or a large needle, and having poured your treasures into a bowl, slip a piece of paper under them, one at a time, and float and pick them out ; then lift them carefully, gently, tenderly from the water, and hang them up to dry. When perfectly dry, place them between pasteboards and press them for several hours. The heavier the pressure the better. By the time they are done you will appreciate them, if no one else does. It is no easy task properly to do them. For amusement, to secure gifts for dear friends far away, &c., it is very well ; but if one was obliged to chase and watch the sea, to be out in storms (for a stormy time is often best for this bus-

iness), and to "put on" mosses for a living, wouldn't it be arduous?

WHERE MOSSES ARE FOUND.

Mosses are found in all waters from pole to pole; but they abound much more on some shores than on others. In the boiling springs, in sulphur springs, amid the eternal snows of mountains, and almost everywhere where there is much moisture they are found. They are of all forms and sizes, some requiring the aid of a microscope to be seen by human eyes, and some of monstrous size, having stems larger than the trunks of the largest trees. These last are the growth of the depths of the Pacific—probably also of the Atlantic—ocean. Their leaves rival in size those of the palm.

The colors of sea mosses are green, olive and red. These colors are changed or modified by a variety of circumstances, and they are of all shades—from almost white to almost black. The green mosses grow in shallow water, and in both salt water and fresh.

Algæ is the general name for mosses of rivers, snows, springs and seas. Green is most common at the poles; olive in the temperate zones, and red in the tropics. This is true of species; but the individual may so abound in any latitude as to give to the careless observer a wrong impression. The olive algæ are found at half-tide mark; as they go deeper they become darker in hue. Red algæ love deep water, and we think they are particularly anxious to keep out of the reach of our hands and sticks. Boiling turns many of the mosses green, and deepens the red of others; this we discovered to our astonishment by a ludicrous accident. As the fine reds begin to decay they assume yellow tints. Many mosses, or plants, as they are, perhaps, more properly called, while under water, waving about with the flow of the tide, show brilliant colors, which they lose on being taken out. Many change color on being pressed. Exposure to wind and rain heighten the reds to brilliant scarlet or orange, and some of them, by being dipped into fresh water, become bright orange; while some of the browns, being dipped into fresh water, become purple or pink. They are generally of a very delicate appearance, and a novice is afraid to touch lest she spoil them. Some seem to be mere film, or slime, and it requires very great skill and patience to arrange them. But it pays for the trouble, as the finest ones are, when well arranged on paper, the most beautiful. Delicate and frail as they appear, they are too tough and strong to be safely pinched or pulled apart, in thinning them (as must be done to many) for pressing. They should be cut, or they will be likely to be ruined.

Algæ are, I believe, produced from the seed. They grow upon rocks—we see them at low tide—but not the finest ones, until the very

lowest tides after the full moon. They are said to be different in distant seas, but this is without reference to latitude.

It was not alone to beautify the sea, and to busy and delight these women with long sticks, that algæ were formed. They serve for food and shelter to hordes of little animals, which are the food of fishes. Algæ also serve to purify the water. We see them freely discharge oxygen, in sparkling bubbles. They also serve for food for man and beast. The edible nests of China, some of which are worth their weight in gold, are made of algæ, and leaves of algæ are by some savages used for the purpose of keeping water fresh. Sheep and goats eagerly devour what is cast up on northern coasts. In fevers, what we people of the provinces call dulse is said to be very cooling. It is much used by them as an article of food. Children buy it as they would candy, and chew it raw. It is dulse, I think, that Scotch, Irish and Norway sheep and goats eat.

Every one knows what is done with Irish moss. To all readers who desire more particular information of mosses I commend "Harvey's British Algæ," which I never read, and "Kingley's Wonders of the Shore," which I never saw; but which probably will much instruct you. As for me, I can stop to tell no more; the tide is out; I go a-mossing. A. M.

From the Leisure Hour.

A VOICE FROM EGYPT ON THE AGE OF THE PENTATEUCH.

To what age does the Pentateuch belong? Is it, as a whole, the production of Moses, or was it written, as some say, in much later times? Till comparatively recent times the uniform answer to this question has been, "The Pentateuch belongs to the age of Moses, not of Samuel, or of Ezra; and the book was written as a whole by Moses, or under his guidance. Speaking generally, it may be regarded as his work." Speaking generally, I repeat, for there are passages—Lamech's prophecy, for example, and Miriam's song—which Moses did not originate, but only insert; and there are other passages—the later names of places, for example, the list of some of the dukes of Edom, the account of his own death—which must have been added by another later hand. With such exceptions, the Pentateuch is quoted and referred to by all Jewish tradition, by our Lord and his apostles, by the Old Testament itself, from the book of Joshua down to the book of Malachi, as the book, the law of Moses, "the man of God." The law, (the system of justice and types) was given *through* Moses; grace and truth (the system of mercy and realities) came to be *through* Jesus Christ. (John i. 17.)

On the specific question of the authorship of the Pentateuch the monuments of Egypt have

to self-instruction in this, as in all other accomplishments, are exceptional examples, and it may be doubted if even these might not have reached a higher excellence, aided by the suggestions of another mind. Properly cultivated Conversation would have an influence upon the whole being, of a kind that could hardly be over-estimated. of Goshen and the Delta of the Nile, the date
of the building of Zoan would be no guide to
the age of Hebron. The "foot-watering" of
Egypt would have suggested no significant con-
tract to one who had no remembrance of the
dependence of the country on this river; nor
would the fact that the eyes of the Lord were
upon the land from the beginning of the year
to the end, have meaning for one who knew not
how for months in Egypt the fields are appa-
rently deserted of God, and have to be watered
at the expense of exhausting and destructive
soil. / Add to this, that between the Exode and
the reign of Solomon—from four hundred and
fifty years [the common chronology] to six
hundred and upwards—there was no inter-
course between Egyptians and Jews; and the
conclusion seems irresistible—these words were
written by a man who knew Egypt; and for
men who knew Egypt; that is, they were
written in the age of the Exode itself.

This kind of proof, it will readily be seen, is not peculiar to Egypt, or to Scripture. About sixty years ago the unburying of Herouclaneum and Pompeii brought to light remains which illustrate the customs of ancient Rome, and now serve to explain allusions and statements in ancient classic writers. In our own day, the researches prosecuted by Layard and others on the plains of Shinar have done much to illustrate and confirm old chronicles of Assyrian life and history. Every museum of antiquities treasures up some relic to which men appeal for purposes of exposition or of defence; and

It is attacks on the Pentateuch are re-
students are naturally looking for
evidence, Egypt supplies it. Error is re-
and truth confirmed by her teaching.

The examples we have mentioned, though they give an idea of the nature of the argument, give no fair idea of its strength or impressiveness. For, first of all, as the argument is cumulative, and depends largely on the number of coincidences, no specimens can do justice to this quality. Then, further, these examples are taken entirely from the Pentateuch. The fact referred to, and the allusion to Egypt, are both given in one and the same passage. There is therefore wanting the obvious undesignedness which makes circumstantial evidence so conclusive to most minds. The facts in all their fullness include coincidences very numerous, and between documents completely independent. On the monuments of Egypt we have the private and public life of the Egyptian people depicted with the utmost minuteness. The scenes are as fresh as if they had been finished only a few years ago. They were not painted, moreover, to supply evidence, or to explain Scripture. The two most ancient records have come unexpectedly into our hands, the one written, the other painted; and if they confirm each other, the evidence, because incidental, is felt to be, on that very ground, the more impressive.

Let us take an example or two. In Palestine iron was the metal commonly used for implements of war. The Canaanites had chariots of iron. It was iron David prepared in abundance. There are still in Lebanon traces of iron works of very ancient date, large quantities of refuse being still to be seen at some distance from the mines, but in the neighborhood of oak forests, the wood of which was used in smelting. Yet, on the Exode, it is not of workers of iron we read, but of workers in brass, and they are mentioned again and again. Whether the brass were an alloy of copper and zinc, the brass of later times, or of copper and tin, the bronze of later times, the use of such a metal clearly implies considerable skill in metallurgy; and, in fact, it is the very metal of which ancient Egyptian weapons,—swords, knives, and even bows,—are generally made. For ages the art of tempering brass so as to make it elastic, was unknown; nor is it now easy to understand how the process was so perfect as it must have been in Egypt.

The Egyptians were long famous for their skill in archery, and naturally, Hagar, the Egyptian maid of Sarah, taught her son the art of her country, and Ishmael became an archer.

Quite incidentally we gather from the history of Joseph's imprisonment that there was wine in Egypt, and from the Psalms that vines were grown there. Herodotus, who lived for some

the residence of Joseph's wife, and or five hundred years before that vines were not grown in Egypt. On the other hand, the paintings of vine culture and of wine-making. Drunken men, and even women, are seen carried home by head and heels on the shoulders of their servants, and yet the culture of the vine was evidently difficult. More laborers seem required to water the plants and dress the trees, than were required for any other kind of growth, and the branches were generally small. Hence, when the spies returned with "grapes of Eshcol," the size naturally filled with amazement a people who had been accustomed only to the grapes of the land of Ham. Hence, also, the narrative must have been written not in the age of Herodotus, but in the age of the monuments.

In the same history the baker is represented as carrying his basket upon his head. The usual way of carrying burdens in Syria was on the side, or on the back, or on the shoulders. On the monuments men are represented as carrying them in the way which the Pentateuch describes.

Glaancing through the monuments there are several facts that strike an observer as significant. The variety of employments is remarkable. Here are agriculturists, shepherds,—a degraded class, apparently—fishermen, hunters, men of all trades, all working apart, and as distinct castes; and yet agriculture is evidently the favorite pursuit. Here is corn in abundance. In seasons of deficient harvests elsewhere, a journey to Egypt, the granary of the world, as it seems, is very likely to be the resource of a pastoral tribe, and that tribe will find there a subdivision of labor, and a degree of artificial civilization not common in purely agricultural countries, and certainly not common in Syria.

Surrounding the monarch, on some of these monuments, are various classes of rulers. Here are priests, anointed for their office by God and the king; warrior chiefs, second only to the monarch—the whole indicating social institutions unlike anything in those days in their vicinity. There was, in fact, nothing like it nearer than India. These are "the princes of the house of Pharaoh."

In all these scenes, moreover, there is a freedom of domestic life very unlike the restraint of most Eastern nations. The women are generally unveiled, and seem to have as much liberty as in modern Europe. After the time of the Persian conquest (B. C. 525) this ceased in Egypt.

But there are other peculiarities in these paintings. The Egyptians are all beardless men, they and their servants. A few toil-worn men and a few mourners have their beards

half-grown; and now and then the rapidity of the conquests of some great warrior—as of Rameses—is indicated by the state of his beard, which he has evidently had no time to remove. But generally their faces are quite smooth; and so Joseph "shaves" when summoned into the presence of Pharaoh.

Here are men who seem to have been very odious to the Egyptians,—not from earliest times, indeed, but still from remote antiquity. They are seen crushed under the chariot-wheels of the kings; they are figured as supporters of vases and seats; they are dragged as slaves through the markets, and massacred without mercy. Sometimes they are painted on the soles of shoes and sandals, as the easiest way of treading them down. These are the shepherds, who were an abomination to the Egyptians, though not to the people of Arabia or Syria.

Here are chairs and chair-makers. Visitors sit at table in a way quite unusual in late Jewish history; not all, indeed, for at common meals the people sit on their limbs, which are doubled under them; but on great occasions chairs are used as stately and as formal as any in Europe. (Gen. xliii. 83.)

Here, again, is the gold chain of office; here the signet ring, which was presented to the man who was made vizier; here the white fine linen with which foreigners were clothed when they were naturalized, and became members of the Egyptian aristocracy.

Compare with these scenes the facts incidentally mentioned in Joseph's history (Gen. xli. 14: xli. 16: xlii. 34) and the naturalness and consequent truthfulness of the narrative will at once appear. The history must have been written by one who knew Egypt, and who lived before the customs of the country had materially changed.

Such is a sample, and a very inadequate sample, of the facts which the Egyptian monuments disclose; and we shall rejoice if this brief notice succeeds in directing attention to the studies which cannot fail to throw light on all parts of Scripture, and which will be found to supply additional proof of the antiquity and genuineness of the books of Moses.

MEMOIR OF THE LATE JOHN WATSON, OF CANADA WEST.

(Concluded from page 147.)

The notes of our friend J. W. here close. The compiler saw him soon after the death of his last son, Thomas, and found him truly cheerful and resigned to the inscrutable ways of Providence. He was able, in company with his wife, to attend the Yearly Meeting in 1864, and the sweet amiability of disposition then evinced, endeared him to all with whom he came in contact. Until within a few days of his death his meetings at home were regularly attended; and on First-day, the 1st of First month, 1865, he was engaged in vocal testimony, expressive of a concern that those present might be more earnest in laboring after a firm establishment on the Rock, Christ Jesus, in the soul, and that they might take heed to and obey the secret impressions of what was right and what was wrong, testifying that these impressions emanated from that Divine power or principle by which all are saved. This salvation comes by obeying the still small voice spoken distinctly to the understanding of every rational creature.

In the evening he was attacked with what proved to be his last sickness. The following account was kindly furnished by one of his relatives, who was with him much of the time till his close: He says, "On hearing, Second-

day, that he was taken very ill, I drove over to see him. As I entered the room, he reached out his hand and said, 'Dear James, all has been done for me that can be, and all that remains now is to bear my pain with patience.' And in this patient state he appeared to be much preserved, often remarking to his neighbors, as they came in to see him, 'that he was going home.'

"Third day.—This morning found him suffering greatly. His mind was much composed, and would flow out in extacies of love to those around him; and not embracing them only, but wishing well to mankind, the world over.—He was often heard in supplication to his Heavenly Father for strength to bear this severe trial with patience, and that he might not give way to murmuring. He often spoke encouragingly to those about him, giving much good and wholesome advice, which I doubt not will be long remembered. Taking his grandson, C. Watson, by the hand, he said, 'My dear grandson, be a good boy; be kind to thy mother and to thy brothers and sisters; and strive to live so that thou wilt feel kind to every one, and God will reward thee. And, above all, attend to the inshinings of Jesus Christ in thy own soul; for it is by attending to the manifestations of this light within, that cleanses from all sin, and purifies and fits us for the Heavenly Father's use;' with more to the same effect. The solemn stillness that appeared to pervade every mind present, manifested the power and influ-

ence with which the words were uttered, and made a deep impression on all.

"*Fourth-day.*—As it drew near meeting time, I said something about it being Preparative Meeting day, and that it was near the time to go. He remarked, 'Dear James, keep thy eye single to the light that shines within, and it will guide thee into all truth, and thus it will open to thy understanding all that is required of thee to do; if thee will be obedient to its manifestations, it will establish thee on the sure foundation, even the Rock, Christ Jesus. Persevere in the cause of Truth, and thou will become a pillar in the Lord's house that shall go no more out.'

"This afternoon, after passing through much suffering, he asked them to pray for him, that he might be released from this severe trial by a speedy dissolution of the body. And with a look such as only extreme suffering might induce, he turned to his wife and said, 'My dear, canst thou not pray for me?' She answered, 'We have prayed for thee. I have prayed for thee from the very depths of my heart. Oh, be patient, my dear, and it will all be well in the Lord's time;' then bowed her head for a few moments, and broke forth in a most touching supplication in his behalf, during which he lay perfectly quiet, and appeared to be strengthened at the close.

"*Fifth-day.*—His sufferings through the day were very great, and he remarked it seemed as though it would be too much for human nature to bear; but was, through mercy, enabled to say, 'Not my will, but thine, O Lord, be done.' This evening, he was favored with an unusually long spell of apparent ease, during which time his mind appeared to be absorbed in viewing and meditating on the never-ending glories of the celestial state. He came out of this with the expression, 'Oh, the beauty, the glory of that Heavenly sight! I would not have missed seeing it for a world.'

"*Sixth-day.*—He had not much to say, but what he did was very appropriate, and he recognized all that he had any acquaintance with. In the twilight of the evening, after passing through a severe season of distress, he exclaimed, 'What shall I do, my dear, it is so trying?' then in a few seconds said, 'Oh, how I pity those that put their trust in fine gold; what will it do for them in an hour like this?' He then rested on my arm quite calmly and composed in mind, his eyes closed, and to appearance was wrapped in solemn meditation, his elbows resting on the bed, with his hands extending upwards, and moving as with a love-inspiring motion for several minutes. He then let them down, and said, 'It is finished;' and added, after a little time, 'I feel the world to be receding from me;' and, soon after, 'I feel my faculties are going.'

"*Seventh-day.*—All day he was gradually sinking; and his last words were those of endearment to his wife and brother. Toward evening, without a sigh or struggle, his immortal spirit took its flight, in the 86th year of his age."

The annexed tribute to his memory was written by a young friend in his neighborhood, and sent us for publication.

"Death has again been in our midst, and a great and good man has fallen. He was great because he was good, and good because he early submitted his will to the yoke of Christ. This lightened the burdens of vigorous manhood, and sustained him during his declining years.

"I know not how he was first induced to partake of the waters of life, for many and various are the means employed by our Heavenly Father to draw the minds of his children nearer to himself. It is of the beautiful effects of this dedication of heart, as exemplified in the life and character of this dear-departed friend and father in Israel, that I would speak, sacred, though self-imposed, I feel this attempt to pay fitting tribute to departed worth."

"One of the early settlers of our favored country, he endured the struggles and privations of pioneer life; but obeying the injunction to seek first the kingdom of God and his righteousness, the accompanying promise was in his case fully verified, for his wilderness home became one of beauty, and was surrounded by the comforts and luxuries of life.

"Here, with the devoted partner of his declining years, in the society of his children and grandchildren, in the midst of an endeared circle of friends and relatives, his days glided peacefully away; but one by one some of the tenderest ties which bound him to earth were loosened, and only a few months before his own decease, his last surviving son preceded him to the silent grave. In adversity's dark hour, he was enabled to feel the sustaining presence of the Power that wounds only to heal; and he passed from each ordeal firmer in faith and stronger in reliance on the arm of his Redeemer.

"And now he too is gone, and forever; no more can we look to him for guidance and counsel; no more shall we behold his venerable form in the house of prayer; no more shall we listen to those mild words of exhortation or entreaty; no more shall we feel the warm pressure of the enfeebled hand, speaking volumes of affection. But why do we weep? The long captive spirit has left the shackles of mortality, and we doubt not is resting in the bosom of its Father and its God.

"The mandate was neither unlooked for or unwelcome.

"He had long been waiting for the day
Whose still twilight softly closing
Steals the trembling soul away."

"And the morn that ushered in the eighty-seventh anniversary of his birth, told of his peaceful exit from the shores of time.

"Gently the passing spirit fled
Sustained by grace Divine."

"How immeasurable the extent of the influence of such a life."

WHITE CHURCH; C. W., 10th mo. 25, 1865.

Circumstances may mould the external character into a becoming form, but *principle* alone, added to the severe discipline of the habits and dispositions, can make the man internally good.—*Rays of Light*.

APPEAL ON THE SUBJECT OF THE ACCUMULATION OF WEALTH.

Addressed to the Society of Friends, usually called Quakers, individually and collectively.

(Concluded from page 150).

But if they mean by independence such a moneyed situation as shall place their children out of the reach of the frowns and crosses and vicissitudes of the world, so that no thought or care shall be necessary for the means of their own livelihood, I fear they are procuring a situation for them which will be injurious even to their temporal interests as men. The matter then seems to me to be brought to this question, Whether it is better—I mean as a general proposition—to bring up children with the expectation of such a moderate portion of wealth, that they shall see the necessity of relying upon their own honest endeavors and the Divine support, or to bring them up with such notions of independence, that, in the pride and exultation of their hearts, they may be induced to account themselves mighty, and to lose sight of the power and providence of God? If we look into the world for an answer to this question, we should find *no greater calamity than that of leaving children an affluent independence*.

Such, then, are the opinions of a man of acute intelligence, and who has had very extended opportunities of observing human nature as it exists in society generally, who has especial introductions to the very bosom of the Society of Friends, and to whom must be allowed the credit of having acted in important affairs for conscience' sake.

The "money-getting spirit," in other words, the earthly mindedness, of which this author feared the danger fifteen years ago, is most manifestly increasing with rapidity, and is much too generally prevalent; but it is not universal. Among the living members of the Society, it would not be difficult to point out notable exceptions to the too general rule, of men who have conscientiously abstained from seeking riches, but who are equally remote from that external and studious display of privation, for which we find no example but in blind devotees and shal-

low enthusiasts, of men whose bright example shines in their motto, adopted from the writings of the apostle, who said, "Let your moderation appear unto all men."

The word *moderation* is full of importance; but must be acknowledged to be devoid of practical illustration in the life of a Quaker, to whom are applicable the words of the poet: "*Dives agris, dives positus in scenare nummis*." May it not be said that such a man, whatsoever may be his external appearance, or the profession of his faith, must have swerved so greatly from the commands of his pattern and preceptor, so completely broken one link in the chain of "practice," that if the injunctions of Christ be binding upon his followers, it may reasonably be doubted, from the admission of Quaker authorities, whether he can be a real Christian at heart? But when we shall perceive such an one, one so remote from obeying the command against accumulation, living at ease, and enjoying every luxury, save that of external splendor, in the foremost rank, and by teaching publicly, or by active co operation in the "discipline" of the Society, saying to its members in the language of conduct, "Follow me," for I profess to "follow Christ," shall we not be tempted to hesitate, as doubting his fitness, and to reply to such an one, "First pull out the beam that is in thine own eye?"

But moderation, Christian moderation, may perhaps be allowed to be of various interpretation. He who has been nurtured in the expectation of riches, of being tried with plentiful estates, as Woolman expresses it, who has been delicately fed, and taught, never to help himself, when other help can be obtained—a being thus dependent must sacrifice much, even more perhaps, than Christian faith would demand, or Christian fortitude could bear, if he were at once to "give all to the poor," and bear his cross in absolute poverty and privation. But vast is the gulf between the one state and the other, and midway lies moderation, a moderation which, while it allows the comforts of life to the possessor, permits him to minister to the needy, and even to deprive himself of some personal luxuries, for the sake of sharing the "luxury of doing good" to others.

There have indeed been those in the Society who have furnished notable examples of moderating their own desires, and in very different ways. One remarkable instance of a truly great and rich Quaker must still be fresh in the memory of his survivors, who so moderated his living below his means, as to expend about one-tenth of his splendid income, and dispose of nine-tenths of it in well selected offices of kindness to his fellow creatures, both public and private. Peace to the memory of such a man! for he deserved while living the applause of the good, and multitudes partook of his bounty,

who never heard of the donor. But it may still be asked, whether, if this very man had been in his earlier days as much of a heartfelt Christian as he became in his riper years, he could have accumulated possessions so great as were his? But if his largesses were intended as an atonement, may we not say that it was complete.

Such a character presents an exalted view of vital Christianity; but let us turn to another instance of the same tenor, that is to say, illustrating also the force of religion upon the mind of the devoted; but in how diverse a proposition! There once lived, not far from London, a member of the Society of Friends, in the humble occupation of a mole-catcher; and he was lowly as was his occupation. This man, possessing extraordinary skill, was employed to clear the grounds of a rich man; and after succeeding completely, his demands were so exceedingly moderate—so very small—as to surprise his employer into the ejaculation, "Why, you cannot live upon so little; consider how long you have been here!" The reply became the man, though aged and a cripple, "Oh yes, I can, and give away a tenth too." This humble and humble-minded man the writer remembers to have seen with a benignant smile upon his countenance, which spoke that all was peace within.

Yet may it not be assumed that the zeal of this man in fulfilling what he esteemed to be his religious duty, erred, though on the side favorable to virtue, in not receiving so much as was his just due from his rich employer? A pocket so barely furnished as was his, was indeed too meagre for so enlarged a mind; and if he had received the reasonable reward of his labor, his bounty to those still poorer than himself might have been stretched beyond his limit of a tenth. Equally, perhaps, is to be regretted the conduct of another excellent man, whose name since he published it as an author, may be quoted without offence. John Fry, of Sutton Benger, in Wiltshire, retired from the cares of business with what he esteemed a competence, namely, the very moderate sum of one hundred and twenty pounds a year.

With an income so slender, and which would afford for a family, consisting of himself, his wife and a servant, a daily repast scarcely more luxurious than that of the Roman meal, "a radish and an egg," how cramped when he saw the necessitous, must have been the mind of a man of his benevolent feelings; but his motto seems to have been, "Give me neither poverty nor riches;" and the extreme moderation of his desires will best be told by the following effort of his muse while he was yet in trade, and before his income had reached his own point of competence:

"As wishing will neither procure nor prevent,
I hope to continue my state of content;
And yield to my lot with a proper submission,
And think myself blessed in my present condition.
I'll not seek for riches because of their snares,
Nor yet for more business, because of its cares;
But thankfully use what bounty of Heaven
Has furnished as needful nor sparingly given,
A mind free from guilt, and possessing true peace,
Oh, these are the riches I wish to increase!
For a state betwixt ease and a constant employ,
Is the state I would choose, and the state I enjoy."

Hence, if these two illustrious examples of moderation may be deemed too severe, that of the philosopher who broke his pitcher when he saw a boy drink from the hollow of his hand, cannot be recommended to the Christian; but when, in opposition to such extreme privation, we see the owner of great possessions in a broad beaver and ample garments, studiously divested of ornament, the external badges of high professorship, and his spouse beside him in a diminutive bonnet of peculiar plainness, seated in a carriage of the most modern taste, and wanting little more than the splendor of emblazoned arms on the harness, and on the panel, to render it as conspicuously elegant as the most fashionable equipage in the park, surely the world will decide that such can scarcely be what they profess, *self-denying* Christians; for the world is not so easily deceived; it perceives that the possessors are worldlings at heart, and smiles at their self-delusion.

It is not, however, against the use of carriages, as altogether unbecoming the high professor, that these remarks are levelled, but simply against that incongruity of garb and accommodation, which too often is to be perceived. There may exist many substantial reasons for the possession; but its appearance should reasonably accord with the externals of the owner, and with his profession; it should seem rather for use than for show.

In the full persuasion that the moderation spoken of by the apostle, when he said to the Philipians, "Let your moderation appear unto all men," could not have extended on the one hand to vast accumulation, nor on the other to the deprivation of comforts and conveniences, such as may justly belong to the Christian without offence to the command, "Lay not up for yourselves treasures," let us advert to two of the various states in which Christian forbearance may be said to be put to the test.

Let us, in the first place, suppose—and the supposition is not without precedent—that a Quaker becomes possessed by patrimony, or by descent of some kind, of a fortune more than amply sufficient for his own reasonable wants. If in this case he involve himself in "the cares of this world," by entering into business or speculation to increase that which is already more than ample for supplying the moderate

desires of the true Christian, and if he so far outstep moderation, as to indulge himself in a large establishment, as regards his house, his carriages, and his number of servants, is not such a man chargeable with the offence of "covetousness?" Such an one, it is true, may be hospitable and indulgent to the poor, but he covets more than Christian moderation, even though his mansion should be less, and his carriages and servants less splendid and numerous than those of "Sir Thomas or My Lord."

Let us again suppose a Quaker, born in humble life, and educated in humble views, to be so circumstanced, that by the great extension of his commercial concerns, or by vast speculations, he has the power of enriching himself and his children, is he justified in so doing as a Christian? And even if he could boast with the young man formerly, that he had kept inviolable all the moral obligations from his youth up, yet would he not break one of the positive injunctions of the Founder of his religion, and would he not prepare for his children the wings spoken of by the historian Clarkson, who says that "it is undoubtedly true, though there are many amiable exceptions, that the worst examples in it (the Society of Quakers) are generally among the children of the rich! These presently take wings and fly away; so that, falling into the corruptive and destructive fashions of the times, their parents have only been heaping up riches, not knowing who were to gather them."

Now it is doing no injustice to the Society to assert that there are to be found within it many examples of both these cases. What, then, shall we say? But let us carry the supposition a little further, and imagine men thus offending in their own persons the Christian injunction against great accumulation, and preparing for their children the means by which they or their immediate descendants are to quit the standard perhaps for ever (for Clarkson says, that the Quakers themselves acknowledge, "that if men grow rich in the Society, their grandchildren generally leave it")—let us imagine that these very men (can they be termed heart-felt Quakers?) are themselves "elders or overseers" in its church, or officiate as ministers at its altar,—what, then, shall we say? Why, that while with one hand they pretend to steady and support the ark, they are, with the other, to use the words of Clarkson, sowing "the seeds of a regular and successive decrease" of that Society for which they pretend so much affection and regard; and is not this the least that can be said? But the example set by such men is even more pernicious to their own Society generally, than to themselves and their offspring.

Who is so self-confident as to suppose that he may not imitate the minister, the elder, and the high professor, of his own church? and thus,

without seizing on the better part as a model for their conduct, the younger, or the weaker parts of the flock, seek to emulate them only in their wealth and their enjoyment, and thus drink in poison, fatal to "self-denial," from the very source whence they are taught to look for consolation and support.

Again: this class of the high professors in the Quaker church (that is, of those who, while they preach self-denial, and do actually practice it in their dress and demeanor, possess most worldly luxuries, and the means of obtaining them all), are stumbling blocks in the way of such of their members as, either from education or thoughtlessness, exhibit less of the externals of humility, but yet who do not gratify self more, in their houses, and furniture, and servants, and equipages. For these perceiving the self-denial of the high professor, who is rich, to be partial and incomplete, and therefore only a "mixed obedience," do not scruple in thinking themselves justified in advancing one step farther in the course of indulgence, and of allowing themselves the additional gratification of more nearly approximating the fashions of the day in their external appearance.

And is not this advance upon the manners and maxims of the world, this progress to an amalgamation with it, which, though slight in the parent, is often complete in the child,—to be attributed, in great measure, to the influence and example of its affluent members? The children of the rich professor are rarely so obviously *correct* in their dress as their parents; who, allowing a trifle of that elegance which belongs to affluence and station, it is soon perceived and admired by the child, whose little feelings of ambition to vie with others finer than itself, are easily aroused; again something is allowed to youth by the parent, so that, taking the reins into his own hands, ere the dawn of manhood, he mingles with the world as one of its own.

Thus, assuming that there does in reality belong to "plainness of dress," that importance which the Quakers affix to it, are not the rich among them in some degree the cause of the spoliation of their own testimonies? for the "peculiarities of conversation and carriage" will soon follow, when that of "appearance" is lost. The influence of riches is enormously great, and the example of the rich spreads with the ease and rapidity of contagion.

And is it credible, that the mind of the man—whether priest or layman—which is so closely allied to the earth, as to be six days in the week pursuing with avidity the accumulation of wealth—eagerly pursuing old plans and devising new—shall, on the seventh, when he pretends (to use the language of Scripture, and to apply it as the preacher applies it) to "offer up himself a living sacrifice," so completely master

the imaginings of the rest of the week, as to forget them on the "First-day" in the meeting? And if he do not—if he bring the "money-changers into the temple,"—if forgetful of the nature of that spiritual worship, which is so conspicuous a feature in the system adopted by Friends, and of that essential shutting out of the earth and earthly things, in order to become recipient of heavenly—if he *there* continue to ponder, and plan, and contrive—is not this the worship of Mammon?

PROVIDENCE.

Those who sincerely desire to be in the stream of Providence will be carried onwards by it through every moment, to the end of life. There may be seasons of anxiety and doubt; there may be times of trouble and affliction; but all these things are overruled for the ultimate good of those who keep the Lord before them, and swerve not willingly from the path of duty. Be it our wisdom, therefore, as it is our duty, to submit to the laws of divine order, and all things shall work together for our good.

HOW TO MAKE CHILDREN HAPPY.

"Little things, on little wings,
Bear little souls to heaven."

It is very usual with us, who have advanced to the time of "the sere and yellow leaf," who are burdened with the increasing weight of years and responsibilities, and who realize to the full the poet's assertion, that this is a

"Changeful life;
So manifold in cares that every day
Brings its own burden with it;"

I say, it is very common thing for us to say to our children: "Ah, *now* is your happy time, *now* is your season of enjoyment, *now* you have nothing to trouble and nothing to annoy you, only to sing and play; oh, if I could but be young again!" etc. etc. To a great extent this is true. God, in his infinite mercy, has constituted childhood with a capacity for receiving pleasure from every trifle; and who can doubt this as he watches its free, joyous movements, hears its melodious laughter, or gazes on its sunny face? The cunning little ones seem to have found out the long-desired secret of "setting a trap to catch sunbeams."

Still, it has often struck us that the daily life of a child is not so happy as it might be. It stabs us to the very heart to see a little heedless offender roughly chidden, or even personally chastised, for an accident caused it may be by the superabundance of its joyous activity. Perhaps a curly-pated urchin, goaded on by the excess of his infantile curiosity, surreptitiously gives a prick to his elastic ball, "to see what makes it jump." The toy is spoiled, it is true, which is a great pity, but still worse is it to hear the upbraids which are

showered upon his defenceless head by mother or nurse. How much better would it be to reprove him gently for what can hardly be called a punishable act, or to take advantage of the same opportunity to give him a simple lesson in natural philosophy, which would never be forgotten. Or again, we have known severe correction to have followed the spontaneous confession of a fault, when the little culprit, at the expense of a vast amount of sensibility and timidity, has stammered forth the burden that has been lying on his mind for hours, only to be met by harsh and injudicious severity. What can such a parent expect as the result of his discipline, but future falsehoods, or sly attempts at concealment? This reminds us of an incident that happened to us the other day. While walking in the street, we passed two or three children in earnest conversation: their looks and tones attracted our attention, more especially the sentence uttered by one as we passed, "My mother never spoke a rough word to me." We involuntarily turned and looked at the boy. There he stood, a sturdy-looking little fellow, in fustian jacket and corduroy trowsers, but with such a beaming, happy face, as is not often to be seen in a poor man's child. And who can wonder at the look of care and depression that is often visible in children who are snubbed, and twitted, and snapped at constantly? Of course we do not wish to imply that children are frequently placed in such unhappy circumstances; yet, how few parents can claim the compliment that Cowper pays to his mother, when he speaks of her

"Constant flow of love that knew no fall,
Ne'er roughen'd by those cataracts and breaks,
That humor interposed too often makes."

When we think of the trifles, the very nothings, that will make a child happy for days and weeks, it makes one sigh to think how seldom they are bestowed on them. "Little things please little minds," we sometimes hear uttered with a half-contemptuous smile. Fathers and mothers, be thankful that is so! Be thankful that a handful of wild flowers, a ripe and ruddy apple, a few blocks of wood, or a peacock's feather, will make your child shout for joy, and cause his dancing limbs to bear witness to the lightness of his heart. We have known a child amused for a long winter's day, when cold and sleet have confined him to the fireside, by half an hour's patient instruction, some paper, and a pair of scissors; while his bright, intelligent eyes have borne testimony to his triumph over the miniature boats and ships that he has constructed. We repeat, that no work is easier or so well paid as the amusement of children.

"Their's is the sunshine of the breast;"

and many a gentle word, or encouraging caress,

is treasured in their hearts, to be repaid at some future time by simple attentions in illness.

Never allow your children to be idle. Idleness is the root of all evil, and a child who is allowed to hang listlessly over the fire, and lounge about on easy chair or sofa, will assuredly be a burden in time to come. If he appears wearied of his toys, draw him kindly to you, and tell or read some simple story; if possible, get him to copy some animal or bird mentioned in it; show him how to fabricate a walnut-shell boat, or a fly-catcher, or an ornament for the bed-room candlestick, or some coarse netting for cabbage-nets, or some spills for lighting candles. And let him see that you value his work, by using it. Nothing damps a child's pleasure more, after he has completed some wonderful fabrication, which is to accomplish marvels in the domestic department, than to see it laid aside as useless, or smiled at superciliously. Use it, if it be possible; or, still better, assist him in making a more perfect one. It always seems more difficult to amuse boys than girls, because it is thought effeminate to instruct them in many things with which girls are acquainted. This we believe to be a grand mistake. We knew a family where all the children, both boys and girls, were taught knitting and netting. No one was allowed to make their marble bags for them, and certainly marvellous and gorgeous in the extreme were the colors they selected; still, they were more prized by them than any fabrications that could be purchased, besides encouraging a taste for industry and a love for domestic life. Our readers may smile, but this is a fact. The boys hailed the winter evenings with pleasure, when they kept time with their busy fingers to the narration of some startling adventure, or school exploit, and, far from becoming "feminized," grew up domesticated in their tastes, and unlike the shiftless creatures men usually are in the items of buttons and strings. Always accept the home-manufactures of your boys, if urged upon you. Many a happy hour will be passed by your little son, if he knows that the rough piece of wood which he is so elaborately carving into some mythical and extinct animal will be accepted with a smile and treasured with love.

Give your children a love for nature. It was our favored lot to be brought up by a loving, intelligent, Christian mother, and never shall we cease to feel gratitude to her memory for the many pleasant hours her early lessons have insured us. From childhood we were trained to admire and love natural objects. What an ovation was performed in honor of the first violet, and what a joyous discovery it was to spy the first pale primrose of the season! Even after long years of sorrow and trial, a thrill of happiness returns at the recollection of these innocent pleasures; of the approval she never omitted to

manifest at indications of a desire to solve any of the many wonders of leaf, and bud, and flower; of the pleasures with which she would survey our collections of variegated snail-shells, or the arrangement of all the varieties of grasses we could collect. She also allowed us to feed caterpillars, (always, however, being most scrupulous as to the kindness with which they were treated,) and no words could describe our delight as we watched the wondrous change into chrysalis and butterfly, while she would take advantage of it to lead our thoughts to the still more wondrous transformation of the human body. The evening hours of an intelligent child might be profitably employed in arranging the shells, grasses, flowers, etc., collected during the summer, placing them carefully on paper or card, and writing the description of their classes, orders, or parts beneath. Live pets, also, deserve notice here, since tending, feeding, and nursing them afford great delight to children, and foster their kindly feelings.

By all means encourage brothers and sisters to love the same amusements. Of course those of an intellectual kind are meant, since we have no desire to transform our boys into women, or to make our girls romps. But, in the study of botany, or natural history, one may materially aid the other. The boy will exhibit more courage and dexterity in securing the prizes, which the "neat-handed Phillis" can more deliberately manipulate and examine; or the girl may make a very pretty drawing of the various butterflies, beetles, etc., which the boy may color; while the neatest writer may add the description. A charming little volume might thus be commenced at a comparatively early age, which both would enjoy to review as they progress, and mark the improvement they have made. Or, again, a boy who was clever as a carpenter might be directed how to form very pretty baskets and vases for holding the flower-pots in the drawing-room or garden, while the girl could cleverly decorate them with pine cones (split down the centre in order to be more easily glued,) which, if wished, could afterwards be varnished; or bouquets of flowers might be skeletonized and bleached at the sole expense of time and trouble, and thus a charming ornament for the parlor would be produced. Hundreds of these little employments will suggest themselves to the mind of any intelligent mother, and she will then be spared the annoyance of a listless, "What shall I do? I have nothing to do!" that too often degenerates into ill-humor and peevishness. Never mind how trivial the occupation, so that it be but useful, and trains your child to an abhorrence of idleness.

Never think it too much trouble to answer your children's questions. How often do we hear the tart reply, "I'm sure I don't know, child; pray don't tease me when you see I'm busy!" This is

the surest way to stunt the growth of your child's mind. It is the most cruel and ruthless conduct possible, thus to deny a child the information for which he craves, and to allow him to feel all the awkwardness and pain to which ignorance exposes him. Rather hail with joy these indications of a growing mind, and make the little inquirer happy by drawing him to you with a kiss, and as full and patient an elucidation as he may require.

Make your children happy in each other, encouraging them to feel that a pleasure enjoyed alone is only half enjoyed. If one of them buy only a farthing sugar-stick, teach him to feel a delight in offering a taste to all the rest. As far as possible, let their presents to each other be of their own manufacture—not purchases. Let the boys carve silk-winders, or make bone crochet hooks, or copy in their best style some favorite poem, transcribing it into a neat manuscript volume, perhaps adorned with original illustrations. Let the girls make bookmarks, satchels for schoolbooks, or a leathern cover for some favorite volume. Cherish the little outbursts of affection natural to them. Do not chide your boys for a few irrepressible tears at leaving home for boarding school, nor encourage "manliness" at the expense of brotherly affection, and do not grudge an hour bestowed upon a little pains-taking letter-writer or juvenile composer, who is anxious to give an account of various home details to the absent one. Let him write two or three sentences of his epistle each night, over-looked by an elder sister; the one will feel happy at being able to instruct, the other will be grateful at the sight of the letters that grow beneath his pen. By any means, at any expense of trouble to yourself, make home happy to your children; let it always remain in their memories as a type of all that is peaceful, loving, and attractive; let them constantly revert to it as a soothing remembrance in the hours of pain, sorrow, or privation, and let its associations be so hallowed and precious as to restrain them in temptation and strengthen them in trial. Yours is a noble mission; oh, parents! see that ye fulfil it with that wisdom and gentleness which shall prove you worthy of the dignity and honor it confers! —*The Leisure Hour.*

SWEET OLD AGE.

God sometimes gives to man a guiltless and holy second childhood, in which the soul becomes childlike, *not* childish, and the faculties, in full fruit and ripeness, are mellow, without sign of decay. This is that thoughtful land of Beulah, where they who have travelled manfully the Christian way, abide awhile to show the world a perfect manhood.

Life, with its battles and its sorrows, lies far behind them; the soul has thrown off its armor,

and sits in an evening undress, of calm and holy leisure. Thrice blessed the family, the neighborhood, that numbers among it one of these not yet ascended saints! Gentle are they and tolerant, and apt to play with little children; easy to be pleased with little pleasure. — *Germantown Telegraph.*

FRIENDS' INTELLIGENCER.

PHILADELPHIA, FIFTH MONTH 19, 1866.

FRIENDS TRAVELLING IN THE MINISTRY.

—Arden Seaman has obtained a minute from Jericho Monthly Meeting, L. I., to attend Genesee Yearly Meeting, and to attend and appoint meetings within its limits as way opens.

Elizabeth Paxson has obtained a minute from Middletown Monthly Meeting to attend New York Yearly Meeting.

PHILADELPHIA YEARLY MEETING.—This body convened on Second-day, the 14th inst. The Meeting for Ministers and Elders held two sessions on the Seventh-day previous. On First-day all the houses were open for public worship, and the several meetings were largely attended. Many Friends are with us from neighboring Yearly Meetings, for five of whom minutes were produced. The representatives in the Men's meeting were present except seven; in the Women's, except six. Epistles were received and read from the five Yearly Meetings in correspondence with us, and these salutations of love were acknowledged to be of great value in preserving and strengthening the bonds which unite us in Christian fellowship. To essay replies as way may open Committees were appointed in both meetings.

Time will not admit of a more extended notice this week.

SWARTHMORE COLLEGE BUILDING.—The Northeast Corner-Stone of this edifice was laid on the 10th inst. Under the genial influence of a clear bright sky, a company of about 400 assembled to witness this important event. Seats had been arranged for the accommodation of part of the audience, and the meeting was opened by Samuel Willits, of New York, who was probably the senior member of the Board of Managers present. It was stated that letters had been received from several of our Friends, among whom were Edward H.

McGill, of the Boston Latin School, Mary S. Lippincott, Sarah Hunt and others. Time did not admit of the reading of all the letters, but we were informed of their purport; one from Samuel M. Janney was read, in which he says:—

"I regret that I cannot be present on that interesting occasion, but my heart is with you in the cause of education which the College is intended to promote. I trust that the institution will be founded on the inscrutable principles of truth and love, and that it will be a blessing to the youth of our Society and others who may share its benefits, not only in our day, but in future generations.

The improvement of the talents conferred by a bountiful Creator is a duty incumbent upon all, and in rearing the superstructure of knowledge, each generation must avail itself of the labors and discoveries of its predecessors.

It is the purpose of our higher schools and colleges to place within the reach of the student, the store of knowledge accumulated by the wise and good of former ages, and to assist in developing the intellectual powers and moral principles. In executing this great trust, the teacher of youth should ever remember that the development of the intellect, though highly important, is of far less value than the cultivation of moral excellence, and that the benign principles of Christianity can alone secure happiness here and prepare the soul for eternal felicity."

This was followed by an appropriate and interesting address from the President, Edward Parrish, some extracts from which will be found in another part of our paper.

A zinc box was then produced, into which were deposited many memorials of the present time, viz:—An impression of the seal of the institution, a piece of wood taken from the meeting house built by George Fox, a sprig of evergreen also from Swarthmore preserved in a hermetically sealed glass bottle, a photograph of the original plan of the building, abandoned on account of the expense, the first pamphlet in regard to the concern by Benjamin Hallowell, the first subscription paper and the various circulars that have been issued, the silver coins of the United States, postage currency, and stamps, a copy of Friend's Intelligencer and many of the leading papers of the day, photographs and autographs of the Managers, and many other Friends, and a few additional articles contributed impromptu. The box was then tightly sealed and consigned to the place

prepared for it in the granite rock. With a solemn feeling we watched the closing of the case whose opening none of us should see, but generations yet unborn, when this edifice shall have fulfilled its object and crumbled into dust, may look with curiosity and instruction upon these types of a departed age, and from their contemplation learn a lesson of humility. When the company had resumed their seats, Dr. Thomas, of Philadelphia, delivered a brief and interesting address, which will be found in another column.

After further remarks by Wm. C. Biddle and others, a solemn silence succeeded and though no vocal prayer was uttered, yet desires were raised in many hearts that the Divine blessing might prosper this weighty and important undertaking. When the company separated, a short time was spent in rambling through the woods, in viewing the building preparations, and in enjoying the beautiful prospect from the College location. All appeared well satisfied with the day's duty and enjoyment.

THE CHILDREN'S FRIEND.—We have received and read with interest the first number of this Monthly Journal for the Children. Its contents are, we think, calculated to awaken thought and impart information. "Draba Verna," a sketch of the earliest flowering plant of our country, and the description of the woodcock in "Natural History," are lively and interesting, and have a tendency to quicken observation in the youthful mind. In "Simplicity of Language," views and arguments are presented which it is well occasionally to offer to our young Friends. The reviews of juvenile books will bring to the notice of parents, works that might not otherwise arrest their attention.

There are so few magazines suitable to place in the hands of our children, that we welcome the advent of one which promises to present truth in a simple and attractive form, and we hope the editor will receive encouragement from Friends generally.

MARRIED, on the 19th of Fourth month, 1866, according to the order of Friends, JOHN W. PRICE, son of William M. and Sarah W. Price, to ELIZABETH FLOWER, daughter of Thomas and Phebe Flower, (the latter deceased,) members of Clear Creek Mo. Meeting, Putnam Co., Illinois.

DIED, of a cancer, which she bore with patience and resignation, on the 12th of Seventh month, 1865,

at her residence at Glen Cove, Long Island, PHUEN, wife of Henry Titus, in the 79th year of her age. In her death society has lost a faithful burden bearer. She was a steady attender of meetings until within a short time of her death, and encouraged her family in the attendance of them. At the time of her death she held the office of Elder, and for more than twenty years that of Overseer of Westbury Monthly Meeting.

DIED, on the 1st of Fifth month, 1866, at her residence in Ledyard, Cayuga Co., N. Y., PRISCILLA HAINES, in the 86th year of her age; for the last 56 years a member of Scipio Monthly Meeting. Her sickness was protracted, but she bore it with much resignation and even cheerfulness, evincing that her mind was stayed on God. She was much esteemed and beloved, not only by her particular friends and acquaintances, but by the community at large.

—, on the 24th of Fourth month, 1866, in Middletown, Bucks Co., Pa., in the 28th year of her age, ELIZABETH, wife of Robert B. Newbold, and daughter of Wm. W. and Anna Blakey; a member of Middletown Monthly Meeting.

Extracts from the Remarks of EDWARD PARBISH, on the occasion of laying the Corner-stone of Swarthmore College.

About five years and a half have passed since the inception of the project which has taken form in Swarthmore College; about two, since we became possessed of this beautiful site; and now we meet to take the first formal step toward the erection of the edifice which is to embody our well-considered plans of building. In accordance with a time-honored custom, we propose to deposit in this most eastern corner of the centre building, a corner-stone, containing a receptacle, to be tightly inclosed, in which we shall deposit fitting memorials of the times in which we live, to the end that when, centuries hence, these massive walls shall be demolished or re-built, the antiquarian, who, with eager curiosity, shall explore our work, shall find something to add to that chain of facts by which men instinctively love to trace the progress of the ages. Before these walls shall crumble, every one of us, with our plans of domestic enjoyment and of personal aggrandizement, all our family and social interests and concerns, will be forgotten. The absorbing political questions, which now so tax the mind of the nation, will then have been solved by the lapse of time. No one living can predict, except with the eye of faith, that future which shall become the present before the tokens which we now deposit are removed.

It may teach us a lesson of humility to think that even our sectarian theories and prejudices—the faiths many and the forms many about which men contend, and with which they build up partitions in society, are transient even when compared with the stones and mortar which the stalwart mason cements into his solid walls.

The set phrases in which the theologian would confine the universal truths of God will cease to have their conventional meaning,—some

of the words will become obsolete, perhaps the finest passages will sound quaint, to those, who, in some far distant time, will exhume this corner stone, and with curious interest seek to lay open its mysteries. Let none accuse us of personal vanity in depositing our photographs and autographs in this box. The comments they may elicit from those who next will look upon them will be harmless to excite our vanity or to wound our self-love; and in transmitting to posterity the lineaments of some who have shared in this work, we do but gratify in our successors what we all recognize as a harmless curiosity in ourselves.

This occasion marks another step toward the organization of Swarthmore College, with a full corps of Professors and teachers, and complete facilities for imparting sound and liberal learning; and it may be thought appropriate that a concise statement should now be given of the educational views which have influenced its originators.

Called by the unanimous choice of the managers, and without my own solicitation, to preside over its organization, I bring to the work one leading qualification of which I am conscious,—a thorough conviction of the utility, not to say necessity, of the establishment of our college, coupled with a high ideal of what such an institution ought to be.

That our attainment will fall far short of this ideal, is of course inevitable; but our ideal is not the less valuable that we cannot expect in our time to realize its complete attainment.

1. We aim to educate the sexes together. Each wing of our building will be separately allotted to one or the other—the collecting room, dining-room, library and class-rooms are for their joint occupancy. The grounds will doubtless be in some degree divided and appropriated for their separate use, while in many sports they will participate together. Impressed with the great loss resulting to society from estranging young men and women from each other, during the years that are especially devoted to their moral and intellectual development, we mean to seek after and follow the natural law of social and domestic intercourse, and to strip their converse as far as possible of any glowing halo of romance, to clothe it in a vestment of friendship and good sense.

2. We shall propose a high grade of intellectual attainment for those who seek our diploma. The idea incorporated into the first draft of our plan was that of an institution in which an education could be attained equal to that furnished by the best colleges in the land. While it is obvious that this standard can only be attained as the result of maturity in the institution, yet this high aim is essential to be kept in view from the very start. An Academical department will necessarily precede the opening of

the College classes, and will doubtless be a permanent feature of the institution. The standard of admission to this will be advanced as opportunity allows, and all the studies will be adapted to prepare the students for the collegiate course. Instruction in the art of teaching will be a desideratum, and in the future a model school will probably be opened to facilitate this important practical branch.

3. The relative importance to be attached in our College to the three main departments of mathematics, language and science, has already been somewhat discussed among those interested in its establishment.

While these considerations can only be fully determined when its faculty is organized, it has been generally understood among us that the study of those branches of science pertaining to the physical universe, which have been so rapidly advanced by modern investigations, and are so wonderfully adapted to develop the intellect and to increase our appreciation of the wisdom and goodness of the Creator, will here have a place not yet conceded to them in colleges, established before they had reached their present magnitude and importance. Yet I trust none of us will be disposed to undervalue those abstract studies which are so wonderfully adapted to train and develop the reasoning powers, nor language, the study of which, as a means of mental discipline, has been so long esteemed, and the importance of which, as an aid to the appreciation and expression of great truths, none will dispute.

It is a false idea of education which limits it to any one class of studies, or degrades it to a mere utilitarian basis. Nothing is deserving the name which does not enlarge man's nature, and fit him for the enjoyment of elevating thoughts and ideas out of the range of business. And yet there is no honorable pursuit in life for which a man is not better fitted by that accumulation of knowledge, that power of classifying facts and ideas, and of deducing principles from them, which it is the object of a liberal education to depart. We claim a higher mission for Swarthmore College than that of fitting men and women for business; it should fit them for life, with all its possibilities. May those who shall hereafter guide its destinies be inspired with a love of learning for its own sake, and for the inestimable advantages it is capable of conferring, and may they never cease to couple in their system of training the highest intellectual culture with the development of the moral and religious elements of character.

4. The leading motive of those who have originated this movement has been what, in the familiar phrase of Friends, is called a *guarded* education. It is our desire to give its proper place to that feature of moral training—almost distinctive of the Society of Friends—which

rests upon a recognition of the intuitive sense of right and wrong, implanted by the Creator in every rational soul. This, recognized in its full force, supercedes much of the religious instruction which is considered essential in most of the Christian churches. With it, the precepts of Christianity become vital and saving; without it, they are liable to lapse into formality and practical unbelief.

It is impossible to exaggerate the importance of education in its connection with the moral attributes of our nature; born on the confines of two boundless worlds,—a world of infinite joy, and a world of unmeasured sorrow, obligations reaching through all eternity attach themselves to the human soul from very infancy.

Great is the responsibility of the parent who essays to guide the infant mind in its first efforts to exercise that free agency which is the high prerogative of its nature; and scarcely less, that of the teacher, who is to pilot the intellect as it sets sail into the vast ocean of conflicting thoughts and opinions. Let both see to it, that through no fault of theirs a cloud shall obscure "that light which lighteth every man that cometh into the world." "For," says the wise man, "the commandment is a lamp, and the law is light, and the reproofs of instruction are the way of life."

REMARKS OF DR. JOSEPH THOMAS.

In the very brief remarks which I propose to offer on the present occasion, I wish it to be understood that I am an "outsider," and consequently, though I feel a deep interest in the object which has brought us together, the originators of this great enterprise are in no wise responsible for anything that I may happen to say.

I need scarcely observe that I am far from desiring in any way to strengthen the barriers which divide the various denominations of Christians, yet so long as there are different sects, I rejoice that all are to be represented in the great cause of liberal education.

It is doubtless a good and glorious thing for our country, that we have everywhere elementary schools in which all, even the humblest, may acquire the rudiments of an English education; but what would Society be if we had nothing higher than these?

In my opinion, what we Americans have most to fear, is a dead level of mediocrity in the education of our people. In the economy of nature it is important that some portions of the earth's surface should be more elevated than the rest; for a country wholly destitute of mountains or hills can have in itself neither fertility nor beauty—all the fertility of Egypt is derived through the Nile from the mountains of central Africa—and I believe the influence of a superior class of educated men serves to give life and

spirit and efficiency to the knowledge of the masses.

Many persons seem to suppose that a moderate education, if joined with good commonsense, is sufficient for all the purposes of life. It may be all that is needed for ordinary occasions, but not for the higher objects of our existence.

It is undeniably true, that while education in the United States is perhaps more generally diffused than in any other part of the world, there are in proportion to the whole number of our people fewer thoroughly educated men than, I will not say in any other country in Christendom, but certainly fewer than in any of the more enlightened countries of Europe, including, I might say, France and all the Protestant nations. Hence it has sometimes happened that works professedly of a learned or scientific character, but of the merest pretension, have met with great favor even among the most intelligent of our people. A single example may suffice. The principal doctrines of "Nott and Gliddon's Types of Mankind" were a few years ago accepted as undoubted truth by many of our most intelligent citizens and scientific men, and indeed were so accepted by the editor of Putnam's Magazine, one of the most respectable critical journals published in the United States, but I think no instance can be presented of a single scientific man or scientific journal of any standing in Europe having been taken in by the shallow learning and loose science of the work above named.

I trust I shall not be understood as seeking to disparage my country, for I am very proud of her,—I admit that she excels in many things; what I desire is that she should excel in everything.

We ought, I think, to be especially on our guard, that we be not deceived by the cry of utility which we hear on every hand. True, in its largest sense, the useful may include all that is most desirable for the human race, but it is too often limited to merely providing for our physical wants and necessities. In this sense it excludes the love of the beautiful and the cultivation of all those sentiments which constitute the chief glory of man. Such views if carried out would paralyze or destroy all that is noblest and most beautiful in the human character; they would in fact reduce the race of man to the condition of two-legged beavers—animals ingenious, sagacious, industrious, but nothing more. Happily the Creator has given us instincts that render it impossible for any people to carry such a system of utilitarianism to its ultimate results, but it may easily be carried much farther than would be consistent with the highest interest or happiness of mankind.

Those who pursue science and truth for their own sake, really do far more to promote the useful in the best sense of the word than those

whose sole object begins and ends with utility. Does any one suppose that Sir Isaac Newton was influenced by mere considerations of utility when he made his immortal discovery of the laws which govern the universe.

I am one of those who believe that the importance of education in its truest and highest sense has never yet been overestimated.

We should my friends, I am convinced, commit a great mistake were we to suppose that the influence of such an institution as we are founding to-day will be limited to those only or chiefly who shall be educated within its halls. On the contrary, it will extend to the whole community—to the entire country. The founding of such an institution is indeed a distinct and emphatic annunciation to the world of our belief in the great importance of a high and liberal culture. It is a declaration of eternal war against the realms of ignorance and darkness; it is a proclamation to all mankind that we for our part have faith in light and science and truth, and do not fear to follow them whithersoever they may lead us.

In concluding, I would say that, although an alumnus of next to the oldest college in the United States, I do not on that account the less sincerely or less cordially wish a God-speed to this young institution, whose existence may be said to date from to-day. May its success be complete; may its career be long and glorious; may it prove to be a true and faithful foster mother to those committed to its care; and may it be instrumental in diffusing among its children and others the light, not only of true learning and science, but what is of far higher importance, of moral and religious truth.

PROMPTNESS IN DUTIES.

There is always a joy in duties performed, and promptness in the execution heightens that joy. To wait and look on a business we ought to do at once, enervates and disheartens; to arise and do it immediately, strengthens and enlarges the heart. Delay begets hesitancy and timidity; direct performance brings zeal and courage. They that wait upon the Lord renew their strength; but they that postpone till to-morrow present duties, are weaker for them than to-day. Promptness in duties, then, gives greater strength for new duties. Enduring hardness as a good soldier in one campaign, qualifies the Christian for more manly feats in the next. We grow on food and exercise morally, the same as we do physically. Christian promptitude helps to develop that noble, full stature of character and life which the Gospel enjoins—gives grace to discipleship and energy and efficiency to the churches.—*Morning Star.*

Tranquil pleasures last longest. We are not fitted to bear the burthen of great joys.

From the Atlantic Monthly.

ABRAHAM DAVENPORT.

BY J. G. WHITTIER.

In the old days (a custom laid aside
With breeches and cocked hats) the people sent
Their wisest men to make the public laws.
And so, from a brown homestead, where the Sound
Drinks the small tribute of the Mianas,
Waved over by the woods of Rippowams,
And hallowed by pure lives and tranquil deaths,
Stamford sent up to the councils of the State
Wisdom and grace in Abraham Davenport.

'Twas on a May-day of the far old year
Seventeen hundred eighty, that there fell
Over the bloom and sweet life of the Spring,
Over the fresh earth and the heaven of noon,
A horror of great darkness, like the night
In days of which the Norland sagas tell,—
The Twilight of the Gods. The low-hung sky
Was black with ominous clouds, save where its rim
Was fringed with a dull glow, like that which
climbs

The crater's sides from the red hell below.
Birds ceased to sing, and all the barn-yard fowls
Roosted; the cattle at the pasture bars
lowed, and looked homeward; bats on leathern
wings

Flied abroad; the sounds of labor died;
Men prayed, and women wept; all ears grew sharp
To hear the doom-blast of the trumpet shatter
The black sky, that the dreadful face of Christ
Might look from the rent clouds, not as he looked
A loving guest at Bethany, but stern
As Justice and inexorable Law.

Meanwhile in the old State-House, dim as ghosts,
Sat the lawgivers of Connecticut,
Trembling beneath their legislative robes.
"It is the Lord's Great Day! Let us adjourn,"
Some said; and then, as if with one accord,
All eyes were turned to Abraham Davenport.
He rose, slow cleaving with his steady voice
The intolerable hush. "This well may be
The Day of Judgment which the world awaits;
But be it so or not, I only know
My present duty, and my Lord's command
To occupy till he come. So at the post
Where he hath set me in his own providence.
I choose, for one, to meet him face to face,—
No faithless servant, frightened from my task,
But ready when the Lord of the harvest calls;
And therefore, with all reverence, I would say,
Let God do his work, we will see to ours.
Bring in the candles." And they brought them in.

Then by the flaring lights the Speaker read,
Albeit with husky voice and shaking hands,
An act to amend an act to regulate
The shad and alewife fisheries. Whereupon
Wisely and well spake Abraham Davenport,
Straight to the question, with no figures of speech
Save the nine Arab signs, yet not without
The shrewd dry humor natural to the man:
His awe-struck colleagues listening all the while,
Between the pauses of his argument,
To hear the thunder of the wrath of God
Break from the hollow trumpet of the cloud.

And there he stands in memory to this day,
Erect, self poised, a rugged face, half seen
Against the Background of unnatural dark,
A witness to the ages as they pass,
That simple duty hath no place for fear.

THE CHOLERA AND ITS TREATMENT.

Letter from Dr. Hamlin—Observations in the East.

The following letter from Cyrus Hamlin, who has been for many years a resident in Constantinople, as a missionary of the American Board of Commissioners for Foreign Missions, appears in the *Christian Mirror*. It contains some useful hints:

* * * "Having been providentially compelled to have a good degree of practical acquaintance with it, and to see it in all its forms and stages during each of its invasions of Constantinople, I wish to make my friends in Maine some suggestions, which may relieve anxiety or be of practical use.

"1st. On the approach of the cholera, every family should be prepared to treat it without waiting for a physician. It does its work so expeditiously, that while you are waiting for the doctor it is done.

"2d. If you prepare for it, it will not come. I think there is no disease which may be avoided with so much certainty as the cholera. But providential circumstances or the thoughtless indiscretion of some member of a household may invite the attack, and the challenge will never be refused. It will probably be made in the night; your physician has been called in another direction, and you must treat the case yourself or it will prove fatal.

"3d. *Causes of Attack.*—I have personally investigated at least a hundred cases, and not less than three-fourths could be traced directly to improper diet, or to intoxicating drinks, or both united. Of the remainder, suppressed perspiration would comprise a large number. A strong, healthy, temperate laboring man had a severe attack of the cholera, and after the danger had passed I was curious to ascertain the cause. He had been cautious and prudent in his diet. He used nothing intoxicating. His residence was in a good locality. But after some hours of hard labor and very profuse perspiration, he had lain down to take his customary noon nap, right against an open window through which a very refreshing breeze was blowing. Another cause is drinking largely of cold water when hot and thirsty. Great fatigue, great anxiety, fright, fear, all figure among inciting causes. If one can avoid all these he is as safe from the cholera as from being swept away by a comet.

"4th. *Symptoms of an attack.*—While cholera is prevalent in a place, almost every one experiences more or less disturbance of digestion. It is doubtless in part imaginary. Every one notices the slightest variation of feeling, and this gives an importance to mere trifles. There is often a slight nausea, or transient pains, or rumbling sounds, when no attack follows. No one is entirely free from these. But when a diarrhoea commences, though painless

and slight, it is in reality the skirmishing party of the advancing column. It will have at first no single characteristic of the Asiatic cholera. But do not be deceived. It is the cholera nevertheless. Wait a little, give it time to get hold, say to yourself, 'I feel perfectly well, it will pass off,' and in a short time you will repent of your folly in vain.

"Sometimes, though rarely, the attack commences with vomiting. But in whatever way it commences it is sure to hold on. In a very few hours the patient may sink into the collapse. The hands and feet become cold and purplish; the countenance, at first nervous and anxious, becomes gloomy and apathetic, although a mental restlessness and a raging thirst torment the sufferer while the powers of life are ebbing. The intellect remains clear, but all the social and moral feelings seem wonderfully to collapse with the physical powers. The patient knows he is to die, but cares not about it.

"In some cases, though rarely, the diarrhoea continues for a day or two, and the foolish person keeps about, then suddenly sinks, sends for a physician, and before he arrives, dies.

COURSE OF TREATMENT.

"1st. *For stopping the incipient diarrhoea.*—The mixture which I used in 1848 with great success, and again in 1855, has during this epidemic been used by thousands, and although the attacks have been more sudden and violent, it has fully established its reputation for efficiency and perfect safety. It consists of equal parts by measure of—1. Laudanum and spirits of camphor. 2. Tincture of rhubarb. Thirty drops for an adult, on a lump of sugar, will often check the diarrhoea. But to prevent its return care should always be taken to continue the medicine every four hours in diminishing doses 25, 20, 15, 10, 9, when careful diet is all that will be needed.

"In case the first does not stop the diarrhoea, continue to give increasing doses—thirty-five, forty, forty-five, sixty—at every movement of the bowels. Large doses will produce no injury while the diarrhoea lasts. When that is checked then is the time for caution. I have never seen a case of diarrhoea taken in season which was not thus controlled, but some cases of the advanced diarrhoea, and especially of relapse, paid no heed to it whatever. As soon as this becomes apparent, I have always resorted to this course. Prepare a teacup of starch, boiled as for use in starching linen, and stir into it a full teaspoonful of laudanum for an injection. Give one third at each movement of the bowels. In one desperate case, abandoned as hopeless by a physician, I could not stop the diarrhoea until the seventh injection, which contained nearly a teaspoonful of laudanum. The patient recovered and is in perfect health. At the same time I used prepared

chalk in ten grain doses, with a few drops of laudanum and camphor to each. But whatever course is pursued must be followed up, and the diarrhoea controlled, or the patient is lost.

"2d. *Mustard Poultices.*—These should be applied to the pit of the stomach, and kept on till the surface is well reddened.

"3d. The patient, however well he may feel, should rigidly observe perfect rest. To lie quietly on the back is one-half the battle. In that position the enemy fires over you, but the moment you rise you are hit.

"When the attack comes in the form of diarrhoea, these directions will enable every one to meet it successfully.

"4th. But when the attack is more violent, and there is vomiting, or vomiting and purging, perhaps also cramps and colic pains, the following mixture is far more effective, and should always be resorted to. The missionaries, Long, Trowbridge and Washburn have used it in very many cases, and with wonderful success. It consists of equal parts of laudanum, tincture of capsicum, tincture of ginger and tincture of cardamon seeds. Dose, thirty to forty drops, or a half teaspoonful in a little water, and to be increased according to the urgency of the case. In case the first dose should be ejected, the second, which should stand ready, should be given immediately after the spasm of vomiting has ceased. During this late cholera siege no one of us failed of controlling the vomiting and also the purging, by, at most, the third dose. We have, however, invariably made use of large mustard poultices of strong, pure mustard, applied to the stomach, bowels, calves of the legs, feet, etc., as the case seemed to require.

EACH HAS HIS WORK.

All men cannot work in the same way. "There are diversities of operations." Upon the face of a watch you may see an illustration of my meaning. On that small space you have three workers; there is the second-pointer performing rapid revolutions; there is the minute-pointer going at a greatly reduced speed, and there is the hour-pointer tardier still. Now, any one acquainted with the mechanism of a watch would conclude that the busy little second-pointer was doing all the work; it is clicking away at sixty times the speed of the minute-pointer, and as for the hour-hand, that seems to be doing no work at all. You can see in a moment that the first is busy, and in a short time you will see the second stir; but you must wait still longer to assure yourself of the motion of the third. So it is in the church. There are active fussy men, who appear to be doing the work of the whole community, and others slower still. But can we

do without the minute and hour-pointers? The noisy second-hand might go round its little circle for ever, without telling the world the true time. We should be thankful for all kinds of workers. The silent, steady hour-hand need not envy its noisy little colleague. Each man must fill the measure of his capacity. Your business is to do your allotted work, so as to meet the approbation of the Master.—*British Standard.*

TORPIDITY OF ANIMALS.

They who are accustomed to witness merely the state of torpor into which many animals, both warm and cold-blooded, enter during the winter months of our northern latitudes, are hardly prepared for the fact that within the tropics a large number of other animals fall into an analogous condition through the heat and drought. We have the authority of Humboldt, supported by many observers, for the fact that in Venezuela and in the region of the Orinoco, "both land and water turtles, the colossal boas, and many of the smaller species of serpents, lie torpid and motionless in the hardened ground throughout the hot and dry season." The Indians often seek them in their retreats as articles of food, and Humboldt mentions that, on one occasion, a party in camp were astonished by a crocodile's breaking up his summer quarters in the enclosure where they were sleeping, and where the reptile had lain buried since the disappearance of the waters. We have ourselves seen the workmen in Guiana, while digging trenches in a garden for planting vegetables, throw out several specimens of a species of eel (*Synbranchus*), which had buried themselves, as is their habit, when the dry season approached, and which, after an imprisonment of two or three months, would have found their way out again with the return of the rainy season.

The "mud fish" (*Lepidosiren*) of the Gambia is one of the most remarkable animals which pass into a "summer sleep." Their habits in this respect have been long known, and Prof. Owen has described the peculiar structure of their respiratory organs, which enables them, though fishes, to breathe air, when water is no longer accessible, during the period of their confinement. M. Auguste Dumeril has recently communicated to the Academy of Sciences some interesting observations made by himself on some of these animals at the Jardin des Plantes. Balls of perfectly dry clay containing "mud fishes" were placed in a tank and water slowly added, so as in some degree to imitate the gradual moistening of the earth by the rain. In due time three of the fishes broke open their coverings and escaped. That they were not, even in the dried clay, wholly torpid, is shown by the fact that in one

case, in which the ball was fractured, if the lining membrane were touched, the fish uttered a cry. After they came out they were fed with worms, were well nourished, and grew. M. Dumeril has had the good fortune to witness, for the first time in Europe, the process of going into "summer quarters." The two survivors began to show signs of preparation for their long sleep by secreting from the general surface of their bodies a large quantity of thick and viscid mucus, and soon after by burying themselves in the soft mud at the bottom of the tank. The water was then drawn off to the level of the mud and this allowed slowly to dry. In the course of time the mud became hard and cracked, and the moisture disappeared, leaving them in their dry case of earth.

After about seventy days they were exhumed alive, each surrounded by a sort of cocoon formed of the hardened mucus secreted by their skin, and serving as a protection against the too great evaporation of moisture from the surface of their bodies. As they entered the mud they left behind them a tubular trail of mucus, which formed a communication between the sack enclosing the fish and the outer air. During the greater portion of the period of their retirement no water can reach their gills; their swim-bladders, however, receive blood diverted by a special arrangement from the gills, and thus act like true lungs, which they in fact are. Thus we have a fish which is a water-breather at one period of the year, and an air-breather at another. In this last respect they make a close approach to the class of reptiles with which they have sometimes, though on insufficient grounds, been identified.—*The Nation.*

WORK WHILE IT IS DAY.

"Whatever is truly great and profound in moral or scientific life, makes its appearance, not with pomp and tumult, but in unostentatious silence. Its growth is slow and its root secret. A seed is cast forth, and often the sower scarcely lives to see it spring forth. But if there be true life in it, its day comes, and it springs up and waxes into a beautiful and umbrageous tree."—*Ullman.*

Under the accumulated difficulties of faith and practice, by which we are embarrassed in this sublunary state, we should meditate on the doctrine of a Providence, which administers the richest consolation. The dominion exercised by the Supreme Being over the works of his hands, is neither partial as to its objects, narrow in its extent, nor transitory in its duration. Unlike earthly monarchs, who expire in their turn and are successfully borne into the tombs of their ancestors, the King of saints liveth and reigneth forever and ever! Evils, indeed, have entered the world, and still continue to distress it. But these evils have not crept

into the system unknown to its great Author; and the attributes of Deity ensure their extirpation. Our rejoicing is—the Lord God omnipotent reigneth!

"One part, one little part, we dimly scan,
Through the dark medium of life's feverish dream,
Yet dare arraign the whole stupendous plan,
If but that little part incongruous seem.
Nor is that part, perhaps, what mortals deem;
Oft from apparent ills our blessings rise—
Oh, then! renounce that impious self-esteem,
That aims to trace the secrets of the skies,
For thou art but of dust—be humble and be wise."

Beattie.

ITEMS.

THE GERMAN POLAR EXPEDITION.—The projected German Polar Expedition is to start on its voyage during the present month. It will consist of two exploring vessels, (small wooden screw steamers, of about four hundred tons, and eighty to one hundred horse power), with a sailing ship as a transport. The latter is considered important, because the small steamers cannot take a sufficient quantity of coal, and consequently would have to lose much time and go out of their course every thirty days to supply that want in some northern port. The voyage is to be completed in six months; but the transport vessel is to remain during the winter in one of the ports of Spitzbergen, in order to make meteorological and other scientific observations, for which purpose three competent men have offered their service.—Dr. Fischer-Renson for geology, Professor Kupffer for zoology, and the Austrian Esquimaux of the Marine Weyprecht for physical experiments.

The aim of the expedition is the exploration of the Arctic central region; special ends will be pursued by the investigation of the east coast of Greenland, the examination of the Gulf and Polar streams and their limits, the geographical survey of new coasts, should any be discovered, by the measuring of the depth of the sea, &c. The equipment and provision of the expedition vessels have been calculated for the term of two years. The expense is estimated at about one hundred thousand thalers, the greater part of which is to be covered by the Prussian government. The crews of the three ships will consist entirely of volunteers, as so many offers for service have been received by the commander of the expedition, Captain Werner, from sailors of all ages, that he has only to select among the best.—*The Evening Post.*

CONGRESS.—In the Senate, the House resolution, congratulating the people of Russia on the escape of the Czar from assassination, was passed. The bill to authorize the coinage of five-cent pieces and the bill imposing a duty of twenty per cent. on the value of cattle imported into the United States, were passed. The post-office appropriation bill was taken up and the discussion of the amendment relative to appointments to office was resumed, and several times occupied the attention of the Senate. Finally it was passed as originally framed.

HOUSE.—The constitutional amendment reported by the Committee on Reconstruction was several times under discussion, and finally passed, yeas 128, nays 37. A joint resolution providing for the exemption of crude petroleum from internal revenue tax was passed; also a resolution to regulate the time and fix the place for holding the United States Circuit Court in the Eastern district of Virginia.

THE FREEDMEN.—The official reports of the assistant commissioners of the Freedmen's Bureau to the commissioner, now being received for the Fourth

month, show a continued improvement in the relation between the white and black races in the States recently in rebellion. The freedmen seem to be gaining a more correct notion of their responsibilities as well as privileges in their new character of freemen; and where they conduct themselves inoffensively, the whites are becoming more disposed to treat them civilly and deal justly with them.

BEDDING and FEATHER Warehouse, Tenth St., below Arch. Feather Beds, Bolsters, Pillows, Mattresses, of all kinds; Blankets, Comfortables, Counterpanes, white and colored; Spring Beds; Spring Cots; Iron Bedsteads; Cushions, and all other articles in the line of business. **AMOS HILLBORN,** 519 12th. No 44 North Tenth Street, below Arch.

THOMAS W. STUCKEY is prepared to execute Book, Card, and Job Printing at No 624 Weaver St., between Fifth and Sixth and Green and Coates. Friends' Printing desired. Orders sent by post will be promptly attended to. 519 vt

GROCERY and PROVISION STORE.—The subscribers, having taken the Store at N. E. cor. Sixth and Buttonwood streets, would call the attention of Friends and the Public generally to their fresh stock of Staple and Fancy Groceries, which they will sell at prices suiting the decline in gold. Good Country produce taken in exchange, at best market rates. **CLAYTON S. HAINES,** 512 19 30th. **JOSEPH G. HAINES.**

JOHN J. LYTLE, Seventh and Spring Garden streets, Philadelphia, has a variety of cheap and desirable goods, such as 7-4 White India Silk Shawls, Four dollars, worth \$10.00; Colored Silk Cashmere Shawls, half price. Fringed Thibet Shawls, \$3.50. All Wool De Barage, 37 1/2 cts. Plain Dark Brown Lawns, 15 1/2 cts. Pongee Mohairs, 35 cts. Mode Silk Knit Mitts for Friends. French and English Lawns. Call and examine his stock before purchasing elsewhere. 512 19 2d.

THOS. M. SMITH, HATTER, 41 N. 2d St. Always on hand, and made to order, a large assortment of Friends' Hats; as he makes a specialty of that part of the Hatting Business. 428, 55, 512 90.

A. WILDMAN, Dealer in HOUSE-FURNISHING GOODS. A general assortment of Tin, Iron, Wooden and Willow Ware, Japanese and Britannia Ware, Cutlery, Spoons, &c. No. 325 Spring Garden St., Philadelphia. 421 104 pf.

CHESTER ACADEMY.—A Boarding and Day School for both Sexes, Broad St., Chester, Pa. Every branch of a solid English Education is taught in this Academy, together with Latin, French and Drawing, in all its varieties. Thoroughness in all the studies is insisted upon, and special care will be taken to educate the morals as well as the intellect of the pupils. A Primary Department is connected with the School. Pupils can enter at any time.

AG—Pleas send for a Circular. **GEORGE GILBERT, Principal.** **THOMAS GILBERT,** **M. LOUISE CLANCY,** Assistants. 2 ws 13t 5wm wnfnd.

KENNETT SQUARE SEMINARY—FOR GIRLS.—The next session of this institution will commence on the last Third day of second month, 1866. Inquire for Circular of 32 3m. 430. vmo. **EVAN T. SWAYNE, Principal.**

CHESTERFIELD BOARDING SCHOOL FOR BOYS, situated on the Crosswicks Road, three miles from Bordentown, N. J. The Fifty-Second Session of this Institution will commence on the 21st of 5th mo., 1866, and continue twenty weeks. Terms, \$65. For further particulars address **HENRY W. RIDGWAY,** 4760 t 3367 pmasa pa in. Crosswicks P.O., Burlington Co., N. J.

BELLEVEU FEMALE INSTITUTE.—A BOARDING-SCHOOL FOR GIRLS. The Spring and Summer Term of this Institution, will commence 5th mo. 21st, 1866, and continue in session twelve weeks. For details see Circular, to obtain which, address the Principals, Attleboro' P. O., Bucks county, Pa. **ISRAEL J. GRAHAM,** **JANE P. GRAHAM,** Principals. 6t. av n. t. 414.

J. H. RIDGWAY & CO., COMMISSION DEALERS in Berries, Peaches, Apples, Onions, Sweet Potatoes, Round Potatoes, Butter, Poultry, Eggs, Dried Fruits, and every description of Country Produce. Office No. 125, Delaware Avenue Market, Philadelphia. Consignments solicited, and orders for shipping promptly attended to. 21018tvlvnap.

WM. BRACOCK, General Furnishing Undertaker, No. 18 North Ninth Street.—A general assortment of ready-made Coffins, and every requisite for funerals furnished. Being entrusted with the oversight of "Fair Hill" Burial Ground,—Funerals, and all other business connected with the ground, will be promptly attended to. 311. 1y. w a s m p.

NEW ARTICLES.—The Graduated Measure and Funnel combined, Russ' Scissor Sharpener, Spring Scissors for Sewing Machines, the Clutch Brace, which does not require the bits to be fitted or notched, the Vegetable Slicer, for beets, cucumbers, &c. For sale at the Hardware Store of **TRUMAN & SHAW,** 310th. No. 325 (Nigh Thirty Five) Market St., below Ninth.

FRIENDS' INTELLIGENCER.

"TAKE FAST HOLD OF INSTRUCTION; LET HER NOT GO; KEEP HER; FOR SHE IS THY LIFE."

VOL. XXIII.

PHILADELPHIA, FIFTH MONTH 26, 1866.

No. 12.

EDITED AND PUBLISHED BY AN ASSOCIATION
OF FRIENDS.

COMMUNICATIONS MUST BE ADDRESSED AND PAYMENTS
MADE TO

EMMOR COMLY, AGENT,

At Publication Office, No. 144 North Seventh Street,
A FEW DOORS BELOW RACE.

Open from 8 A.M. until 5 P.M.

TERMS:—PAYABLE IN ADVANCE.

The Paper is issued every Seventh-day, at Three Dollars per
annum. \$2.50 for Clubs; or, four copies for \$10.

Agents for Clubs will be expected to pay for the entire Club.
The Postage on this paper, paid in advance at the office where
it is received, in any part of the United States, is 20 cents a year.

AGENTS—Joseph S. Cohn, New York.

*From the "Fells of Swarthmoor Hall and their
Friends." BY MARIA WEBB.*

George Fox had planned a meeting-house to be built on a piece of ground at Swarthmoor, which he had purchased for that purpose. He made his desires known through a letter to Thomas Lower, and soon after the date of that letter the work commenced. The Friends around aided with horses, laborers, and such material as their land furnished; with the exception of those contributions from willing hearts and hands, the expenses were all borne by himself. It does not seem that George Fox was ever at Swarthmoor Hall after the building of the meeting-house commenced, as we know, from his own statements, that he spent at intervals a great part of the years '87, 8, and 9 in and about London. To Kingston, with the Rous's, and to Gooseyes, with the Meades, whenever his failing strength demanded care, he retreated for a temporary rest. His religious services in London, and the business of the Society which centered there, claimed his most earnest attention during those years. But its organization was at length so satisfactorily established, that it is probable he had in view, should life be prolonged, retiring to Swarthmoor after the winter of 1690, to take rest and obtain the lengthened repose his declining years so much required. All his affairs indicated that he stood prepared for departure either final or temporary, as the Lord might direct. By a letter from his wife to her son and

daughter Abraham, which now lies before me, I find that after having been with him several months, she had decided on returning to the North after the Yearly Meeting. She writes early in the summer of 1690, indicating her intention of being at home in the course of a few weeks. * * * * *

During the short reign of James II., Quaker persecutions ceased. But when, in 1689, King William superseded his father-in-law, the intolerant party in the English Episcopal Church again hoped to have their way in compelling conformity to their own religious establishment. William Penn, as one great obstacle to such plans being effectually carried out, was attacked with the most bitter accusations. His title to his American province was not only called in question, but a commissioner was appointed to proceed to Pennsylvania, to see what could be done towards abrogating the laws he had established there. False accusations arose on all sides, that declared him to be a Jesuit, a Jacobite, and a Popish revolutionist. The King was called on to take from him his Shangaray property in Ireland, and to confiscate his English estate, as well as to deprive him of his personal liberty. It is not to be supposed that King William, or those of his ministers who were men of sense, believed these false reports that for a time found place in the public mind; but it is certain that the Pennsylvania Assembly declining to raise troops for the war had annoyed them, and that they would gladly have found

some legal pretext on which to take the American province from Penn. Such was the portentous aspect of the surroundings of the Quaker legislator as the autumn of 1690 advanced.

In the Eighth month, old style (October of that year), Robert Barclay breathed his last. The Eleventh month witnessed the removal of another pillar from the Quaker Church, in the death of that "worthy elder," (the phrase by which he was often spoken of among Friends), through whose instrumentality the Society was mainly gathered. William Penn thus communicates the event :—

WILLIAM PENN TO MARGARET FOX.

"London, 13th of 11th mo., 1690 [January, 1691.]

"Dear M. Fox,—With the precious remembrance of thy unfeigned love in Christ Jesus, I am to be the teller to thee of sorrowful tidings, which are these ; that thy dear husband and my beloved friend, George Fox, finished his glorious testimony this night, about half an hour after nine o'clock, being sensible to the last breath. Oh ! he is gone, and has left us with a storm over our heads. Surely in great mercy to him, but an evidence to us of sorrows coming. He was as lively and as firm [as ever] on Fourth-day was a week at Gracechurch Street ; and also the last First-day, being the day before yesterday. But he complained after meeting of being inwardly struck, and lay down at Henry Goldney's, where his spirit departed. My soul is deeply afflicted with this sudden great loss. Surely it portends to us evils to come. A prince indeed is fallen in Israel to-day !

"I cannot enlarge, for I shall have to write to several to-night, and it is late. May the Lord be with thee and thine, and us all. Amen.

"I am thy faithful and affectionate friend,

"WILLIAM PENN.

(P.S.) "Now present :—Robert Barrow, J. Taylor, J. Vaughan, J. Rich, J. Boucher, S. Waldringfield, and myself. G. Whitehead and S. Crisp were here about two hours since. He died as he lived, minding the things of God and His Church to the last in a universal spirit."

Robert Barrow, in a letter to Henry Coward and some other Lancaster Friends, says :—

"Our ancient Friend, an honorable elder in the Church, George Fox, was this day buried, in the presence of a large assembly of God's people, supposed to be about 4,000 Friends. The meeting-house at Gracechurch Street could not contain them, nor the court before the door. Many living powerful testimonies were published in the meeting-house and the graveyard, among tender hearts, watery eyes, and contrite spirits.

"The London Friends were very discreet, ordering all concerns relating thereto with great wisdom. There being six monthly meetings

belonging to this city, six chosen Friends were appointed out of each monthly meeting, who were to carry the corpse, and none else. [They arranged] that his relations should go next ; that all Friends should go on one side the street, three and three, in rank, as close together as they could, that the other side might be left clear for the citizens and coaches.

"Last week George Fox was at the Quarterly meeting, the Second-day morning meeting, the meeting for suffering, and at two meetings for worship, beside the First-day morning meeting. He said he was as well at that meeting as he had been for a long time before. He began to be ill that evening about the fifth hour, and departed before the tenth hour the evening of Third-day following. I was with him most of the time, wherein he spoke many living powerful sentences to the tendering of the company present. There was no sign of any great pain, neither did he ever complain. Robert Widder's manner of departure and his were much alike, for I saw them both ; only George shut his eyes himself—he lay as if he had fallen asleep. One would have thought he smiled. He was the most pleasant corpse that I ever looked upon. Many hundreds of Friends came to see his face ; having the most part of three days to behold it before the coffin was nailed up."

Many testimonies were issued after the death of George Fox, illustrative of the remarkable features of his character, his life, and his mission. His wife wrote at some length. His step-daughters and their husbands put forth another document ; William Penn a third ; and Thomas Elwood a fourth ; beside an official testimony from the London morning meeting.

That from the pen of his friend Thomas Elwood, who was likewise the intimate friend of John Milton and of William Penn, shall be transcribed as being brief, full, and comprehensive. No man knew him more thoroughly than Elwood, on whom devolved the preparation of his journal for the press :—

"Thomas Elwood's account of that eminent and honorable Servant of the Lord, George Fox.

"This holy man was raised up by God in an extraordinary manner, for an extraordinary work, even to awaken the sleeping world, by proclaiming the mighty day of the Lord to the nations ; and publishing again the everlasting Gospel to the inhabitants of the earth, after a long and dismal night of apostacy and darkness. For this work the Lord began to prepare him by many trials and exercises from his very childhood, and having fitted and furnished him for it, He called him into it very young, and made him instrumental by the effectual working of the Holy Ghost, through his ministry, to call many others into the same work, and to turn many thousands from darkness to the light of Christ, from the power of Satan unto God.

"I knew him not till the year 1660; from that time to the time of his death, I knew him well, conversed with him often, observed him much, loved him dearly, and honored him truly. Upon good experience I can say he was indeed a heavenly-minded man, zealous for the name of the Lord; and preferred the honor of God before all things. He was valiant for the truth, bold in asserting it, patient in suffering for it, unwearied in laboring in it, steady in his testimony to it, immovable as a rock. Deep he was in Divine knowledge, clear in opening heavenly mysteries, plain and powerful in preaching, fervent in prayer. He was richly endued with heavenly wisdom, quick in discerning, sound in judgment, able and ready in giving, and discreet in keeping counsel. A lover of righteousness; an encourager of virtue, justice, temperance, meekness, purity, chastity, modesty, humility, charity, and self-denial; in all, both by word and example. Graceful he was in countenance, manly in personage, grave in gesture, courteous in conversation, weighty in communication, instructive in discourse, free from affectation in speech or carriage. He was a severe reprover of hard and obstinate sinners, a mild and gentle admonisher of such as were tender, and sensible of their failings, not apt to resent personal wrongs, easy to forgive injuries, but zealously earnest, where the honor of God, the prosperity of Truth, and the peace of the Church were concerned. Very tender, compassionate, and pitiful he was to all that were under any sort of affliction; full of brotherly love, full of fatherly care; for indeed, the care of the Churches of Christ was daily upon him, the prosperity and peace whereof he studiously sought.

"Having fought a good fight, finished his course, and kept the faith, his righteous soul, freed from the earthly tabernacle, in which he had led an exemplary life of holiness, was translated into those heavenly mansions, where Christ our Lord went to prepare a place for His servants, there to possess that glorious crown of righteousness which is laid up for, and shall be given by the Lord, the righteous Judge, to all them that love his appearance. Ages to come and people yet unborn shall call him blessed, and bless the Lord for raising him up. And blessed shall we also be if we so walk, as we had him for an example, for whom this testimony lives in my heart. He lived and died the servant of the Lord."

George Fox left directions as to the disposal of his property, written at different intervals, all in his own handwriting, which constituted a legal will, though not written in legal form. It was deposited eight years after his death in the Prerogative Court of Canterbury, from whence a copy has been procured. He makes in his will various bequests to his friends and relatives;

and gives many directions about his books and papers. But the grants of land in Pennsylvania, which he had from his friend William Penn, are not bequeathed therein or alluded to at all. This and other circumstances lead to the conclusion, that during his lifetime he conveyed his right to the greater portion of that American property to his three sons-in-law, John Rous, Thomas Lower, and Daniel Abraham; and that he directed them, when put in possession, to see that the smaller lots which lay in and near the city were transferred to the Friends of Philadelphia, to be appropriated according to specific directions, which he gave in writing. The history of this property, as communicated by Philadelphia Friends, to whom I recently applied for information, is as follows:

"In the year 1681, William Penn gave to George Fox a receipt for £25, which was to entitle him to a city lot in the newly-planned city, a liberty lot of sixteen acres in the suburbs, and a tract of 1,250 acres in the back lands of Pennsylvania. The £25 of purchase-money, being understood to be a necessary item to secure the legal transfer. There being no one in America interested in getting these lots of land located and properly conveyed to George Fox, nothing was done to perfect the possession until after his death. Some years after that event, Thomas Lower took measures to have them surveyed, and his father's directions concerning the way in which they should be used made fully known. At that time the city lot having been taken possession of by a settler, who built upon it, could not without much difficulty be obtained. But William Penn said the Friends might select twenty or twenty-five acres, according to the locality fixed on in the neighborhood of the city, instead of the sixteen, and the city lot, at first proposed, and it should be transferred to them in the name of George Fox. After much delay, that transfer was accomplished on the 28th day of Sixth month, 1705. For many years the land in question was merely occupied as pasture ground.

On the 13th of Twelfth mo., 1716, Thomas Lower wrote to David Lloyd, William Penn's deputy, concerning the occupation of the ground bestowed by George Fox. He says:—"George Fox gave it in the said writings unto the Friends of Philadelphia to be converted to these uses. . . . To build a meeting-house for the use of Friends, and a school-house upon another part, and to inclose another part for a garden, and to plant it with all sorts of physical plants, for lads and lasses, to learn simples there, and the uses to convert them to,—distilled waters, oils, ointments, &c. The residue that belonged to the lot near Philadelphia to be paid about for Friends that come to the Meeting, to put their horses in." In this letter, Thomas Lower seems to be remonstrating with the

Friends for not having carried out the expressed wishes of the donor. They had doubtless built meeting-houses elsewhere before they got possession of the land in question, and had also probably such schools established as they deemed necessary, hence no such erections up to that time had been made. As to the garden that was to be planted with all sorts of physical plants for the botanical studies of the lads and lasses of Philadelphia, the Friends of that day it is evident did not enter into the views of their honored and revered friend who presented the ground for that purpose. Had they understood the great value of such a botanical garden, with suitable appliances for teaching the qualities and medicinal uses of plants, they would probably have made more efforts to have carried out the plan he suggested.

In the year 1767, the heirs-at-law of George Fox, being the descendants of his brother John, several of whom had settled in Pennsylvania, came forward to claim all the ground in possession of the Philadelphia Friends, that had come through their great grand-uncle. On what plea they made the claim is not quite clear. My American correspondent thinks it was grounded on some informality in the transfer, that impaired the title, but from the existing state of affairs, it might probably have been from the non-appropriation of the grant to the purposes stated by George Fox. However, the Friends agreed to submit the case to a legal arbitration, which gave an award against them, according to which they had to pay the sum of £500 to the claimants for a clear title to the ground in question. In the early part of this century, by the joint approval of the five monthly meetings of Philadelphia, the ground thus obtained was all sold for building lots, except a portion which constitutes a part of the Fair Hill burial-ground, which is the property of the Green Street monthly meeting.

Thomas Lower, in 1715, purchased from Daniel Abraham, and John Rous's son Nathaniel, their claim to the American estate which was transferred by George Fox to the three brothers-in-law. In the letter before quoted, which Thomas Lower wrote to David Lloyd, in 1716, four years before T. L.'s death, he says he gives the whole of his American property to his grandsons, William Swan and Thomas Swan; the elder of whom he had sent "to the West Indies by a sober master," the other he intended to bring up "to some good trade when he hath been a while longer at school." I cannot find that either William or Thomas Swan ever came into possession of the property thus laid out for them by their grandfather. In 1738 Thomas Story wrote to Israel Pemberton, sen., requesting him on behalf of a young woman, a descendant of Thomas Lower, to whom the American estate belonged by inheritance, to

have it surveyed; which Israel Pemberton attended to, and found that it measured full 1,300 acres, fifty having been allowed for public roads. The land had been entered upon without liberty by German emigrants, who would gladly have purchased from Israel Pemberton, but he was not authorized to sell; and how the interest in it was afterwards disposed of, does not appear. However, when the French war broke out, in 1756, some Indian allies of the French came down on the people of the Ooterara Creek, where this land was located, and having killed a few of the settlers, frightened the rest away.

We begin to be filled with the life of God when self is silenced in all its willings and desirings, and when we find that all desires to act from our own wills are dormant.

We are filled with the life of heaven just so far as we are emptied of our own, and find in us an utter inability to do good without Divine assistance.

Every man is an agent by whom God wills to bless others, according to the ability of the agent; and every order of fibres and fluids in him were created to the intent that it might be performed; but they are often perverted to very opposite purposes.—*Rays of Light.*

For Friends' Intelligence.

THE MINISTRATIONS OF THE MATERIAL WORLD.

These flow in upon us like heavenly benedictions. They salute us in the language of a Father's love, sometimes in the sweet and gentle whispers of the evening breezes, which soothe and invigorate, or in the morning dews, which refresh and gladden the heart. We may ever trust in Him, who "weighs the mountains in scales, and the hills in a balance," for He knows our state, and remembers we are but dust. In his great goodness he has provided for every condition, supplies plenteous and multifarious, that all, various as they are, should subserve the necessities of his children. The firmament sheweth his handiwork. He has decked it with gems that sparkle and shine, emitting a brilliance that speaks a power divine. All these invite us to come to Him who set them in their own orbits, and commanded them to run their course and minister to the enjoyment of intelligent beings, by gilding the arch above with brightness when the shades of night appear. He that gave us a keen relish for the beautiful, has abundantly supplied material suited to the most exquisite taste. Whichever way we turn the eye, we see something to admire. He has stationed his ministers at every turn,—around, above, and below,—inviting his children to partake of pure pleasures and innocent enjoyments,—to drink in the streams that

flow through channels of his own preparing, and which minister to their real wants, and never harm. The firmament that divides the waters from the waters, the vast expanse of blue ether that bears up the clouds, and stays the rain of heaven until the appointed time, when it descends in small particles and waters the earth, instead of coming as a deluge to sweep it away. How can we do other than magnify that Power that made and upholds all things, and through these ever-varying ministrations calls us home to himself. S. HUNT.

Fifth mo 1st., 1866.

THE NEW LIFE.

When all that has separated from God is taken away,—when every inordinate desire has undergone the process of excision so as to be reduced into its place, and to be put into entire position and agreement with the one overruling desire of conformity to God's will, then begins the new life in the higher sense of the term. The soul no longer possesses anything which it call its own, but may rather be spoken of as a *subject*; and instead of *possessing*, may be said to be *possessed* by another; God himself comes to it, and dwells in it, as in His holy temple. It is not only obedient to God, which is a high state of grace, even when it costs considerable effort to render obedience; but its obedience is rendered in such a manner so promptly and lovingly, that God may be said to be its life. The soul has become nothing in itself, but it has gained all things out of itself. Disrobed of the life of *nature*, it is clothed with the life of *grace*; it has lost the inspiration and life of the creature, but it has gained the life of God. And now, there is nothing that has God in it, but what is its delight. The sky expands with purer beauty; the flower opens with a sweeter fragrance; in the forest and on the river's banks it finds food for contemplation and holy love; it rejoices with those that rejoice, and weeps with those who weep; it is young and buoyant with the child, and wise and reverent with the aged; everything in human life is dear to it; it pities and forgives its enemies; like Him who is embodied in it, it does good to the evil and unthankful; tears are dried at its approach, and smiles bloom at the presence of its loveliness.

Those who have never experienced the transformations of thoroughly sanctifying grace, know but little of the purity, the peace, and the blessedness of such a soul. It has but little to say of itself; it has no dreams, no visions, no ecstasies. We mean to say that it makes no account of them separate from God. It lives by faith and not by sight. *Believing*, it asks nothing more. Its new life is all natural to it; a life which lives and acts of *itself*, without calculation and without effort. It is humble with-

out knowing or speaking of its humility; it is divinely wise without analysing its wisdom; it is full of kindness and love apparently without any consciousness how kind and loving it is. It worships God even without formally thinking of God, because the kingdom of God is within it. It is not more full of faith than it is of holy simplicity. It is like a little child. — *Guion*.

From Meditations on Death and Eternity.

DEATH IS MY GAIN.

The human body with which we are invested on earth, is but the veil of the soul, and we should ever hold in mind this relation between soul and body, for this conception is not only true in itself, but is fruitful of important conclusions bearing upon life.

The Deity willed that the spirit of man should be capable of placing itself in communication with the non-spiritual existences, therefore it was enveloped in a refined earthly material, every part of which is vivified by the spirit. Through means of a tissue of nerves, so delicate as scarcely to be perceptible to the naked eye, and which interpenetrate the entire body, the soul holds command over the latter. Through the body the soul receives impressions from without, which tend to its improvement, and it gradually learns to avail itself of the body as an instrument of action upon the outward world. If the bodily veil be rent in twain, if the instrument be destroyed, the spirit loses its power over its former habitation, which becomes as foreign to it as all other earthly matter. This estrangement between soul and body is called death.

The body is a transparent covering of the soul. In all movements and changes, in repose as in action, we recognize the soul behind the appearances of the body. It is not the body that loves or is angered; it is the soul that speaks in thundering accents through the instrumentality of the voice, and which smiles in the merry glance of the eye; it is the shame felt by the soul that suffuses the cheek with blushes; it is the soul's courage, terror, longing, or suffering that is shown in the various expressions of its outward covering. For when the soul is separated from the delicate and mobile covering, which we call body—what becomes of the latter? It sinks down and lies like a discarded garment. It grows rigid like a marble statue, and we can hardly believe that these dead ashes have ever been animated by a higher essence.

It is not either the body that we love or hate in others, but the soul which is concealed behind its veil. It is the soul's loveliness that charms us; its wisdom or its virtue which inspires us with respect; its degeneracy that awakens our indignation. In the presence of the soul-abandoned corpse, all love and hatred

cease, for our friend or our foe has disappeared, and his discarded covering makes no more impression on us than any other dead matter.

Natural as it is that no one should love the body of another, but on the contrary, the soul that beams forth from it, as natural is it that each man should love the body in which his own soul is clothed. He seeks to protect and improve it, because the soul requires a worthy and efficient instrument; he endeavors to adorn and beautify it, because the innate and constant yearning of the soul for perfection and distinction, involuntarily passes over to that which is most intimately connected with it. The soul even strives, in the feeling of its own unworthiness, to cover its own failings by the beauty of its earthly veil; it tries to draw the folds of this more closely around itself, in order that it may not be seen in its ugliness—and of such persons we say that they present a false appearance.

The necessity that each soul should be clad in a veil of flesh, is one of the eternal ordinances of the Deity. Hence the deep and strong love of the soul for its body; hence that clinging to life which it is almost impossible to overcome.

But what is death? Nothing but the separation of the soul from its earthly covering. What becomes of the covering when discarded? Does it vanish from God's creation? No, it moulders into dust and ashes, and mingles with the rest of the earth, out of whose nourishing elements it was originally built up. It does not go out of creation, but remains in it available for other purposes. But what becomes of the unveiled soul? Does that vanish from God's creation? Oh, no! How could it be possible that the nobler element should cease to exist, when the baser one is imperishable? Are we to believe that it has been removed from the infinitude of created beings, because it has thrown off the veil through which alone it could reveal its presence to our senses? Nay, it lives! For even the dust in which it once enveloped itself is still in existence. It lives! For God is Creator, not annihilator! It lives! For the All-wise cannot have repented of the exalted purpose for which he called it into being.

And is the throwing off of this earthly veil so very painful? It is true the natural love of life which the Creator has implanted in us, makes us recoil from the thought of parting from our earthly covering; but the strength of the human spirit can conquer the terrors of nature. How many noble men have not met death in the cause of God, fatherland, faith or friends! They felt no fear of death. How many poor, weak, degenerate beings have not, driven by despair, voluntarily sacrificed a life that had become a burden to them!

The dying do not practise hypocrisy, and therefore from their features we may judge what is passing in their minds. This being the case, it would almost appear that a pleasurable feeling must be experienced when the spirit is leaving its mortal coil; for it has been frequently observed that the features of persons who are dying from painful diseases, at the last moment assume an expression of cheerful repose, and that even around the lips of the corpse a placid smile, left by the spirit in parting, lingers, and seems to say, "Ah, what blessed relief!"

But the imagination of those persons who attach too much importance to the body, and who therefore shudder at the idea that it is to be delivered up to destruction in the earth, makes death more terrible than it is in reality. Giving way to self-delusion, they even at times seem to fancy that the dead dust feels painfully its state in the earth, whereas in fact that which feels has hastened into a higher existence, and the corpse, the discarded veil of the spirit, is nothing more than insensible clay.

Parting from the habitual and pleasant relations of life, the loss of well-known pleasures, and separation from beloved friends on earth, may indeed be painful. But in these cases it is not death itself, but that which we leave behind us, that causes us to mourn. It is our undue attachment to the earthly goods which have only been lent to us, and were never intended to be our lasting possessions, that occasions the grief which we experience. It is therefore an imperfection of the soul, a want of true wisdom, which entails suffering, as does every fault. Yea, even the love we bear our friends may be reprehensible. Can we expect that the Deity will take our obstinate attachments into consideration, and alter His higher purposes to suit our views? And in what does the parting from our beloved in death differ from every other parting, even from the "good night" we wish our friends before we go to sleep?

Death may indeed be fearful to those who have entirely, or in great measure, neglected their immortal soul in this life, who—like the animals thoughtless of the future beyond the grave—have only taken heed for the well-being and enjoyment of their bodies; who have oppressed their fellow-men, or slandered and deceived them, in order to gain for themselves more honors, more riches, and more enjoyment; to whom it seems preposterous to restrain their sensual desires, their animal instincts, in order to strengthen the power of their souls; who call it folly to sacrifice earthly pleasure for the sake of virtue; who consider it silly enthusiasm to work for the good of others, when no thanks are to be reaped, or when persecution and great sacrifices must be encountered.

When the moment has come for such persons to throw off the earthly coil, the body they so much love, for which alone they think God has created them; when they are to part from the dust, for which alone they lived, to which they sacrificed all things, for which they committed so much injustice—to them indeed death must be terrible. For poor, unworthy, miserable, imperfect are their neglected souls, which have lost the sweet innocence of which they could boast in childhood, and which are now loaded with the burden of many sins. As they sowed in life, so they have reaped. For the eternal future of their spirit they never sowed.

(To be continued.)

"As the mustard seed becomes in time the strong and flourishing plant, so the feeble *faith* becomes in due time, under the fertilizing effects of the Spirit of God, the strong, and stable, and durable tree. Like the new-born infant, which can neither speak nor stand alone, but is carried in the arms of others, and lives upon nothing but the simplest aliment, feeding and crying occupying the earliest hours of life; such is, generally speaking, the true and genuine faith of the infant believer; an alternate state of hungering for the Word of God, and of sorrowing for sin; unable to stand alone, looking for the aid of stronger Christians to bear it up, glad of every little help to carry it forward in its infant course. But while this is the infancy of faith, if it be a true faith, every day and every hour is giving it strength, and bringing it forward into manhood; it does not lie in the heart like a stone, unchanged and unchangeable, but like a prolific seed in the fertile earth, realizing what St. Paul expresses when he says, 'The righteousness of God is revealed from faith to faith;' from one degree of faith to another."

CHORAZIN—BETHSAIDA—CAPERNAUM.

Before the morning sun overtopped the hills of Bashan, I was in the saddle. A ride of three miles westward along the shore brought me to the ruins of a large town. It was encompassed by such a dense jungle of thorns, thistles and rank weeds, that I had to employ some shepherds to open a passage for me. Clambering to the top of a shattered wall, I was able to overlook the whole site. What a sense of desolation was that! Not a house, not a wall, not a solitary pillar remains standing. Broken columns, hewn stones, sculptured slabs of marble, and great shapeless heaps of rubbish half concealed by thorns and briars, alone serve to mark the site of a great and rich city. The Arabian does not pitch his tent there, the shepherd does not feed his flock there, not a sound fell upon my ear as I stood amidst those ruins, save the gentle murmur of each wave as it broke on the

pebbly beach, and the mournful sighing of the summer breeze through sunscorched branches; yet it is the place where Chorazin once stood. Chorazin heard, but rejected the words of mercy from the lips of its Lord, and he pronounced its doom, "Woe unto thee, Chorazin!" Matt. 11: 21.

After riding some three miles further along the lake, I reached a little, retired bay, with a pebbly strand, just such a place as fishermen would delight to draw up their boats and spread out their nets upon. Here were numerous fountains, several old tanks and aqueducts, great heaps of rubbish, and fields of ruin. Two Arab tents were pitched a little way up on the hillside, but I saw no other trace there of human habitation or human life; and yet that is the site of Bethsaida, the city of Andrew and Peter, James and John. Upon this strand Jesus called his first disciples. Like Chorazin, this city heard and rejected his words, and, like Chorazin, it has been left desolate. "Woe unto thee, Bethsaida!"

A few minutes more and I reached the brow of a bluff promontory which dips into the bosom of the lake. Before me now opened the fertile plain of Gennesaret. At my feet, beneath the western brow of the cliff, a little fountain burst from a rocky basin. A fig-tree spreads its branches over it, and gives it a name, Ain-et Tin, "the fountain of the fig." Beside it are some massive foundations, scarcely distinguishable amid the rank weeds; and away beyond it almost covered with thickets and thorns, briars, and gigantic thistles, I saw large heaps of ruins and rubbish. These are now all that mark the site of Capernaum. Christ's words are fulfilled: "And thou, Capernaum, which art exalted unto Heaven, shalt be brought down to hell." Matt. 11: 23.

On that day I climbed a peak which commands the lake and the Jordan valley up to the waters of Merom. The principal scene of Christ's public labors lay around me, a region some thirty miles long and ten wide. When he had his home at Capernaum, the whole country was teeming with life and bustle and industry. No less than ten cities with numerous villages studded the shores of the lake and the plains and the hill-sides around. The water was all speckled with the dark boats and white sails of Galilee's fishermen. Eager multitudes followed the footsteps of Jesus through the city streets, over the flower-strewn fields, along the pebbly beach. What a woful change has passed over the land since that time! The angel of destruction has been there.

From that commanding height, through the clear Syrian atmosphere, I was able to distinguish, by the aid of my glass, every spot in that wild region celebrated in sacred history or hallowed by sacred association. My eye swept

the lake from north to south, from east to west; not a single sail, not a solitary boat was there. My eye swept the great Jordan valley, the little plains, the glens, the mountain-sides from base to summit—not a city, not a village, not a house, not a sign of settled habitation was there, except the few huts of Magdala and the shattered houses of Tiberias. A mournful, solitary silence reigned triumphant. Desolation keeps unbroken Sabbath in Galilee now. I saw how wondrously time had changed a prophetic sentence into a graphic reality.

"I will make your cities waste, saith the Lord; I will bring the land into desolation. I will scatter you among the heathen." "Upon the land shall come up thorns and briers, yea, upon all houses of joy, in the joyous city." "So that the generations to come of your children that shall rise up after you, and the stranger that shall come from a far land, shall say when they see the plagues of that land, Wherefore hath the Lord done thus unto this land? What meaneth the heat of this great anger?" Jer. 26; Isa. 32; Deut. 29.—*Porter's "Cities."*

FRIENDS' INTELLIGENCER.

PHILADELPHIA, FIFTH MONTH 26, 1866.

FRIENDS TRAVELLING IN THE MINISTRY.—Minutes have been obtained from Baltimore Monthly Meeting for the following Friends: for Samuel Townsend, Mary M. Needles and John Needles, the latter as companion, to New York Yearly Meeting, and for Rebecca Turner, as companion to R. Price, in attending Genesee Yearly and some other meetings.

PHILADELPHIA YEARLY MEETING.—In addition to the information furnished last week, we may state the following particulars, referring our readers to the Extracts for a full account of the interesting proceedings. The meeting was about as large as usual and was attended throughout with remarkable solemnity and harmony of feeling.

On Second-day afternoon a Committee was appointed on the Treasurer's account. The proposition from Philadelphia Quarterly Meeting in relation to marriages, referred by last Yearly Meeting to the consideration of this, was introduced by the reading of the minutes, and after a free interchange of sentiment, was generally united with, and directed to the attention of the Quarterly Meetings through the Representatives, to be inserted in

our Book of Discipline. A deputation from Women's Meeting informed that they had arrived at a similar conclusion. A proposition from Philadelphia Quarterly Meeting, to make some change in the Queries, was also submitted to a committee.

On Third and Fourth days the meeting was occupied in a consideration of the State of Society as presented in the answers to the Queries, during which much harmony prevailed, and the expression gave evidence of a united exercise for the advancement of the Truth. On this day a mother in Israel made an acceptable visit. A Committee was also appointed in the case of an appeal from the judgment of Abington Quarter.

On Fifth day morning, the several meeting houses of Friends were opened for public worship and well attended; meetings were held in the north and south ends of the house on Race and Cherry Streets.

In the afternoon, the Minutes of the Representative Committee were read and their proceedings approved. The Quarterly Meetings furnished names of members of the Representative Committee, and also the names of Correspondents, in their various Monthly Meetings, all of which were directed to be published in the Extracts.

The Committee on the proposition from Philadelphia Quarter made a report favorable to the proposed change. The report was directed to be published in the Extracts for general information, and the whole subject was referred for final action another year.

The Committee on the Treasurer's account made a report which was approved, recommending that \$2,000 be raised for the service of the Yearly Meeting this year, and the re-appointment of William P. Sharpless as Treasurer.

The Committee on the Appeal confirmed the judgment of Horsham Monthly and Abington Quarterly Meetings.

The concern of the Yearly Meeting on the divided condition of those who are recognized as members of the Society of Friends was revived by the reading of the minute which referred the subject to the consideration of this meeting.

An interesting and harmonious interchange

of sentiment followed, and the clerk made a suitable minute recording the sense of the meeting, and recommending the subject to the individual feelings of Friends.

Sixth-day morning.—A memorial prepared by Haddonfield Monthly Meeting, approved by Haddonfield Quarter, concerning Mary G. Allen, was read, approved, directed to be recorded and published with the Extracts.

The Committee appointed to prepare and forward the address adopted last year, to the President and Administration, made a written report, which gave some interesting details of their visit to Washington, &c., which was directed to be published in the Extracts.

The Committee on Epistles produced one which was directed to be forwarded to the five Yearly Meetings, with which this is in correspondence.

A minute embracing some of the exercises was then read and united with, and a Committee was appointed to assist the clerks in transcribing and forwarding the Epistles and publishing the Extracts.

A period of solemn silence ensued, in which vocal supplication was offered, soon after which the Clerk read the closing minute, expressive of the gratitude felt for the love and harmony which had prevailed throughout the several sittings.

PHILADELPHIA YEARLY MEETING OF WOMEN FRIENDS—Soon after the meeting was opened, the clerk made a few remarks in allusion to the removal by death of many who on similar occasions have assembled with us. A time of silence succeeded, during which supplication arose that nothing of a disturbing character might be permitted to affect our deliberations, but that harmony and love might be in us and abound to our strength and refreshment.

The representatives in attendance and the reading of the Epistles were noticed last week.

The proposition in relation to the accomplishment of marriage, left over from last year, was again considered and adopted.

A proposition from Philadelphia Quarterly Meeting, suggesting slight alterations in the arrangement of some of the Queries, was referred to a joint committee, and subsequently

laid over for further consideration, another year.

Reports from our several Quarterly Meetings and the Half-Year's Meeting, brought before us the state of Society throughout our boarders, and in many respects evinced much to encourage. The prevalence of love and unity among us; the care extended over those who need aid; the moderation observed at social and other entertainments; the punctuality exercised in the payment of debts and in the fulfilment of promises, and the general care to live within the bounds of individual circumstances, reasonably excited joy and gratitude.

On the other hand, the remissness, in many places, in the attendance of meetings, especially those held during the week; the disposition manifested by some to indulge in luxury and extravagance; the indifference to the important duty of securing a guarded education for the children; the want of concern for the advancement of the testimony to a free gospel ministry, and an indulgence to some extent, in the spirit of war, brought many under deep exercise, and frequent and urgent appeals were made, inciting to a more intelligent and faithful support of the vital testimonies of Truth of which we make profession.

At the last sitting on Sixth-day morning, an interesting and instructive memorial was read for our late beloved friend Mary Allen.

Throughout all the different sittings unusual harmony and love abounded, and it was the universal acknowledgment that it was good for us to have been together.

Epistles were forwarded to the five Yearly Meetings in correspondence with us.

DIED, on the 4th of Third month, 1866, at his residence in Newtown, Delaware Co., Pa., HENRY PRATT, in the 75th year of his age; a member of Goshen Monthly Meeting.

ERRATUM.—In extract from Samuel M. Janney's letter, last week, page 169, for "inscrutable principles" read *immutable principles*.

Instead of clutching to props which cannot elevate you, or if they do bear you up for a moment, must soon be withdrawn again,—the Gospel bids you grow against the Tree of Life and just as you grow up into Christ,—you will grow up into holiness and into happiness. And if you have not yet found an object to your heart's content,—if you feel that there is still something wrong with you,—that you are

neither leading the life which you would like to lead, nor enjoying the comfort which you think might be somehow got, be advised. Take the Lord Jesus for your friend. He is one in whom you will find no flaw. He is one of whom, if you really get acquainted with Him, you will never weary; and one who, if once you really go to Him, will never weary of you.—*Hamilton.*

• GROWTH OF THE SOUL.

It is not more the nature of matter to attract than that of a soul to grow. Each step towards goodness leads to and facilitates subsequent advance, just as the force of attraction increases in the inverse ratio of the squares of the distance. The nearer, the stronger is the law for both. At the beginning of the moral life, when we make our first steps towards virtue, all seems weakness, doubt, and hesitation. At the climax of mortal goodness we see that the saint's footing stands secure on the angel's ladder, whose summit is lost in heaven's splendors. Though the clouds of death roll between us, we know that he is ascending still beyond our straining sight.*

Nor can there be any end to this ascension of the immortal soul. There is no reason whatever to doubt that the virtue of finite intelligences, being never capable of attaining absolute perfection, is infinitely progressive toward it. Through the infinite number of grades which divide the soul from such perfection, there is nothing to arrest its journey, but one degree must forever facilitate the attainment of the next with ever-growing security and rapidity. As in mathematics, so in morals, there is an infinite approximation, an asymptote which as it is produced approaches continually, yet never reaches, the hyperbola. When the soul now grovelling in sin should have struggled up to better life, when the sinner should have become a saint, and the saint should have passed through all the gradations of excellence our imaginations attribute to the seraphic ranks of the noblest created spirits, at the highest pinnacle of the spiritual universe, he would not have reached perfection,—he would still see infinitely between himself and the holiness of God.

If we believe in this unbounded power of growth in the human soul, its capacity for endless progress, we cannot, I think, fail to recognize such capacity as the most important attribute of a finite intelligence. In comparison of

* The old Druids held distinctly this great truth, that human life is a Progress from "Abred," the state of Evil to "Gwynnyd," the state of Knowledge and Felicity. "The Brahmins regard the present life merely as the conception of persons presently to be born, and death as a birth into a life of reality and happiness to those who rigidly philosophize."—STRABO, Lib. V. v. 712, from Megasthenes.

the ideas of Godlike goodness, ineffable peace, purity, and magnanimity, which thus open to us as possible for us, all the delights of this life, the kingdoms of the world and the glory of them, seem unworthy of a thought. We feel that the one thing real in this world of shadows is the state of the soul, its progress towards or its retrogression from this glorious bourn. And God, who sees even now down the far-off cycles of the future the blessed virtue to which the child of clay may, ay, *shall*, assuredly attain, must not *He* set forth that consummation so prominently as the end of his creation that in comparison thereof the pleasures of this life shall be accounted but as the toys of an infant, to the throne he shall inherit hereafter? Who will say Goodness seeks but the Happiness of the creature? It would not be goodness, but direst cruelty, which should set our happiness on earth before our virtue through all eternity.—*Intuitive Morals. F. P. Cobbe.*

From the Atlantic Monthly.

TO-MORROW.

BY H. W. LONGFELLOW.

'Tis late at night, and in the realms of sleep
My little lambs are folded like the flocks;
From room to room I hear the wakeful clocks
Challenge the passing hour, like guards that keep
Their solitary watch on tower and steep;
Far off I hear the crowing of the cocks,
And through the opening door that time unlocks
Feel the fresh breathing of To-morrow creep.
To-morrow! the mysterious, unknown guest,
Who cries aloud: "Remember Barmecide,
And tremble to be happy with the rest."
And I make answer: "I am satisfied;
I dare not ask; I know not what is best;
God hath already said what shall betide."

From the Evening Post.

LEARNING TO WALK.

Only beginning the journey,
Many a mile to go;
Little feet, how they patter,
Wandering to and fro.
Trying again, so bravely,
Laughing in baby glee:
Hiding its face in mother's lap,
Proud as a baby can be.
Talking the oddest language
Ever before was heard;
But mother (you'd hardly think so)
Understands every word.
Tottering now and falling,
Eyes that are going to cry,
Kisses and plenty of love words,
Willing again to try.
Father of all, O! guide them,
The pattering little feet,
While they are treading the up-hill road,
Braving the dust and heat!
Aid them when they grow weary,
Keep them in pathways blest,
And when the journey's ended,
Saviour, O! give them rest.

GEORGE COOPER.

MANNERS.

BY MARY G. CHANDLER.

"There is something higher in Politeness than Christian moralists have recognized. In its best forms, as a simple, out-going, all-pervading spirit, none but the truly religious man can show it; for it is the sacrifice of self in the little habitual matters of life,—always the best test of our principles,—together with a respect, unaffected, for man, as our brother under the same grand destiny."—O. L. BRACS.

"Manners are what vex or soothe, corrupt or purify, exalt or debase, barbarize or refine us, by a constant, steady, uniform, insensible operation, like that of the air we breathe in."—BUCKE.

Manners are the most external manifestation by which men display their individual peculiarities of mind and heart; and unless used artificially to conceal the true Character, they form a transparent medium through which it is exhibited.

It has been sarcastically asserted, that few persons exist who can afford to be natural; and it is probable that, if the human race were to allow their manners to be perfectly natural, that is, were they too allow all the passions of the soul to display themselves without restraint in their Manners, social intercourse would become insupportable.

Among the merely worldly, the difference between an ill-bred and a well-bred person is that the former displays his discomfit, ill-humor or selfishness in his Manners, while the latter conceals them all under a veil of suavity and kindness. Selfishness prompts the one to be rude, and the other to be hypocritical, and each is alike unworthy of commendation.

Manners are the garments of the spirit; the external clothing of the being, in which Character ultimates itself. If the Character be simple and sincere, the Manners will be at one with it; will be the natural outbirth of its traits and peculiarities. If it be complex and self-seeking, the Manners will be artificial, affected, or insincere. Some persons make up, put on, take off, alter, or patch their Manners to suit times and seasons, with as much facility, and as little apparent consciousness of duplicity, as if they were treating their clothes in like fashion. If an individual of this class is going to meet company with whom he wishes to ingratiate himself, he puts on his most polished Manners, as a matter of course, just as he puts on his best clothes; and when he goes home, he puts them off again for the next important occasion. For home use, or for associating with those about whose opinion he is indifferent, no matter how rude the Manners, or how uncared for the costume. Perhaps the rudeness may chance to come out in some overt act that will not bear passing over in silence, and then the perpetrator utters an "Excuse me," that reminds one of a bright new patch set upon an old, faded garment. Not that

such a patch is unworthy of respect when worn by honest poverty, and set on with a neatness that makes it almost ornamental. This is like the "Excuse me" of a truly well-bred man, apologizing for an offence he regrets; while the "Excuse me" of the habitually rude man is like the botched patch of the sloven or the beggar, who wears it because the laws of the land forbid nakedness.

The fine lady of this class may be polished to the last degree, when arrayed in silks and laces she glides over the rich carpets of the drawing room; and yet, with her servants, at home, she is possibly less the lady than they; or worse still, this fine lady, married, perhaps, to a fine gentleman of a character similar to her own, in the privacy of domestic life carries on a civil war with him, in which all restraint of courtesy is set aside.

There is so much undeniable hypocrisy in the high-bred courtesy of polished society, that among many religious persons there has come to be an indifference, nay, almost an opposition, to Manners that savor of elegance or courtliness. If, however, Christian charity reign within, rudeness or indifference cannot reign without. One may as well look for a healthy physical frame under a skin revolting from disease, as for a healthy moral frame under Manners rude and discourteous; for Manners indicate the moral temperament quite as accurately as the physical temperament is revealed by the complexion. Selfishness and arrogance of disposition express themselves in indifferent, rude, or overbearing Manners; while vanity and insincerity are outwardly fawning and sycophantic. If Christian charity reign in the heart, it can fitly express itself only in Manners of refinement and courtesy: and the Christian should not be unwilling to wear such Manners in all sincerity because the worldling assumes them to serve his purposes of selfishness. Worldly wisdom ever pays Virtue the compliment of imitation; but that is no good reason why Virtue should hesitate to appear like herself. The best Manners possible are the simple bringing down of the perfect law of charity into the most external ultimates of social life. Until character tends at all times, and in all places, and towards all persons, to ultimate itself in Manners of thorough courtesy, it is not building itself a sure foundation. The ultimates of all things serve as their basis and continent; therefore must true charity of heart be built upon and contained within true charity of Manner.

When we are in doubt regarding the value of any particular trait of Character, we can generally find the solution of our difficulty by working out an answer to the question, How does it affect our usefulness in society? There are three modes in which we express ourselves

towards those with whom we come in contact in the family and social relations of life,—Action, Conversation, and Manners. The importance of ordering the first two of these expressions aright can hardly be doubted by any thinking being; but that conscience has anything to do with Manners would probably be questioned by many. Let us ascertain the moral bearing of Manners by the test just indicated.

What effect have our Manners upon our usefulness as social beings? Conversation is in general the expression of our thoughts; much more seldom do we express our affections in words. Manners, on the contrary, are the direct expression of our affections. They are to Action what tone is to Conversation. Many persons may be found who make use of falsehood in their Conversation, but very few who can lie in the tones of their voice. So, many persons can act hypocritically, but there are comparatively few whose Manners are habitually deceitful. Our words and actions are more easily under our control than our tones and manners; because the former are more the result of Thought, while the latter are almost entirely the result of Affection. Although few persons are distinctly aware of this difference, every one is powerfully affected by it. There is no physical quality more powerful to attract or to repel than the tones of the voice; and this power is all the stronger because both parties are usually unconscious of it, and so mutually act, and are acted upon, simply and naturally without effort or resistance. Thus conversation often owes its effect less to the words used than to the tones in which they are uttered. An unpalatable truth may come without exciting any feeling of irritation or opposition from one who speaks with a tone of voice expressive of the benevolent affections, and produce much good; while the very same words, uttered in a tone of asperity or bitterness, may exasperate the hearer, and be productive only of harm.

The artificial Manners and laws of social life are so overloaded with conventionalisms, and a knowledge of these is so often made a test of good-breeding, that much confusion of opinion exists regarding the requisites that constitute the true gentleman and lady. These titles belong to something real, something not dependent on the knowledge and practice of conventionalisms that change with every changing season, but to substantial qualities of Character which are the same yesterday, to-day, and to-morrow.

The foundation of good Manners is the sincere acknowledgment that we are all children of one great family, all one band of brothers, each having a right to receive from the rest all the consideration and forbearance that can be given him without diminishing the portion that

belongs to the others. The rich complain of the envy and jealousy of the poor, and the poor murmur because of the arrogance and haughtiness of the rich; yet if those among the two classes who are guilty of these vices were to change positions, they would change vices too; for arrogance in the possessor and envy towards the possessor of wealth are but differing phases of a love for wealth based on the love for that consideration in society which it gives, and not for the power it yields of added usefulness.

(To be continued.)

A living soul! Have you ever had a vision of what a living soul may be, may do, may suffer, may know—the infinite capacity of life? I think sometimes, when I study the harmonies of this body of ours and the creation of the exquisite concords which, even through the dull menstruum of our sin-thickened senses are the springs of the intensest joys; of the rapture with which they shall one day fill the spirit, when these sensual films are shed, and the organ comes fairly into contact with its world.—*The Soul's Exodus.*

From "Harper's Monthly."

THE BURROWERS AT HOME.

The wonderful ingenuity evinced by many animals in the construction of their homes has led the naturalist to persevering researches in tracing out the haunts and ways of those not familiarly known.

It is not often that the lover of nature has opened to him such a rare and curious museum as is exhibited in the volume from which the materials of this article are drawn. The author tells of strange habitations, made without hands, beneath, above, and around us—burrowers, nests, and curious domiciles of every kind, in earth, air, and water. Nor are these presented to the mental vision merely, but are so clearly and elegantly illustrated, that we almost fancy that these strange dwelling-places are really before the eye.

It is impossible within the limits of a single article, to do more than present to the reader of the Magazine a few specimens of these homes—and these are selected from the Burrowers—whose secret localities are rarely noticed, much less investigated, by the ordinary observer.

Yet the burrow is the simplest form of habitation, whether it is in the ground, or in stone, wood, or any other substance.

Among mammalia, the *Mole* ranks first in the list of burrowers. This extraordinary animal, which is found both in Europe and America, forms a complicated subterranean dwelling-place, with chambers, passages, and other arrangements of wonderful completeness. It has regular roads leading to its feeding-grounds;

establishes a system of communication as elaborate as that of a modern railway, or, to be more correct, as that of the subterranean network of metropolitan sewers; and is an animal of varied accomplishments.

It can run tolerably fast, fight like a bull-dog, capture prey under or above ground, swim fearlessly, and can sink wells for the purpose of quenching its thirst.

Take the mole out of its proper sphere, and it is awkward and clumsy; but replace it in the familiar earth, and it becomes a different being—full of life and energy, and actuated by a fiery activity which seems quite inconsistent with its dull aspect and seemingly inert form. The absence of any external indication of eyes communicates a peculiar dullness to the creature's look, and the formation of the fore limbs gives an indescribable awkwardness to its gait.

We need not pity the mole for the dull life we suppose it leads below the ground. There it is happy, and there only can it develop its various capabilities. No one can witness the eagerness with which it flings itself upon its prey, and the evident enjoyment with which it consumes its hapless victim, without perceiving that the creature is exultantly happy in its own peculiar way.

The ordinary mole-hills present nothing particularly worthy of notice. They are the shafts through which the quadrupedal miner ejects the materials which it has scooped out, as it drives its many tunnels through the soil, and if they be carefully opened after the rain has consolidated the heap of loose material, nothing more will be discovered than a simple hole leading into the tunnel. But if we strike into one of the large tunnels, and follow it up, we come to the real abode of the animal.

The central apartment is a nearly spherical chamber, the roof of which is nearly on a level with the earth around the hill, and therefore situated at a considerable depth from the apex of the heap. Around this are driven two circular galleries—one just level with the ceiling, and the other at some height above. The upper circle is much smaller than the lower. Five short descending passages connect the galleries with each other, but the only entrance into the inner apartment is from the upper gallery, out of which three passages lead into the ceiling. It will be seen, therefore, that when a mole enters the house from one of his tunnels, he has first to get into the lower gallery, to ascend thence to the upper gallery, and so descend into its chamber.

There is, however, another entrance from below, by a passage which dips downward from the centre of the chamber, and then, taking a curve upward, opens into one of the larger tunnels.

The use of so complicated a series of cells and

passages is extremely doubtful, since there is reason to believe that the owner, instead of retiring to his fortress to rest, often contents himself with lying in the high-road. Wonderful as is this subterranean abode, it is not the only one constructed by this animal. A nursery is provided, more extended, though simpler, inlaid with dried grass, and intersected by many passages, so that the mother and young may easily escape from any apprehended danger. The walls of all these passages are rendered smooth and hard by the pressure of the mole's fur, so that the earth will not fall in after the severest storm.

The whole life of the mole is one of fury, and he eats like a starving tiger, tearing and rending his prey with claws and teeth, and crunching audibly the body of the worms between the sharp points. A mole has been seen to fling itself upon a small bird, tear its body open, and devour it while still palpitating with life. Nothing short of this fiery energy could sustain an animal in the lifelong task of forcing itself through the solid earth.

A battle between two moles is as tremendous as one between two lions, if not more so, because the mole is more courageous than the lion, and, relatively speaking, is far more powerful and armed with weapons more destructive. Magnify the mole to the size of the lion, and you will have a beast more terrible than the world has yet seen. Though nearly blind, it would be active beyond conception, leaping with lightning quickness upon any animal which it met, and rending it to pieces in a moment. Such a creature would, without the least hesitation, devour a serpent twenty feet in length, and so terrible would be its voracity that it would eat twenty or thirty of such snakes in the course of a day.

When fighting with one of his own species, the mole gives his whole energies to the destruction of his opponent, without seeming to heed the injuries which are inflicted upon himself, exhibiting an extraordinary amount of muscular power concentrated into a very small space.

The mole emerges from the earth with unsoiled fur. This cleanliness is due in part to the peculiar character of the hair, and partly to strong membranous muscle beneath the skin, by means of which the animal gives itself a frequent and powerful shake.

There are many burrowing animals, but the mole is emphatically *the* burrower—the very type of a creature which is intended to pass the whole of an active existence under ground. He absolutely riots in the exuberance of animal spirits and muscular activity, passing through the earth almost like a fish through the water, and giving to its strange and apparently sombre life a poetry and an interest which we fail to

and in the lives of many creatures more richly endowed with external beauty.

Oh, disciple! have you not been wont to regard yourself as occupying, in the Saviour's mind, such a place as a star in the firmament or a leaf in the forest, or at best a sheep in the uncounted fold? If these be your notions, go back to Olivet. Hear the Divine Intercessor exclaiming, "Neither pray I for these alone, but for all who shall hereafter believe through their word;" and hear Him promising, ere His feet stunder from its grassy slopes, "And lo! I am with you alway, even to the end of the world;" and recollect that He, who prayed thus, and promised thus, is He to whom all power is given.—*Hamilton.*

From Talk with my Pupils.

THE LOVE OF NATURE.

BY ELIZABETH SEDGWICK.

It is a great blessing to live in the midst of beautiful scenery from which one can have daily draughts of refreshment to the soul, and find pleasant by-paths from the dusty highway of life; and it is delightful sometimes to go in search of what is lovely and grand in nature, that is beyond our own surroundings. Pursuit has a charm of its own that it super-adds to every object pursued. It is well to enrich, as much as possible, the picture gallery of the memory. There is, besides, great benefit to mind and body, in occasional change of air, of scene, and of occupation.

From an early period in my life as teacher, I have had the habit of taking my pupils on an excursion at some distance, once every summer. The failure to do so has been a rare exception; and I have given them opportunities to become familiar with the high places of nature in our own vicinity, made for the purest worship, and with all her most attractive resorts and hiding-places.

I have been led to believe that, generally, the love of nature, like every other principle of the human mind, although it exists, requires cultivation for its development—I mean in a majority of instances. In some, it is so strong and vigorous, that it expands of itself. To be without it, is a great misfortune, for it is in fact, to be blind, in a most important sense—blind to the glory and beauty of God's wonderful works, to all he has made that can fill the soul with rapture, through the mere seeing of the eye; deaf to ten thousand voices that she utters continually to man—quickenings in him what is best and highest in his nature, and helping to spiritualize it; and incapable of a communion through nature, with nature's God—with whom it is desirable that his creatures should be put, by every possible means, in conscious perceptible relation. It having been, therefore, my study

to cultivate it in my pupils, I have considered all our excursions near and distant, as a part of this training; and I have seen its effect even upon our drivers, who have driven us frequently. They would often, of their own accord, point out beautiful scenes and objects.

I once sat by a brook with a very little child, who listened intently for a little time, and then said, in a soft, sweet voice: "Mother I love to hear the pretty water." Another little child, standing by the window at sunset, and listening to the wind, said: "Mother, what does the wind say to me?" She knew already that it had a language. There are a thousand pretty sayings of children about the moon and the stars. Perhaps one of the prettiest fancies was that of a child, who thought the stars were "gimlet-holes, to let the glory through." As in the infancy of the world, men are supposed to have had communion with God and the angels, which was afterwards lost; so in the infancy of man's being, he often possesses a consciousness of Nature's presence, and a relationship with her, which passes away, as he becomes engrossed with material life, unless cherished like one of the precious germs of his being. Wordsworth expresses something like this sentiment in the following lines:

Heaven lies about us in our infancy;
Shades of the prison-house begin to close
Upon the growing boy;
But he beholds the light, and whence it flows,
He sees it in his joy.
The youth, who daily further from the East
Must travel still, is Nature's Priest,
And by the vision splendid
Is on his way attended.
At length the man perceives it die away,
And fade into the light of common day.

The child's heaven remains spread about him, its kingdom is close at hand, and he is invited "to come" into it, by the flowers all about him, by the shining of the stars, and the whispering of the wind. These constitute the alphabet of Nature's language, by which she reveals herself even to a little child, so that he may afterwards learn to read her book as a story, without an end—or he may become inattentive and indifferent to her, so that she will be to him a "sealed book," and even her glorious handwriting on the walls of the firmament shall have no more significance to him than an undeciphered hieroglyphic.

It is the spirit that giveth life. The man who has no love of nature lives in the midst of lifeless unmeaning forms, from which he is quite isolated, except for certain material purposes. He is not a part of Nature's harmonious whole, but a dry, cold unit. He fills his lungs with the air of heaven, and feeds himself on the fruits of the earth, and enlists the magic potency of the north star in the pilotage of his ships, and yet has no distinct recognition of

the wonderful circle of affinities of which he is himself the centre, linking him with Nature in all her ramifications, and subjecting him to her most subtle influences. He is glad of a bright sun, because it will ripen his grain; of clouds, because they will pour down rain for the same purpose. He is glad of day for labor, and night for rest. The sun is not the king of day, but simply light and warmth, and the facilitator of many plans. The clouds are not His "pavilion round about him" who made them, but rain-sifters. Night is not a peerless queen, with a coronet of diamonds upon her brow, but darkness; day is not an uncovering of the fair face of Nature, and the filling of her countenance with light and beauty, but the opener of workshops and factories, the uplifter of signals for labor, the appointer of task-work. He beholds, without emotion, the perpetually recurring miracle of the morning's dawn—the newly created day. Its freshness is not imparted to his soul; its marvellous beauty, as it gradually bursts into bloom, is not reflected there; its hymn of joy is not heard there; its anthems of praise to its great Author find there no response. He sees not how jocund it "stands on the misty mountain-tops;" how out of its glorious chambers it brings a garment of light wherewith to cover the earth. He has no fellowship with it—it does not bring a corresponding morning in his soul, nor enlarge it by its beautiful expansion; it awakens no gratitude within him.

But one who is in Nature's secrets, who is her lover, and to whom she is a friend and a revealer of God, has his own peculiar share in all her glories and beauties, and is elevated, refreshed and strengthened by them. They confer upon him a kind of state, which he will do nothing to dishonor, among the essential attributes of which are purity, refinement, and nobleness of soul.

Gratitude to God for making the world so beautiful ought to be inculcated. I am often made both sorry and indignant by hearing it spoken of as such a miserable place. Men can mar it to any extent; but God has made it lovely, and spread his tender mercies over it. No season is without its charm. In winter, nature does not die, but lies entranced in great pomp of state. Snow-covered mountains are transfigured, and their raiment is white and glistening. Others have a royal robe of blue, more magnificent than that they wear at any other period. The forms of the bare trees are so beautiful, that you are content not to have them "clothed upon." The fresh snow has the purity of the heavens from which it falls. The evergreens, which it touches but to adorn, stand as beautiful emblems of immortality; and the skies above are clear and gorgeous beyond the dream of a summer-worshipper. Notwith-

standing my long observation of the fact, that in the dullest day, and when nature's aspect is most forbidding, some charm will be unexpectedly revealed, it has often surprised me to see a flash of her countenance, like that which an eye suddenly kindled darts over a human face.

The question of what use are the influences of nature, resolves itself into one, the irreverence of which will be easily acknowledged. Why did God, who does nothing in vain, make the world beautiful? and give to man the perception of beauty? As well ask, what need have earthly beings, whose material wants necessarily claim much of their time and attention, to be surrounded with all possible aids for the development of their spiritual natures. What need has selfish man, prone to be occupied with his own petty interests, of that which shall make him look away from himself? What need has plodding man, whose eyes are bent on the ground, to have them uplifted towards God? What need has sorrowing man to see God's love and pity expressed in beautiful symbols on every side of him? What need has artistic man for nature's exquisite models and rich materials? What need has weary man for refreshment procured without labor, that he can drink in with every sense? What need has the poor man of a banquet where no payment is demanded, and where no one shall say to him, "Friend give place"—because he is in his father's house? And lastly, What need has the solitary man of soothing companionship? In the great sense, there is but one mediator between God and man. Nature is also a mediator between him and his creatures, because she is a medium of influence from him, and of communion with him. Natural religion is the worthy handmaid of revealed religion; and many of the heathen, doubtless, have lived much nearer to God, in consequence of her ministrations, than they would otherwise have done. I have no doubt, too, that the asperities of religious creeds have been softened through her influences, and their bad effects in some degree corrected.

ITEMS.

The bill which has just passed both Houses, provides for a new five-cent coin, which shall weigh five grammes of the metric system. Three of them will weigh about half an ounce, or the weight of one single letter. It will also serve for weights at apothecaries or elsewhere. The act requires the withdrawal of all fractional notes of less denomination than ten cents.

The Internal Revenue Bureau gives notice to assessors and collectors, that the joint resolution for the exemption of crude petroleum from internal tax or duty, took effect from and after the 9th inst.

CONGRESS.—Among others the following bills were passed in the Senate; one prohibiting the carriage of nitro-glycerine, under certain conditions, and one to provide quarantine measures against the introduc-

tion of the cholera. The bill to fix the time and place of holding courts in Virginia was passed and now awaits the approval of the President.

HOUSE.—The bill to authorize the use of the metric system of weights and measures in the United States was passed. The measure is not compulsory, but merely permissive. Standard weights and measures in accordance with the system are to be furnished to the Governor of each State. Post-office business with foreign countries is to be computed according to weight in grammes. The Committee on Public Lands were directed to report upon the feasibility of planting the Western prairies with timber, or aiding private individuals and companies in the work. A bill was reported providing for the safety of the lives of passengers on steamships. Among other provisions, it contains a section to prohibit the transportation of nitro-glycerine on steamers, ships, boats or wagons which convey passengers, under a heavy penalty. If it is so carried, and death results, the persons offending may be convicted of murder, and punished accordingly. An amendment was proposed to the bill from the Reconstruction Committee. It provides for equal and universal suffrage. The Senate amendments to the post-office appropriation bill were concurred in. The bill to amend the organic acts of the Territories was passed. One section provides that there shall be no denial of the elective franchise on account of color, while all legislative enactments conflicting with it are declared null and void. The Senate bill to authorize the coinage of five-cent pieces was concurred in. The Judiciary Committee were instructed to inquire into the expediency of altering the laws so as to forbid the abrogation of office at the pleasure of the appointing power. A resolution was passed for the appointment of a committee to examine into the causes and incidents of the Memphis riot.

The bill passed by Congress to admit Colorado into the Union as a State has been vetoed by the President.

THE INDIANS.—The Governor of Idaho has addressed a letter to the Commissioner of Indian Affairs, informing him of the massacre of some sixteen friendly Indians, near the mouth of Moore's creek, on the Boise river, by a party of citizens of Ada county. He concludes by saying that there were but two grown males, the rest were Indian women and children. The immediate settlers, miners, protested against the murder, and their statements I shall send you in a few days, showing that the Indians were defenceless and peaceable. If anything will serve to bring on a general Indian war it is such acts as these. I have gathered the rest of the tribe and placed them under the protection of the military of this post. The excitement runs high, and I have all I can do to carry out my instructions against the depraved moral sentiment evinced towards the poor savages. Things look stormy just now, but when the road to the Indian country becomes passable I shall quiet the troubled waters. In no case that I have examined have I found the "Red man" the aggressor, but invariably the trouble springs from some fiendish outrage of "bad white men."

THE FREEDMEN.—Recent reports received by the Commissioner of Freedmen's Affairs represent that, notwithstanding the many impediments in the road of the freedmen, they are conducting themselves in a manner to meet the approval of all loyal men in the South.

The assistant commissioner of the freedmen's bureau for the State of Alabama has informed the Mayor of Selma "that the chain-gang, as a mode

of punishment for freedmen, must be discontinued; unless this is done the authorities will be proceeded against under the civil-rights bill. The assistant commissioner is determined to put a stop to a punishment wherein so gross a distinction is made on account of color."

BEDDING AND FEATHER Warehouse, Tenth St., below Arch. Feather Beds, Bolsters, Pillows, Mattresses, of all kinds; blankets, Comfortables, Counterpanes, white and colored; Spring Beds; Spring Cots; Iron Bedsteads; Cushions, and all other articles in the line of business. AMOS HILLMAN, 519 12t. No 44 North Tenth Street, below Arch.

THOMAS W. STUCKEY is prepared to execute Book, Card, and Job Printing at No 624 Weaver St., between Fifth and Sixth and Green and Coates. Friends' Printing desired. Orders sent by post will be promptly attended to. 519 vt

GROCERY AND PROVISION STORE.—The subscribers, having taken the Store at N. E. cor. Sixth and Buttonwood streets, would call the attention of Friends and the Public generally to their fresh stock of Staple and Fancy Groceries, which they will sell at prices suiting the decline in gold. Good Country produce taken in exchange, at best market rates. CLAYTON E. HAINES, 512 19 2062. JOSEPH G. HAINES.

JOHN J. LITTLE, Seventh and Spring Garden streets, Philadelphia, has a variety of cheap and desirable goods, such as: 7-4 White India Silk Shawls, Four dollars, worth \$10.00; Colored Silk Cashmere Shawls, half price. Fringed Thibet Shawls, \$3.50. All Wool De Barge, 37 1/2 cts. Plain Dark Brown Lawns, 15 1/2 cts. Pongee Mohairs, 35 cts. Mode Silk Kait Mitts for Friends. French and English Lawns. Call and examine his stock before purchasing elsewhere. 512 19 2d.

THOS. M. SEEDS, HATTER, 41 N. 2d St. Always on hand, and made to order, a large assortment of Friends' Hats; as he makes a specialty of that part of the Hatter's Business. 422, 65, 512 03.

B. A. WILDMAN, Dealer in HOUSE-FURNISHING GOODS. A general assortment of Tin, Iron, Wooden and Willow Ware, Japaned and Britannia Ware, Cutlery, Spoons, &c., No. 925 Spring Garden St., Philadelphia. 421 10t pt.

CHESTER ACADEMY.—A Boarding and Day School for both Sexes, Broad St., Chester, Pa. A very branch of a solid English Education is taught in this Academy, together with Latin, French and Drawing, in all its varieties. Thoroughness in all the studies is insisted upon, and especial care will be taken to educate the morals as well as the intellect of the pupils. A Primary Department is connected with the School. Pupils can enter at any time.

Please send for a Circular. GEORGE GILBERT, Principal.

EXTRACTS FROM THE MINUTES OF PHILA- DELPHIA YEARLY MEETING.

In addition to the account furnished last
week, we take the following from the Extracts
of Philadelphia Yearly Meeting:

The following report from the Committee
appointed, to consider the proposition from
Philadelphia Quarterly Meeting was read, de-
liberately considered, and referred to the con-
sideration of the Meeting next year.

"To the Yearly Meeting:

*"The Joint Committee of men and women
Friends, appointed to consider the proposition
brought up on the reports from Philadelphia
Quarterly Meeting in relation to a change in
the Queries, having nearly all met and deliber-
ately considered the important subjects therein
contained, unite in recommending its adoption
as follows.*

*Omit from the Fifth Query the words, "Do
their children freely partake of learning to fit
them for business, and are they and other
Friends' children placed among Friends."*

*Also omit all the annual Queries and the
paragraph preceding them on page 93, and sub-
stitute as follows, immediately following the
Ninth Query.*

*Tenth Query.—How many schools are there
established for the education of our youth, su-
perintended by Committees of the Monthly
or Preparative Meetings? What is the num-
ber of pupils? How many are members, and*

*how many not members have one parent a
member? Are the teachers in membership
with Friends? And do they, with their pupils
attend our mid-week meetings?*

*Eleventh Query.—Are Friends careful that
their children, while acquiring a literary or
business education, are not placed in situations
where they may be drawn from our principles
and testimonies; and do they provide school
instruction for those who need aid in obtaining
it?*

*Twelfth Query.—What changes have been
made in the times or places of holding Friends'
Meetings? And what new meetings have been
settled?*

*Thirteenth Query.—Are the Queries ad-
dressed to the Quarterly, Monthly and Prepara-
tive Meetings read, and answered therein as
directed?*

*Also on pages 88 and 89 of our Discipline
substitute the words "All the Queries" for
"the nine Queries."*

*The Committee to examine and settle the
Treasurer's account produced the following re-
port, which was united with, and William P.
Sharpless, therein named, is appointed Treas-
urer. The Quarterly Meetings are requested
to forward their quotas as early as practicable.*

"To the Yearly Meeting:

*The Committee appointed to settle the
Treasurer's account, report having examined
the same and comparing it with his vouchers,*

find it correct, leaving a balance due to the Treasurer, of \$288.81, the quotas being all paid in.

They propose raising the sum of Two Thousand Dollars, (\$2,000) for the ensuing year.

They are united in proposing William P. Sharpless, to serve the Meeting as Treasurer, the ensuing year.

The concern of the Yearly Meeting on the divided condition of those who are recognized as members of the Society of Friends, was revived by the reading of the minute which referred the subject to the farther consideration of this Meeting.

An earnest exercise prevailed, that, although honest differences of sentiment exist among Christian professors, we may ever cultivate Christian love and sympathy toward all, and particularly toward those who are called by the same name, who labor for the promotion of the same testimonies, and for the advancement of the Redeemer's Kingdom.

We should especially cherish harmony and Christian brotherhood among ourselves, that so we may become a strong and united band, always remembering, that unless we have the Spirit of Christ, and manifest in our intercourse those peaceable dispositions which lead unto brotherly kindness and charity, we can lay no claim to be called by His name.

The Meeting united in recommending the subject to the individual feelings of Friends.

The following minute with some of the exercises of the Meeting was read and united with.

In coming together on this occasion, our minds have been solemnized in the reflection that some of the fathers who were accustomed to meet with us, have been removed; and under this solemn feeling, the Meeting entered upon a consideration of the important subjects which were presented.

The unity and brotherly love which have prevailed throughout the several sittings have been truly encouraging, harmonizing our feelings, and baptizing us by the one spirit into the one body.

The important duty enjoined by the first query, was renewedly felt to be of binding obligation, and if rightly appreciated, will prove a means of our growth in spiritual things, and strengthen us in a love for the brethren. It was impressively urged upon the young men that they should not only attend our meetings on First-days, but also those in the middle of the week, and for discipline. Those who have long felt the importance of this obligation, and whose age and experience qualify them for the service, were incited to the necessity of giving practical evidence of their interest in the young and inexperienced, by visiting them in the love

of the Gospel, and extending the hand of help and encouragement.

Our dear youth were reminded that the concerns of the Society must soon devolve upon them: and affectionate invitations were extended to them, to unite with their elder brethren in a faithful maintenance of our religious testimonies.

The duty of parents, in the moral and religious education of their children, was impressively adverted to.

While maintaining the spirituality of true religion, let it not be forgotten that external helps have been mercifully provided; and while guarding them against pernicious publications let such reading be liberally furnished as will tend to strengthen the intellectual, moral and religious nature.

The frequent reading of the Holy Scriptures was especially recommended to all our members.

These invaluable writings, so marvellously preserved to us, are accepted by Friends, in common with all Christian sects, as a standard by which religious doctrines are to be tested and proved; and whatever errors of translation they may contain, they are, and ever have been, a comfort and strength to all who read them with a single eye to that witness for God in the soul of which they so abundantly testify. While we do not regard them as the Word of God, we have ever held that they were "profitable for doctrine, for reproof, for correction, for instruction in righteousness; that the man of God may be perfect, thoroughly furnished unto all good works." We were exhorted to guard against improper criticism, or lightly speaking of, or in any way depreciating them, lest we lay the foundation of irreverence or disbelief.

We are encouraged to hope that the testimony on the subject of spirituous liquors is generally appreciated by our members, although it is feared that their use as a drink is on the increase in the community, and earnest appeals were made that all, and particularly our dear youth, should maintain a watchful care against this insidious enemy, which has blasted the hopes and ruined the prospects of many a promising young man, who has been almost imperceptibly beguiled into the practice. The most effectual means of preservation from this and other evils is habitual watchfulness unto prayer. "Watch and pray continually, lest ye enter into temptation."

While we are recommended to habits of industry and economy, in order that proper provision may be made for our families, a fear was expressed that the accumulation of wealth may prove an insidious and grievous snare, leading to the sin of covetousness, which, while it closes the heart against the charities of life, leads both ourselves and our children to an un-

des love of the world, to the exclusion of the love of God and our neighbor.

In view of the sad breaches made by the spirit of war, the Meeting was led into exercise for the faithful maintenance of our testimony to the peaceable nature of Christ's kingdom. Notwithstanding our deficiencies, the influence of Friends is believed to have been important in keeping alive this testimony during the trying period through which we have recently passed; and earnest desires were expressed that we might all seek for a qualification to bear aloft the standard of the Prince of Peace before the nations.

Evidence was furnished of the religious concern that has been manifested towards those of our members who entered into the strife; and we are comforted in the assurance, that tender care has been, and continues to be, extended towards them.

In the treatment of all offenders it should ever be borne in mind that the object is to restore; and overseers, and other concerned members, should seek and wait for a qualification, in a meek and patient spirit, to bring back those who have wandered from the fold.

A Committee was appointed to assist the Clerks in transcribing and forwarding the Epistles, and in preparing, publishing, and distributing the extracts.

LITTLE THINGS.

Springs are little things, but they are sources of large streams; a helm is a little thing, but it governs the course of a ship; a bridle-bit is a little thing, but see its use and powers; nails and pegs are little things, but they hold the parts of large buildings together; a word, a look, a smile, a frown, are little things, but powerful for good or evil. Think of this, and mind the little things. Pay that little debt; it is a promise, redeem it—it is a shilling, hand it over; you know not what important events hang upon it. Keep your word sacredly—keep it to children; they will mark it sooner than any one else; and the effects will probably be as lasting as life. Mind the little things.

BORROWING TROUBLE.

"The worst evils" (says the proverb) "are those that never arrive." By way of practical counsel to all borrowers of trouble, I would say—Face the real difficulties and troubles of life, and you won't have time for practising the art of self-tormenting. The most contented people in the world are those who are most occupied in alleviating with Christian heart and hand the sorrows that flesh is heir to. Visit the homes of ignorance and poverty and vice, and in the face of the terrible realities you will there witness, your own petty cares will seem

as nothing. The anxieties of the fancy will vanish altogether, while you will be far more able to bear those burdens which, though real, will seem light by comparison.—*Our Own Fireside.*

The following Essay by Henry B. Hallock, and read at one of the conferences held by Friends in New York, has been sent us by the author for publication:

To every one to whom the cause of Truth is dear it must be a source of deep regret that the standard of righteousness that was so nobly upheld by our fathers, has in these latter days, been allowed to trail in the dust; and the question naturally arises, why is this so? Why is it that those principles that were by them esteemed so highly, are by us considered of so little worth? Why is it that the meetings for discipline that they established, and did so much to uphold, are by us so much neglected? Why is it that our meetings for worship, that with them were so full of life and power, appear to be losing their hold upon the hearts of our members?

For many years past the answer to the first query of our discipline has been something like this: "Our First-day morning meetings are attended by most of our members, while those held in the afternoon, and in the middle of the week, are much neglected." The reasons for this are obvious. Living as we do in a commercial city, where, during the week, the time of many of our members, from early dawn until late at night, is devoted to business, it is only natural that when First-day afternoon arrives they should feel that it is not only their privilege, but a Christian duty, to call their families around them and give them that attention that is denied them during the week. Again, there are those among us who, being confined during the week in close, illy-ventilated, apartments, believe that having attended meeting in the morning, they have done all that is required of them in that respect, and feel at liberty in the afternoon to go out upon the hills and enjoy the beauties of nature, invigorating both body and mind by drinking in the pure atmosphere of the country.

The neglect in the attendance of our meetings for discipline, as well as of those for worship in the middle of the week, is owing in part to the fact that they are held at an hour of the day when men of business have least leisure, and partly to the circumstance that many of our younger members being clerks, do not feel it to be their duty to sacrifice the interest of their employers to their own, even for so worthy an object as that of attending meeting.

There are doubtless many among us who feel deeply the sacrifices they are obliged to make

in this respect, and would gladly avail themselves of an opportunity to attend, but who believe that they have no choice in the matter. Another reason why our meetings are not better attended is, that they are wanting in interest. Were we really and truly a spiritually minded people, were the objects of the invisible world as real to our minds as those of the outward creation, were humility, purity and faith as tangible to us as wealth, pleasure and power, we could sit together in silence and know of being refreshed and strengthened. But such is not the case! hence the necessity for ministers.

Our ministers may be divided into three classes: First, those who are sincere in their desire to do good, but have mistaken their calling. The ministration of such generally consists in quotations from the Scriptures and long rambling discourses without life or profit. Another class are those who, having received the Gospel traditionally, preach from the intellect, and consequently do not reach the heart. Often well versed in the Scriptures and the doctrines of the Society, as held by early Friends, and having a good command of language, they are able to please the ear by a repetition of beautiful and well selected words, but which—not proceeding from the inner life of the speaker,—do not reach that of the hearer.

Thanks be to God, there is still another class who, though small in numbers, are mighty in power. These are they who, through faithfulness, have become partakers of the Divine nature, and are thus prepared to speak to the condition of the people. These are they who recognize the fact, that even the sublime doctrine of the "inner light," if preached traditionally, degenerates into a mere religious dogma. These are they whose daily lives illustrate the virtues that they teach. Even when no word is spoken, we feel that it is indeed a privilege to meet with such, for we know that there is a power for good in the influence of their bright example.

Admitting that God is unchanged and unchangeable, and that Truth in all ages is essentially the same, it is nevertheless a fact that each age has its own peculiar work to perform, and cannot follow blindly in the steps of its predecessor.

The great and besetting sin of the present age is worldliness. Born into a world of exceeding beauty, surrounded on every hand by objects calculated for the gratification of the senses, gifted with intellect and affections, the very exercise of which is a joy unspeakable, it is no wonder that these things take deep root in our minds. It matters little in what way it manifests itself, whether in the acquisition of wealth, the love of society, a fondness for literature and the fine arts, or any other; it is world-

liness still, and consequently opposed to the self-denying religion of Jesus Christ.

Now the Apostle has said, that "the natural (or worldly minded) man receiveth not the things of the Spirit of God; for they are foolishness unto him; neither can he know them because they are spiritually discerned." Seeing that this is so, we need in the ministry more spiritually minded men and women, who, meeting us on this low ground, will be enabled through the power of the Highest to hold up to view the beauty of holiness as exemplified by the life and character of the Divine Master, and thus lead us, step by step, up into the purer atmosphere of a more spiritual life. The Apostle Paul understood this, when, in his letter to the church at Corinth, he said: "I, brethren, could not speak unto you as unto spiritual, but as unto carnal; even as unto babes in Christ. I have fed you with milk, and not with meat; for hitherto ye were not able to bear it, neither are ye yet able."

Jesus himself recognized this want when, after inquiring again and again of a disciple if he loved him, he said in language so full of tenderness, "Feed my sheep; feed my lambs." It is to be feared, that it has been for the want of food suited to their condition that so many precious lambs have been lost to the fold.

As individuals, and consequently as a society, we have suffered a deep loss by the rejection of the Divine Master as our example. How rarely in our households, or in our meetings, is the name of Jesus so much as mentioned; and even then, it is more for the purpose of illustrating some favorite doctrine than to lead us to follow His example, by pointing out the sublime beauty of His self denying life. In our anxiety to avoid the great error of worshipping Him as God; in our fear lest we should admit the power of His blood to cleanse us from sin; we have passed to the other extreme, and His name is seldom mentioned among us. Many of us know and acknowledge with deep gratitude, how pregnant with good is the example of a truly devoted, self-denying parent. How often, in the dark hour of temptation, we have been led to recall the memory of such an one, and how it has strengthened us to bear our trial with fortitude and come out scathless.

If the example of a frail being like ourselves is so powerful, how much greater would be that of the pure and spotless one? Could we keep ever before our minds, even a faint conception of the majesty and sublime benignity of His character, how poor would appear our unworthy aims. Contrasted with the nobleness and Divine earnestness of His life, how abject would appear a life entirely devoted to the things of this world. It would appear almost impossible to habitually contemplate His character with

out a growing love for Him, and an ever-increasing desire to follow in His footsteps. It is true, that a state that requires an outward example is not the highest state, but it is also true that as the little child needs the supporting hand of its mother to steady its tottering footsteps while gaining confidence in its own powers, so, the child, in the knowledge of Divine things, needs the support of outward example while acquiring faith in the sustaining power of the inward principle. In this way we should come to realize more and more the necessity of practical righteousness.

Instead of standing apart as a peculiar people, and placing our dependence upon a strict adherence to the traditions of our fathers, we should go out into the world, and show our faith by our works.

The formation of the "Freedmen's Relief Association" was a step in the right direction. Throughout the length and breadth of our society, the young were rejoiced to find this one channel of usefulness opened to them. But we need not stop here.

Notwithstanding all that has been done by Christians of other denominations, there are still thousands of children at our very doors who need assistance and instruction in the first principles of morality.

A little attention to these, by the establishment of mission schools, would not only benefit them, but would serve to place our society where it was originally built—upon the broad foundation of practical righteousness. But this is not all. Were our children taught that it is absolutely wrong to squander money on personal adornment, while there is so much suffering in the world, and were they not only taught this, but did they know that money thus saved would be applied for the instruction of the ignorant and the elevation of the fallen, there would be less complaint of the violation of our Discipline in regard to simplicity.

So true it is that the Christian virtues, like the stones in an arch, mutually support and sustain each other; and it is only when every virtue is in its place, performing its proper office, that the arch is complete, through which we may pass calmly and serenely into the Land of Promise.

God cannot be absent from any thing that is holy, however remote, however insignificant it may be. In the nature of things it is impossible. From the first moment of the soul's restoration to purity, however cast-out and wretched it may have been before, it recognizes the approach of the Divinity. From that memorable hour, it enters into a divine companionship, which neither time, nor place, nor power, nor selfish men can delay or separate. God's love to a truly purified being is infinite, and nothing

short of infinite power could keep Him, even for a moment, from a most intimate and essential union with such a holy soul. No matter in what *outward* condition that soul may be; no matter how unhonored and unknown among men, it has no sooner become purified in the baptism of holiness, than it shines infinitely more brightly to the omniscient eye than the purest and brightest star of his own glittering firmament.—*Upham*.

EXTRACTS FROM "PATIENCE OF HOPE."

"There is a sadness in all Idealism; it lifts the soul into a region where it cannot now dwell; it must return to earth, and it is hard for it to do so but at the shock of a keen revulsion—the dashing of the foot against a stone. But in no life does the secret of all tragedy, the conflict between the will and circumstance, so unfold itself as in that of the Christian; he, of all men, feels and mourns over that sharp, ever-recurring contrast of our existence,—the glorious capabilities; the limited attainments of man's nature and destiny below. For his possibilities are at once more glorious and more assured than those of other men; yet, as regards actualities, he among all men must be content to have the least to show. And this, if we examine deeply, will be found at the root of all sincere fanaticism. It is the agony of the spirit, its strict, convulsive embrace of some glorious truth, the soul's first love, for the sake of which it refuses to perceive the limitations to which all things here have been made subject. We say Quakerism has decayed and dwindled; but why? Even because the wide and loving principles it promulgated in an age of dreary spiritual exclusivism have been, since the days of the early Friends, (the first apostles of so many a holy cause), gradually and silently incorporated into the thoughts of Christian men in general. They, as Howitt says, have missed being a great people, but the truths they so simply and perseveringly advocated have not failed of their mark.

"The Christian life is no drama planned to correspond with certain prescribed unities of time and situation; but, *because it is a life*, it is too solemn, too real a thing to be bounded by any such limitations. The Bible prescribes no fixed routine of religious experience, and I know not how to express my sense of the crudity, I would also say cruelty, of such religious writings as insist upon certain phases of feeling as being essential to every true conversion; thus making sad the heart of the righteous whom God has not made sad. '*The gods*,' said the wise heathen, '*give not all things to men at all times*.' Have Christians yet to learn that certain feelings are only proper, say rather, are only *possible*, to certain stages of experience? *That when we are able to receive such things*

we do receive them, and until then must be content to wait, *abiding in the truth*, growing up in it from day to day, but forcing nothing either upon themselves or others.

"How careful should we guard against the passing of a religious truth into a religious conventionalism! The deepest expressions of feeling, as when St. Paul, seeing so far into his own nature, and into God's purity, is *able* to call himself the chief of sinners, becomes *false, commonplace*, when taken up by those who do not feel, but merely repeat them—when they are out of all harmony with the life and consciousness of the speaker. We may apply this also to the crude admonitions so often addressed to afflicted people; the set phrases in which, without any consideration of his fitness to receive such sayings, the sufferer is referred to the will of God, the love of Christ, for compensation. Yet the loss of a felt, experienced good, even of an earthly kind, can only be made up for by a comfort equally felt and experienced; *and how can that be a comfort which has never been a joy?*"

DEATH IS MY GAIN.

(Concluded from page 182.)

Even when in the full enjoyment of health, the unrighteous man cannot at times help blushing at his own depravity. In the midst of his evil-doing he is obliged to confess to himself that he is acting in a manner which he cannot justify either to God or to man. But his soul, though feeling what is right, is conquered by the power of his sensual being, to which long habit has given the mastery. But when the power of the senses declines with the strength of the body, when self-delusion is no longer possible, and the soul recognizes itself in all its hideousness—then what must be his state? With what feelings must he look to the future, who has lost *all* upon earth, and who has nothing to hope from eternity?

How different the condition of the wise and noble spirit, which knows its duties and fulfils them, and honors the high purpose for which the omnipotence of God called it into existence. How different the condition of the Christian, who has gained full ascendancy over his lower nature, and ever places the claims of the soul above those of the body; who understands the deep import of the words, to live in Christ.

To him death is a gain. How could it be a loss to him? To him who has made the divine thoughts of Christ his own, neither this earth, nor his own house, nor village, nor city, is his true home. He is conscious that he was not born to be for ever attached to the clod of earth which he cultivates to satisfy his earthly necessities, but to be a citizen of the eternal and infinite realm of God. In his eyes it is not this short life on earth which is the most important,

but the life in the entire divine creation. The universe is his Father's house, and God, who dwells therein, is his Father, and every soul in it is bound to him by the ties of brotherhood.

To him death is a gain. For what loss does the soul sustain in death? It only throws off its heavy earthly veil; it only changes its garment; it receives from the Father of love a more beautiful raiment, instead of the cast-off vestment, which its altered circumstances have rendered useless. The soul remains what it was, God remains with it, the divine universe with all the wonders of creation, remain. What does it lose? The friends and relatives whom it loved on earth? Oh, no, they are still in the house of the Father, they are still bound to it by the same ties of brotherhood as before, though they cannot communicate with it any longer through earthly means. Nay, its loved ones are not lost to it. That cannot be lost which is in the hands of God.

Or can it be said that this sublunary life is full of roses, and has no thorns? It is true that with the change I lose many pleasures, but then also I shall be placed above many fears and many sorrows. Tears will never be shed by me again, for sweet is the fate of liberated souls!—Is this earthly life so full of unmixed happiness that we should wish it to endure for ever? Why do persons of very advanced age so frequently long for rest, for dissolution, for liberation, for removal into the better life? and why among thousands and thousands of people, is there not one, who, if the choice were given, would begin life over again if its course were to be exactly the same? Well then, what great loss can this life be in reality, when there are so few to whom it has through its whole course brought sufficient happiness to induce them to wish it to remain for ever as it was? Is it not rather a gain for souls, who can with confidence resign themselves to it, to go over into another and a better world? After all what are the terrors of death? Merely the terrors of a childishly timid imagination. The same God, O Soul, that divests thee of one garment, will invest thee with another.

He who knows how to live with Christ, will also know how to die joyfully with Him. (1 Cor. xv. 31.) He dies each time he lifts his thoughts to God and forgets all earthly matters. He dies each time he communes in spirit with his departed loved ones, and feels that he is with them. For in such solemn moments this world is to him as if it were not. He is in the presence of God, in the presence of those he loved. He is what his soul will be when it has been uncoiled from its earthly veil; only not in such great perfection as it will be when it shall be able to communicate with God and the loved friends, in a new vestment, and

as it were, through means of more glorious instruments.

Death is my gain; for what is the purpose of my life on earth? Like all mankind, I am destined to live eternally; all nature teaches me this, and therefore, even here below, I am to live for eternity; and all my longing is for a better, higher existence. It is with this in view that I labor to improve myself; it is with this in view that I endeavor to adorn my spirit with every virtue. That which I become through Christ, that is, through following His divine example, that shall I be on yonder side the grave. It is therefore death that leads me to the desired goal. Through it, I reach what I have been ever striving for; through it I become what I was destined to be.

Death is my gain. I exchange a less perfect garment for a more perfect one, exchange a lower seat, in the great paternal house of the universe, for a higher one; I exchange an inferior degree of happiness for a state of bliss, of which my limited earthly faculties can as little form a conception, as the lowly worm in the dust can form a conception of the joys that may vibrate in the bosom of rational man. I proceed from a necessitous state into a world of overflowing plenty, where a drop becomes an ocean, and a spark of light becomes a sun.

Death is my gain. Why should my soul be alarmed at the unknown road along which it has to travel? Is the path I have to wander here below better known to me? Is not each succeeding hour of my life shrouded to me in impenetrable darkness? Do I know what will happen to me the next moment? Whither I shall go? And yet I live through each of those hours, and each becomes light to me as soon as I live in it.

And equally light will be the hour that succeeds that of death. The unknown road will be made known to me as soon as I enter upon it. Why then should I recoil from it with a shudder? Is it not the same as has been trodden by the dear ones who have gone before me? Why should I not be rejoiced to follow in the path of those souls who will ever be precious to me? Perhaps in the very moment when the earthly veil falls from my spirit, I shall recognize those dear ones, whom I believed so far removed from me, and shall learn that they were always nearer to me, than in my earthly state I had any conception of.

Yea, verily, death is my gain! It is closer union with the Father of spirits; it is reunion with my glorified loved ones, for whom my soul is yearning; reunion with those for whom to this day my wounded heart bleeds, my eyes weep. Reunion! Renewed possession! Renewed life! O ye, whom God's hand directed towards me, and linked to me in his creation! To find you again! To love you again! To

be ever united with beloved and glorified souls! What bliss in this thought! God gave you to me: God, the most exalted love, inspired us with this love, which death cannot destroy, and which binds the mortal, as with invisible bonds, to the inhabitants of the higher world! God does not destroy that which is holy, which is good—for it is his own work! And love is the highest good which souls can acquire in their mutual intercourse. It is because He is Himself Infinite Love, that God has peopled the universe with living souls.

Death is my gain! May this be my last sigh on my bed of death; and may the thought of the love of my Creator, and of the dear ones that have preceded me into another life, be the last that occupies my soul, ere the veil falls from it. When it drops, my spirit shall at once be in those realms of glory which they entered before me.

Therefore, O Christ, O divine Revealer of the Father, be thou my life, for without Thee, to die were to see my soul enter into destruction! O God-enlightened Teacher, I will think Thy thoughts, I will walk according to Thy divine doctrines. I will contemplate from Thy elevation all earthly matters. With Thy love I will love my brethren, with Thy zeal endeavor to spread joy and happiness around me. With Thy courage I will overcome every obstacle to virtue, and will master myself so as to be able to act justly, nobly, divinely. With Thy patience I will bear every ill of life, with Thy wisdom and moderation enjoy its pleasures. With Thy faith I will walk meekly and trustingly in the ways of Providence, and through thine eyes I will look up to eternity as to my Father's house, and to God as to my Father.

For if Christ be my life, death is my gain.

LAWS OF HEALTH GOD'S LAWS.

It is wonderful how views of life depend upon exercise and the right management of the physical constitution. Nor is this, rightly looked at, any cause for perplexity, though it seems so at first; for though we might be inclined to view it as a degradation of our higher nature to find it so dependent upon the lower, and hope and faith and energy resulting from a walk or early hours, yet, in fact, it is only proof that all the laws of our manifold being are sacred, and that disobedience of them is punished by God. And the punishment in one department of our nature of the transgressions committed in the other—as, for instance, when mental gloom comes from uncleanness or physical inertia, and, on the other hand, where ill-health ensues from envy or protracted doubt—is but one of the many instances of the law of vicarious suffering. We are, as it were, two; and one suffers by what the other does. I cannot acquire the sickly taste of admiring the delicacy

of ill health. Beauty, in my eyes, depends much upon association; and the delicacy that calls up one's knowledge of morbid anatomy, and suggests the thought of disordered functions and abnormal states and physicians' attendance, never affects me with a sense of beauty. This may be an unfashionable view; but I am certain it is a sound and healthy one, fresh from nature's heart. I admire the beauty which God made—health—immeasurably above the counterfeit which man procures.—*Life and Letters of F. W. Robertson.*

FRIENDS' INTELLIGENCER.

PHILADELPHIA, SIXTH MONTH 2, 1866.

FRIENDS TRAVELLING IN THE MINISTRY.

—William Dorsey obtained a minute from Philadelphia Monthly Meeting to attend New York Yearly Meeting.

Ann Weaver obtained a minute from Green Street Monthly Meeting, Philadelphia, to attend Genesee Yearly Meeting, and to appoint meetings going and returning therefrom.

NEW YORK YEARLY MEETING has been in session this week. As soon as the Extracts are furnished us we will give some account of its proceedings.

GENESEE YEARLY MEETING will be held in Canada the present year. It will convene on the 11th inst.

We would ask the friend who sent the interesting railroad incident to give us his authority for the account.

MARRIED, on the 24th of Fourth month, 1866, in Loudoun Co., Va., THOMAS EDMUNDSON, of Richmond Monthly Meeting, Ind., and MARY ELLEN BIRDSALL, a member of Goose Creek Monthly Meeting.

DIED, on the 18th of Fifth month, 1866, at her residence in West Chester, Pa., SUSAN H. HICKMAN, widow of Benjamin Hickman, in her 73d year; a member of Concord Monthly Meeting. This dear and faithful Christian has through life furnished abundant evidence of her fitness for the kingdom of eternal peace and rest. Her sympathies were always alive for the poor and suffering, giving bountifully for their aid and comfort. Although the most of her life her health had been delicate, this feeble constitution she endured with resignation. During her last sickness, her advice to her children was truly impressive: "Act honorably in the sight of thy Heavenly Father." "If thou doest well, shalt thou not be accepted? and if thou doest not well, sin lieth at thy door," were the last words syllabled forth by the dying lips of this Christian mother.

—, on the 6th of Fourth month, 1866, of paralysis, SUSAN ANN BIRDSALL, wife of Samuel Birdsall, in the

46th year of her age; a member of New York Monthly Meeting. Her sickness was protracted, but she bore it with resignation, and even cheerfulness. Her sympathies were alive for the poor and the distressed, often affording them relief. Verily she had her reward, in the glorious prospect which opened to her when she drew near her end, and the peaceful close with which she was favored.

DIED, on the 28th of Fourth month, 1866, in Danby, Vt., JONATHAN HILL, a worthy and beloved member of Danby Monthly Meeting. On the morning of the 19th, he, with his wife, attended meeting as usual, but before meeting closed he was taken with a severe chill, which proved to be the commencement of his last illness. Being unable to reach home, they stopped at the house of his brother-in-law, where he was carefully cared for till his death. A distressing circumstance attending his sickness was the illness of his beloved wife, which prevented her ministering to him. Retaining perfectly his consciousness, he left this precious consolation, "that in looking over the past he saw many misses, but he believed they were all forgiven, and that he saw nothing in his way." During his illness he requested to be lovingly remembered to all his friends. Thus has passed away in calmness and with the seal of perfect peace a consistent Christian, a kind neighbor and friend, a tender brother, and a loving husband; having nearly completed his 60th year.

—, on the 15th of Fifth month, 1866, MARY K., youngest child of Dr. Albert H. Smith, and granddaughter of Charles Kaighn, of Philadelphia, aged 14 months and 18 days.

—, on the 14th of Fourth month, 1866, near Whitmarsh, Montgomery Co., Pa., SARAH S., wife of George M. Wilson.

FRIENDS' SOCIAL LYCEUM.

The members of Friends' Social Lyceum propose having their *Third Annual "Reunion"* at Swarthmore, near Westdale Station, on the West Chester and Philadelphia Railroad, on the 16th of Sixth month, 1866. If unfavorable weather should prevent the excursion, it will take place on the succeeding Seventh-day, (6th month 23d,) at the same hour.

Delegates have been invited from various Literary Associations, and a general invitation is extended to Friends in the city and country.

The cars leave Thirty-First and Market Streets, West Philadelphia, at 7.20, 9 (*Special Train*), 11 A.M., and 2.15 P.M.; returning, will leave Westdale for the city about 2.40, 5.55, and 8.05 P.M. Those residing along the line of the Baltimore Central and West Chester Railroad will arrive and depart by the regular trains,—all of which will stop at Westdale Station on this day.

Excursion tickets may be had of any of the Committee, or at the Depot previous to the departure of the trains, at Fifty cents each; Children, half price. Corresponding rates from other points.

Literary Exercises will be held at 10 A.M. and 3 P. M.

CLEMENT M. BIDDLE, 509 Commerce St., J. MORGAN COOPER, 203 Market, JACOB M. ELLIS, 325 Walnut, CHAS. A. DIXON, 715 Market, JOS. L. HANCOCK, 33d above Baring, HENRY BENTLEY, S. E. cor. Third and Chestnut, HENRY C. HAWKINS, 1024 Chestnut, REB. T. BUCKMAN, 645 N. Eighth, HOWARD GOURLAY, 523 N. Seventh, CLEMENS PARRISH, 800 Arch, ALFRED MOORE, 331 N. Sixth, T. H. SPEAKMAN, 26 N. Seventh, J. M. TRUMAN, JR., 717 Willow,

Committee on Arrangements.

SILENCE.

If the tongue does the talking, it has also been abundantly talked about. It has been denounced from the earliest times, and by the best and wisest of men. Inspired sages have compared it to "a sharp razor working deceitfully;" to "sharp arrows of the mighty with coals of juniper." And by later inspiration it has been described as "an unruly evil, full of deadly poison," more untamable than the fiercest beast or the deadliest reptile. So has the Bible magnified the power of the tongue for evil, that an apostle declares that the religion of a man who does not bridle his tongue is vain; and so decisive is its influence upon character that the same sacred teacher affirms the man to be perfect who offends not in word.

The mere possession, therefore, of the faculty of speech, involves a terrible power and a corresponding responsibility. The man who can talk, though he may be able to do nothing else, may divulge a secret on which may hang the fate of empires. A tongue that moves without grace or reason may overthrow the plans of the highest reason. The "little member" not only "boasts," but *does* "great things"—great evil and great good. The good, however, can only grow from diligent culture. The loving and well-desiring heart must lay its influence on the tongue, and the intellect must drill its natural and easy recklessness into order and care; must show it that even greater care is needful in spending our words than our money; that we are as much God's stewards and almoners in the use of our tongues, as in the use of hand or mind.

To understand this strange and wilful little member, to bring it under discipline and enable it to serve its purpose, its motions must sometimes be checked, rest must be prescribed, and careful, deliberative dissection resorted to. Only thus can be learned and acquired the grace of silence, and of tempered reticent speech.

The grace of silence challenges respect even in its lower forms. It is still a grace when it is not spiritual. Not all silence indeed; for there is a silence which comes of cowardice, which is born of shame, and drags a man down below the level of a faithful watch dog. A craven will not speak when he sees the highest truths dragged in the mud, and will silently wreath his cowardly lips in a traitorous smile while his best friends are traduced. And even a fool may be taught the trick of silence, as a parrot the mimicry of speech. The silence of prudence and discretion is quite another thing. It is not simply an over-dignified and plainly self-conscious constraint, which always puts on a look of wisdom made ridiculous by a sprinkle of complacency and condescension. It is good, hearty, interested listening that has caught the glow of our neighbor's speech, or having sincere

respect for his character, need not and would not simulate an interest in his thoughts. It is a natural, unconscious listening which lends power when the time comes for speech.

Indeed, there is a sort of speech in conversation which wears an air of silence; which is exceedingly like a pure movement of the intellect; which is so quiet, so thoroughly natural, that one never thinks of it as brilliant, or the reverse, or even as talk at all. We have only received thoughts, or rather, perhaps inspiration. Our friend has only opened his breast and allowed us to read; or, to change the figure, we have quaffed without hearing the ripple of the fountain. The silence which is followed by such speech as this is power. As the silence was speaking, so the speaking is silent; the weight of each is in each.

Silence, however, is not only a noble art which nature accepts at the hands of culture; it is also a Christian grace. Whoever has schooled his tongue into perfect order, and finds it as easy to be spoken to as to speak; whoever feels, in a promiscuous conversation, where controversies run high, no heat of the brain stirring up the prurience of speech, no hurry to squeeze into the gaps of the talk, no strong impulse to trip up and prostrate some incautious interlocutor, but is willing and able coolly to await his turn, and when it comes even to throw it away if some one else has made his contribution needless, is an extraordinary person, and if he feels no envy of his competitors, or chagrin for himself, he is a Christian. His silence is power over himself, and he is "able to bridle the whole body."

But Christian silence has even a higher sphere than this. It is one of the forms of devotion. We supplicate, we speak in many forms, in prayer. But is there not a time to wait for God to speak? Having invited the Lord into his tabernacle, and thrown open the doors and windows, are we not to listen for his footstep? And if we feel his kingly tread upon our lowly floor, are we not to allow him to be quietly seated that we may hear the music of his voice speaking to the ear within?

Yes, there is a silence which is devotion. It is not thinking; it is not even the form of thought which we call meditation. It is only a quiet, calm, collected listening, to know what God, the Lord, will say to us. It is analogous to what we note in the minds of great discoverers in the field of science. The great key ideas of the world have not been thought out, but they have been *suggested* to patient, quiet souls, and thought out afterwards. They have heard the voice of nature, because they were patient and persistent listeners. God's works are an image of himself. Having spoken to God, we should often silently listen for his answer.—*The Methodist.*

ANIMAL GRAFTS.

The possibility of engrafting one part of a living animal on another portion of the same animal, has long been recognized as a physiological fact, and underlies the whole practice of "plastic surgery." A lost nose or an unsightly opening in the face may be, in a great degree, remedied, at least as far as appearance goes, by such an operation. But in these cases the old connections are not wholly destroyed until the new ones are established. The skin out of which the substitute for a nose is made is allowed to retain an attachment to, and derive nourishment from, the forehead, until it forms a union with the parts with which it has been newly brought in contact, and only then its old connections, becoming unnecessary, are divided. Completely severed fingers sometimes unite when carefully brought together, and teeth which have been knocked wholly out will re-unite with their sockets when replaced. Individual tissues, as parts of a muscle, nerve, etc., have been from time to time transferred from one animal to another, where they have formed an organic union and lived.

The recent experiments of Bert in grafting, more than eighty in number, and for which he has received a prize from the Academy of Sciences in Paris, are the most complete hitherto recorded, and some of his results show a greater persistence of life in separated parts than had been previously supposed possible. They consisted chiefly in transplanting the tail, or other parts, of one animal into or beneath the skin, or into the cavity of the abdomen, of the same or of another animal. The following will serve to illustrate the nature as well as some of the results of Bert's observations. The tail of a rat was cut off, a portion of its end was deprived of its skin, and then inserted into an opening on the back and secured in place; a complete adhesion of the parts followed, and the tail was sufficiently nourished in its new position. In another case a piece of tail 2.5 centimetres long, from which the skin had been removed, was inserted under the skin of another rat so as to be completely covered in; the wound soon healed. Two months afterwards, by manipulating through the skin, one of the vertebrae of the transplanted part was fractured; about three months from the beginning of the experiment the rat was killed, and the fragment of tail had not only formed an organic union with the surrounding parts, but had grown from 2.5 to 9 centimetres in length, and the fractured portions had united, showing that its life was fully maintained. In like manner, the foot of one rat, from which the skin had been removed, was inserted under the skin of another, where it formed a union and increased considerably in size.

The following experiment has an important bearing on the physiology of nerves, since it

adds another fact in evidence that nerves are more indifferent as conductors than has generally been supposed. The prevailing view has been that sensitive nerves only conduct impressions inwards to the nervous centres, and motor nerves from the centres outwards. The curious experiment of Vulpian, though as yet it has not been often repeated, tends to show that this is not true. He divided the motor and sensitive nerves of the tongue, and, crossing them, united the ends of the first with those of the second. After the union was complete he was able to excite muscular contractions by stimulating the sensitive nerve, which readily transmitted impressions made upon it to the motor nerve. It will be seen that in this case the sensitive nerve acted in a direction opposite to that in which it ordinarily acts. Bert engrafted the tip of a cat's tail into her back, and, after the union was completed, severed it at its base, so that it then hung from its tip and received its nourishment in a direction the reverse of the natural one. The sensibility of the tail was at first destroyed, but at length returned after a union had been formed between its nerves and those of the body. When it was pinched she defended herself in the usual way. Here, too, the nerve transmitted its impressions in a direction the reverse of the natural one, the tail having been turned end for end.

The time for which a part may retain its vitality after being separated from the body was also investigated, and, if Bert's observations are to be trusted, is much longer than has been supposed hitherto. Two young rats had each a piece of its own tail four centimetres long, and an equal piece of the tail of another and adult rat, engrafted into its body, after the parts had been detached from their living connections for twenty-four hours; during this interval the parts were kept in a glass tube inverted over water. They formed a union in their new places, and the immature tails increased in size. Successful grafts were made in other cases after the separation had lasted in one instance for twenty-six hours, in another three days, and in another eight days, the respective tails being enclosed during these periods in tightly-corked tubes, and kept at a moderate temperature. He has shown by a series of experiments that the maintenance of a steady and moderate temperature during the period of separation is important. In parts kept at a temperature of from 50° to 54° F. the vitality persisted for several days; at 68° for seventeen hours; and at 86° only seven hours and a half. That the parts had fairly formed a living connection in the above instances was shown not only by their adhesions, but by the aid of injections, which proved that the blood vessels of the body and the graft communicated with each other.

Bert has not been successful in engrafting parts of a given animal on to another of a different genus.—*The Nation*.

WASTED TIME.

BY HENRY MORFORD.

Alone in the dark and silent night,
With the heavy thoughts of a vanished year,
When evil deeds come back to sight,
And good deeds rise with a welcome cheer;
Alone with the spectres of the past,
That come with the old year's dying chime,—
There glooms one shadow dark and vast,
The shadow of Wasted Time.

The chances of happiness cast away,
The opportunities never sought,
The good resolves that every day
Have died in the impotence of thought;
The slow advance and the backward step
In the rugged path we have striven to climb,
How they furrow the brow and pale the lip,
When we talk with Wasted Time.

What are we now? what had we been,
Had we hoarded time as the miser's gold,
Striving ever our need to win,
Through the summer's heat and the winter's cold;
Sbrinking from nought that the world could do,
Fearing nought but the touch of crime,
Laboring, struggling, all seasons through,
And knowing no Wasted Time?

Who shall recall the vanished years?
Who shall hold back this ebbing tide
That leaves us remorse, and shame and tears,
And washes away all things beside?
Who shall give us the strength, e'en now,
To leave forever this holiday mime,
To shake off this sloth from heart and brow,
And battle with Wasted Time?

The years that pass come not again,
The things that *die* no life renew;
But e'en from the rust of this cankering chain
A golden truth is glimmering through:
That to him who learns from errors past,
And turns away with a strength sublime,
And makes each year outdo the last,—
There is no Wasted Time.

Beware of Peter's word;
Nor confidently say,
"I *never* will deny thee, Lord;"
But, "Grant I never may."

Man's wisdom is, to seek -
His strength in God alone;
And e'en an angel would be weak
That trusted in his own.

Oh, disciple! have you not been wont to regard yourself as occupying, in the Saviour's mind, such a place as a star in the firmament or a leaf in the forest, or at best a sheep in the uncounted fold? If these be your notions, go back to Olivet. Hear the Divine Intercessor exclaiming, "Neither pray I for these alone, but for all who shall hereafter believe through their word;" and hear Him promising, ere His feet sunder from its grassy slopes, "And lo! I am

with you alway, even to the end of the world;" and recollect that He, who prayed thus, and promised thus, is He to whom all power is given.—*Hamilton*.

MANNERS.

BY MARY G. CHANDLER.

(Concluded from page 188.)

The ill-bred fashionist sails haughtily into the shop where she obtains materials for her adornment, and with a supercilious air purchases her ribbons and laces of a sulky girl, who revenges herself for not being able to wear the costly gauds, by treating as rudely as she dares the customer who can; and as they look upon each other, the one with scorn, and the other with envious hate, we see in both only the very same littleness of feminine vanity, which in its narrow-minded silliness believes that the first requisite of a lady is costly garments.

It would be a great mistake to suppose that in our higher society there are no good manners, none that are really good in essence and purpose, as well as in form; and it would be an equal mistake to suppose that in all society of lower caste there is either a want of true refinement or an envy and distrust of all that is above it; but it is also true that there is a magic circle known as "genteel," and a perpetual antagonism prevails here between those who are within and those who desire admittance, but are refused; as there are literary circles where contentions and envyings arise between pedantic scholarship and assuming ignorance.

The ill-breeding so often complained of in the intercourse between the different classes of society, and by none more indignantly than those who exercise it most, results from the factitious value set upon the externals of life by those who estimate them in proportion as they give distinction among men, and not as they increase the means of happiness and usefulness in this world, and so prepare us for the usefulness and happiness of the world to come.

Those among the poor, the ignorant, and the vulgar, whose hearts are burning with envy and hatred; and those among the rich, the learned, and the fashionable, who are rendered arrogant and supercilious by their possessions, are alike unconscious of the true worth of the blessings that excite the covetousness of the one class and the exultation of the other. Each party values man for his possessions, and not for the use that he makes of them; for what he has, and not for what he is. Where this is the case, mutual aversion, ultimating itself on both sides in acts of discourtesy, will ever keep alive a spirit of antagonism among the various classes of society; and this will disappear in proportion as so-

ciety becomes sufficiently Christianized to perceive and acknowledge that every human being is worthy of respect so far as he fulfils the duties of his station; and that we cannot be discourteous even towards the evil and the unfaithful, without indulging feelings of pride and disdain that are incompatible with Christian meekness.

In the social intercourse of equals, and in domestic life, ill-temper, selfishness, and indifference, which is a negative form of selfishness, are the principal sources of ill breeding. Where the external forms of courtesy are not observed in the family circle, we are almost sure to find perpetually recurring contention and bickering. Rudeness is a constant source of irritation; because, however little the members of a family regard politeness, each will have his own way of being rude, and each will probably be disgusted or angry at some portion of the ill-breeding of all the rest. Rudeness is always angular, and its sharp corners produce discomfort whenever they come in contact with a neighbor. Politeness presents only polished surfaces, and not only never intrudes itself upon a neighbor, but is rarely obtruded upon; for there is no way so effectual of disarming rudeness as by meeting it with thorough politeness; for the rude man can fight only with his own weapons.

Indifference of manner exhibits a disregard for the comfort and pleasure of those around us, which, though not so obtrusive as rudeness, shows an egotism of disposition incompatible with brotherly love. If we love our neighbor as ourselves, we cannot habitually forget his existence so far as to annoy him by neglecting to perform the common courtesies of life towards him, or interfere with what he is doing by not perceiving that we are in his way.

If we would be thoroughly well-bred, we must be so constantly. It is not very difficult to distinguish in society between those whose manners are assumed for the occasion and those who wear them habitually. The former are apt to forget themselves occasionally, or they overact their part, or, if they succeed in sustaining a perfect elegance of deportment that is really pleasing as an effort of art, they always want the grace of naturalness and simplicity which belongs to the manners of those who have made courtesy and refinement their own by loving them. It is only when we act as we love to act, that our manners are truly our own. If we cultivate the external forms of politeness from an indirect motive, that is, for the love of approbation, or from pride of character, it is the reward we love, and not the virtue; and if we gain this reward, it is only external and perishable; and is of no benefit to our character, but the reverse, for it ministers only to our pride. If, on the contrary, we cul-

tivate politeness with simplicity, because we believe it to be a virtue, and love it for its own sake, we are sure of the reward of an added grace of character, which can never be taken from us, because it is a part of ourselves; and though we may enjoy the external rewards if they come, we shall not be disturbed if they do not; because these were not the motives that induced our efforts.

Politeness, where it is loved and cultivated with simplicity for its own sake, gives a repose and ease of action to the moral being which may be compared to the comfort and satisfaction resulting to the physical frame from habits of personal cleanliness. The moral tone is elevated and refined by the one, as the animal functions are purified and renewed by the other.

As in civil life liberty to the whole results from the subjection of the evil passions of all to legal enactments, so in social life every individual is free and at ease in proportion as all the rest are subject to the laws of courtesy. Ease and freedom are the result of order, and it is as incorrect to call rude manners free and easy, as to call licentiousness liberty. No man is truly free who allows his sphere of life to impinge upon that of his neighbor. Fluids are said to move easily because each particle is without angular projections that prevent it from gliding smoothly with or by its companions; and in like manner the ease of society depends on the polish of each individual. If the units of society seek their own selfish indulgence, without regard to the rights of the neighbor, the whole must form a mass of grating atoms in which no one can be free, or at ease.

Indifference, ill-temper, selfishness, envy, and arrogance, all positive vices, are the characteristics that ultimate themselves in ill-manners. Rudeness is, as it were, the offensive odor exhaled from the corrupt fruit of an evil tree; and he who would be a branch of the true vine must remember, whenever he is tempted to do a rude thing, that he will never yield to such temptation unless there is hidden somewhere upon his branch fruit that should be cut off and cast into the fire.

The Christian gentleman and lady are such because they love their neighbor as themselves; and to be a thorough Christian without being a gentleman or lady is impossible. Wherever we find the rich without arrogance, and the poor without envy, the various members of society sustaining their mutual relations without suspicion or pretension, the family circle free from rivalry, fault-finding, or discord, we shall find nothing ungente, for there the spirit of Christianity reigns. He who is pure in heart can never be vulgar in speech, and he who is meek and loving in spirit can never be rude in manner.

From the Evening Post.

PROSPERITY OF THE BRITISH WEST-INDIES.

The people who believe that freedom has ruined the Southern States are fond of referring to the sad condition of affairs in Jamaica, as if it was to be taken without question for a test experiment of the effect of releasing negroes from bondage. But, somehow, they never allude to the other British islands, in all of which slavery was abolished at the same time.

Now the fact is that Jamaica is but one of about twenty islands held by Great Britain in the West Indies, and is the only one of them all in which any serious social convulsion has taken place. It is the largest of them all, and contained the greatest number of slaves, but its area is less than two-fifths of the whole, and its population numbers 377,433, while the other islands number 450,851. In density of population it falls far below several, having only 60 to the square mile, while Dominica and St. Lucia have 80, Tobago 95, Monserrat 150, Grenada and St. Vincent above 200, Antigua and St. Christopher's about 350, and Barbadoes 820 people to the square mile. None of these islands present the social evils which appear in Jamaica, and which some people imagine will presently appear in our southern States.

Take, for example, the island of St. Christopher's. With a population of 23,177 souls on an area of 68 square miles, making above 340 to the square mile, the average annual export of sugar for the six years 1852 to 1857 was 6,960 hogsheads; and for the six years ending with 1863 it was 9,735 hogsheads, an increase of 25½ per cent. Tobago, with an area of 144 square miles and a population of 13,208, making 94 to the square mile, was supposed to be in a declining state. But this has changed for the better, so that the annual export of sugar, which was 55,180 cwt. before 1858, is now 61,837 cwt., an increase of 17 per cent.

Even Barbadoes, with a population of 135,939 on one hundred and sixty-six square miles of ground, making 819 to the mile, the only colony where population really presses on the means of subsistence, yet holds its ground as a happy and prosperous community. Mr. Thomas Harvey, an English Quaker of great benevolence and sound judgment, says of it: "When I visited that colony in 1837, its production was believed to have reached its utmost limits, and was the wonder of all inquirers. Since then it has increased its export of sugar, sixty or seventy per cent., and this little island exports and imports respectively to the value of a million sterling."

After giving a variety of other facts, especially concerning Guiana and Trinidad, he writes:

"Our colonies are steadily, thought it may

be slowly, advancing, and if profits are less extravagant, they are less uncertain than in the times of slavery. The educational, moral and religious state of the population is very fluctuating, and, in some aspects, discouraging; and their civilization is yet of an imperfect, immature kind. How could it be otherwise? Are they not in as hopeful a state as could be expected from those who are only removed by the space of less than a single generation from a state of slavery."

The truth is that the experience of Jamaica is exceptional in regard to the results of emancipation; and every honest inquirer, who wishes to trace things to their real causes, will look for the explanation of the Jamaica troubles among the circumstances in which this differs from the other islands, the chief difference being in the fact that in Jamaica the owners of the old estates were generally non-resident, and the management of plantations, as well as of the government, fell into the hands of a venal and almost irresponsible set of persons, as agents and attorneys for the absentee proprietors.

Lady Maxwell wrote—"Time would fail me to tell of the numberless manifestations of divine love and power. I have, though deeply unworthy, been favored with such wonderful lettings into Deity, as no language can describe or explain; but the whole soul dilates itself in the exquisite enjoyment; so refined, so pure, so tempered with sacred awe, so guarded by heavenly solemnity, as effectually to prevent all irregularity of desires. These, with every power of the mind, bow in holy subjection before Jehovah. Surely the feelings of the soul on these memorable occasions are nearly similar to those enjoyed by the heavenly inhabitants. I have it still to remark, that all my intercourse with God the Father is strongly marked with that superior solemnity and awe which lay and keep the soul in the dust, yet raised to that holy dignity which flows from a consciousness of union with Deity."

Society cannot exist unless a controlling power upon the will and appetite is placed somewhere; and the less of it there is within, the more there must be of it without. It is ordained, in the eternal constitution of things, that men of intemperate minds cannot be free. Passions forge their fetters.

As daylight can be seen through very small holes, so little things will illustrate a person's character. Indeed, character consists in little acts, habitually and honorably performed; daily life being the quarry from which we build it up and rough-hew the habits that form it.

A man of sense may artifice disdain,
As men of wealth may venture to go plain.

From the Reader.

ON THE INVISIBLE RAYS OF THE ELECTRIC LIGHT.

We are so accustomed to associate the word *ray* with the idea of light, that the term dark, or invisible, or obscure rays, stimulates the imagination by its strangeness. And such is more particularly the case when we are told that the major portion of the radiation of the sun itself is of this invisible character. This great discovery was announced sixty-five years ago by Sir William Herschel. Permitting a sunbeam to pass through a glass prism, he formed the colored spectrum of the solar light; and carrying a small thermometer through its various colors, he determined their heating power. He found this power to augment gradually from the violet to the red; but he also found to his surprise, that the calorific action did not terminate where the visible spectrum ended. Placing his thermometer in the dark space beyond the red, he found the heating power there to be greater than in any part of the visible spectrum.

Sir William Herschel concluded from his experiments that besides those rays which, acting separately upon the retina, produce the sensation of color, and the sum of which constitutes our ordinary sunshine, a vast outflow of perfectly invisible rays proceeds from the sun; and that, measured by their heating power, the strength or energy of these invisible rays is greater than that of all the visible rays taken together.

This result was questioned by some and confirmed by others; but, like every natural truth that can be brought to the test of experiment, the verity of Sir William Herschel's announcement was soon completely established. Forty years after the discovery of those invisible rays by his father, Sir John Herschel made them the subject of experiment. He made an arrangement which enabled him to estimate the heating power of the spectrum by its *drying* power. Wetting by a wash of alcohol, paper blackened on one side, he casts his spectrum on this paper, and observed the chasing away of the moisture by the heat of the rays. His drying paper presented to him a *thermograph* of the spectrum, and showed the heating power to extend far beyond the red.

By the introduction of the thermo-electric pile Melloni created a new epoch in researches on radiant heat. This instrument enables us to examine, with a precision unattainable with ordinary thermometers, the distribution of heat in the solar spectrum. Melloni himself devoted some time to this subject. He had made the discovery that various substances in the highest degree transparent to light, were eminently opaque to those invisible heat-rays. Pure water, for example, is a body of this kind. Only

one substance did Melloni find to be equally pervious to the visible and the invisible rays, namely transparent rock-salt. And though the researches of MM. De la Provostaye and Desains, together with some extremely suggestive experiments executed by Mr. Balfour Stewart, show conclusively that Melloni erred in supposing rock-salt to be *perfectly* transparent, it must be admitted that, in this respect, the substance approaches very near perfection.

Abandoning prism of glass, which had been always employed previously, Melloni made use of a prism of rock-salt in his experiments on the solar spectrum. He was thus enabled to prove that the ultra red rays discovered by Sir William Herschel formed an invisible spectrum, at least as long as the visible one. He also found the position of maximum radiant power to lie as far on one side the red as the green light of the spectrum on the other.

Dr. Franz of Berlin subsequently examined the distribution of heat in the solar spectrum, employing for this purpose a flint-glass prism. He showed that the inaction of the ultra-red rays upon the retina did not arise from the absorption of those rays in the humors of the eye; at all events he proved that a sensible portion of the invisible rays was transmitted across the eye ball of an ox, and reached the back of the eye. Professor Muller of Freiburg afterwards examined very fully the heat of the solar spectrum; and representing, as Sir William Herschel also had approximately done, by lines of various lengths the thermal intensity at various points, he drew a curve which expressed the calorific action of the entire spectrum.

At various intervals during the last ten years Professor Tyndall has occupied himself with the invisible radiation of the electric light; and to the distribution of heat in its spectrum he directed attention in a discourse given on the evening of Friday, the 20th, at the Royal Institution. The instruments made use of were the electric lamp of Dubosq and the linear thermo-electric pile of Melloni. The spectrum was formed by means of lenses and prisms of pure rock-salt. It was equal in width to the length of the row of elements forming the pile, and the latter being caused to pass through its various colors in succession, and also to search the space right and left of the visible spectrum, the heat falling upon it, at every point of its march, was determined by the deflection of an extremely sensitive galvanometer.

As in the case of the solar spectrum, the heat was found to augment from the violet to the red, while in the dark space beyond the red it rose to a maximum. The position of the maximum was about as distant from the extreme red in the one direction, as the green of the spectrum in the opposite one.

The augmentation of temperature beyond the

red in the spectrum of the electric light is sudden and enormous. Representing the thermal intensities by lines of proportional lengths, and erecting these lines as perpendiculars at the places to which they correspond, when we pass beyond the red these perpendiculars suddenly and greatly increase in length, reach a maximum, and then fall somewhat more suddenly on the opposite side of the maximum. When the ends of the perpendicular are united, the curve beyond the red representing the obscure radiation, rises in a steep and massive peak, which quite dwarfs by its magnitude the radiation of the luminous portion of the spectrum.

Interposing suitable substances in the path of the beam, this peak may be in part cut away. Water, in certain thicknesses, does this very effectually. The vapor of water would do the same, and this fact enables us to account for the difference between the distribution of heat in the solar and in the electric spectrum. The comparative height and steepness of the ultra-red peak, in the case of the electric light, are much greater than in the case of the sun, as shown by the diagram of Professor Muller. No doubt the reason is, that the eminence corresponding to the position of maximum heat in the solar spectrum has been cut down by the aqueous vapor of our atmosphere. Could a solar spectrum be produced beyond the limits of the atmosphere, it would probably show as steep a mountain of invisible rays as that exhibited by the electric light, which is practically uninfluenced by atmospheric absorption.

Having thus demonstrated that a powerful flux of dark rays accompanies the bright ones of the electric light, the question arises, "Can we separate the one class of rays from the other?"

(To be continued.)

Where the treasure is, there will the heart be also.

THE DARK AGES.

As to the degree of darkness in which these ages were really involved, and as to the mode and degree in which it affected those who lived in them, I must express my belief that it has been a good deal exaggerated. There is no doubt that those who lived in what are generally called the "middle" or "dark" ages, knew nothing of many things which are familiar to us, and which we deem essential to our comfort, and almost to our existence; but still I doubt whether, even in this point of view, they were so entirely dark as some would have us suppose. I dare say you have observed that, in a certain state of twilight, as soon as you have lighted only a taper in your chamber, it seems quite dark out of doors; yet, perhaps, you have only just come into the house out of

that which, if not broad daylight, was nevertheless such good serviceable twilight as that, while you were in it, you never once thought of darkness, or of losing your way, or not being able to see what you were about; yet, I say, as soon as ever you lighted, were it only a rush-light, in your chamber, all the look-out was darkness. Were you ever so misled as to open the window, and tell the people in the road that they would certainly lose their way, or break their shins—nay, even to condole with triumph over those inevitable consequences of their wandering in pitch-darkness? I very much doubt it; but if it ever did happen, I feel quite confident that, if from being at a loss for an exordium, or for any other reason, you had been obliged to wait with your head out at the window until your eyes had recovered from the glare of your own little candle, you would have seen that there was really some light abroad; you would have begun to distinguish houses and highways, and sober people going about their business, which showed they could see enough for common purposes, and you would have held your tongue and drawn in your head, rather pleased that you had not exposed yourself.—*Mailand.*

PROGRESS OF THE ATLANTIC CABLE.—The new Atlantic cable is now coiling at the rate of two miles an hour in the tanks of the Great Eastern. Manufacture and stowage go on concurrently, and at the moment one part of the great wire is receiving its elementary coating of Chatterton's compound, or perhaps spun at Birmingham, other portions are laid down in the great ship ready for the final paying out. Tests both of insulation and continuity are ceaselessly put by the electricians. The old cable on board is for this purpose connected with the new, and messages have been transmitted through a total distance of one thousand five hundred and six nautical miles. It is estimated that in the event of a fault arising in the new cable it will be discovered instantly and be localized, and the process of paying out reversed to that of picking up, within a very few minutes of its occurrence. The whole machinery for both paying out and picking up has been repeatedly tested; the latter is entirely refitted with two high pressure boilers, and will now be of from five to seven and a half times the strength of the breaking weight. Now, proficiency in picking up at great depths is recognized as a necessity in submarine telegraphy, and every provision has been made to make such picking up easy and safe on board the Great Eastern. Last year it could only be done from the fore part of the ship; this year

matters will be so arranged that the cable may be brought in as well as paid out at the stern; and the saving of time and complications is obvious.

DISASTROUS CREVASSES ON THE MISSISSIPPI.—Very serious breaks on the levee of the Mississippi near Morganza are flooding the two richest parishes of Louisiana, and thus postponing that demonstration of the increased value of negro labor, with freedom annexed, which in that district the crops of the current year were expected to furnish. The loss in other particulars will be incalculably large. The New Orleans Crescent says: "The great West Baton Rouge crevasse has already submerged a large portion of our richest agricultural parishes. For weeks now the flood has rushed through that formidable opening, working its resistless will on a wretched and hopeless population. Crops have been swept away, and families driven from their homes. The lateral outlets, filled to the utmost of their discharging capacity, have risen above their banks, and threaten to burst through the feeble barriers which restrain the violent waters. And now comes this Morganza crevasse to complete the sum of misfortune by the tremendous reinforcement of superfluous waters which it brings to the work of destruction. In a short time, the whole country from the mouth of Red river down, and between the Mississippi and the Teche, will be submerged."

CONGRESS.—In the Senate, the House bill amending the postal laws was passed. A committee of five was appointed to examine into the affairs of the national banks. A bill was passed providing for the acceptance of the collection of botanical plants presented to the government by F. Peck, a clerk in the Department of Agriculture. The collection embraces about two thousand plants collected in several different States, and the donor proposed to present them to the department, in order to form a nucleus around which might be gathered specimens of all the different plants found in the United States.

In the House, a concurrent resolution to appoint a committee to investigate the action of the Freedmen's Bureau was adopted. The Senate amendments to the House bill for the disposal of public lands for homesteads to actual settlers in the States of Alabama, Mississippi, Louisiana, Arkansas and Florida were non-conferred in, and a committee of conference was asked for. A resolution was adopted directing the Secretary of the Interior to inform the House how much money has been appropriated for the erection of school houses and the maintenance of schools in the different Indian agencies in the Dacotah Indian superintendency, together with the present condition of such agency, and the manner in which the business of the superintendency and agency has been conducted. The Senate joint resolution to prevent the introduction of cholera into the United States was passed. A bill was introduced to encourage the growth of forest trees on the Western plains. It was referred to the Committee on Public Lands.

THE FREEDMEN.—Commissioners Steadman and Fullerton, on their tour through the South, have held conferences among the colored people, who unanimously express the desire for the retention of the Freedmen's Bureau. Freedmen's schools are in successful operation in 15 large cities in Alabama, and in them more than 10,500 pupils are taught. From the report of the Assistant Commissioner in Texas, we learn that there are in that State 42 day, 29 night, and 19 First-day schools, with an average attendance of 4,600 pupils. There are also some 20 private schools. The Christian Recorder says: "According to the

May number of the *American Freedmen*, we find that during last year, in the South, for the benefit of Freedmen 307 schools and 773 teachers have been sustained, and over 40,000 pupils educated by the various societies of the North. The amount of contributions to these societies was over \$700,000; and it is estimated that altogether they have spent not less than 2,000,000."

WALL PAPER.—Price reduced to 12½, 18 and 20 cts. Gold and Glazed Paper Hangings reduced. Linen Window Shades and Fixtures, of neat designs and all sizes. My prices are moderate. Work done in the country. Call at K. S. JONESTON'S "UNION SQUARE" DEPOT, No. 1033 Spring Garden St. below 11th, Phila.

BEDDING AND FEATHER WAREHOUSE, Tenth St., below Arch. Feather Beds, Bolsters, Pillows, Mattresses, of all kinds; Blankets, Comfortables, Counterpanes, white and colored; Spring Beds; Spring Cots; Iron Bedsteads; Cushions, and all other articles in the line of business. AMOS HILLBORN, 519 12t. No 44 North Tenth Street, below Arch.

THOMAS W. STUCKEY is prepared to execute Book, Card, and Job Printing at No 824 Weaver St., between Fifth and Sixth and Green and Coates. Friends' Printing desired. Orders sent by post will be promptly attended to. 519 vt

GROCERY AND PROVISION STORE.—The subscribers, having taken the Store at N. E. cor. Sixth and Buttonwood streets, would call the attention of Friends and the Public generally to their fresh stock of Staple and Fancy Groceries, which they will sell at prices suiting the decline in gold. Good Country produce taken in exchange, at best market rates. CLAYTON K. HAINES, 512 19 20st. JOSEPH G. HAINES.

JOHN J. LITTLE, Seventh and Spring Garden streets, Philadelphia, has a variety of cheap and desirable goods, such as: 7-4 White India Silk Shawls, Four dollars, worth \$10.00; Colored Silk Cashmere Shawls, half price. Spriged Thibet Shawls, \$3.50. All Wool De Barre, 87½ cts. Plain Dark Brown Lawns, 18½ cts. Ponge Mohairs, 35 cts. Mode Silk Knit Mitts for Friends. French and English Lawns. Call and examine his stock before purchasing elsewhere. 512 19 2d.

THOS. M. SKEDS, HATTER, 41 N. 2d St. Always on hand, and made to order, a large assortment of Friends' Hats; as he makes a specialty of that part of the Hattling Business. 423, 45, 512 00.

A. WILDMAN, Dealer in HOUSE-FURNISHING GOODS. A general assortment of Tin, Iron, Wooden and Willow Ware, Japaned and Britannia Ware, Cutlery, Spoons, &c., No. 525 Spring Garden St., Philadelphia. 421 10t pd.

CHESTER ACADEMY.—A Boarding and Day School for both Sexes, Broad St., Chester, Pa. Every branch of a solid English Education is taught in this Academy, together with Latin, French and Drawing, in all its varieties. Thoroughness in all the studies is insisted upon, and special care will be taken to educate the morals as well as the intellect of the pupils. A Primary Department is connected with the School. Pupils can enter at any time. 42-Please send for a Circular. GEORGE GILBERT, Principal. 2 ws 13t 5wm wafed. THOMAS GILBERT, M. LOUIS CLANCY, Assistants.

CHESTERFIELD BOARDING SCHOOL FOR BOYS, situated on the Crosswicks Road, three miles from Bordentown, N. J. The Fifty-Second Session of this Institution will commence on the 21st of 6th mo., 1866, and continue twenty weeks. Terms, \$25. For further particulars address HENRY W. REDWAY, 4766t 3307 pmms pa la. Crosswicks P.O., Burlington Co., N. J.

DELLEVUE FEMALE INSTITUTE.—A BOARDING-SCHOOL FOR GIRLS. The Spring and Summer Term of this Institution, will commence 6th mo. 21st, 1866, and continue in session twelve weeks. For details see Circular, to obtain which, address the Principals, Attleboro' P. O., Bucks county, Pa. ISRAEL J. GRAHAM, JANE P. GRAHAM, Principals. 4t. av 2t. 414.

W. M. HEACOCK, General Furnishing Undertaker, No. 18 North Ninth Street.—A general assortment of ready-made Coffins, and every requisite for Funerals furnished. Being entrusted with the oversight of "Fair Hill" Burial Ground,—Funerals, and all other business connected with the ground, will be promptly attended to. 311. 1v. was m.p.

NEW ARTICLES.—The Graduated Measure and Funnel combined, Russ' Sclator Sharpeners, Spring Scissors for Sewing Machines, the Clutch Brace, which does not require the bits to be fitted or notched, the Vegetable Slicer, for beets, cucumbers, &c. For sale at the Hardware Store of TRUMAN & SHAW, 310ct. No. 535 (Eight Thirty Five) Market St., below Ninth.

PRINTED BY MERRIHEW & SON, BOOK, PAMPHLET AND GENERAL JOB PRINTERS, 243 Arch St.

*Memorial of Haddonfield Monthly Meeting of
Friends, concerning our deceased Friend,
MARY G. ALLEN. Endorsed by Haddonfield
Quarterly Meeting, held at Evesham, Ninth
month 14th, 1865.*

As the memory of the righteous is blest, we
believe it right to issue the following testi-
mony concerning our deceased Friend, Mary
G. Allen. She was the daughter of Cortland
and Isabella Taylor, of Burlington county, N. J.
She was born 4th of Twelfth month, 1794.

Her father, though not a member, attended
Friends' meetings, and united with them in the
support of some of their testimonies, especially
that against war. At his invitation, she will-
ingly accompanied him on these occasions where
she became deeply interested, and ever retained
a vivid recollection of the ministry she heard.
She evinced, in early life, an unusual serious-
ness, with a desire to be a Christian. Her
mother, who was a pious Baptist, observing this,
desired she might join in profession with her.
She frequented Baptist and Methodist meet-
ings, and endeavored to participate in their de-
votional exercises, and to be edified by their
ministry and prayers; but her language was:
"I have seen beyond-salaried ministry, formal
prayers, water-baptism, and other dogmas of
their faith, and cannot unite in membership with
either."

Her mother and the Baptist minister, (who
often visited them) sympathized with her re-
ligious exercises; but the latter finding all his

arguments to induce her to join his sect, un-
availing, relinquished his efforts, telling her
he was now willing to give her up into the
hands of the Lord, "which," she says, "I ac-
cepted with joy."

Her constitution was frail from infancy, and
she endured much physical suffering through
life, being often brought so low that her life was
despaired of. At these seasons, she was favored
with patient resignation, though impressed with
the belief that she should be raised for further
service in the Church. She had a firm belief
in the interposition of an over-ruling Provi-
dence, strengthened by her own experience.
On one occasion, whilst sitting with a companion
under a tree, she felt an impression that they
must leave immediately. Very soon the tree
was struck by lightning. Soon after this oc-
currence, she attended a meeting of Friends,
in which a female minister arose with these
words: "If the morning of thy days be wasted,
what will the afternoon produce?" "This,"
she says, "wrought powerfully on my feelings,
convincing me of the mingling of spirits, and
confirming my belief in the immediate inter-
position of Divine Power."

From that time she became a sincere seeker
after Truth, and, we doubt not, was favored to
build upon the sure foundation, "Christ Jesus,
the Rock of Ages."

In her early childhood, at one time she
heard a remark that they were likely to have
a scarcity of food for their family, when she

said, she went out of the house and knelt down and prayed to her Heavenly Father that she might always have enough for herself, her family and friends, and she then received a promise that her prayer would be granted. It was the prayer of faith; of a little child answered by her Father in Heaven. She was often heard to say the promise had been fulfilled.

She believed it would be right for her to become a teacher, and she obtained an education, paying for it after she had earned the means by teaching. She taught school fifteen years. When her pupils needed correction, it was her practice to sit down with them in silence, to try to discover who was in fault. The effect was salutary upon them, and they were bound to her by ties of affection and gratitude.

She believed it right to attend Friends' Meetings, though she had to walk four miles, under bodily suffering and mental exercise, but found great comfort therein. In conformity with her convictions, she felt required to dress plainly; but a dear sister speaking lightly of her religion and her dress, caused her some close trials. She was received a member at Chesterfield Monthly Meeting, in the year 1819. Her first appearance in the ministry was at Upper Greenwich Meeting, in the year 1823. While under the preparing hand for this service, she had many deep baptisms, and her reluctance to appear in public, prolonged her season of trial. During this period, she met at a Friend's house, that worthy Elder, Lucy Ann Evans, to whom she was an entire stranger.—When she sat down in the room, Lucy looked at her and said, "I have received an evidence that thou art one who has been preserved by the immediate interposition of Divine Providence to bear testimony to His cause, and why dost thou withhold? Do not all the powers of thy mind belong to Him, and to Him alone? It arises in my mind, 'He that being often reproved hardeneth his neck, shall suddenly be destroyed, and that without remedy. Dear friend, in the love of the Everlasting Gospel, I entreat thee to let the time past suffice, and yield obedience to the openings of Truth on thy mind.' This admonition, delivered in the power of Truth, met the witness, and was 'as a nail fastened in a sure place.'"

In the year 1831, she was married to our Friend, Samuel Allen, and became a member of Haddonfield Monthly Meeting. She was acknowledged a minister in the year 1842. She was diligent in the fulfilment of religious duties, which led her to make frequent visits within the limits of our own and neighboring Yearly Meetings; and she was often engaged in visiting families, a service for which she seemed well qualified, as she was led to speak convincingly to individual states. Abundant

testimony is furnished by Friends and others where her lot was cast, of their appreciation of her Gospel labors. She ever directed her hearers to a reliance on the Holy Spirit and an attention to its revealings, as the alone way to secure peace and happiness in this life and in that to come.

She was an affectionate wife, a devoted mother, guardian and kind neighbor; and being of a "meek and quiet spirit," she gained the love and esteem, we believe, of all who knew her. She was the faithful friend of the poor and sick, and by her industry and economy, always had means to administer where needed. She was an example in plainness and moderation, walking in the way of self-denial, and bearing the cross. She sympathized deeply with the oppressed slaves, and for years avoided participating, as far as she could, in anything that would tend to prolong their bondage. Being a promoter of "Peace on earth and goodwill to men," she mourned over the desolating war in our land, endeavoring to bear a faithful testimony against any participation therein. "I dare not," she remarked, "read newspapers, or look at any military parades, lest I countenance war, or participate in the excitements of the day."

She was taken ill in Fourth month, 1864, while on a visit at some distance from home. On arriving at home, she remarked she felt better, adding, "My own chamber feels like a palace;" and next morning, "That she had passed a pleasant and happy night." Observing the anxiety of her daughter, she remarked, "This was her last sickness; she saw that it would be before she was taken ill," and told her husband. "They had lived in love, and in the unity of the spirit." She gave affectionate counsel to different members of the family and others who visited her, encouraging to faithfulness, and to a firm trust in a gracious God. She enjoined it upon all to dwell in love, repeating to her family, "Love one another, as I have loved you." She was much engaged in commemorating the goodness and mercy of her Divine Master, and in silent prayer. To a Friend she said, "I have looked over my past life and feel no condemnation. I have endeavored to serve my Heavenly Father faithfully, and to be a whole Christian; and I am now assured that I have not followed cunningly devised fables, adding, 'I see a brightness beyond the grave that no language can describe.' Again, 'My Heavenly Father has taken care of me through life, and has been my support through much sickness and suffering, and my faith is strong in Him; which was verified by her patience and cheerfulness throughout her extreme sickness, as no murmur escaped her lips. She desired messages of love to her absent friends, saying, 'I love everybody.'"

The evening preceding her close, a change was perceived, and on the following morning her husband went to her bedside, and found her sinking, though, being able to converse, she gave him renewed and full assurance that she was ready to be admitted to her Heavenly Father's rest.

She gradually became weaker, and on the afternoon of Sixth month 1st, 1864, she passed away as one falling into a sweet sleep, and was gathered, we doubt not, "as a shock of corn fully ripe."

On the 4th of the month, her remains were taken to Friends' Meeting-house at Haddonfield, where a solemn meeting was held, attended by a large concourse of friends and neighbors. Testimonies were delivered on the occasion, after which the interment took place.

CLAYTON LIPPINCOTT, } Clerks.
MARY W. LIPPINCOTT, }

"I will go in the strength of the Lord."—Thou might say, "I am not equal to what is required of me; I feel that I have no spiritual ability for occupying such and such a position; but then, dear friend, what about the "strength of the Lord? The Psalmist's "I will go," was a determination made with reference to His strength. Oh! let ours be the same, and there is little doubt that we shall be upheld and strengthened in the might that cometh from above. "I can do all things," said the Apostle, "through Christ which strengtheneth me."

THE POWER OF GOODNESS.

I love to walk through a library full of old books, the works of mighty men who once shook the ground under them, yet all forgotten now; and I think how rich-minded the human race is when it can afford to let such intellect lie, and never miss that wealth. But goodness is hid much oftener than great intellect. I do not mean that it is hid in its action, but from men's sight. But for each man of this stamp, there are several women. There is no town but has many sisters to every Lazarus, generous mothers kindly aunts, faithful friends, whose footsteps are like those of spring, flowery to-day, in some weeks fruitful,—those who leave tracks of benevolence all through the cold and drifted snow of selfishness which piles the streets of a great metropolis. It is these persons, women and men, who carry on the great movements of mankind.

The topstone of yonder monument is only the highest because it rests on every block underneath, and the lowest and smallest helps to hold it up; only the foundation was laid with sweat and sore toil, while the capstone was hoisted to its place amid the shouting of multitudes. It is in this way that all the great humanities are carried forward. They advance

most rapidly in New England, because we have more men and women of this stamp amongst us than elsewhere are to be found in the world. Nobody knows the power of a good woman, in the quiet duties of her home, where she is wife, mother, sister, aunt; and in the neighborly charities of the street and village she sets afoot powers of excellence which run and are not weary, or walk and never faint.

You and I may not have much intellectual power; perhaps our thought will never fill the world's soul, nor guide the world's helm; we may not have reason enough to dig down to the roots of things, nor imagination enough to reach up to the fruits and flowers, nor memory to reach back to the causes, nor prophetic power to reach forward to their consequences. But all the little space within our reach we can occupy with goodness, and then the whole house will be filled with the fragrant beauty of our incense, which we offer towards man, and which steals up as a welcome sacrifice towards God. In a wintry day, I have sometimes found a geranium in some poor woman's kitchen, and it filled the whole house with its sweet fragrance. So it is with this goodness. Piety is the root of all manly excellence, and it branches out into a great many things. How you and I can increase this goodness in ourselves, and then in the world; for, though the bodily power is capable of great increase and development, and you see the odds between the thrifty hand of the mechanic and the clumsy hand of the Irish clown; though the intellectual power is capable of wondrous culture, as you see how the use which the well-bred scholar makes of his intellect, differs from the clumsy attainment which the poor ignorant man can only reach,—yet neither the cunning hand nor the cunning brain of man is capable of such immense development of those moral, affectional, and religious faculties whose fairest, sweetest blossom is what we call goodness. And what you and I set on foot for ourselves, are long belongs to the whole world. This is the precious privilege which God gives us, that when we attain it for ourselves, we win it for the whole human race; and though when we go thitherward we carry the fragrance of our flower along with us, its seeds drop into the ground, and live forever on the earth to bless mankind.

Remember that God is no curious or critical observer of the plain expressions that fall from his poor children when they are in their closet duties; 'tis not a flow of words, or studied notions, seraphic expressions, or elegant phrases in prayer, which take the ear, or delight the heart of God, or open the gate of glory, or bring down the best of blessings upon the soul; but uprightness, holiness, heavenliness, spirituality and brokenness of heart—these are the things

that make a conquest upon God, and turn most to the soul's account.

For Friends' Intelligencer.

FRIENDS AND ORTHODOX FRIENDS IN IOWA.

Last autumn a brief account of Friends in the prairie land was published in the *Intelligencer*. At the same time some notice was made of the Yearly Meeting of Orthodox Friends and their liberality in permitting two of our members to sit in their Annual Meeting. It was with sorrow to a number of Friends here that a different state of feeling was manifested in the East. Since that time we have been visited by one of their ministers, and his companion, who by request sat in our Monthly Meeting in the First month, and after some service, requested that the meeting might close with open shutters; which request was complied with, and the service was acceptable to all; and so it was on the the following First-day morning in our regular meeting for worship. This body of Friends is composed of ten Quarterly Meetings, and is in correspondence with London Yearly Meeting. Salem Quarterly Meeting is held in the southern part of Henry County, twenty miles from Prairie Grove, where our new Quarterly Meeting is proposed to be opened in the Sixth month. Two Friends in the ministry from our meeting, feeling weightily impressed to make a visit to some of their Meetings, opened the prospect to the Monthly Meeting, and received minutes expressive of unity. They arrived at Salem on the evening previous to the Quarterly Meeting, and informed some Friends of their feelings. On the following morning a conference of several of the active members of Society was had, and just before entering the house we were met by a goodly number, in a kind, and even cordial manner, one of whom said, "Feel yourselves at home among us Friends."

In the meeting for worship, after a few minutes spent in silent waiting, one of their ministers, in a very impressive manner, said, "If any man minister, let him do it with the ability that God giveth. If any man speak, let him speak as the oracles of God, for where the Spirit of the Lord is, there is liberty. 'Quench not the Spirit.'"

The visitors were both impressed to utter what was upon their minds, which was followed by a brief testimony from one of their number, confirming what had been said. After supplicating the throne of grace, a proposition was made to proceed to the business of the Quarterly Meeting. While the partition was still open, one of the ministers informed the meeting of our concern to sit in their Meeting for Discipline. It was responded to in the affirmative by a very large number of voices on both sides of the partition. A friend in the ministry who had been absent on an extensive religious visit,

then returned his certificate and gave an interesting account of his journey, after which the shutters were closed.

We found there had been a revision of the Discipline and a change made in the manner of answering queries, as well as in some other things. A copy of the Discipline being presented to one of us, I will transcribe some portions thereof that I think may interest the readers of the *Intelligencer*.

We concluded there must have been about five hundred members present on this occasion. On First-day morning, the day following, the commodious house was filled to its utmost capacity. The same freedom was exercised as on the day previous, and, as Friends sometimes used to say in seasons of divine favor, "truth reigned over all." A precious-spirited female minister from Ohio, followed in testimony confirming what had been expressed. So that there was no jar, but rather a Pentecostal feeling, where the love of Christ seemed to have free course to the humbling and comforting of our souls. As a Quarterly Meeting, they have a number of their young people, away in the South, teaching the freedmen.

One pleasant feature in the Meeting for Discipline was to see so many young persons taking an active part in the services of Society.

First-day schools are established throughout their borders, for the instruction of the precious children—a subject well worthy of our emulation.

May the walls of separation be more and more broken down; may bigotry and intolerance be subjugated, until at last the flocks may come to recognize the one fold, under the one blessed Shepherd and Bishop of souls. J. A. D.

Near Mt. Pleasant, Iowa, 5th mo. 15, 1866.

Extracts from the Revised Discipline of the Iowa Yearly Meeting of (Orthodox) Friends (1865).

PRAYER.

"We would by no means encourage formal prayer." "Let not the delusive idea that the gift and duty of public vocal prayer is confined to ministers. We are sorrowfully impressed with the belief that, for this and other causes, the motions of the Spirit have been much suppressed, and by repeated quenchings, the love which was once warm, has grown cold, and blindness and poverty have ensued, to the great loss and peril of individuals, and the leanness of the Church."

"Prayer is the indispensable duty of all, both old and young, and we do affectionately entreat all to yield to the power of God, when His Spirit prompts them to give vocal expression before others to the yearning of their souls in prayer."—*Pages. 21, 22.*

PLAINNESS, &c.

"We would advise our members to avoid in

their conversation the use of the titles 'Master' and 'Mistress,' and the application of the name of heathen deities to days and months; the use of the plural pronoun 'you' instead of the singular, and the objective pronoun 'thee' instead of the nominative 'thee.'

"True civility and due respect one to another and to the world are enjoined by our holy religion, and we desire all our members to show forth these Christian graces in their conduct and conversation."—*Pages 26, 27.*

TOBACCO.

"Seeing that the use of tobacco is repulsive to good taste, and generally injurious to health, requiring a needless, and, in the aggregate, an enormous waste of labor and money, we do therefore earnestly and affectionately encourage all our members who indulge in it to take up the cross, and discontinue and discourage a habit so disgusting and so generally fraught with evil, if it can be done without injuring their health. And it is believed if Friends prayerfully consider the subject, they will feel themselves conscientiously restrained from the use, production, or sale of the article, except for medicinal purposes."—*Page 25.*

SLAVERY.

"As from late political changes, Slavery has been abolished in nearly all the United States, and millions of our injured fellow men, are just emerging from the abject degradation produced by this cruel system, we commend their physical, moral and religious condition to the continued interest and care of our members, with a view to their elevation to the capacity of enjoying all the rights and privileges of civil and Christian societies, with desires that they may be made more generally rich partakers of that knowledge which is life eternal."—*Page 34.*

RIGHTS OF MEMBERSHIP.

"It is the earnest desire of the Yearly Meeting that all our dear youth may espouse our profession by conviction at an early age, and it shall be the duty of Monthly Meetings to extend kind, Christian care to them, by committees, to this end."

RECEPTIONS INTO MEMBERSHIP.

"If the request comes from Men's Meeting, the approbation of Women's Meeting also should be obtained; if before Women's, that of Men's Meeting. And it is our desire that when a small or larger number of individuals, who may reside remote from any Monthly Meeting, may be awakened to a sense of their spiritual wants, and may incline to embrace the doctrines of the Gospel, as held by us, that ministers, elders and overseers, and other Friends, should render such advice and encouragement as in the wisdom of truth they may be enabled to do, in

order that they may be well informed in Christian doctrine; and if at any time such individuals desire to be admitted into full membership with us, the Friends who have extended care as aforesaid should inform the Monthly Meeting most convenient; and such meeting, after extending proper care, may be at liberty to receive them into membership collectively; or should the Monthly Meeting desire assistance, the case may be forwarded to the Quarterly Meeting for advice and assistance before final action."—*Pages 39, 40.*

RELEASE OF MEMBERS AND RELINQUISHMENT OF RIGHTS.

"When any member requests to be released from membership, the Monthly Meeting should grant or record such release, after the proper care to reclaim them proves unavailing.

"Any member joining another religious denomination, and continuing satisfied therein for two years, thereby relinquishes his right in our own."—*Page 41.*

MEETINGS FOR DISCIPLINE.

"As the service of our Meetings for Discipline pertains especially to our own members, it is advised that they be kept select, as a general rule, yet discretionary authority is conceded to Meetings for Discipline in reference to admitting others.

"We do earnestly exhort that none be deterred from the faithful exercise of their gifts, either in Meetings for Worship or Discipline, on account of their youth. And in the important appointments in the Church, let the dictates of the Spirit and the religious growth of individuals be considered rather than age or activity."—*Page 48.*

MARRIAGE.

"When any of our members become satisfied to join in marriage with one not in membership with us, the same procedure may be allowed as when both are members, the Monthly Meeting noting the fact of non-membership on its records.

"Monthly Meetings are encouraged to visit, by committees, our members soon after their marriage, for their help and encouragement, at this important period, as much depends on the early adoption of religious habits."—*Page 79.*

UNANSWERED QUERIES.

"In order to realize the benefit of serious self-examination, and to induce an earnest concern for the good of others, the four following queries are to be read in our Meetings for Discipline, to be then seriously considered, but not answered.

"1st. What is the religious state of your meeting, and is there among you evidence of a growth in the truth?

"2d. Are you individually giving evidence of true conversion of heart, of love to Christ

and self-denying devotedness to Him, and of a growing preparation for the life eternal?

"8d. Do you exercise a judicious, religious care over your younger members, manifesting an earnest concern that, through the power of divine grace, they may all become established in the faith and hope of the Gospel?"

"4th. Do you maintain a watchful care against conformity to the world; against the love of ease and self-indulgence, or being unduly absorbed by your outward concerns to the hindrance of your religious progress; bearing in mind that 'here we have no continuing city'?"

Love as brethren, be pitiful, be courteous.—Did we sufficiently regard this blessed admonition, "Be pitiful, be courteous," what suffering we should spare ourselves and others! How would the old road of life be disarmed of its asperities; how would its rough places be smoothed, and how many of our bitterest cups be sweetened!

"Be pitiful, be courteous," not only to the good and gentle, but also to the froward; not only to them who may be on our own level in outward position and circumstances, but also to our brethren and sisters who have to maintain themselves by the sweat of their brow, but who are the very bone and sinew of the social frame.

WHO ARE THEY THAT ARE OF THE TRUTH.

The first qualification is to *be* true: "He that is of the truth heareth my voice." Truth lies in character. Christ did not simply *speak* truth: he *was* truth; truth through and through; for truth is a thing not of words, but of life and being. . . . The next qualification is integrity. But by integrity I do not mean simply sincerity or honesty; integrity rather according to the meaning of the word as its derivation interprets it—entireness, wholeness, soundness; that which Christ means when he says, "If thine eye be single or sound, thy whole body shall be full of light."

This integrity extends through the entireness or wholeness of the character. It is found in small matters as well as great; for the allegiance of the soul to truth is tested by small things rather than by those which are more important. There is many a man who would lose his life rather than perjure himself in a court of justice, whose life is yet a tissue of small insincerities. We think that we hate falsehood, when we are only hating the consequences of falsehood. We resent hypocrisy, and treachery and calumny, not because they are untrue, but because they harm us. We hate the false calumny, but we are half pleased with the false praise. It is evidently not the element of untruth here that is displeasing, but

the element of harmfulness. Now, he is a man of integrity who hates untruth *as* untruth; who resents the smooth and polished falsehood of society, which does no harm; who turns in indignation from the glittering, whitened lie of sepulchral Pharisaism, which injures no one. Integrity recoils from deceptions which men would almost smile to hear called deceptions. To a moral, pure mind, the artifices in every department of life are painful: the stained wood, which passes for a more firm and costly material in a building, and deceives the eye by seeming what it is not, marble; the painting which is intended to be taken for a reality; the gilding which is meant to pass for gold; and the glass which is worn to look like jewels, for there is a moral feeling and a truthfulness in architecture, in painting, and in dress, as well as in the market-place, and in the senate, and in the judgment-hall.

"These are trifles." Yes; but it is just these trifles which go to the formation of character. He that is habituated to deceptions and artificialities in trifles, will try in vain to be true in matters of importance; for truth is a thing of habit, rather than of will. You cannot, in any given case, by a sudden and single effort, will to be true, if the habit of your life has been insincerity. And it is a fearful question, and a difficult one, how all these things, the atmosphere which we breathe in our daily life, may sap the very foundations of the power of becoming a servant of the truth. Life becomes fictitious, and it passes into religion, till our very religion bases itself upon a figment, too. We are not righteous, but we expect God to make believe that we are righteous, in virtue of some peculiar doctrines that we hold; and so our very righteousness becomes the fictitious righteousness of the Scribes and Pharisees, instead of the righteousness which is by faith, the righteousness of those who are the children of the kingdom of the truth.

Once more. He is qualified to be the subject of the king who *does* the truth. Christianity joins two things inseparably together—acting truly, and perceiving truly. Every day the eternal nature of that principle becomes more certain. If any man will do His will, he shall know of the doctrine whether it be of God.

It is a perilous thing to separate feeling from acting; to have learnt to feel rightly without acting rightly. It is a danger to which, in a refined and polished age, we are peculiarly exposed. The romance, the poem, and the sermon, teach us how to feel. Our feelings are delicately correct. But the danger is this: feeling is given to lead to action; if feeling be suffered to awake without passing into duty, the character becomes untrue. When the emergency for real action comes, the feeling is as usual produced; but, accustomed as it is to

rise in fictitious circumstances without action, neither will it lead on to action in the real ones. "We pity wretchedness, and shun the wretched." We utter sentiments, just, honorable, refined, lofty,—but, somehow, when a truth presents itself in the shape of a duty, we are unable to perform it. And so such characters become by degrees like the artificial pleasure grounds of bad taste, in which the water-fall does not fall, and the grotto offers only the refreshment of an imaginary shade, and the green hill does not strike the skies, and the tree does not grow. . .

Again, it is perilous to separate thinking rightly from acting. He is already half false, who speculates on truth and does not do it. Truth is given, not to be contemplated, but to be done. Life is an action, not a thought; and the penalty paid by him who speculates on truth is, that by degrees the very truth he holds becomes to him a falsehood.

There is no truthfulness, therefore, except in the witness borne to God by doing His will, —to live the truths we hold, or else they will be no truths at all. It was thus that Christ witnessed the truth. He lived it. He spoke no teaching truths for sentiment to dwell on, or thought to speculate upon. Truth with Him was a matter of life and death. He perilled his life upon the words he said.

—F. W. Robertson.

The Epistle from the Yearly Meeting of Women Friends of New York, received and read at the late Yearly Meeting of Women Friends held in Philadelphia.

DEAR SISTERS,—Through the matchless goodness of our Heavenly Father, we have once more been permitted to meet at our annual assembly, and to transact the concerns thereof with harmony and due deliberation. Once more the table of the Lord has been spread for us with rich dainties, of which we have partaken to our spiritual refreshment. Your acceptable epistle, with those from other Yearly Meetings, have been received, and we have been filled with gratitude to the Giver of all good, that He still preserves unbroken the bond of sympathy and love which unites us together in sweet Christian fellowship. There is but one way to secure an entrance into the Heavenly kingdom, and this is the path of humility and self-renunciation; and look to but one true guide, to whom we must look with a single eye for safe conduct in the way He leads us, whether it be through sorrow and tribulation, or into pleasant pastures beside the still waters. If we are humble and teachable, willing to learn of Him who alone can unfold to us the treasures of light and knowledge, He will open springs in dry places, and rivers in the wilderness. Then let us not become weary by the way, and be be-

guiled into a false rest, or drawn aside by the alluring temptation of an easier path than that our heavenly guide leads into. But moving forward only as He goes before, let us do whatsoever He bids us, even though we may be required to bear the cross under deep exercise. He can make hard things easy and sweeten the bitter cup. We feel deeply the necessity of more earnestness, more devotion to our Master's work, more dwelling apart from the spirit of the world, and more searching of our hearts, that we may discover, and by divine aid root out, all that His righteous controversy is against, and dedicating ourselves anew to the dignified and noble cause of Truth, be enabled to bear up the great testimonies for which our fathers gave up their worldly good and their reputation among men. Knowing that time is short, let us work while it is yet day.

The neglect in the attendance of our religious meetings, as reported in the answers to the queries, brought a deep travail of spirit over many minds, and tender appeals were made to all, particularly the young, to renewed diligence in the performance of this important duty, also, that when assembled, we should seek for Divine assistance, that our creaturely will may be reduced, and in this humble, dependant state, wait on the Lord, who has promised to crown with his presence every assembly gathered in His name. Then be not discouraged by the smallness of the number, the lack of gospel messengers, distance, or inclement weather.

We were earnestly exhorted to a more frequent and prayerful perusal of the Holy Scriptures, believing, as we do, they were given forth by inspiration of God, and that they are profitable for doctrine, for reproof and instruction in righteousness, and that the traveller Zionward is often comforted and encouraged by the precious promises recorded therein; and if we cannot comprehend all parts of them, let us patiently wait for the holy anointing to open them, so as to be of deep instruction to us, as many devoted servants of the Lord have realized.

We have been favored with the company and labor of several dear friends from yours and other Yearly Meetings; and although we have at times felt discouragement because of the deficiencies in our midst, yet we have at this time been furnished with renewed evidence that Joseph is yet alive, and fervent desires have been begotten that he may as of old become a fruitful bough, whose branches may run over the wall.

We have been made to rejoice that the sound of war has ceased in our afflicted country, and humble petitions have ascended to Him who rules the storm, that He will work mightily in every soul to the rooting out of every element of strife and contention, that the dove may go

forth bearing the olive branch of peace to all future generations.

With the salutation of love we remain your sisters.

Signed on behalf and by direction of the Meeting by

RACHEL HICKS, *Clerk.*

FRIENDS' INTELLIGENCER.

PHILADELPHIA, SIXTH MONTH 9, 1866.

DIED, on the 18th of Third month, 1866, in Mount Holly, N. J., ELIZABETH ANN, wife of Joseph L. Worrell, in the 31st year of her age. She expressed her willingness to depart, in hope of a glorious immortality.

—, on the 23d of Third month, 1866, at the residence of her daughter, in Horsham Township, Montgomery Co., Pa., RACHEL ROBERTS, Sr., in the 85th year of her age.

—, on the 30th of Fifth month, 1866, AMOS PRABLER, in the 86th year of his age; a Minister of the Monthly Meeting of Friends of Philadelphia held at Green Street.

—, on the 23d of Second month, 1866, at his residence near Medford, New Jersey, DANIEL BATES, in the 67th year of his age; an Elder and diligent attendant of Medford Monthly Meeting of Friends.

Thus has passed away from earth to the mansions of blessedness, a devoted husband and father, one esteemed by all who knew him. Whilst we mourn his loss, we are not without hope, for we have the comforting assurance that all is peace with him. "Blessed are the pure in heart, for they shall see God."

—, on the 24th of Fifth month, 1866, near Jacobstown, N. J., PHENE, wife of John Brown, aged 68 years.

—on the 27th of Fifth month, 1866, at his residence near Plymouth, Montgomery Co., Pa., WM. HALLOWELL, aged 82 years and 3 days; a member of Gwynedd Monthly Meeting.

—, on the 31st of Fifth month, 1866, in Philadelphia, MARY P. L. HEATON, in her 76th year.

—, on the 1st of Sixth month, 1866, at Penn's Manor, Bucks Co., Pa., RACHEL C., eldest daughter of Hector C. and Mary T. Ivins, in her 16th year.

FRIENDS' SOCIAL LYCEUM.

The members of Friends' Social Lyceum propose having their *Third Annual "Reunion"* at Swarthmore, near Westdale Station, on the West Chester and Philadelphia Railroad, on the 16th of Sixth month, 1866. If unfavorable weather should prevent the excursion, it will take place on the succeeding Seventh-day, (6th month 23d,) at the same hour.

Delegates have been invited from various Literary Associations, and a general invitation is extended to Friends in the city and country.

The cars leave Thirty-First and Market Streets, West Philadelphia, at 7.20, 9 (*Special Train*;) 11 A. M., and 2.15 P. M.; returning, will leave Westdale for the city about 2.40, 5.55, and 8.05 P. M. Those residing along the line of the Baltimore Central and West Chester Railroad will arrive and depart by the regular trains,—all of which will stop at Westdale Station on this day.

Excursion tickets may be had of any of the Com-

mittee, or at the Depot previous to the departure of the trains, at Fifty cents each; Children, half price. Corresponding rates from other points.

Literary Exercises will be held at 10 A. M. and 3 P. M.

CLEMENT M. BIDDLE, 569 Commerce St., J. MORGAN COOPER, 203 Market, JACOB M. ELLIS, 325 Walnut, CHAS. A. DIXON, 715 Market, JOS. L. HANCOCK, 33d above Baring, HENRY BENTLEY, S. E. cor. Third and Chestnut, HENRY C. HAWKINS, 1024 Chestnut, REB. T. BUCKMAN, 645 N. Eighth, HOWARD GOURLEY, 523 N. Seventh, CLEMMONS PARRISH, 800 Arch, ALFRED MOORE, 331 N. Sixth, T. H. SPEAKMAN, 26 N. Seventh, J. M. TRUMAN, JR., 717 Willow,

Committee on Arrangements.

Applications for Teachers among the Freedmen may be addressed to the Secretary of the Education Committee, Jacob M. Ellis, 608 N. Seventh St., Phila.

WANTED, a few Nos. 39, 40 and 41, Vol. 22d Friends' Intelligencer, in nice order, for which full subscription price will be paid.

EMMON COMLY,

144 N. Seventh Street.

TOO MUCH READING.

F. W. Robertson says in one of his letters :

"I never knew but one or two fast readers, and readers of many books, whose knowledge was worth anything. Miss Martineau says of herself, that she is the slowest of readers, sometimes a page in an hour; but then, what she reads she makes her own. Do impress this on E—. Girls read too much, and think too little. I will answer for it that there are few girls of eighteen who have not read more books than I have; and as to religious books, I can count upon my fingers in two minutes all I ever read, but then they are mine.

"Sir Erskine Perry said the other day that, a fortnight ago, in a conversation with Comte, one of the most profound thinkers in Europe,—Comte told him that he had read an incredibly small number of books these last twenty years, I forget how many—and scarcely ever a review; but then, what Comte reads lies there fructifying, and comes out a living tree with leaves and fruit.

"Multifarious reading weakens the mind more than doing nothing, for it becomes a necessity at last, like smoking, and is an excuse for the mind to lie dormant, whilst thought is poured in, and runs through, a clear stream, over unproductive gravel, on which not even mosses grow. It is the idlest of all idleness, and leaves more of impotency than any other. I do not give myself as a specimen, for my nervous energies are shattered by stump oratory, its excitements and reactions, but I know what reading is, for I could read once, and did. I read hard, or not at all,—never skimming, never turning aside to merely inviting books; and Plato, Aristotle, Butler, Thucydides, Sterne, Jonathan Edwards, have passed like the iron atoms of the blood into my mental constitution."

ALMIRA FALES.

The following sketch of this admirable woman who has for the last two or three years distributed among the Freedmen in Washington clothing and supplies sent from Friends' Association for the Aid and Elevation of the Freedmen, we take from the New York Independent.

WASHINGTON, May 1866.

There is a cottage on Fourth Street which looks as if it had strayed away from a New England village. Vines climb its lattices; trees are putting forth leaves to shelter it; flowers fill its garden with fragrance; its rooms are full of sunshine, content and love. Do you wonder that it looks lost amid the comfortless tenements of Washington? This cottage *orned* is the happy home of one of the most remarkable women of our time. She never painted a picture, nor carved a statue, nor wrote a book, nor lifted up eloquent voice to vindicate the rights of women—her just claim to be man's equal before the law. She has simply used the woman's right which the most selfish man would not deny her—the right to forget herself, and to devote her whole being to the service of others.

The most distinguished and discriminating travellers who visit this country are astonished at the universal intelligence and superiority of American women. Among the masses of the people, there are more women who speak and write correctly, even eloquently, than men. A stimulating climate, a stimulating school-system, a stimulating press, stimulating institutions of every sort, acting upon the sensitive brain of the American woman, pervade her with all the ambition and unrest which is so marked a characteristic of the American man. With a few exceptions, the prizes of ambition lie open to her. Thus we find her everywhere reaching after them, goaded on, wearing out. We find her on the lecture-stand, in the dissecting room, even in the pulpit. Her statues stand in our galleries; her pictures hang upon our walls; her books are cherished in our libraries; her winsome wisdom, and brave, true thoughts reach our brains and linger in our hearts. At what a lavish expenditure of life, at what cost of nerve-power, and of heart-joy, are these prizes often won?

Publicity to a woman, never a blessing, is often a bane. If she offends as an artist, it is her misfortune to be assailed as a woman, because, as a woman, nothing can be so sacred to her as her womanhood. That fame is a curse which soils the loveliness of the womanly name by thrusting it into the grimy highway, where it is wondered at, sneered at, lied about, by the vulgar, the worldly, and the wicked. The woman who finds herself the cynosure of a home,

who sees in her children her choicest treasures, finds in her husband the satisfaction of her heart and the crown of her ambition; who, in the sweet amenities of life, in unostentatious benevolence, finds occupation and a career; whose deep and quiet culture of every power makes her the meet wife and mother of men—she is the happy woman: All are not born to this perfect heritage. There are women endowed with gifts so dominant that they dare not turn from their uses; women impelled by fate to an exceptional career. Humanity needs such women, or God would not make them. He creates his sibyls as well as his seers. He gives them the prescient soul and the divining eyes which penetrate the mystery of life and the secrets of all hearts. He creates them, not for their own joy, but for the world's service. Remember this, happy woman by your fireside. Look on her with eyes of tender ruth; speak gently of this sister-woman, whose lot, if loftier, is so much lonelier than your own. Though your life seems meagre and spiritless, do not envy her her splendid isolation. There may be many to admire, and a few to love her; but, so far as her being is exceptional, it is solitary. She looks down, measuring the path between her and the grave, and feels that she must walk it alone. If this woman loves, fame holds no compensation for what she has missed. If the child by your side looks into your face with the lonely eyes of genius, shield her as you never shielded another, and yet you cannot avert her destiny. But if you have a pert and clever little daughter you can save her from a false life. You need not train her for the world, you need not educate her for display. Ostentation is the curse of our American life. Few afford to do what they do quietly. Few are content to live simple, contrite, loving lives. Our home-life is not sweet, and sheltered, and holy, as it should be. Everybody is trying to make a display of something. Emulation in petty things is as rampant in women as in men. If a woman don't write, or paint, or preach, she must lead something—fashion, perhaps; and the object of her life is to see how many bits of pasteboard she can have left at her door in the course of a year. The average young lady leaves school filled with one ambition—to "catch" lovers, and boast of her conquests. To this business she consecrates every power. The delicate bloom of girlhood, how soon it is brushed from her soul! At twenty she is old in art, if not in sin. The innocence of youth is dead and buried. What a dowry she brings to her husband! The fragments of a heart never deep or true, a passion for admiration, a hunger for conquest which he will never satisfy. The law of her life, she obeys it, to bring to his home desolation, if she does not cover his name with disgrace. How the country

needs a deeper and quieter culture for women; a culture which, while it trains every faculty for noble use, perfects her womanhood, making her more than ever the lover and keeper of home, the gentle minister of the erring and afflicted. No matter what her intellect, the crowning excellence and glory of woman must be goodness. Man, torn with conflicting ambitions and passions, fights her battles and his own in the great arena; but, at the end of the conflict, turns always to her, his sanctuary and his safety. The arbiter of his fortune, the saviour of his purity, the unerring instincts of nature teach her that she lives in this world, not only to give him his life, but to spend her life for him! The most grandly endowed woman, looking up to her God, feels rich, not in genius, but in her wealth of tenderness, in her capacity for sacrifice and devotion, which is at once the cross and crown of her womanhood.

I have left my Fourth-street cottage a long way back, and have been saving its occupant, not to hold her up as a perfectly harmonious woman, but as one of a small band of American women who have proved themselves to be great in self-forgetfulness and heroic devotion. Such women, always doing, never think of pausing to tell their own stories, which, indeed, can never be told; yet the hint of them can be given, to stir in the hearts of other women a purer emulation, and to prove to them that the surest way to happiness is to serve others and forget yourself.

This woman that I see is tall, and not fashionably dressed. She is not young, yet her face bears traces of great beauty, and her large blue eyes yet beam with the brightness of youth. Those hands—what a story they tell! Poor hands! darkened and hardened by work, they never shirked any task, never turned from any drudgery, that could lighten the load of another. Dear hands! how many blood-stained faces they have washed, how many wounds they have bound up, how many eyes they have closed in dying, how many bodies they have sadly yielded to the darkness of death!

After a life spent in benevolence, it was in December, 1860, that Almira Fales began to prepare lint and hospital stores for the soldiers of the Union, not one of whom had then been called to take up arms. People laughed, of course; thought it a "freak;" said that none of these things would ever be needed. Just as the venerable Dr. Mott said, at the woman's meeting in Cooper Institute, after Sumter had been fired: "Go on, ladies! Get your lint ready, if it will do your dear hearts any good, though I don't believe myself that it will ever be needed." Since that December Mrs. Fales has emptied over seven thousand boxes of hospital stores, and distributed with her own hands over one hundred and fifty

thousand dollars worth of comforts to sick and wounded soldiers. Beside, she supplied personally between sixty and seventy forts with reading matter. She was months at sea—the only woman on hospital ships nursing the wounded and dying men.

Thousands of heroes on earth and in heaven gratefully remember this woman's loving care to them in the extremity of anguish. The war ended, her work does not cease. Every day you may find her, with her heavily-laden basket, in hovels of white and black, which dainty and delicate ladies would not dare to enter. No wounds are so loathsome, no disease so contagious, no human being so abject, that she shrinks from contact, if she can minister to their necessity.

An electric temperament, a nervous organization, with a brain crowded with a variety of memories and incidents that could only come to one in a million—all combine to give her a pleasant abruptness of motion and of speech, which I have heard some very fine ladies term insanity. "Now don't you think she is crazy, to spend *all* her time in such ways?" said one. When we remember how rare a thing utter unselfishness and self-forgetfulness is, we must conclude that she *is* crazy. If the listless and idle lives which we live ourselves are perfectly sane, then Almira Fales must be the maddest of mortals. But would it not be better for the world, and for us all, if we were each of us a little crazier in the same direction? M. C. A.

For Friends' Intelligence.
FOR THE CHILDREN.

Are you joyous at this season of buds and blossoms? Have you spaded your flower-beds, made the earth mellow and sown your seeds? If the ground is properly prepared, and the florist has given you *good* seeds, then with the blessing of a kind Providence in sending the early and the latter rain, mingled with sunshine, you may look first for the green leaf, then for the bud, afterward the blossom and then the seed fully ripe.

But weeds may spring up among them, which if permitted to grow will take much of the strength of the soil, and your plants will be smaller and less beautiful. Therefore watch closely, lest your first labor be lost, and your anticipated enjoyment end in disappointment.

And, while thus hopefully laboring, did you ever think that those little plants were a type of yourselves? That the daily watching, weeding and cultivating was repeated every day by your anxious parents? Yes, you are their immortal plants, warmed by the sunshine of love and watered by the dew of affection. And *here* too comes a labor for you; to receive and improve these precious blessings, that they may bring forth fruit of gentleness, kindness, for-

bearance and love. Not love to *one* alone in the household, but let all feel that they share a common affection; not that alone due to a parent or one who takes the place of a parent, but such as should flow through the family circle. Be not selfish, but generous; extend the social circle, and embrace all who have a deep interest in your welfare, and would offer a word of admonition for your good. Thus may you shed a light upon those whose childhood has long since passed away, and their sun is fast setting. Let them catch the watchful eye as it casts about for their comfort, and feel that the vacant chair at the table or the fireside would gladly be long deferred. These have passed through the season of buds and blossoms, have borne their fruit, and are now waiting for the Great Husbandman to gather them into his sacred garner. Neglect them not, during this period of waiting. E. H.

THE GREAT WORSHIP.

BY JOHN G. WHITTIER.

The harp at Nature's advent strung
Has never ceased to play;
The song the stars of morning sung
Has never died away.

And prayer is made, and praise is given,
By all things near and far:
The ocean looketh up to heaven,
And mirrors every star.

Its waves are kneeling on the strand
As kneels the human knee,
Their white locks bowing to the sand,
The priesthood of the sea!

They pour their glittering treasures forth,
Their gifts of pearl they bring,
And all the listening hills of earth
Take up the song they sing.

The green earth sends her incense up
From many a mountain abrine;
From folded leaf and dewy cup
She pours her sacred wine.

The mists above the morning rills
Rise white as wings of prayer;
The altar-curtains of the hills
Are sunset's purple air.

The winds with hymns of praise are loud,
Or low with sobs of pain;
The Thunder-organ of the cloud,
The dropping tears of rain.

With drooping head and branches crossed,
The twilight forest grieves,
Or speaks with tongues of Pentecost
From all its sunlit leaves.

The blue sky is the temple's arch,
Its transept earth and air;
The music of its starry march
The chorus of the prayer.

So nature keeps the reverent frame
With which her years began,
And all her signs and voices shame
The prayerless heart of man.

To be furious in religion, is to be irreligiously religious.—*Penn.*

From the Evening Post.

SCATTER SEED.

In the furrows of thy life,
Scatter seed!
Small may be thy spirit-field,
But a goodly crop 'twill yield;
Sow the kindly word and dead,
Scatter seed!

Sun and shower aid thee now,
Scatter seed!
Who can tell where grain may grow?
Winds are blowing to and fro,
Daily good thy simple creed,
Scatter seed!

Up! the morning flies away,
Scatter seed!
Hand of thine must never tire,
Heart must keep its pure desire;
While thy brothers faint and bleed,
Scatter seed!

Though thy work should seem to fail,
Scatter seed!

Some may fall on stony ground;
Flower and blade are often found
In the clefts we little heed.
Scatter seed!

Spring-time always dawns for thee;
Scatter seed!
Ope thy spirit's golden store,
Stretch thy furrows more and more,
God will give to thee thy need.
Scatter seed!

GEORGE COOPER.

From the Atlantic Monthly.

IN THE HEMLOCKS.

Most people receive with incredulity a statement of the number of birds that annually visit our climate. Very few even are aware of half the number that spend the summer in their own immediate vicinity. We little suspect, when we walk in the woods, whose privacy we are intruding upon,—what rare and elegant visitants from Mexico, from Central and South America, and from the islands of the sea, are holding their reunions in the branches over our heads, or pursuing their pleasure on the ground before us.

I recall the altogether admirable and shining family which Thoreau dreamed he saw in the upper chambers of Spaulding's woods, which Spaulding did not know lived there, and which were not put out when Spaulding, whistling, drove his team through their lower halls. They did not go into society in the village; they were quite well; they had sons and daughters; they neither wove nor spun; there was a sound as of suppressed hilarity.

I take it for granted that the forester was only saying a pretty thing of the birds, though I have observed that it does sometimes annoy them when Spaulding's cart rumbles through their house. Generally, however, they are as unconscious of Spaulding as Spaulding is of them.

Walking the other day in an old hemlock wood, I counted over forty varieties of these summer visitants, many of them common to other woods in the vicinity, but quite a number peculiar to these ancient solitudes, and not a few that are rare in any locality. It is quite unusual to find so large a number abiding in one forest,—and that not a large one,—most of them nestling and spending the summer there. Many of those I observed commonly pass this season much farther north. But the geographical distribution of birds is rather a climatical one. The same temperature, though under different parallels, usually attracts the same birds; difference in altitude being equivalent to the difference in latitude. A given height above the sea level under the parallel of 30° may have the same climate as places under that of 35°, and similar Flora and Fauna. At the head-waters of the Delaware, where I write, the latitude is that of Boston, but the region has a much greater elevation, and hence a climate that compares better with the northern part of the State and of New England. Half a day's drive to the southeast brings me down into quite a different temperature, with an older geological formation, different forest timber, and different birds,—even with different mammals. Neither the little Grey Rabbit nor the little Gray Fox is found in my locality, but the great Northern Hare and the Red Fox are seen here. In the last century a colony of beavers dwelt here, though the oldest inhabitant cannot now point to even the traditional site of their dams. The ancient hemlocks, whither I propose to take the reader, are rich in many things beside birds. Indeed, their wealth in this respect is owing mainly, no doubt, to their rank vegetable growths, their fruitful swamps, and their dark, sheltered retreats.

Their history is of an heroic cast. Ravished and torn by the tanner in his thirst for bark, preyed upon by the lumberman, assaulted and beaten back by the settler, still their spirit has never been broken, their energies never paralyzed. Not many years ago a public highway passed through them, but it was at no time a tolerable road; trees fell across it, mud and limbs choked it up, till finally travellers took the hint and went around; and now, walking along its deserted course, I see only the foot-prints of coons, foxes, and squirrels.

Nature loves such woods, and places her own seal upon them. Here she shows me what can be done with ferns and mosses and lichens. The soil is marrowy and full of innumerable forests. Standing in these fragrant aisles, I feel the strength of the vegetable kingdom and am awed by the deep and inscrutable processes of life going on so silently about me.

No hostile forms with axe or spade now visit

these solitudes. The cows have half-hidden ways through them, and know where the best browsing is to be had. In spring the farmer repairs to their bordering of maples, to make sugar; in July and August women and boys from all the country about, penetrate the old Barkpeeling for raspberries and blackberries; and I know a youth who wonderingly follows their languid stream casting for trout.

In like spirit, alert and buoyant, on this bright June morning, go I also to reap my harvest,—pursuing a sweet more delectable than sugar, fruit more savory than berries, and game for another palate than that tickled by trout.

June, of all the months, the student of ornithology can least afford to lose. Most birds are nesting then, and in full song and plumage. And what is a bird without its song? Do we not wait for the stranger to speak? It seems to me that I do not know a bird till I have heard its voice; then I come nearer it at once, and it possesses a human interest to me. I have met the Gray-cheeked Thrush (*Turdus aliciae*) in the woods, and held him in my hand; still I do not know him. The silence of the Cedar-Bird throws a mystery about him which neither his good looks nor his petty larcenies in cherry time can dispel. A bird's song contains a clue to its life, and establishes a sympathy, an understanding between itself and the admiring listener.

I descend a steep hill, and approach the hemlocks through a large sugar-bush. When twenty rods distant, I hear all along the line of the forest the incessant warble of the Red-eyed Fly-catcher (*Vireosylva olivacea*), cheerful and happy as the merry whistle of a school-boy. He is one of our most common and widely distributed birds. Approach any forest at any hour of the day, in any kind of weather, from May to August, in any of the middle or eastern Districts, and the chances are that the first note you hear will be his. Rain or shine, before noon or after, in the deep forest or in the village grove,—when it is too hot for the thrushes, or too cold and windy for the warblers,—it is never out of time or place for this little minstrel to indulge his cheerful strain. In the deep wilds of the Adirondac, where few birds are seen and fewer heard, his note was almost constantly in my ear. Always busy, making it a point never to suspended for one moment his occupation to indulge his musical taste, his lay is that of industry and contentment. There is nothing plaintive or especially musical in his performance, but the sentiment expressed is eminently that of cheerfulness. Indeed the songs of most birds have some human significance, which, I think, is the source of the delight we take in them. The song of the Bobolink, to me, expresses hilarity; the Song-Sparrow's, faith; the Bluebirds, love; the Cat-

Bird's, pride; the White-eyed Flycatcher's, self-consciousness; that of the Hermit-Thrush, spiritual serenity; while there is something military in the call of the Robin, and unalloyed contentment in the warble of the Red-eyed Vireo.

This bird is classed among the flycatchers, but is much more of a worm-eater, and has few of the traits or habits of the *Muscicapa* or the true *Sylvia*. He resembles somewhat the Warbling Vireo (*Vireo gilvus*), and the two birds are often confounded by careless observers. Both warble in the same cheerful strain, but the latter more continuously and rapidly. The Red-Eye is a larger, slimmer bird, with a faint bluish crown, and a light line over the eye. His movements are peculiar. You may see him hopping among the limbs, exploring the under side of the leaves, peering to the right and left,—now flitting a few feet, now hopping as many,—and warbling incessantly, occasionally in a subdued tone, which sounds from a very indefinite distance. When he has found a worm to his liking, he turns lengthwise of the limb, and bruises its head with his beak before devouring it.

As I enter the woods, the Slate-colored Snow-bird (*Fringilla Hudsonia*) starts up before me and chirps sharply. His protest when thus disturbed is almost metallic in its sharpness. He breeds here, and is not esteemed a snow-bird at all, as he disappears at the near approach of winter, and returns again in spring, like the Song-Sparrow, and is not in any way associated with the cold and the snow. So different are the habits of birds in different localities. Even the Crow does not winter here, and is seldom seen after December or before March.

The Snow-Bird, or "Black Chipping-Bird," as it is known among the farmers, is the finest architect of any of the ground-builders known to me. The site of its nest is usually some low bank by the road side near a wood. In a slight excavation, with a partially concealed entrance, the exquisite structure is placed. Horse-hair and cow-hair are plentifully used, imparting to the interior of the nest great symmetry and firmness as well as softness.

(To be continued.)

From the N. Y. Evening Post.

OUR CELLAR POPULATION.

It is a well established scientific fact that light is absolutely essential to the growth of animals as well as of plants. When we desire the unnatural development of a plant, as for example chickory or celery, we cover it up from the effect of light. If we wish to secure an abnormal secretion of fat in an animal, like the pig, we fedge it in a half darkened pen. Only mushrooms, fungi, infusoria, monads, diatoms,

poisonous weeds, hybrid plants, unnatural monsters, lurk and flourish in dark places.

It is known that vegetables which begin to sprout in cellars send forth poisonous shoots. Draper has shown that under the influence of the luminous rays, plants give off oxygen gas and destroy carbonic acid. They exhale oxygen in the light and assimilate carbon. A plant is the child of the sun, depending upon it for its birth, nutrition and growth. Respiration is the gentle combustion of carbon and of hydrogen, analogous to that which takes place in a burning lamp.

In respiration and vegetation it is the atmospheric air that furnishes the oxygen and the carbonic acid; but the substance of the animal, its very blood, supports the combustion, and if the loss incurred is not restored by food the oil will soon be wanting in the lamp, and the animal will perish, as the lamp goes out when its oil is exhausted. But food alone, either for the plant or animal, is not sufficient to sustain life. The plant cannot secrete its food in the dark, and it has been found that respiration cannot be healthfully carried on without the light.

A long series of observations have been made by Moleschott to show that the same animal, placed alternately in the dark and in the light, gives off one-third more carbonic acid from its lungs in the light than it does in the dark, and that its growth and strength are in direct ratio to the amount of the respired gas. A plant becomes white and fragile in a cellar, and a twining plant forgets its nature in the dark, and grows up a straight stalk.

The observations made upon plants and animals apply to man. The same laws of growth obtain in his case.

Where a plant will not grow man will not grow. Where a lamp is extinguished the lamp of life will also go out. There are other causes which render subterranean dwellings unhealthy—these are the dampness, the foul gases from sewers, and the lack of ventilation. It has been found that a close proximity to surface water exposes persons fatally to the attack of such diseases as the cholera. There needs no law to prevent the farmer and gardener from sowing their seed in places where it will not grow, but a law to prevent landlords from sowing the seeds of disease and nourishing a sickly, perishing class of population, by shutting them up in unwholesome cellars, may well merit our attention.

Business men need to be cautioned against the dismal, damp, dingy, dungeon-like offices, down town, out of which can be seen to issue every day pale, cadaverous, nervous people, who pay enormous rents for these holes, and larger doctor's bills, while they are working hard to support their families. If sunlight

were for sale, and everybody knew its value, it would bring a high price on 'Change, but being cheap, and its value not understood, no one will pay a dime for a single ray.

Let those who love darkness and are willing to pay for it enjoy it to their satisfaction; but it is a public injury that men, taking advantage of the poverty and necessities of their fellows, should sell darkness and disease, as they are sold, at high rates, to the thousands who in this city live in cellars.

ON THE INVISIBLE RAYS OF THE ELECTRIC LIGHT.

(Concluded from page 207.)

One way of doing this would be to cut off the luminous portion of the decomposed beam by an opaque screen, allowing the non-luminous portion to pass by its edge. We might then operate at pleasure upon the latter;—reflect it, refract it, concentrate it. This would be a perfectly philosophical way of detaching the light from the heat, but with our present means we could not thus obtain a quantity of heat sufficient to produce the results intended to be exhibited before the conclusion of the discourse. Another plan consists in following up a mode of experiment initiated by Sir William Herschel. He examined the transmission of solar heat through glasses of various colors, through black muslin and other substances, which intercepted a large portion of the solar light. Melloni subsequently discovered that lampblack, and also a kind of black glass, while perfectly opaque to light, transmitted a considerable quantity of radiant heat. In Professor Tyndall's "Lectures on Heat," given at the Royal Institution in 1862, and since made public, experiments with these bodies are described. It was while conversing with his friend Mr. Warren De la Rue, in the autumn of 1861, on the possibility of sifting, by absorbents, the light of a beam from its heat, that Professor Tyndall first learned that carbon was the substance which rendered Melloni's glass opaque. This fact was of peculiar interest to him, for it and others seemed to extend to solid bodies a law which he had detected two years previously in his experiments on gases and vapors, and which showed that *elementary* gases were highly transparent, while *compound* gases were all more or less opaque—many of them, indeed, almost perfectly opaque—to invisible radiant heat. The enormous difference existing between elementary and compound gases, as regards their opacity to radiant heat, is illustrated by the following facts:—For every ray intercepted in a tube four feet long, by a certain measure of air, oxygen, hydrogen, or nitrogen, transparent ammonia strikes down 7,260 rays, olefiant gas 7,950, while transparent sulphurous acid destroys 8,800.

In Professor Tyndall's first experiments on

the invisible radiations of the electric light, black glass was the substance made use of. The specimens, however, which he was able to obtain, destroyed, along with the visible, a considerable portion of the invisible radiation. But the discovery of the deportment of elementary gases directed his attention to other simple substances. He examined sulphur dissolved in bisulphide of carbon, and found it almost perfectly transparent to the invisible rays. He also examined the element bromine, and found that notwithstanding its dark color, it was eminently transparent to the ultra-red rays. Layers of this substance, for example, which entirely cut off all the light of a brilliant gas flame, transmitted its invisible radiant heat with freedom. Finally, he tried a solution of iodine in bisulphide of carbon, and arrived at the extraordinary result that a quantity of dissolved iodine sufficiently opaque to cut off the light of the mid-day sun was, within the limits of experiment, absolutely transparent to invisible radiant heat.

This then is the substance by which the invisible rays of the electric light may be almost perfectly detached from the visible ones. Concentrating by a small glass mirror, silvered in front, the rays emitted by the carbon points of the electric lamp, we obtain a convergent cone of light. Interposing in the path of this concentrated beam a cell containing the opaque solution of iodine, the light of the cone is utterly destroyed, while its invisible rays are scarcely, if at all, meddled with. These converge to a focus, at which, though nothing can be seen, even in the darkest room, the following series of effects may be produced:—

When a piece of black paper is placed in the focus, it is pierced by the invisible rays, as if a white-hot spear had been suddenly driven through it. The paper instantly blazes without apparent contact with anything hot.

A piece of brown paper placed at the focus soon shows a red-hot, burning surface, extending over a considerable space of the paper, which finally bursts into flame.

The wood of a hat box similarly placed, is rapidly burnt through. A pile of wood and shavings, on which the focus falls, is quickly ignited, and thus a fire may be set burning by the invisible rays.

A cigar or a pipe is immediately lighted when placed at the focus of invisible rays. His Royal Highness the Comte de Paris performed this experiment at Professor Tyndall's lecture.

Disks of charred paper placed at the focus are raised to brilliant incandescence; charcoal is also ignited there.

A piece of charcoal suspended in a glass receiver full of oxygen, is set on fire at the focus, burning with the splendor exhibited by this sub-

stance in an atmosphere of oxygen. The invisible rays, though they have passed through the receiver, still retain sufficient power to render the charcoal within it red-hot.

A mixture of oxygen and hydrogen is exploded in the dark focus, through the ignition of its envelope.

A strip of blackened zinc-foil placed at the focus is pierced and inflamed by the invisible rays. By gradually drawing the strip through the focus, it may be kept blazing with its characteristic purple light for a considerable time. This experiment is particularly beautiful.

Magnesium wire, presented suitably to the focus, burns with almost intolerable brilliancy.

The effects thus far described are, in part, due to chemical action. The substances placed at the dark focus are oxidizable ones, which, when heated sufficiently, are attacked by the atmospheric oxygen, ordinary combustion being the result. But the experiments may be freed from this impurity. A thin plate of charcoal, placed in *vacuo*, is raised to incandescence at the focus of invisible rays. Chemical action is here entirely excluded. A thin plate of silver or copper, with its surface slightly tarnished by the sulphide of the metal, so as to diminish its reflective power, is raised to incandescence either in *vacuo* or in air. With sufficient battery-power and proper concentration, a plate of platinized platinum is rendered white-hot at the focus of invisible rays; and when the incandescent platinum is looked at through a prism, its light yields a complete and brilliant spectrum. In all these cases we have, in the first place, a perfectly invisible image of the coal points formed by the mirror; and no experiment hitherto made illustrates the identity of light and heat more forcibly than this one. When the plate of metal or of charcoal is placed at the focus, the invisible image raises it to incandescence, and thus prints itself visibly upon the plate. On drawing the coal points apart, or on causing them to approach each other, the thermograph of the points follows their motion. By cutting the plate of carbon along the boundary of the thermograph, we may obtain a second pair of coal points, of the same shape as the original ones, but turned upside down; and thus by the rays of the one pair of coal points, which are incompetent to excite vision, we may cause a second pair to emit all the rays of the spectrum.

The ultra-red radiation of the electric light is known to consist of ethereal undulations of greater length, and slower periods of recurrence, than those which excite vision. When, therefore, those long waves impinge upon a plate of platinum, and raise it to incandescence, their period of vibration is changed. The waves emitted by the platinum are shorter, and of

more rapid recurrence than those falling upon it, the refrangibility being thereby raised, and the invisible rays rendered visible. Thirteen years ago, Professor Stokes published the noble discovery that by the agency of sulphate of quinine, and various other substances, the ultra-violet ray of the spectrum could be rendered visible. These invisible rays of high refrangibility, impinging upon a proper medium, cause the molecules of that medium to oscillate in slower periods than those of the incident waves. In this case, therefore, the invisible rays are rendered visible by the *lowering* of their refrangibility; while in the experiments of Professor Tyndall, the ultra-red rays are rendered visible by the *raising* of their refrangibility. To the phenomena brought to light by Professor Stokes, the term *fluorescence* has been applied by their discoverer, and to the phenomena brought forward at the Royal Society, and at the Royal Institution, Professor Tyndall proposes to apply the term *calorescence*.

It was the discovery, more than three years ago, of a substance opaque to light, and almost perfectly transparent to radiant heat—a substance which cut the visible spectrum of the electric light shortly off at the extremity of the red, and left the ultra-red radiation almost untouched, that led Professor Tyndall to the foregoing results. They lay directly in the path of his investigation, and it was only the diversion of his attention to subjects of more immediate interest that prevented him from reaching, much earlier, the point which he has now attained. On this, however, Professor Tyndall can found no claim, and the *idea* of rendering ultra-red rays visible, though arrived at independently, does not by right belong to him. The right to a scientific idea or discovery is secured by the act of publication, and, in virtue of such an act, priority of the conception as regards the conversion of heat-rays into light-rays, belongs indisputably to Dr. Akin. At the meeting of the British Association, assembled at New Castle in 1863, he proposed three experiments by which he intended to solve this question. He afterwards became associated with an accomplished man of science, Mr. Griffith, of Oxford, and jointly with him pursued the enquiry. Two out of the three experiments proposed at Newcastle by Dr. Akin are quite impracticable. In the third it was proposed to concentrate by a large burning mirror the rays of the sun, to cut off the luminous portion of the radiation by “proper absorbents,” and then to operate with the obscure rays. Dr. Akin employed in his experiments a mirror thirty-six inches in diameter, but he has hitherto failed to realize his idea. With a mirror four inches in diameter, the radiant source with which his researches had rendered him familiar, and a substance which he had himself discovered, to filter the beam of the electric lamp,

Professor Tyndall obtained all the results above described.

ITEMS.

The President has approved the bill authorizing the Secretary of the Treasury to make and carry into effect such orders and regulations of quarantine as may be deemed necessary and proper in aid of State or municipal authorities, to guard against the introduction of cholera into the ports of the United States.

ALPINE ITEMS.—M. Blatter, one of the three meteorologists who have passed the winter in a part of the Matterhorn, ten thousand feet above the level of the sea, for the purpose of taking observations, has just descended to the village of Meiringen. He reports that his brother and himself enjoyed excellent health, while their companion, an Italian, suffered severely from the climate. The greatest cold had been 19½ degrees below zero, Fahrenheit; as recently as the 24th of March, the temperature was 23 9-10 R. The average throughout the winter was 16 deg. R. (4 below zero, Fahrenheit.) Their provisions had consisted of meat from the Valais, dried in the air, which had remained almost perfectly sweet. The only living creatures the observers had seen were choucous, (a kind of jackdaw,) which flew around the hut without the slightest timidity.

CONGRESS.—A bill was introduced into the Senate, and referred to the Committee on Public Lands, to donate public lands to the several States which may provide agricultural colleges for the education of colored persons. The joint resolution in regard to railroad communication was taken up as it passed the House, and, after discussion, passed as amended. The act continuing in force the Freedmen's Bureau was received from the House and referred to the Military Committee.

In the House, among many other bills and resolutions, the following were adopted: A resolution directing the Committee on the Judiciary to inquire into the expediency of abolishing all but one district court in the United States in all States which are entitled to no more than seven members in Congress; also one recommending a change in the system of paying drawbacks on imported goods. The bill to continue in force and amend the Freedmen's Bureau bill was passed.

INDIANS.—Advices from Fort Laramie say that the Indians are congregating there in large numbers to attend the pending treaty at that place. About twenty thousand are already there, chiefly from the Arapahoes, Cheyennes and Sioux. Their destitution makes them anxious for peace, but they strenuously claim that the territory along the Smoky-hill route must be left to them for herding grounds, and it is thought that unless this is done they will continue to be troublesome. Their condition at the fort is deplorable in the extreme.

THE FREEDMEN.—A most favorable measure for the Freedmen has passed both Houses, and now awaits the President's signature. It extends the provisions of the Homestead law over the public lands of the late rebellious States, giving eighty acres to each actual settler, without distinction of color, and reducing the price to be paid for each patent to \$5.00. It also provides that these lands shall be disposed of in no other way.

The Freedmen's Bureau has recently received, from the Southern States highly satisfactory accounts of the operations of its officers and the whites and the freedmen. With a few exceptions, they work harmoniously together. The condition of the cotton and grain crops is flattering, and it is believed that the yield of the former will be much

larger than the exhibit of last year. This is owing principally to the successful working of the paid-labor system of the freed race. In some portions of the States great destitution prevails to such an extent that the supply of rations on hand is inadequate to the emergency.

A BRIEF MEMOIR OF ISAAC PENINGTON.

He was the eldest son of Isaac Penington, many years an alderman of London, and, for two years successively, mayor of the city. He was born about the year 1617: his education was suitable to his quality amongst men, having the advantages of the schools and universities of his own country, joined with the conversation of some of the most considerable men of his time. He arrived at manhood, at a period when England was agitated with the tempest of civil commotion, by means of the discord between Charles I. and his Parliament; and as the father of Penington was himself a warm partisan, in a conspicuous station, and intrusted with concerns of considerable importance, the son, had his temper inclined him, might probably soon have risen to eminence in the republic. But he refused the greatness and glory of the world, and chose rather a life dedicated to religion and retirement. Having received impressions of piety very early, they had so good an effect upon him, that he was preserved from the evils of the age, and became the wonder of his kindred and familiars, for his awful life and frequent retirements, his declining company, that might interrupt his meditations, and his being disposed to a life of mourning. Yet this sorrow did not flow from a sense of former vices, for he was inclined to virtue from his childhood; but with Habakkuk, from the dread he had of the majesty of God, and his desire to find a resting place in the great day of trouble.

In the midst of which exercises, nothing gave ease or comfort but the smiles of God's countenance upon his soul.

About the year 1648, he married Mary, the widow of Sir William Springett, a religious woman; but he continued in a seeking state for some years after; till at length he was convinced of the principles of Truth as professed by the people called Quakers, and joined himself to this society about 1658, being then forty-one years of age. Neither his worldly station, the most considerable of any that had closed with this way, nor the debasement it brought upon his learning and wisdom, nor yet that reproach and loss which attended his public espousing of it, did deter him from owning and embracing it. Thus parting with all, he received a new stock from heaven, wherein the Lord prospered him; the dew of heaven rested upon his branch and root, and he grew rich and fruitful in heavenly treasure, full of love, patience, and long suffering, and exemplary in his duty to God and men.

As it was given to him to believe in Christ, so he had also to suffer for his sake; his imprisonments were many, and some of them long, which he underwent with great constancy and quietness of mind; first in the year 1661, in Aylesbury gaol, for worshipping God in his own house; and endured great hardship for seventeen weeks, in a cold incommodious room, without a chimney, great part of the time in winter; from which usage his body contracted

so great a disorder, that for several weeks after, he was not able to turn himself in bed. He was imprisoned five times after this, on account of his religious profession; and being of a tender constitution, was in danger of losing his life from the hardship he endured. Thus through many tribulations did he enter the kingdom, having been long exercised, tried, and approved of the Lord. As his outward man grew in years, his inward man grew in grace, and the knowledge of his Redeemer; for it was observable among them that knew him in his declining time, that when the candle of his natural life burnt dimmer, his soul waxed stronger, and like a replenished lamp, shone with greater lustre; his profession being adorned by a life of piety and virtue, and the constant practice of what he recommended to others. Many were the gifts God honored him with, which he made use of, to the praise of the great Giver. Being thus fit to live, he was prepared to die, which was in the sixty-third year of his age, in the 8th month, 1679.

This truly experienced man having given some brief sketches of the deep exercises and conflicts which his soul passed under, in his search after and attainment of the knowledge of the way, the truth and the life, it may be acceptable and instructive to many, thus to view and ponder his steps as expressed in his own language.

"My heart from my childhood was pointed towards the Lord, whom I feared, and longed after from my tender years; wherein I felt, that I could not be satisfied with, nor indeed seek after the things of this perishing world, which naturally pass away; but I desired true sense of, and unity with, that which abideth forever. There was somewhat indeed, then still within me, even the seed of eternity, which leavened and balanced my spirit almost continually; but I knew it not distinctly, so as to turn to it, and to give up to it, entirely and understandingly.

In this temper of mind I earnestly sought after the Lord, applying myself to hear sermons, and reading the best books I could meet with, but especially the Scriptures, which were very sweet and savory to me: Yea I very earnestly desired, and pressed after the knowledge of the Scriptures, but was much afraid of receiving men's interpretations of them, or of fastening any interpretation upon them myself: but waited much, and prayed much, that from the Spirit of the Lord, I might receive the true understanding of them, and that he would chiefly endue me with that knowledge, which I might feel sanctifying and saving. And indeed I did sensibly receive of his love, of his mercy, and of his grace, which I felt still freely to move towards me; and at seasons when I was most filled with the sense of my own un-

worthiness, and had least expectations of the manifestation of them.

But I was exceedingly entangled about Election and Reprobation, having drank in that doctrine, according as it was then held forth by the strictest of those that were termed Puritans; and as then seemed to be very manifest and positive, from *Rom. ix. &c.*, fearing lest, notwithstanding all my desires and seeking after the Lord, he might in his decree have passed me by; and I felt it would be bitter to me to bear his wrath, and be separated from his love for evermore: yet if he had so decreed, it would be, and I should, notwithstanding these fair beginnings and hopes, fall away and perish at last. In this great trouble and grief, which was much added to, by not finding the spirit of God so in me, and with me, as I had read and believed the former Christians had it, and in mourning over and grappling with secret corruptions and temptations, I spent many years, and fell into great weakness of body; and, often casting myself upon my bed, did wring my hands and weep bitterly; begging earnestly of the Lord daily, that I might be pitied by him, and helped against my enemies, and be made comfortable to the image of his Son, by his own renewing power. And indeed at last, when my nature was almost spent, and the pit of despair was even closing its mouth upon me, mercy sprang, and deliverance came, and the Lord my God owned me, and sealed his love unto me, and light sprang within me: which made not only the Scriptures, but the very creatures glorious in my eye; so that everything was sweet and pleasant and lightsome round about me. But I soon felt that this estate was too high and glorious for me, and I was not able to abide in it, it so overcame my natural spirits. Wherefore, blessing the name of the Lord for his great goodness to me, I prayed unto him to take that from me which I was not able to bear; and to give me such a proportion of his light and presence, as was suitable to my present state, and might fit me for his service. Whereupon this was presently removed from me; yet a savor remained with me, wherein I had sweetness, and comfort, and refreshment, for a long season.

But my mind did not then know how to turn to and dwell with that which gave me the savor; nor rightly to read what God did daily write in my heart; which sufficiently manifested itself to be of him, by its living virtue, and pure operation upon me. But I looked upon the Scriptures to be my rule, and so would weigh the inward appearances of God to me, by what was outwardly written; and durst not receive anything from God immediately, as it sprang from the fountain, but only in that mediate way. Herein did I limit the Holy One of Israel, and exceedingly hurt my own soul, as I

afterwards felt, and came to understand. Yet the Lord was tender to me, and condescended exceedingly, opening Scriptures to me freshly every day, teaching and instructing, warming and comforting my heart thereby. And truly, he did help me to pray, and to believe, and to love him and his appearances in any: yea, to love all the sons of men and all his creatures, with a true love. But that in me, which knew not the appearances of the Lord in my spirit, but would limit him to words of Scriptures formerly written,—that proceeded yet further, and would be raising a fabric of knowledge out of the Scriptures, and gathering a perfect rule, as I thought, concerning my heart, my words, my ways, my worship; and according to what I thus drank in, after this manner, from the Scriptures, I practised, and with much seriousness of spirit, and prayer to God, fell a helping to build up an independent congregation, wherein the savor of life and the presence of God was fresh with me; as I believe there are some yet alive, of that congregation, who can testify.* This was my state, when I was smitten, broken and distressed by the Lord, confounded in my worship, confounded in my knowledge, stripped of all in one day, which it is hard to utter, and was matter of amazement to all that beheld me. I lay open and naked to all that would inquire of me, and strive to search out what might be the cause the Lord should deal so with me. They would at first be jealous that I had sinned and provoked him so to do; but when they had scanned things thoroughly, and I had opened my heart nakedly to them, I do not remember any one that ever retained that sense concerning me. My soul remembereth the wormwood and gall, the exceeding bitterness of that state, and is still humbled in me, in the remembrance of it before the Lord.

Oh! how did I wish, with Job, that I might come before him, and bowingly plead with him; for indeed I had no sense of any guilt upon me, but was sick of love towards him, and as one violently rent from the bosom of his beloved! Oh, how gladly would I have met with death! For I was weary all the day long, and afraid of the night; and weary also of the night season, and afraid of the ensuing day. I remember my grievous and bitter mournings to the Lord. How often did I say, *Oh Lord why hast thou forsaken me? Why hast thou broken me to pieces? I had no delight but thee. My heart was bent wholly to serve thee, and thou hast even*

fitted me as appeared to my sense, by many deep exercises and experiences for thy service. Why dost thou make me thus miserable."

(To be continued.)

Never too Late to Mend.—As it is never too soon to do good, so it is never too late to amend. I will therefore neither neglect the time present nor despair of the time past. If I had been sooner good, I might, perhaps have been better, if I am longer bad, I shall, (I am sure,) be worse. That I have stayed a long time idle in the market-place deserves reprehension; but if I am late sent into the vineyard, I have encouragement to work, "I will give unto this last as unto thee."

ANCIENT AND MODERN FRIENDS.

The following remarks, which were written by a member of our religious Society about thirty-five years ago, may, I think, be profitably perused at the present time. For it must be apparent to all, that a sad degeneracy has indeed spread over us, when we recur to the language of Isaac Pennington in describing the faithfulness of Friends in his day. "Let it be looked at over England," he says, "which of us so much as mind these things? Nay, the Lord knows that the love of these things is daily rooted out of our hearts more and more, and we are a people whom the world cannot charge with covetousness or love of the world, wherewith all sorts of professors hitherto have been too justly chargeable." S. B. F.

"It is well for us who have the privilege of membership in the Society of Friends, frequently to look back at the origin of our religious institutions, and to contemplate 'the great fight of afflictions,' the long and painful sufferings through which our forefathers passed, and by the patient endurance of which they purchased for us those privileges and that liberty of conscience which we now enjoy. It is to be feared that we set too lightly by the profession of Quakerism, and estimate both its principles and its advantages far below their real importance.

"Could we see a living exemplification of the zeal and perseverance which characterized Friends in the beginning,—witness their constancy, and even cheerfulness, when subjected to the cruel ordeal of the scourge or the stocks—the unshaken firmness of innocent prisoners languishing in noisome dungeons, for conscience' sake, during periods of from three to nineteen years, separated from their bereaved and helpless families, and forbidden to contribute aught toward their support—the faithfulness of women and children in facing the tempest of persecution, fearless of suffering, in order that they might maintain their religious meetings when all the men were im-

* In another part of his writings, wherein he alludes to this particular season, he says, "But there was somewhat wanting, and we mistook our way, for whereas we should have pressed forward into the spirit and power, we ran too much outward into the letter and form; and though the Lord is many things helped us, yet, therein he was against us, and brought darkness, confusion and scattering upon us."

prisoned, and the joy and peace with which others triumphantly met an ignominious death, rather than violate their testimony to the truth as it is in Jesus,—if the spirit of the world has not blunted our sensibilities, and rendered us indifferent to the things which belong to our everlasting peace, the prospect must surely put us to shame, and sharply rebuke the lukewarmness and apathy of the present day. The profession of Quakerism is now rather respectable than otherwise; and as such we are willing to embrace it to a certain extent; but we take care not to render any of its peculiar characteristics strikingly obvious in our conduct, and rather retire into the shade, as though we felt a little ashamed of our religion, than nobly and fearlessly set out its requirements. How delicate and refined have we become—how studious of mode and polish—how eager to approach as near as possible in our houses and furniture and persons, to the customs of the world, for fear we should be thought narrow and bigoted, or looked upon as mean and old fashioned.

“What would a Fox, or Burrough, or a Whitehead think of the liberal and modish Quakers of the present day—so squeamish of obtruding their principles on the world, and so tender of coming in collision with the prejudices of other professors? They would look with amazement at the magnificence and costliness of our establishments, at the sumptuous style of our living, at the luxurious ease in which our lives are passed, and the courtly compliance and graceful air with which we shake hands with the world; and when they cast a retrospective glance over the years of toil and hardship *they* spent in the service of the Gospel,—how poor and mean was their outward entertainment; the contempt and scorn they met with from the high professors of their day; the homely simplicity of their houses, and dress, and manners; the boldness and magnanimity with which they asserted and suffered for the truth; the industry they practised and the ardor they felt in the cause of Christ,—they would turn away from us with sorrow as a fallen and degraded people—‘a people whose oppressors are women and whose children rule over them’—who have sold their birthright for money and their spiritual inheritance ‘for a thing of nought.’

“Of those who read these lines, there are probably some who will laugh at what they consider the absurdity of my observations, and affect great surprise that any one should be so unreasonable as to expect Friends of this enlightened and improved age to live the simple, self-denying lives of their early predecessors. With such my business is not at present. I address myself to those, and probably they are much the most numerous class, who will con-

cur with all I have said, and rise from the perusal of it with the acknowledgement that a mournful degeneracy has indeed spread over us, and a consciousness that they are contributing, by their example and habits, to increase and perpetuate it.

“But when they turn their thoughts on their manner of life,—on the great extent of their business, on the abundance of their wealth, and the uselessness, in a religious sense, with which they spend their days,—if conviction and condemnation for a little moment seize their minds, and give rise to some desires for a greater conformity to what their judgment approves, yet there are so many palliatives and opiates at hand, that the smarting of the stroke is quickly allayed, and they fall back with even stronger attachments than before into the old track.

“The views of mankind, say they, are modified by the change of times, and the degree of strictness and simplicity which marked the lives of the early Quakers is not to be expected now. The general style of living is more expensive, and we must yield to the current; this increased expense demands larger resources and more extensive business, and these again absorb so much of our time and attention, that we find little or none to devote to the pursuits of religion or the concerns of the Society. We regret that circumstances impose this necessity on us, but it is a law which we cannot escape. Some find a plausible excuse for the grandeur in which they live, by alleging that their estates are large, and they may as well distribute the income in the form of expenses as in any other mode; while others make the excess of their incomes an argument for going on hoarding and accumulating wealth; and though they may reprobate a worldly spirit, and make a show of liberality by some handsome donations to benevolent objects, and would be greatly offended at being thought avaricious, yet secretly their money steals upon their affections, and there is a lurking satisfaction and complacency as they count over the hundreds and thousands which are annually saved to be invested in good security.

“Far be it from me to discountenance honest industry, or that prudent foresight which would provide for the wants of sickness or declining years; but it cannot be denied that the inordinate desire of accumulating wealth is one of the crying sins of our Society; that it withers and blights the liveliness of our religious feelings, cramps our benevolent enterprises, swallows up our time and affections to an unwarrantable degree, and prepares the way for that selfish feeling which so extensively prevails,—‘wherein all seek their own, not the things which are Jesus Christ’s.’ But we see these evils—lament them for a moment—

pass an encomium on the disinterestedness and self-denial of the primitives, and then, like the hearers of the word, we 'go on our way and forget what manner of men we are' "

"What will it profit a man, if he shall gain the whole world, and lose his own soul?" By J. JACKSON.

"What will it profit a man, if he shall gain the whole world, and lose his own soul?" These words of Jesus have been presented to the view of my mind as being full of instruction, and worthy of our individual consideration. When we consider that every accountable and immortal being that is brought into existence, is the immediate offspring of its Divine author, we shall not wonder that Jesus should have placed the value of the soul higher than even the possession of the whole world. To be, and to know that we are in possession of an immortal spirit, is to have an evidence of that link in the great chain that connects the present with the future, and unites man to his Maker. We have received our spiritual nature immediately from God. It constitutes the germ of immortality and eternal life, which, under the blessed influence of the gospel of Christ, is capable of unlimited growth and enlargement. Taking this view, we shall see the force of the expression of Jesus, "What will it profit a man, if he shall gain the whole world, and lose his own soul?" It is a question of vital importance to our present and future well-being, to know that we are in possession of a nature that does not die, when the tabernacle in which it is contained shall return to the dust from which it was taken; and it is equally important that we should improve a gift, bearing upon it the proof of divine origin. If we read attentively and understandingly the beautiful parables of Jesus, we shall find that many of them have a direct reference to this subject; that through these he endeavored to instruct his disciples in the nature of the growth of the immortal spirit, from the state of a germ in which it was bestowed, to that state in which it becomes perfected in the knowledge of its Author.

When Jesus compared the kingdom of heaven to "a grain of mustard seed," or to the "seed that a sower went forth to sow," or a "little leaven hid in three measures of meal," he represents it as something small in its first appearance, but which is capable of being cultivated and improved, by the continual addition of the experience of the things belonging to that kingdom. The grain of mustard seed, unless it were placed in a position favorable to its growth, would be of no further value than a single grain, but we see it contains within itself the elements of its own reproduction. When the soil upon which it falls is prepared to re-

ceive and nourish it, it is then that it brings forth the stem, the branches, the blossom, and finally the fruit fully ripe, and this process is continually repeated. Thus the outward world furnishes an illustration of the growth to be experienced by our spiritual nature, until that germ of the Divine life, which is immediately bestowed by the Author of our being, and which constitutes us beings, "made in the image of God," has expanded and brought forth those fruits of "righteousness, peace and joy in the Holy Spirit," in which the apostle declares the kingdom of heaven consists.

We shall lose our own souls, so far as the enjoyment of those things is to be realized, if we neglect this kind of culture, for our spiritual nature can only expand and yield these fruits as it is cultivated and improved.

These parables of Jesus are akin to the figure of the Garden of Eden, in which man is placed, with authority to dress and keep the trees of the garden, and partake of the fruit of all except the "tree of the knowledge of evil." Thus we have parables and figures throughout the Scriptures, all pointing us to the improvement of a treasure that we have in "earthen vessels," and as this is improved, we advance from one mansion of the Heavenly Father's house to another, for according to the testimony of Jesus, it is declared, "In my Father's house are many mansions; if it were not so, I would have told you. I go to prepare a place for you, that where I am, ye may be also."

The professed belief among Christians is, that the soul cannot be saved without Christ, and if this doctrine were carried out in practice, we should see wonderful illustrations of this growth to which I have alluded, in the knowledge of the Lord spreading from sea to sea, and from the rivers to the ends of the earth. If men really believed that their salvation depended on their likeness to Christ, all the wrongs and evils of unrighteousness would cease, and the kingdom of God would come on earth as it is heaven.

But unhappily men do not in reality believe that they are to be saved, by their likeness to Christ, so much as by their opinions concerning him. Hence the great doctrine of salvation by Christ, and the soul's advancement from stature to stature, till it attains to the state of a "man in Christ Jesus," is not fully understood; and in consequence, the fruits of the spirit, which are love, peace, joy, charity, and all the heavenly virtues, do not correspond with the great profession of religion that is made among men.

We know these fruits will appear wherever men witness salvation by Christ; but while they are depending on their *opinions* concerning a Saviour, they will never be brought out of darkness into the light of the gospel day;

neither will the church ever be brought out of the wilderness of lifeless forms and ceremonies, to behold the beauty of that temple where God is worshipped in spirit. Upon this subject, men are losing their own souls, or at least giving them up to the keeping of others. Look over the religious world, and see how many thousands and tens of thousands of our fellow beings are taught to look for their spiritual bread, their knowledge of God, of Christ, of the kingdom of heaven, to the teachings of men. Resting satisfied with a name to live, and persuading themselves that their opinions concerning religion, Christ and God are true, and therefore they have accomplished all they have to do, in the work of the souls advancement, and relying upon the testimony of others for authority, are willing to leave unread the great volume of truth which Christ opens to his followers. Happy would it be for the professors of Christianity, if they would seek for higher evidence of the presence of Christ, than the declarations of men; then they would find the promise, "Lo, I am with you always," verified in their own experience.

While we are in possession of an immortal soul, he dwells near us, and the language that was uttered formerly remains to be as true now as it was then: "Behold I stand at the door and knock, if any man will hear my voice and open unto me, I will come in and sup with him, and he shall sup with me." If we rest satisfied with other men's opinions, we cease to be thinking beings, we cease to ask, that we may receive; to knock, that it may be opened unto us; and failing to inquire for ourselves, our understandings are not opened to comprehend the sublime realities of the kingdom of heaven. We should not separate the word *Christ* from the word *power*; they are and ever have been the same thing. He is spoken of as the "light that lighteth every man that cometh into the world," opening the path of duty before him, warning him against evil, and justifying him for doing good. He is the power that enables man to resist temptations, to overcome evil, to go on his way from glory to glory. We should confine our views of him to the operation of this power within ourselves, that we may have such an evidence of his presence, as will enable us to say from living experience, "I know that my Redeemer lives, and because he lives, we shall live also."

In the parable of the sower, Jesus illustrated the goodness of the great Husbandman, in the universal distribution of the good seed, the seed of a spiritual nature; and it is for us to say, whether that seed shall fall upon stony ground, by the way-side, among thorns, or upon soil prepared for its reception and growth. Let all the energies of our minds, instead of being converted into swords and spears, be converted

into ploughshares and pruning-hooks, to cultivate the ground for the reception and growth of this seed, in a new heaven and a new earth wherein dwelleth righteousness. Then we shall see that the value of the soul increases as it expands in the knowledge of its Author.

Our views of the Divine mind should not be such as to shut him out from the present life, leading us only to anticipate a knowledge of Him when we shall have passed beyond the limits of time. Oh, no; he is not far from every one of us, seeing that "in Him we live, and move, and have our being."

That same benevolent Being who has spread out before us the visible world as a monument of his wisdom, power and goodness, has also furnished to his rational, intelligent creation, a witness of himself. We are, therefore, called to a knowledge of God and Christ now; such a knowledge that will regulate our thoughts and conduct, purify the heart, sanctify the affections, and elevate the soul into the enjoyment of the Divine harmony here, and lay the foundation of a well-grounded hope of its continuance in the world to come.

We should embrace the religion of Jesus, because it puts us in possession of the joys of heaven in the present as well as the future world. But I have no idea of people being driven to embrace religion, or any system of belief or opinion (as is often the case) through fear of judgments to come, for this only tends to drive men into darkness and error.

Religion should be held up, and especially to the young mind, as something that is cheerful and joyous in its character; something that shall make it happier every day and every hour; something that shall preserve it from all evil and secure to it all that is good. I have no faith in that dark and gloomy theology which terrifies the mind of the child, by insisting upon its total depravity, and the absence of a pure and undefiled spirit; that holds up to it a fear of death and of imaginary torments beyond the grave, to frighten it into religion.

Religion should be held up to the view of the child in the language of Jesus: "Suffer little children to come unto me and forbid them not, for of such is the kingdom of heaven." It should be represented as a path shining brighter and brighter unto the perfect day; such a view will correspond with the soul's advancement from one mansion of the heavenly Father's house to another; and our minds should ever be impressed with the conviction, that the moment we turn aside from this path, we are on the downward course—a course strewn with briars and thorns, and which, as it is pursued, leads through all the wanderings of folly, misery, and wretchedness, and finally to ruin. In presenting these views of religion, I shall not be understood, that it ever leads to

the indulgence of any hurtful thing. It will control every passion, and set bounds to the indulgence of every propensity belonging to the animal nature of man, and a moment's reflection will satisfy us of the hurtful tendency of improper indulgence in these. The view I wish to convey is, that religion, in regulating our lives, and bringing the animal propensities under the control and dominion of the spiritual man, will deprive us of no real good; but that it will render life a scene of enjoyment; it opens to us the creation of God, as springing from its author, and invites us to look upon his works as the monuments of his infinite wisdom and power: it invites us to look within ourselves for the traces of his omnipotence and omnipresence; that in the spirit's sanctuary we may hold communion with a Being whom the heaven of heavens cannot contain, but who condescends to dwell with the pure in heart, the humble and contrite spirit. Oh! my friends, could we keep such views of religion before us, and contemplate the nature and value of the immortal soul, we should be encouraged to press forward till we experience those joys and blessed realities which the righteous of all past time have witnessed, by walking by the same rule, and minding the same thing. Like the beloved Son, we shall also, as we are led by the spirit of God, become "heirs of God, and joint heirs with Christ." We should then experience a likeness to Christ, in the state of meekness, humility, love, universal charity for all mankind, and an enlarged philanthropy to which we shall have attained. Love to God and to our fellow-creatures would be the secret spring of all our actions, and all our works would correspond.

When mankind come to embrace these views, there will be fruits of righteousness, peace on earth, and good-will to men, such as the world never yet has witnessed, for this doctrine has for its object the growth of man's spiritual nature, from the germ-like state in which it was bestowed, until it prepares him to enjoy the society of saints and angels in the kingdom of heaven.

DR. JOHN KITTO.

"O misery, thou art to be my only portion! Father of mercy, forgive me if I wish I had never been born! O that I were dead, if death were an annihilation of being; but as it is not, teach me to endure life—to enjoy it, I never can."

Had these words been written by a man who had passed through many years of suffering, who had seen all his hopes destroyed, and all his loved ones perish, who was worn by multiplied cares and enfeebled by manifold trials, whose only hope of rest or peace was in the grave—though we could hardly, even then, think them right—we might still consider

them as the natural expressions of a heart, sunk in hopeless despair. But when we are told that they were written by a mere boy, by one who had not yet passed "youth's sunny season," who still heard the whispers of hope in his soul, who had laid bright plans for a life of usefulness, if not of happiness, it is difficult to believe that what we read is true. And yet these were words penned during his boyhood by Dr. John Kitto, who became in after years one of the most noted Bible students whom England has numbered among her men of learning. One can readily imagine that at the time of writing such lines as these he must have felt himself in unusual trouble. And well he might; for to be poor, friendless, ill-treated, and, besides this, totally deaf and almost dumb, as he was, is to be in a condition which God in his mercy has called few others to experience. The boy's whole history was a sad one, but it may teach us a lesson which we need to learn. Until he reached his twelfth year, he had been able, like other children, to hear the voices of his friends, the sweet songs of the birds, and all the pleasant sounds with which the air is filled. But at that age his ears were closed never more on earth to be opened. He lost his hearing by an accident which happened in this way:

It was towards the close of the day. From the morning until then the child had been working with his father, whose trade was that of a mason, and who was engaged at the time upon the roof of a building of more than average height. It was the duty of the boy to ascend again and again the ladder which reached from the ground to the roof, as he carried to his father the materials required for use. Already he had mounted many times; soon his task would be ended, and he would go home to enjoy the evening meal and the rest made sweet by labor. But truly we know not what an hour or a moment may bring forth. Just as his work was almost finished, just as he had gained the highest round of the ladder for nearly the last time, his foot slipped, and he fell a distance of many feet to the pavement below. He was found there lying senseless, was carried home and for two weeks knew nothing. When he awoke from his long sleep a strange stillness was around him, he could see the moving lips of those around him, but not a word that they spoke was he able to distinguish, his sense of hearing being destroyed. It was not long before, forgetting, perhaps, the sound of language, and unable to perceive whether he spoke correctly or not, he lost, in a measure, the power of speech, and could make himself understood only by signs or writing. This sudden affliction was indeed great, but the old saying that "troubles never come singly" was in his case to be verified, and he was called to farther sorrow. His grandmother, with whom he had

previously lived, dying, left him without a home. His father, a man of dissipated habits, failed to provide for his son, and the deaf mute was sent to the work-house. There he was taught the art of making shoes, and was, after a time, apprenticed by the work-house authorities to a shoemaker. This man proved to be a most cruel master, who struck the boy when he made a wrong stitch, pounded his head with a hammer upon slight provocation, and ill-treated him in many ways. It was during this trying apprenticeship that the boy penned the lines found above, which express a degree of misery almost impossible to be realized by those, who, in comfortable homes, enjoy the kindness of the friends who are dear to them, and who possess, in all their perfection, the faculties of which the young shoemaker was deprived. Yet, even in the midst of his griefs, he found companionship and consolation in reading and study, for of these he was very fond, and all his leisure moments were devoted to self-improvement;—for this boy, whom no one could expect to become any thing more than a tolerable mechanic, just able, perhaps, to earn his daily bread, living and dying in the obscurity in which his lot appeared to be cast, had already determined to make himself all that he could, and had dreamed of one day writing books which should cause his name to be known and honored.

His extraordinary intelligence was not destined to remain long unnoticed. It attracted the attention of some gentlemen who procured his release from his apprenticeship, and raised a fund to enable him to continue his studies. As his friends supposed that there were few occupations which he could pursue, it was proposed that he should learn the art of printing, which he soon thoroughly mastered. Having acquired it, he was engaged as a printer for a missionary station on the island of Malta, for which place he accordingly sailed.

His work there, though faithfully performed, was unsatisfactory to his employers, who quarreled with him because his spare hours were passed in study, and very soon dismissed him. Upon his return to England he was engaged as tutor to the sons of a missionary about leaving for Persia. With them the young man travelled for the space of three years, eagerly seizing the opportunities which were frequently offered of becoming familiar with the places mentioned in the Scriptures.

Returning once more to his native land, Mr. Kitto devoted himself entirely to literature, and in twenty years (from 1838 to 1858) composed twenty-one books, some of which were of great size, and treated of subjects requiring profound study. At length, at the age of fifty, his overtasked brain gave way, and then, when his work was done, God called him to himself.

The trials of his youth had their compensation in the universal esteem in which he came to be held in after life, and, though to him they were grievous, for us their recital is full of instruction, since they show us what obstacles may be overcome when one has once determined to improve all the talents which have been committed to him. If a poor deaf mute could do so much and so well, what should be expected of those whose faculties are unimpaired, and whose advantages are better by far than his? All may not have the abilities which he possessed—all may not become authors, or make their names famous among men—but all may do something to honor God who made them, and whom it is their duty to serve. Our talents may be many or few, our gifts of one sort or another, but we all have at least one talent, one gift which may be of use to our fellow-men. It may be no more than the power to speak kindly, to "weep with those that weep, and rejoice with those that do rejoice," or to give a cup of cold water in the Master's name; but whatever can be done, let us do, and our reward shall be sure. It may be one gift or it may be another that we are called to employ—all have not the same; but of one thing we may be certain—our work upon earth will not be rightly done unless we make of ourselves, our time, our opportunities, *all that we can.*—*Christian Intelligencer.*

FRIENDS' INTELLIGENCER.

•PHILADELPHIA, SIXTH MONTH 16, 1866.

FRIENDS TRAVELING IN THE MINISTRY.—Daniel Griffin and his companion, David Halleck, attended Salem Quarterly Meeting on the 7th inst., with minutes from Amawalk Monthly Meeting, dated Fifth month 11th. These minutes embrace most or all the meetings of that quarter.

Martha Sheppard obtained a minute from Salem Monthly Meeting, N. J., on Fifth month 30th, to visit the "ensuing Half Year's Meeting of Fishing Creek, and appoint some meetings if way opens."

OUR COMMON SONG BIRDS.—The advertisement of our friend Grace Anna Lewis, which will be found in the present number, calls attention to a subject which may have been too much overlooked. Many who from youth to mature, and even old age, have listened with pleasure to the cheering and beautiful notes of our common song birds, are ignorant of their structure, names or habits.

While it would be the work of a lifetime to

learn all the different species throughout the world, a few hours instruction under a competent teacher will enable us to know most of those inhabiting our own latitude, many of which are daily visitants around our rural homes; and the knowledge once obtained is a source of pleasure greater than would be imagined by those whose inquiries have not been directed to the subject.

We partially attended a former course, and were not only interested but deeply instructed. The constantly recurring exhibit of the wonderful adaptation of bird structure to the necessities of the different species, filled the mind with wonder and admiration at the wisdom and power of the benign Creator. Few, we think, could contemplate the marvellous works of Deity, as manifested in the feathered tribes, without an increase of love and veneration for Him who ruleth over all, and without whose notice not a sparrow falls to the ground.

Grace Anna Lewis has for many years given much attention to this branch of Natural History, appears to be thoroughly acquainted with it, and well qualified to impart her knowledge to others. She is desirous of forming classes in country neighborhoods during the present season, whilst the birds are numerous, and opportunities favor the observation of their habits and varieties. We recommend her to the notice of Friends.

MARRIED, on Fifth-day, 31st of Fifth month, 1866, under the care of Green St. Monthly Meeting, of BENJAMIN A. WILDMAN, a member of Philadelphia Monthly Meeting, to ESTHER L., daughter of Samuel Thomas.

DIED, on the 30th of Fifth month, 1866, ISAAC L. MILLER, of Willistown, Chester Co., Pa., in his 71st year; a member of Goshen Monthly Meeting.

—, on the 8th of Fourth month, 1866, at the residence of Stephen T. Janney, ELIZABETH J. SIMPSON, wife of Jacob Simpson. The deceased was for more than four years the subject of lingering consumption, and she died in the 38th year of her age.

“Smitten friends

Are angels sent on errands full of love!

For us they languish, and for us they die.”

It has seldom fallen to the lot of friendship to record the demise of an endeared associate who has elicited more evidences of tender feeling and respectful regret than the object of this brief notice. Possessing an energetic mind, and a disposition eminently social, she was attached to a number of friends by ties, the sundering of which has left a blank not easily filled. The evidences of her disinterested acts of beneficence will long be remembered by those who have witnessed the devotion with which many of them were rendered under debility

and declining health, either of which would have furnished a sufficient excuse for exemption from physical and moral efforts. The symptoms of pulmonary consumption had been very distinctly traced for more than four years, and yet, till within a few weeks of her decease, she continued in the performance of her various household duties, and in those quiet, unobtrusive acts which characterize the life of the true Christian. During the war, she became an active member of an association, formed for the alleviation of the wounded and suffering, and continued her efforts while there was a necessity for such aid. Her life was not distinguished by demonstrative professions, but by an unobtrusive practice of the Christian virtues, giving evidence in all her actions of a strict *sense of duty*! Having filled the various positions of life with singular fidelity, she was enabled to meet the closing scene with the well-grounded hope of the blessing which is promised to the “pure in heart.”

DIED, of consumption, on the 12th of Fifth month, 1866, THOMAS GRIEST, in the 80th year of his age. He was a kind and tender parent. He was formerly a member of the Society of Friends, and maintained their principles until his death. He bore his sickness with patience, resigned himself wholly to the will of the Almighty, and expressed himself by saying he was full and satisfied, and wanted nothing more of this world. He was much favored with clearness of mind during his sickness, and peacefully and quietly expired. We can truly say, “Blessed are the dead which die in the Lord, for they shall rest from their labors, and their works do follow them.”

—, at his residence in the city of Baltimore, on the morning of Fourth month 27th, 1866, HICHS BARRIS, in the 65th year of his age. In the manner of his death there was a beauty and serenity which must ever be a consolation to his surviving relatives and friends. With Christian patience he had endured, through an illness protracted through years, great physical suffering, and with perfect peace of mind, and, to the last moment, a clear intellect, he viewed the approach of death with resignation, looking forward with joyful anticipation to the close of this life, as the renewal of those bonds of sympathy with the dear departed one, whose loss severed the strongest ligament which had bound him to earth. His remains were interred in Friends' burial-ground, by the side of his wife. They were united in life, and in death were not divided.

—, on the 4th of Sixth month, 1866, EDWARD H., only son of Carey and Sarah L. Ellis, in his 30th year.

CONTROVERSY.—“I like controversy when it is thoroughly honest. I do admire to see two large and generous minds approach a subject from opposite quarters, and then to watch the new lights that flash over it and show it in a thousand relations that were not obvious before. It lifts us out of the ruts of our sects and party, in whose treadmill we have been grinding all our lives, and mistaking it for the universe. But controversy with small minds is the smallest business that is done in this world. It slides inevitably into word-catching, and ends in personalities. The moment I saw a man consciously trying to put my language to a different use from what I had put it myself, I would stop short with him and say: ‘I am glad to compare ideas, but I have no time for

word-catching. To say, as Dr. Johnson did, 'I can't furnish means and brains 'oo,' is not courteous. The only controversy that ever convinces the controvertists, is a friendly comparison of beliefs, each turning the other's round, and viewing it under all the angles of reflection."—*E. H. Sears.*

From the Press.

THE DISCOVERY OF A NEW STAR.

The stars, for convenience of classification, are divided into grades, according to their apparent magnitude or brilliancy. A few of the very brightest, say about twenty, are regarded as of the first magnitude; fifty or sixty others of a high lustre, but markedly less bright than the former, are of the second magnitude, and so down to the seventh, which include those stars that are barely perceptible to the unassisted eye. The total number thus classified may amount to some twenty thousand. If, however, we use the telescope, they may be discovered spread over the heavens almost without limit.

Some stars are called *variable*, because they undergo periodical changes in their brightness. The intervals of time required for the complete development of their different degrees of brilliancy vary from two or three days to a year or more.

There have also been instances of stars suddenly appearing, and, after shining for a time with great splendor, vanishing as mysteriously as they at first appeared. These stars are called *temporary*, but they may be, and doubtless are, variable stars, having periods of great length.

One of the most splendid of this class broke forth on the 11th November, 1572, in the constellation *Cassiopeia*, in the time of the great Danish astronomer, Tycho Brahe, and immediately became the most brilliant star in the heavens, so bright indeed, as to be seen at mid-day. It continued in this condition for more than a year, and then gradually faded from view, and has not been seen since.

The discovery of a variable or temporary star constitutes an interesting addition to our astronomical knowledge, especially when, as in the case to which I am about to allude, it is due solely to the quickness of perception of a mere youth, without other scientific information than he would acquire in his ordinary school-training.

William M. Davis, Jr., of this city, a student in my school, while walking out during the evening of the 12th ultimo, observed a new star in the constellation of the *Northern Crown*. He pointed it out to his mother, and proceeded carefully to note its magnitude, which he estimated to be equal to that of *Alphecca*, the brightest star in the constellation. Continuing

his observations on subsequent evenings, he found the stranger rapidly fading away, so that it was lost to view in less than two weeks from the date of its discovery.

On communicating these facts to Professor B. A. Gould, of Harvard University, he drew from that distinguished astronomer a response, some extracts from which I feel at liberty to publish for the information and encouragement of other intelligent youths who may be interested in the noble science of astronomy. The professor, under date of May 25th, after expressing satisfaction at the communication to him of the discovery of young Davis, goes on to say:

"There had been several days of cloudy weather here preceding Monday, the 14th, on which evening the star you refer to was seen by an assistant of mine, Mr. Chandler, who is in the habit of watching for variable stars, and had been comparing various stars in this vicinity.

"At 11h., May 14th, it was of the 2.9 magnitude. On Tuesday evening, May 15th, Mr. Chandler and I compared it with other stars very carefully, and made it out to be of the 3.5 magnitude.

"There was no more clear weather until Saturday, 19th, when it was of the 5.9 magnitude; on Sunday, 20th, we considered it as 6.3. Last night, May 24th, was the next opportunity, and the moonlight interfered much with observations; but the star was not far from 7.9. It is to be found on one map of the heavens only, the most detailed ever made; it was mapped there in 1855 as 9.5, the faintest magnitude of any recorded there.

"I suppose the star *Alphecca*; to which you refer, to be about 2.3 magnitude, and if you are sure that the variable was quite as bright on Saturday evening, the 12th, this is a valuable observation.

"Accounts have reached me of its having been seen in Washington on Sunday evening, and in Mobile on Monday; but although the observers speak of seeing it, no one made any careful estimate of magnitude. This can only be done by thorough and pains-taking comparison with stars brighter and fainter, estimating the variable's proportionate place in the scale.

"Observers of magnitudes now estimate two tenths of a magnitude. For stars, however, that are brighter than 2.0 or 2.5 this does not apply, because there is as great a difference between stars of the first as amounts to nearly a whole magnitude; all being grouped together as first because there are so few.

"But as the number of slightly variable stars is probably far greater than is generally supposed, there are few thoroughly established constant standards; and it becomes necessary

to observe the *comparison-stars* from time to time as well as those compared.

"Thus, if five stars be selected for comparison—a, b, c, d, e—the observations would be recorded thus for a variable, which we will call R:

"d 0.1 R meaning R, is one-tenth magnitude fainter than d.

"a: R=R: b meaning R is mid way between a and b.

"R $\frac{1}{2}$ e meaning R is $\frac{1}{2}$ magnitude brighter than e.

"c $\frac{1}{2}$ R $\frac{1}{2}$ b meaning R is $\frac{1}{2}$ magnitude fainter than c, and $\frac{1}{2}$ magnitude brighter than b.

"R $\frac{1}{2}$ from d to b meaning R is $\frac{1}{2}$ nearer to d than b is, being fainter than the former.

"Then if, by subsequent or previous determinations, repeated on different evenings, we should find the brightness to be a=4.6, b=5.7, c=4.9, d=5.1, e=5.6, our observations would afford the following determinations of the magnitude of the variable, viz:

5.2, 5.1 $\frac{1}{2}$, 4.9 $\frac{1}{2}$, 5.2 $\frac{1}{2}$, 5.2, 5.2 $\frac{1}{2}$.

"And taking the mean of these to the nearest tenth, we would adopt 5.2 with small probability of error.

"Any person can make such observations who has the requisite interest, carefulness and judgment, and be thus very useful.

"In Albany, in 1858, my assistant and I thus determined, to the nearest tenth, the magnitude of every star in the sky visible to the naked eye, between 45 deg. N. and 2 deg. S. Since then I am convinced that very numerous changes have occurred on a small scale; and Mr. Chandler was studying these when he saw the new variable, which, as there are already two, R and S in the *crown*, will take the name, *T. Coronæ*.

"Its brilliancy is no doubt periodic, but whether the period is like *Mira*, less than a year, or to be reckoned in tens, hundreds or thousands of years, only observation can determine. Tycho's star in 1572 was the brightest in the heavens, brighter than *Sirius*, and has not been seen since.

"If you should practice estimating magnitudes, and make such observations as I have described, you might be really serviceable to science now."

It will be noticed that our young observer is, so far as yet known, in advance of all in this country. Europe, however, remains to be heard from.

CALEB S. HALLOWELL,
Select High School.

PHILADELPHIA, Sixth month, 2d, 1866.

It is the highest set of charity to bear with the unreasonableness of mankind.—*Anthony Benezet*.

ARE THE PLANETS HABITABLE.

A few years ago, Dr. Whewell wrote a book to prove that the more distant planets of our system are uninhabitable. Applying the law of inverse squares to their distances from the sun the diminution of temperature was found to be so great as to preclude the possibility of human life in the more remote members of the solar system. But not to mention the hazardous task of attempting to prove a negative—the influence of an atmospheric envelope was overlooked in those calculations. The omission vitiates the whole argument. It is perfectly possible to find an atmosphere which would act the part of a barb to the solar rays, permitting their entrance toward the planet, but preventing their withdrawal. For example, Prof. Tyndall tells us, a layer of air only two inches in thickness, and saturated with the vapor of sulphuric ether would offer very little resistance to the passage of the solar rays, but would cut off fully thirty-five per cent of the planetary radiation. It would require no inordinate thickening of the layer of vapor to double this absorption; and it is evident that with a protecting envelope, which permits heat to enter but prevents its escape, a comfortable temperature might be obtained on the surface of our most distant planet.

It is the presence of a protecting atmosphere that renders the earth itself habitable; and in regions where it is modified by the absence of aqueous vapor so as to lose its protective power man cannot live. One cause of the coldness of high mountain tops is their being lifted beyond the protection of the layer of moist air, which lies close to the earth. The withdrawal of sunshine from any region over which the atmosphere is dry must be followed by quick refrigeration. The moon would be rendered entirely uninhabitable by beings like ourselves, through the operation of this single cause. With a radiation uninterrupted by aqueous vapor, the difference between her monthly maxima and minima of temperature must be enormous. The winters of Thibet are almost unendurable, from the same cause. Humboldt dwelt upon the "frigorio power" of the central portions of the Asiatic continent, and controverted the idea that it was to be explained by reference to their elevation; their being vast expanses of country not much above the sea level, with an exceedingly low temperature. He did not seem to be aware of this one most important cause, which contributes to the observed result. The absence of the sun at night causes powerful refrigeration when the air is dry. The removal for a single summer night, of the aqueous vapor from the atmosphere which covers England, would be attended by the destruction of every plant which a freezing temperature could kill. In Sahara, where "the soil is fire and the wind is

flame," the refrigeration at night is often painful to bear. Ice has been formed in this region at night. In Australia also, the diurnal range of temperature is very great, amounting commonly to between forty and fifty degrees. In short, it may be safely predicted that, wherever the air is dry, the daily thermometric range will be great. This, however, is quite different from saying that where the air is clear, the thermometric range will be great. Great clearness as to light is perfectly compatible with great opacity as to heat. The atmosphere may be charged with aqueous vapor, while a deep blue sky is overhead; and on such occasions the terrestrial radiation would, notwithstanding the "clearness," be intercepted. It is consequently impossible for any one on earth to be sure that the distant planets are uninhabitable, and that the sun cannot be to them as to us, a vivifier as well as a worker.—*All the Year Round.*

For Friends' Intelligencer.

VERSES

Addressed to a Relative in the 76th year of her age.

Thy sands of life, dear cousin, well-nigh run,
Earth's fading pleasures, what are they to thee?
Their waning brightness, thy declining sun,
But point to rest beyond Life's troubled sea.

There is a rest, a peace, a glorious joy,
That will long years of anxious care repay;
Be thine, beloved, that boon without alloy,
When to thy spirit opens th' eternal day.

With calmness waiting for that sweet repose
Thy lengthened years premonishing as nigh,
Be cheerful, hopeful, joyful to the close,
For 'tis the common lot of all—to die.

An' oh! may Hope, whose guiding star attends
To bless and beautify our chequered years,
And to the last the drooping heart befriend,
Still from thy future banish doubts and fears—

Still o'er thee shed its ever genial ray,
Whilst spirit-voices of the angelic throng
Speak to thy spirit of the cloudless day,
The bliss awaiting, and the deathless song.

A few more years yet may we linger here,
A few more rounds of anxious care be ours;
Earth's cherished dreams at last must disappear,
And perish of its joys the fairest flowers.

But oh! there comes the throe, the inward strife,
The pain, the parting tear, the close at last,
Alike to all, now flushed with health and life,
No cloud of sorrow over whom hath passed.

None are exempt—the opening bud of spring,
Touched by the chilling wind may soon grow sore,
Or when expanded into blossoming,
Or when the golden-fruitage time is near:

So with our varied being, every stage
Or phase shows some signal mark of death,
The infant dies, the youth and hoary age,
All, all alike yield to the icy breath.

Not so the soul—to its unfolding powers
Perennial hopes and loves are wisely given,
And midst the wreck of time its golden hours
Are brightened by the sunny smiles of Heaven.

'Tis ours to be submissive, calm, resigned,
Though soon or late life's journey here conclude;
Our greatest treasure be—a peaceful mind,
The surest passport of the wise and good.

Though keen the crosses of existence fall
And weary life, yet to the chastening rod
Bowing submissively, these trials all
Become as incense offerings to God.

Then may we fondly hope when done with time—
Its pleasures all—its paths with sorrow strewn—
To join the loved ones in that happier clime,
Where sorrows, tears and farewells are unknown.
J.

Chester County, 1866.

THE AGED CHRISTIAN.

The spring and summer time of life have long since
passed away,
And golden autumn, with its leaves of sadness and
decay,
Has come and gone; and winter shrouds each lovely
scene in gloom,
And bids me mark across my path the shadows of
the tomb.

Mine eye is growing dim with age, my step is feeble
now,
And deeper lines of thought and care are graven on
my brow;
But shall I murmur as I trace the rapid flight of
hours,
Or grasp with trembling eagerness earth's fair yet
fading flowers?

Oh no! a bright and happy home awaiteth me
above,
And my ardent spirit longs to dwell where all is joy
and love;
Does the wave-tossed mariner regret when he sees
the haven near,
Where his shattered bark shall safely rest, nor storm
nor danger fear?

Will the toil-worn laborer sigh because his weary
task must close,
And evening's peaceful shades afford him calm and
sweet repose?
Or does the child with sorrow mark each swift-
revolving mile,
Which bears him to his cherished home, and loving
father's smile?

And shall the Christian grieve because some gentle
signs are given
That he is nearer to the bliss, the perfect bliss of
heaven?
That every moment closer brings that mansion fair
and bright,
Prepared for him with tender love in realms of pure
delight?

Oh! with such brilliant hopes as these, how can my
heart repine,
Although I feel my vigor fade, my wonted strength
decline?
Rather with gladness would I hail these messages
of love,
Which tell me I shall quickly join the white robed
throne above.

My pilgrimage will soon be o'er, my arduous race be
run,
And the bright crown of victory triumphant faith
have won.
No sorrow clouds the land of rest, hushed is the
thought of pain;
Oh! if for me to live is Christ, to die, indeed, is
gain.

IN THE HEMLOCKS.

(Continued from page 321.)

Passing down through the maple arches, barely pausing to observe the antics of a trio of squirrels,—two gray ones and a black one,—I cross an ancient brush fence and am fairly within the old hemlocks, and in one of the most primitive, undisturbed nooks. In the deep moss I tread as with muffled feet, and the pupils of my eyes dilate in the dim, almost religious light. The irreverent red squirrels, however, run and snicker at my approach, or mock the solitude with their ridiculous chattering and frisking.

This nook is the chosen haunts of the Winter Wren. This is the only place and these the only woods in which I find him in this vicinity. His voice fills these dim aisles, as if aided by some marvellous sounding-board. Indeed, his song is very strong for so small a bird, and unites in a remarkable degree brilliancy and plaintiveness. I think of a tremulous vibrating tongue of silver. You may know it is the song of a wren, from its gushing lyrical character; but you must needs look sharp to see the little minstrel, especially while in the act of singing. He is nearly the color of the ground and the leaves; he never ascends the tall trees, but keeps low, flitting from stump to stump and from root to root, dodging in and out of his hiding places, and watching all intruders with a suspicious eye. He has a very perk, almost comical look. His tail stands more than perpendicular; it points straight towards his head. He is the least ostentatious singer I know of. He does not strike an attitude, and lift up his head in preparation, and, as it were, clear his throat; but sits there on a log, and pours out his music, looking straight before him, or even down at the ground. As a songster, he has but few superiors. I do not hear him after the first week in July.

While sitting on this soft-cushioned log, tasting the pungent acidulous wood sorrel (*Oxalis acetosella*), the blossoms of which, large and pink-veined, rise everywhere above the moss, a rufous colored bird flies quickly past, and, alighting on a low limb a few rods off, salutes me with "Whew! Whew!" or "Whoit! Whoit!" almost as you would whistle for your dog. I see by his impulsive, graceful movements, and his dimly-speckled breast, that it is a Thrush. Presently he utters a few soft, mellow, flute-like notes, one of the most simple expressions of melody to be heard, and sounds away, and I see it is the Veery or Wilson's Thrush. He is the least of the Thrushes in size, being about that of the common Bluebird, and he may be distinguished from his relatives by the dimness of the spots upon his breast. The Wood Thrush has very clear, distinct oval spots on a white ground; in the Hermit, the

spots run more into lines, on a ground of a faint bluish-white; in the Veery, the marks are almost obsolete, and a few rods off his breast presents only a dull yellowish appearance. To get a good view of him you have only to sit down in his haunts, as in such cases he seems equally anxious to get a good view of you.

From those tall hemlocks proceed a very fine insect-like warble, and occasionally I see a spray teeter, or catch the flit of a wing. I watch and watch till my head grows dizzy and my neck is in danger of permanent displacement, and still do not get a good view. Presently the bird darts, or as it seems, falls down a few feet in pursuit of a fly or moth, and I see the whole of it, but in the dim light am undecided. It is for such emergencies that I have brought this gun. A bird in the hand is worth half a dozen in the bush, even for ornithological purposes; and no sure and rapid progress can be made in the study without taking life, without procuring specimens. This bird is a Warbler, plainly enough, from his habits and manner; but what kind of Warbler? Look on him and name him; a deep orange or flame-colored throat and breast; the same color showing also in a line over the eye and in his crown; back variegated black and white. The female is less marked and "brilliant." The Orange-throated Warbler would seem to be his right name, his characteristic cognomen; but no, he is doomed to wear the name of some discoverer, perhaps the first who robbed his nest or rifled him of his mate,—Blackburn; hence, Blackburnian Warbler. The *burn* seems appropriate enough, for in these dark evergreens his throat and breast show like flame. He has a very fine warble, suggesting that of the Redstart, but not especially musical. I find him in no other woods in this vicinity.

I am attracted by another warble in the same locality, and experience a like difficulty in getting a good view of the author of it. It is a quite noticeable strain, sharp and sibilant, and sounds well amid the old trees. In the upland woods of beech and maple it is a more familiar sound than in these solitudes. On taking the bird in your hand, even if you are not a young lady, you will exclaim, "How beautiful!" So tiny and elegant, the smallest of the Warblers; a delicate blue back, with a slight bronze-colored triangular spot between the shoulders; upper mandible black; lower mandible yellow as gold; throat yellow, becoming a dark bronze on the breast. Blue Yellow-back he is called, though the yellow is much nearer a bronze. He is remarkably delicate and beautiful,—the handsomest, as he is the smallest, of the Warblers known to me. It is never without surprise that I find amid these rugged, savage aspects of Nature, creatures so fairy and delicate. But such is the law. Go to the sea or climb the mountain, and with the

ruggedest and savagest you will find likewise the fairest and most delicate. The greatness and the minuteness of Nature pass all understanding.

Ever since I entered the woods, even while listening to the lesser songsters, or contemplating the silent forms about me, a strain has reached my ear from out the depths of the forest that to me is the finest sound in nature,—the song of the Hermit-Thrush. I often hear him thus a long way off, sometimes over a quarter of a mile away, when only the stronger and more perfect parts of his music reach me; and through the general chorus of Wrens and Warblers I detect this sound rising pure and serene, as if a spirit from some remote height were slowly chanting a divine accompaniment. This song appeals to the sentiment of the beautiful in me, and suggests a serene religious beatitude as no other sound of nature does. It is perhaps more of an evening than a morning hymn, though I hear it at all hours of the day. It is very simple, and I can hardly tell the secret of its charm. "O spherul, spherul!" he seems to say; "O holy, holy! O clear away, clear away! O clear up, clear up!" interspersed with the finest trills and the most delicate preludes. It is not a proud, gorgeous strain, like the Tanager's or the Grosbeak's; suggests no passion or emotion,—nothing personal,—but seems to be the voice of that calm, sweet solemnity one attains to in his best moments. It realizes a peace and a deep solemn joy that only the finest souls may know. A few nights ago I ascended a mountain to see the world by moonlight; and when near the summit the Hermit commenced his evening hymn a few rods from me. Listening to this strain on the lone mountain, with the full moon just rounded from the horizon, the pomp of your cities and the pride of your civilization seemed trivial and cheap.

Whether it is because of their rareness, or an accident of my observation, or a characteristic trait, I cannot tell, yet I have never known two of these birds to be singing at the same time in the same locality, rivalling each other, like the Wood-Thrush or the Veery. Shooting one from a tree, I have observed another take up the same strain from almost the identical perch in less than ten minutes afterward. Later in the day, when I had penetrated the heart of the old Barkpeeling, I came suddenly upon one singing from a low stump, and for a wonder he did not seem alarmed, but lifted up his divine voice as if his privacy was undisturbed. I open his beak and find the inside as yellow as gold. I was prepared to find it inlaid with pearls and diamonds, or to see an angel issue from it.

He is not much in the books. Indeed, I am acquainted with scarcely any writer on ornithology whose head is not muddled on the sub-

ject of our three prevailing song-thrushes, confounding either their figures or their songs. A writer in the Atlantic² gravely tells us the Wood-Thrush is sometimes called the Hermit, and then, after describing the song of the Hermit with great beauty and correctness coolly ascribes it to the Veery! The new Cyclopædia, fresh from the study of Audubon, says the Hermit's song consists of a single plaintive note, and that the Veery's resembles that of the Wood-Thrush! These observations deserve to be preserved with that of the author of "Out-door Papers," who tells us that the trill of the Hair-Bird (*Fringilla socialis*) is produced by the bird fluttering its wings upon its sides! The Hermit-Thrush may be easily identified by his color; his back being a clear olive brown, becoming rufous on his rump and tail. A quill from his wing placed beside one from his tail, on a dark ground, presents quite a marked contrast.

(To be continued.)

ON ELATION OF MIND.—T. A. KEMPIS.

"Trust not in thy own wisdom, nor in the wisdom and skill of any human being; but trust in the grace and favor of God who raises the humble and humbles the presuming.

Glory not in riches, though they increase upon thee; nor in friends, because they are powerful; but glory in God, who giveth riches, and friends, and all things.

Be not vain of the gracefulness, strength, and beauty of thy body, which a little sickness can weaken and deform.

Please not thyself with flattering reflections on the acuteness of thy natural understanding, and the sweetness of thy natural disposition; lest thou displease God who is the author of all the good that nature can dispense. Do not think thou art better than others, lest, in the sight of God, who only knoweth what is in man, thou be found worse.

Be not proud of that in which thou art supposed to excel, however honored and esteemed by men; for the judgment of God and the judgments of men are infinitely different, and that displeaseth Him which is commonly pleasing to them. Whatever good thou art truly conscious of, think more highly of the good of others, that thou mayest preserve the humility of thy spirit.

To place thyself lower than all mankind, can do thee no hurt; but much hurt may be done by preferring thyself to a single individual.

Perpetual peace dwelleth with the humble, but envy, indignation and wrath, distract the heart of the proud."

'Whatever book thou readest, suffer not thy mind to be influenced by the character of the writer, whether his literary accomplishments be

* For December, 1859.

great or small. Let thy only motive to read be the love of Truth; and instead of inquiring who it is that writes, give all thy attention to the nature of what is written. Men pass away like the shadows of the morning, but the word of the Lord endureth forever; and that word without respect of persons, in ways infinitely various, speaketh unto all.'

The month just closed has been a cold unpleasant one, and yet the above exhibit shows we have had Fifth months considerably colder. The rain is gradually falling short in quantity of last year, until it averages nearly one inch per month less.

PHILADELPHIA, 6th mo. 2d, 1866. J. M. ELLIS.

CLIMBING PLANTS.

The Academy of Sciences at Paris has received from M. Duchatre a highly interesting communication on certain well-known plants called creepers, because their stalks, too weak to support themselves, tend to twine themselves around the nearest objects. They generally do this from left to right, that is inversely to the motion of the sun, but some species turn to the contrary direction, and it is impossible to make either the one or the other change its direction. Palm, Vau Mohl, Dutrochet, and latterly Ch. Darwin, have successfully expressed the opinion that light was the cause of this tendency; but further experiments being wanting to confirm this theory, M. Duchatre, who discovered that the Chinese yam could live a long while in the dark, resolved to try the effect of absence of light upon it. At the end of May, 1865, he placed one in a pot, and as soon as it showed its stem above the ground he took it down to a cellar, where it remained in complete darkness until the 2d of August following. The stem in the course of seven weeks, grew to the length of a metre and a half. It looked withered and whitish, but was, upon the whole, strong and even stiff and perfectly straight, showing nowhere a tendency to twine itself round the stick which had been placed there for its support. Another yam was planted nearly a month later, and left exposed to daylight until it had twined itself twice round the stick. It was then taken and placed in the cellar, where its stem still obeying its natural tendency, went round once more, but in a more vertical direction than before; after which it grew straight up along its pole, to which it was fastened as it grew. It was now again taken up into the garden, where it immediately began to twine round again, making five close turns; and when it was once more taken down into the cellar, it continued its growth again in a straight line, and so on according as it was alternately in the light or dark.—*Every Saturday*.

ITEMS.

Letters have recently been received from Professor Agassiz, dated early in last month. He had returned to Rio Janeiro with a large and beautiful collection of fishes. The Emperor had shown him special attention, and facilitated his expedition with every necessary assistance.

CONGRESS.—The Senate received a communication from the Postmaster General in response to a resolution adopted some months since, giving information as to the cost, practicability, &c., of establishing a national telegraph system in connection with the Post-office Department. He does not think that it can be anything but an experiment, and success is not attainable. The bill providing for the safety of passengers on steam vessels was reported from the Committee on Commerce with amendments, and then postponed for the present. A bill authorizing the leasing of the saline lands of the United States for the purpose of development and improvement, was introduced and referred. The Constitutional

amendment, reported from the Reconstruction Committee, and which has already passed the House, was taken up, discussed and passed.

In the House, the resolution asking for information as to the amount of gold sold by the Treasury since the first of First month, 1866, was adopted. The resolution declaring that the Government could not endorse Mexican bonds was called up, and the previous question was moved, but the House refused to second the call, so the resolutions were referred to the Committee on Foreign Affairs. A bill was presented and referred to the Judiciary Committee, providing that all civil officers who hold their offices by appointment from the President or any of the heads of Departments, shall hold their offices for four years from the date of their appointment, and shall not be subject to removal during their term of office, except for malfeasance; and in all cases where the advice and consent of the Senate is necessary to appoint, the same advice and consent shall be necessary before any removal shall be effected; provided that the act shall not apply to those holding position merely as clerks. The bill was passed authorizing the Secretary of the Navy to accept League Island, in the Delaware river, as a depot for iron-clads, and as a site for an extensive navy yard; the one at Philadelphia to be dispensed with, and disposed of by the United States as soon as the public convenience will admit. The bill to establish a department of education in the city of Washington was lengthily discussed, and then defeated by the close vote of 59 to 61.

THE FREEDMEN.—By order of the Freedmen's Bureau, two hundred and forty couples have recently been regularly united in marriage at Arlington Heights. Many of these are old persons, who are the parents of grown-up children, but who were never legally married. Such were quite loth to comply with the order, regarding their relations as having been practically realized and sanctified by time and faithful observance; but they were all re-married, and, of course, much excitement and many amusing scenes were the result.

An eloquent petition from the colored people of North Carolina was presented to the House on the 30th ult., and referred to the Committee on Freedmen's Affairs. It earnestly protests against the withdrawal of the Freedmen's Bureau and gives their reasons for desiring its continuance. Some of which are that, "from a life-long experience as the slaves of the men, who now administer the laws, we cannot convince ourselves that equal justice will be meted out to us by them; but, on the contrary, we have, in a year's experience of freedom, every reason to believe that, without the Freedmen's Bureau, or some similar protection, we shall not be permitted to live even in peace, and our condition thus become really worse than when we were slaves and did not expect justice.

We bear no malice toward our former masters, whom we have served long and faithfully; and ask only that protection which will enable us to live in peace and quiet, toiling as we have always done until such time as we are recognized as men, and thus made able to protect ourselves as all men have a right to do.

We ask that the protecting influence of the Freedmen's Bureau be continued, in order that the young ladies now teaching our children may be induced to remain and continue their labor, for which we owe them a debt of gratitude we know not how to pay; and that the same influence be felt by our own schools in flourishing condition, supported and taught by ourselves."

LESSONS ON OUR COMMON SONG BIRDS.—Tickets for a course of Eight Lessons, \$3.00 each. Liberal reduction to Schools and Classes of over fifty persons.

A BRIEF MEMOIR OF ISAAC PENNINGTON.

(Continued from page 227.)

Sometimes I would cast mine eye upon a Scripture, and my heart would even melt within me. At other times, I would desire to pray to my God as I had formerly done; but I found I knew him not, and I could not tell how to pray, or in any wise to come near him, as I had formerly done. In this condition I wandered up and down, from mountain to hill, from one sort to another, with a cry in my spirit, *Can ye tell news of my beloved? Where doth he dwell? Where doth he appear?* But their voices were still strange to me; and I would retire sad and oppressed, and bowed down in spirit, from them. For truly I can say, I had not been capable of so much misery as my soul lay in, for many years, had not my love been so deep and true towards the Lord my God, and my desires so great after the sensible enjoyment of his spirit, according to the promise and way of the Gospel. Yet this I can also say, in uprightness of heart, it was not gifts I desired, to appear and shine before men in; but grace and holiness, and the spirit of the Lord dwelling in me, to set my heart by his grace, and to preserve me in holiness. Now surely, all serious, sober, sensible people, will be ready to inquire how I came satisfyingly to know the Lord at length: or whether I do yet certainly know him, and am yet truly satisfied. Yes, indeed, I am satisfied at my very heart. Truly my heart is united to him whom I longed after, in an everlasting

covenant of pure life and peace. Well, then, how came this about? will some say. Why thus: the Lord opened my spirit. The Lord gave me the certain and sensible feeling of the pure seed, which had been with me from the beginning. The Lord caused his holy power to fall upon me, and gave me such an inward demonstration and feeling of the seed of life, that I cried out in my spirit, *This is he, this is he, there is not another, there never was another. He was always near me though I knew him not, not so sensibly, not so distinctly, as now he was revealed in me, and to me by the Father. O that I might now be joined to him, and he alone might live in me!* And so, in the willingness which God had wrought in me, in this day of his power to my soul, I gave up to be instructed, exercised, and led by him, in the waiting for and feeling of his holy seed, that all might be wrought out of me which could not live with the seed, but would be hindering the dwelling and reigning of the seed in me, while it remained and had power. And so I have gone through a sore travail and fight of afflictions and temptations of many kinds; wherein the Lord hath been merciful to me, in helping me, and preserving the spark of life in me, in the midst of many things which had befallen me, whose nature tended to quench and extinguish it. Now, the Lord knows, these things I do not utter in a boasting way; but would rather be speaking of my nothingness, my emptiness, my weakness, my manifold infirmities, which I feel more than

ever. The Lord hath broken the man's part in me, and I am a worm and no man before him. I have no strength to do any good or service for him; nay, I cannot watch over or preserve myself. I feel daily, that I keep not alive my own soul; but am weaker before men, yea weaker in my spirit, as in myself than ever I have been. But I cannot but utter to the praise of my God, and I feel his arm stretched out for me; and my weakness, which I feel in myself, is not my loss, but advantage before him. And these things I write, as having no end at all therein of my own, but felt it required of me; and so in submission to my God, have I given up to do it, leaving the success and service of it with him.

Now, thus having met with the true way, and walked with the Lord therein, wherein daily certainly, yea, and full assurance of faith and of understanding is at length obtained, I cannot be silent, true love and pure life stirring in me, and moving me, but am necessitated to testify of it to others; and this is it:—to retire inwardly and wait to feel somewhat of the Lord, somewhat of his holy Spirit and power; discovering and drawing from that which is contrary to him, and into his holy nature and heavenly image. And then, as the mind is joined to this, somewhat is received, some true life, some true light, some true discerning; which the creature not exceeding, but abiding in the measure of, is safe. But it is easy erring from this, but hard abiding with it, and not going before its leadings. But he that feels life, and begins in life, doth he not begin safely? And he that waits and fears, and goes on no further than his captain goes before him, doth he not proceed safely? Yea, very safely, even till he cometh to be so settled and established in the virtue, demonstration, and power of Truth, as nothing can prevail to shake him. Now, blessed be the Lord, there are many at this day, who can truly and faithfully witness, that they have been brought by the Lord to this state. And thus have we learned of the Lord; to wit, not by the high-striving, aspiring mind; but by lying low, and being contented with a little. If but a crumb of bread, (yet if bread), if but a drop of water, (yet if water), we have been contented with it, and also thankful to the Lord for it: nor by thoughtfulness, and wise searching, and deep considering with our own wisdom and reason have we obtained it; but in the still, meek, and humble waiting, have we found that brought into the death, which is not to know the mysteries of God's kingdom; and that which is to live, made alive, and increase in life. Therefore he that would truly know the Lord, let him take heed of his own reason and understanding. I tried this way very far, for I considered most seriously and uprightly. I prayed, I read the Scrip-

tures, I earnestly desired to understand and find out, whether that which this people, called Quakers, testified of, was the only way and truth of God, as they seemed to me but to pretend; but for all this, prejudices multiplied upon me, and strong reasonings against them, which appeared to me as unanswerable. But when the Lord revealed his seed in me, and touched my heart therewith, which administered true life and virtue to me, I presently felt them there, the children of the Most High, and so grown up in his life, power, and holy dominion, (as the inward eye, being opened by the Lord, sees), as drew forth from me great reverence of heart, and praises to the Lord, who had so appeared among men, in these latter days. And as God draweth, in any respect, oh! give up in faithfulness to him. Despise the shame, take up the cross; for indeed it is a way which is very cross to man, and which his wisdom will exceedingly be ashamed of; but that must be denied and turned from, and the secret, sensible drawings of God's spirit waited for, and given up to. Mind people, he that will come into the new covenant, must come into the obedience of it. The light of life, which God hath hid in the heart, is the covenant; and from this covenant God doth not give knowledge, to satisfy the vast, aspiring, comprehending wisdom of man; but living knowledge, to feed that which is quickened by him; which knowledge is given in the obedience, and is very sweet and precious to the state of him that knows how to feed upon it. Yea, truly, this is of a very excellent, pure, precious nature; and a little of it weighs down that great, vast knowledge, in the comprehending part, which man's spirit and nature so much prizeth and presseth after.

And truly, friends, I witness at this day, a great difference between the sweetness of comprehending the knowledge of things, as expressed in the Scriptures, (this I fed much on formerly), and tasting the hidden life, the hidden manna in the heart, which is my food now, blessed forever be the Lord, my God and Saviour. Oh! that others had a true, certain and sensible taste of the life, virtue and goodness of the Lord, as it is revealed there! Surely it could not but kindle the true hunger, and inflame the true thirst; which can never be satisfied but by the true bread, and by water from the living fountain. This the Lord, in the tenderness of his love, and in the riches of his grace and mercy hath brought us to; and this we earnestly and uprightly desire and endeavor, that others may be brought to also; that they may rightly in the true silence of the flesh, and in the pure stillness of spirit, wait for, and in the Lord's due time, receive that which answers the desire of the awakened mind and soul, and satisfies it with the true, precious substance, forevermore. Amen.

Oh! I have known it to be a bitter thing to follow this wisdom [carnal wisdom] in understanding of Scriptures, in remembering of Scriptures, in remembering of experiences, and in many more inward ways of workings, that many cannot bear to hear. The Lord hath judged me for that, and I have borne the burden and condemnation of that, which many at this day wear as their crown. And now, what am I at length? A poor worm? Whom can I warn effectually? Whom can I help? Whom can I stop from running into the pit? But though I am nothing, I must speak, for the Lord draweth and moveth me; and how unserviceable soever my pity be, yet my bowels cannot but roll, both towards those that are in misery, and those that are running into misery.

I am a lover of mankind in general, and have been a deep sufferer with and travail for, all the miserable. None knows the path of my sorrows, or the extent of my bowels, but he that made me. It is not natural, or kindly to me, to upbraid any man with any kind of wickedness, or ever so justly deserved misery; but my bowels work concerning him towards the spring of eternal power and compassions: even as I would be pitied, and represented to the Father of mercies in the like condition. Indeed I have been emptied from vessel to vessel, and tossed with multitudes of storms and tempests; yet the savor of my life remaineth with me to this day, and the Spirit of my God breatheth on my heart: blessed be His holy name forever! And though I walk with one sort of people, because my heart saith, yea, the Spirit of the eternal God hath witnessed unto me, and shown me in that light which cannot be deceived, that they are the people, whom he hath chosen out of all the gatherings throughout the earth, from the apostacy, to manifest his power in, and his presence among: I say, though I have been guided, and led by the Spirit of the Lord to walk among these; yet I am not bounded there, either in the love, or in the unity of my heart; but I have unity with the integrity and zeal for God which is in others, of what sort or gathering soever; and I have tender bowels for all, even for those which hate and persecute that which is my life, and hath the love of my heart forever. Oh! how have I prayed for the lost world! For all the souls of mankind: how hath my soul bowed in unutterable breathings of spirit before my God, and could not be silenced, until he quieted my spirit in the righteousness and excellency of his will, and bid me leave it to him.

(To be continued.)

Said the learned Dr. Donne to his friends when dying, "I repent of all my life but the part of it I have spent in communion with God and doing good to men."

For Friends' Intelligencer.

REFLECTIONS.

Feeling inclined to meditation, I walked out in the open air, to gaze (as far as the eye could reach) upon the visible world, and contemplate the goodness and wisdom of Him who is "great and marvellous in all His works." I looked at the sun shining in meridian splendor, and reflected that it would soon go down in the western horizon, to enlighten another hemisphere, leaving us in darkness, when the twinkling stars would appear one after another, until the whole firmament would be in a glow, and the moon would rise in her majesty and shine queen of the night. These, and innumerable other suns and planets, have from time immemorial moved in their respective spheres, performing the purpose designed by that Being who created and sustains them all. I said in my heart who can doubt the omniscience, omnipotence and omnipresence of Him who said, "Let there be light, and there was light."

I cast my eyes upon the brown earth, and I thought how wonderful it is that it brings forth not only such a profusion of tender blades of grass, so beautifully green, but the delicate flowers of every form and gorgeous hue,—the sturdy oak, the cedar and the fir tree—the grains and fruits to support the animal kingdom,—and reflecting how wonderfully all His works in the universe are adapted to the wants, the convenience and happiness of man, when he moves under the guidance of that divine law given him by his Creator, calling for reverence and gratitude in every soul, surely none but "the fool"—the man void of understanding—can say, "There is no God." Again I looked upon the earth, and felt that I loved it, for it was my mother; she had fed me all my life long, and would soon open her kind arms, and hide in her bosom my mortal remains when no longer fit to be looked upon by mortal eye. I felt the subject was too vast for human language to portray, therefore conclude with the poet in saying,

"When all thy mercies, O my God,
My rising soul surveys,
Transported with the view, I'm lost
In wonder, love and praise.

"Oh, how shall words with equal warmth
The gratitude declare
That glows within my ravished heart;
But Thou canst read it there."

FROM A FRIEND.

A lovable Christian is one who hits the golden mean between easy, good-natured laxity of conscience, on the one hand, and stern, ungenial moroseness on the other. He is sound, and yet ripe, sweet and mellow. He never incurs contempt by yielding to men's sinful prejudices, nor does he incur the antipathy of others by doing right in a hateful, surly, or bigoted way.

EXTRACT FROM THE WORKS OF WILLIAM LAW.

"Discovering the true way of turning to God and of finding the Kingdom of Heaven, the riches of Eternity in our souls."

Thou hast seen, dear reader, the nature and necessity of regeneration, be persuaded therefore fully to believe, and firmly to settle in thy mind this most certain truth, that all our salvation consists in the manifestation of the nature, life, and spirit of Jesus Christ in our inward new man. This alone is Christian redemption; this alone delivers from the guilt and power of sin; this alone redeems, renews, and regains the first life of God in the soul of man. Everything besides this is self, is fiction, is propriety, is our will, and, however colored, is only thy old man, with all his deeds. Enter therefore with all thy heart into this truth; let thy eye be always upon it, do everything in view of it, try everything by the truth of it; love nothing but for the sake of it. Wherever thou goest, whatever thou doest,—at home or abroad, in the field or at church,—do all in a desire of union with Christ, in imitation of his tempers and inclinations, and look upon all as nothing, but that which exercises and increases the spirit and life of Christ in thy soul. From morning to night keep Jesus in thy heart; long for nothing, desire nothing, hope for nothing, but to have all that is within thee changed into the spirit and temper of the Holy Jesus. Let this be thy Christianity, thy church and thy religion. For this new birth in Christ, thus firmly believed and continually desired, will do everything that thou wantest to have done in thee; it will dry up all the springs of vice, stop all the workings of evil in thy nature, it will bring all that is good into thee, it will open all the Gospel within thee, and thou wilt know what it is to be taught of God. This longing desire of thy heart to be one with Christ will soon put a stop to all the vanity of thy life, and nothing will be admitted to enter into thy heart, or proceed from it, but what comes from God, and returns to God. Thou wilt soon be, as it were, tied and bound in the chains of all holy affections and desires; thy mouth will have a watch set upon it; thy ears would willingly hear nothing that does not tend to God, nor thy eyes be open, but to see and find occasions of doing good. In a word, when this faith has got both thy head and thy heart, it will then be with thee as it was with the merchant who found a pearl of great price, it will make thee gladly to sell all thou hast, and buy it. For all that had seized and possessed the heart of any man, whatever the merchant of this world had got together, whether of riches power, honor, learning or reputation, loses all its value,—is counted but as dung and willingly parted with,—as soon as this glorious pearl, the new birth in Christ Jesus, is discovered and found by him. This, therefore,

may serve as a touchstone, whereby every one may try the truth of his state: if the old man is still a merchant within thee, trading in all sorts of worldly honor, power or learning; if the wisdom of this world is not foolishness to thee; if earthly interests and sensual pleasures are still the desires of thy heart, and only covered under a form of godliness, a cloak of creeds, observances and institutions of religion,—thou mayest be assured that the pearl of great price is not yet found by thee. For where Christ is born, or his spirit rises up in the soul, there all self is denied, and obliged to turn out; there all carnal wisdom, arts of advancement, with every pride and glory of this life, are so many heathen idols all willingly renounced, and the man is not only content, but rejoices to say, that his kingdom is not of this world.

Oh, the loss to saints who drench their spirits in continued sadness, and waste their days in complaint and groans, and so make themselves, both in body and mind, unfit for the sweet, heavenly work of praise. Instead of being employed in the praise of God, they are questioning their worthiness and studying their miseries, and so rob God of his glory, and themselves of their consolation.

THE SERVICE OF GOD.

Amongst the many points which distinguish the revealed religion of the Bible from the systems of heathenism or of philosophy, is that of the *kind* of service which it demands of those who would obey and please Him. It is not only fear and reverence, not only a conformity to some external forms of devotion or worship, but a surrender of the whole man unto God, a consecration of every gift, aspiration and possession to Him and His cause. Christianity is the only thorough religion, the only one that attacks the seat of man's moral disease, and that endeavors to make of him a new creature, in thought, will and life a servant and child of the Most High. No one, then, who would occupy that position and fulfil its obligation, and, at the same time, realize all its blessedness, must shrink from this complete self-consecration. In its merely outward manifestations and in times of prosperity, moral and physical, most Christians devote themselves to this service with cheerfulness, but they often find it a very serious struggle to act as the devoted servants of God, when seasons of adversity or temptations come upon them. To serve God, to fulfil His whole will, even in disappointment and affliction, how hard a task is this! To endure chastisement, to be patient when He smites, to suffer His wisdom to dictate for us when our own will would be something very different, that many learn. But to transmute adverse providences into positive

blessings, to advance our own spiritual welfare when a heavy load of sorrow is resting upon us, to serve the will of God, willingly and consciously, when the bitter cup of humiliation and trial is given us to drink, this is a virtue and victory difficult to acquire, yet ever to be sought after. The Christian's constant effort must be to reduce his whole character and life to a state of the most intimate dependence upon and communion with God. When that condition of spirituality is reached, the Christian will extract from circumstances which seem most adverse to the attainment of such a result, advantages and blessings which can not only not be derived in any other way, but are, in themselves, so incalculably valuable and glorious. Adversity and trial will not only be borne humbly and uncomplainingly, but through them he will be brought to a more thorough knowledge of himself, and a deeper appreciation of the mind and love of God.

It is, however, not alone in such dispensations in which we have no difficulty of perceiving the directing hand of Him, who is Supreme in the universe, that the task is laid upon the Christian of thinking and acting as the obedient servant of the Lord in heaven, but in many others which are no less the products of His care and wisdom. From whom come happiness, health, the possession of wealth? If they come from God, is there no responsibility to serve Him by these gifts? The true servant of God will keep himself unspoiled by prosperity, will not be lifted up by pride, will not clutch with eager hand the advantages and enjoyments of wealth, but will use all the gifts which make his life happy and bright, as a conscientious steward. And if any one would accept the service of God, honestly and for its own sake, he must make it a matter of principle to keep himself up to the steady recognition of his position as a dependent and servant of the Heavenly Master. He must educate himself to the constant practice of the duties which rest upon him as such. Running through the whole of his life and spiritual consciousness must be the thought that he is not his own, that this is only a passing probationary state of existence, a time of trial, a season of preparation. God gives him the possession of money, talents, happiness or any other good thing, that in them and by means of them, he may the more abundantly be able to do His holy will. With increased opportunities of serving Christ should come a proportionate willingness to do so. The settled, unchanging purpose of his life must be that of magnifying the name of his gracious Father, and of fulfilling all the duties which rest upon one who has accepted His service as his highest obligation and fullest joy.

Whether, then, brightness or darkness be the

Christian's lot, his duties are the same, his accountability is the same. Neither of them should abate his anxiety or determination to be found a steadfast and conscientious servant. What we all need is to measure things by their right value, to attain to a calm and unwavering purpose by which our life shall be regulated, to set ourselves once and forever to the task of carrying out the will of God so far as it concerns ourselves and we are able to perform it, and all this irrespective of the outward condition in which we may be placed. It is from a want of this firm resolve, because there is such an indefiniteness in spiritual conception and determination, because they allow themselves to be made so completely the victim of circumstances, without considering that these are all of God's ordering, that so many lamentably fail both in the performance of that amount of positive work in the service of God, which is warranted by their opportunities and endowments, and in the acquisition of a steady, peaceful, growing spirituality. What they need is to accept the service of God in its fullest sense and at once, without hesitation.—*The Moravian.*

From Hedge's Reason in Religion.

THE SPIRIT IN THE LETTER.

It will not do to quarrel with the letter, the spirit requires it. Spirit will not stay without a letter to hold it, as every one knows from his own experience. What avails your vision, your aspiration, your ideal, and what avail your kind purposes and generous emotions, if they do not embody themselves? You have a vision of excellence; it fills your whole soul; your spirit is aglow with it; it is your spirit for the time; and could your spiritual interior at that moment be laid open and portrayed as a photograph fixes the fleeting expression of the countenance, the portrait would be that of a hero or a saint. What boots it, if you do not embody that spirit in some word or work? It expires with the pulses of the breast; it evaporates with a breath, and no man is benefitted by it; it was, and is not, and no memorial of it remains to kindle aspiration in another, or to rekindle it in yourself. But express that spirit, record it in some way, embody it somewhere, and you add something to the spirit's life and the world's riches. As yet, it is a mere breath that steals over the soul, a possibility only; you are none the better for it, nor any one else, if it end so. And yet the spirit is good and holy and divine as that which fired St. Francis when he poured out his soul in measureless love, or that which flooded the heart of Jesus when he prayed for his enemies on the cross. But divine as it is in possibility, it is nothing in reality until it is embodied; and it may be worse than nothing as exhausting sensibility in leaves without

fruit, like the infructuous fig-tree whose leafy and lying luxuriance availed nothing, but drew to itself a curse. As yet it is a mere breath; shall it end so,—a passing wind, whence coming you heed not, nor whither going? or shall it become actual, and a fact of life? Express it, actualize it in some way, and straightway it becomes life, a thing, a fact; insignificant in appearance, obscure in place, evanescent in time; but still, life, and a fountain of life to others, an influence in the world, and so an actual constituent part of the world, inseparable, indestructible. The difference between it and spirit unexpressed is simply infinite,—the difference between something and nothing. I fancy that, when the soul reckons with us in our day of judgment, we shall burn less with the memory of bad acts or words, than of good designs unembodied, and worthy thoughts unexpressed. All spirit, so far as it is good and holy at all, is a unity. The spirit that prays in any of us to-day, if the genuine fire of devotion is in us, is the same which discoursed in the Sermon on the Mount, and opened the eyes of the blind; which blew into the soul of Peter, and drove Paul like a rolling thing around the world, and built up universal Christendom, with its temples and its Scriptures, its sanctities and its arts. The difference between the spirit that did all this, and the holy thought that stirs my heart to-day, and remains unexpressed, is not in quality, but in outwardness,—the difference between the spirit *with* a letter, and the spirit *without* it.

We are indebted to the letter as much as to the spirit,—to the spirit only through the letter. And when we consider how a piece of parchment in a registrar's office, which is not even looked at once in a lifetime, may fix the occupation of large portions of the earth's surface for thousands of years; and how a printed paper which they call a Constitution may determine the political condition of a nation,—the measure of external freedom enjoyed or bondage endured, of millions of people; and how some leaves inscribed with tables of figures will enable a ship's company to find their way across the pathless sea, and to circumnavigate the world,—when, I say, we consider these things, and note the power of the letter, and the value of its function in the secular economy of life, we may come to think respectfully of its agency as a power in religion.

It must be granted to those who argue the cause of the spirit against the letter, that no existing letter can endure forever, or continue forever to hold the place which it once held in the spiritual economy. Every form in which the spirit clothes itself, every body it puts on, is transient; every existing organization is destructible, and to be destroyed. The spirit endures, the form perishes. Yet even here we

must distinguish between form and type; that is, between the material form and the spiritual—between soul and body. Every form of being which is not exceptional or transitional and accidental, expresses a type which will reappear when the form which now embodies it is dissolved. In other words, the form will reproduce itself continually. The human body is fragile and corruptible; all the bodies in which humanity is now invested will soon be dust, but the human form will endure while heaven and earth remain, and when the heavens and the earth that now are have passed away. The human form is a letter that can never become obsolete. And so there may be types of the spirit in the present institutions and ordinances of religion, which will survive their dissolution, and reproduce themselves in new and similar ordinances, if ever the present shall pass out of use; as indeed the present are reproductions of elder rites.

This also must be conceded, that in no letter is the spirit fully and perfectly expressed, and that the letter still requires the spirit to interpret its import, and to make it available to those who would use it. It is a medium of spiritual life to those only who come to it in and with the spirit. Without that touch of kindred life, it is dead and deadening. Then it is that "the letter killeth." The metallic wire which conveys your message to a distant friend, and his to you, possesses that capacity in a latent state. No manipulation can make it work to that end without the touch of the electric fluid which develops its secret virtue. Nevertheless, that metallic wire is a necessary condition of the communication desired; no other medium can supply its place, nor can the communication take effect without a medium. So is the letter without the spirit, and yet an indispensable mediator of spirit.

It is an old controversy, the dispute concerning the letter and the spirit in religion. All parties agree in asserting the supremacy of the spirit. The only question is, whether any, and how much, of letter is essential to spirit. There is always a party in the church who despise the letter and disparage ordinances and all external sanctities. They think they have Paul on their side, when they quote these words of his, "The letter killeth." But Paul is not to be so understood. He does not condemn the letter as such,—any and every letter,—but only the literality and empty formality which Judaism in his day had come to be. The correct application of this saying will depend on what we assume to be the object of the word "killeth." It is not the spirit that the letter killeth; on the contrary, we have seen that the letter is necessary to any continued life of the spirit;—not the spirit, but those who rest in the letter alone; those who separate the letter

from the spirit, and make it supreme and final. The fault, then, is not in the letter, but in those who use it.

Dr. Cudworth says, speaking of holiness, "If it be but hearty and sincere, it can no more be cut off and discontinued from God, than a sunbeam here upon earth can be broken off from its intercourse with the sun, and be left alone amidst the mire and dirt of this world. Holiness is something of God, wherever it is. It is an efflux from Him, that always hangs upon Him, and lives in Him; as the sunbeams, although they gild this lower world, and spread their golden wings over us, yet they are not so much here, where they shine, as in the sun from whence they flow."

From the London Times.

BUNNHILL-FIELDS.

Among the historic sights of London there are not many which can lay claim to more venerable association than the Bunhill fields burial-ground, in Finsbury. It was first used for interment at the time of the great plague, and is the site of "the great pit in Finsbury," spoken of in Defoe's narrative. At that time, instead of being surrounded by one of the gloomiest neighborhoods of brick and mortar that are characteristic of London, it lay quite open to the country. Since then it has been one of the principal places of interment for the great sects of non-conformists who objected to the burial service in the Book of Common Prayer. It has in fact been called the "Campo Santo of the Dissenters," and it well deserves the name. Here are interred Dr. Goodwin, the Independent preacher, who attended Cromwell on his death-bed; Dr. John Owen, the famous Puritan, Vice Chancellor of Oxford, and General Fleetwood, Cromwell's son-in-law. Here above all lie the remains of the greatest but one of Puritan writers,—the man who, perhaps, has done more than any other author to perpetuate among Englishmen the best parts of the Puritan theology. In other words, to a vault in these grounds are entrusted the remains of John Bunyan. Here, too, lie the bodies of George Fox, the founder of the Quakers; of the mother of the Wesleys, and of Isaac Watts. Here lies Defoe himself, amid one of the scenes which his pen has immortalized. Stothard, the artist, was buried here, as late as 1834, and in short for nearly two centuries, the ground has been a chosen resting place of the non-conformists. Such a place deserves to be treated with no less reverence than if it were legally consecrated ground. The mere respect for two centuries of the dead, should alone insure its preservation; but to a spot which contains such names as we have mentioned, religious associations, no less than

English memories, should combine to lend a peculiar sanctity. It is with the greatest regret, therefore, we learn that any occasion has arisen for fear lest this almost consecrated ground should be abandoned to the common uses of bricks and mortar. That there is any serious danger of such a desecration we do not believe, but a difficulty has been raised on the subject which would be sufficient to provoke some ill feeling, unless it be promptly met in a proper spirit. The burial-ground in question is part of the great estate of the Finsbury Prebend, which, in consequence of recent legislation, is now vested in the Ecclesiastical Commission. The whole estate had been leased to the Corporation of London for a term of 99 years, dating from 1768, and it will revert, therefore, with its enormous revenues, to the Ecclesiastical Commission in 1867. With the rest of the estate the Commission will of course enter into absolute possession of Bunhill-fields burying ground, and the non-conformists appear to be in considerable alarm lest the appetite of the Commission for an increased income should prove too strong for their respect to the memory of Dissenters. At all events, in December, 1868, a Mr. Iverny, acting on behalf of the representatives of the persons buried in this ground, proposed to this Commission to purchase the freehold of the land on the expiration of the lease in 1867. The Commission expressed their willingness to agree to the sale for about a tenth of the present value of the land, on condition that it should be kept forever as a burial-ground, and should revert to them if it were ever appropriated to any other purpose. If this arrangement had been observed the matter would have been settled; but it seems afterwards to have occurred to the Dissenters that they were already entitled to the permanent possession of the ground without making any further payment for it. The vaults and graves had been paid for just as at other burial grounds; and it certainly seemed somewhat unreasonable that the representatives of the deceased persons should be called upon, long after the death of their friends, to pay a further sum in order to insure their quiet possession of graves which had in the first instance been duly purchased. The Dissenters are anxious to preserve the ground; the Commission, by their offer, show that they are equally averse to desecrating it, and the corporation allege that they have no right to do so. However the dispute may be decided, therefore, we may rest assured that Bunhill-fields will be treated with as much respect as if it had been legally consecrated; and every one will rejoice that there is no danger of a contrary result. There are always ample reasons, on sanitary grounds, for preserving these open burial places from interference; but in a spot appropriated

to the use of so celebrated a body of men, any desecration would be more than usually unpardonable.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, SIXTH MONTH 23, 1866.

DEVOTIONAL INFLUENCES.—In maintaining a testimony against formal observances, it is needful that we discriminate wisely, lest we reject habits through which our spiritual life may be strengthened. If we examine the ground of this righteous testimony, we must perceive that it was not against a *form*, but against a lifeless observance of it, that Friends felt bound to testify. While the use of set words addressed at stated periods to the Most High may justly be considered a vain oblation, a drawing near with the mouth when the heart is afar off, to retire awhile from the active duties of the day and sit together in solemn silence, to read a few verses in Scripture or a portion of some other good book, is a simple avail of the means provided by the Giver of all Good for training the youthful mind in habits of reverence and self-examination.

While it has not been the custom of Friends to advise their members to assemble their households daily for family devotion, concerned fathers and mothers among us have felt it right frequently to collect their families to wait in stillness for the arisings of truth upon the mind, that thereby their spiritual strength might be renewed.

Though parents may often feel little qualification for such a duty, yet, if they will regard the practice as an opportunity to encourage devotional feeling in their children, and humbly ask the guidance of the Holy Spirit in the endeavor, we believe they will realize the habit to be attended with a blessing not only to their children, but also to themselves.

We have stated seasons of assembling for religious worship, and should we not in our different families gather the members together, that the incense of gratitude may unitedly arise for the endearing ties of home and kindred, and the other numberless blessings by which we are surrounded. Parents who thus manifest to their children a concern for their spiritual growth, may have their own faith renewed, their desires for holiness strengthened, and

their efforts to maintain a watchful and consistent life increased, through the means used to advance the welfare of their offspring, while the children who are the objects of such tender care may find the recollection of it a preservation to them in after years.

It may be that the child does not at the time appreciate such concern, but when far removed from the parental home, and exposed to the trials and temptations of adult life,—when the cares and the pleasures of the world engross his time and his thoughts, and the still, small voice of the monitor within is seldom heeded,—in some quiet hour the remembrance of a father's solicitude or a mother's love may steal into his heart with resistless power, and Divine Grace, operating through the affections, may awaken his dormant conscience. The habits of that early home, hallowed by tender associations, may then be resumed to his strength and comfort.

"THE CITIZENS' ASSOCIATION OF PHILADELPHIA."—This is the modest title of a new organization which has received from the Legislature of our State a charter which bestows upon it most important and responsible obligations.

In view of the rapid increase of pauperism, vagrancy and crime, it is one of the highest duties of the age to institute measures to prevent, or at least to remedy these evils.

Purely "missionary labors" in the midst of the most depraved portions of our population, effect but little in comparison with the vast work that needs to be done. Legislation seems inadequate to the task, and the eleemosynary relief of benevolent individuals and societies, though honorable and merciful to a large degree, leave the records of crime still fearful in numbers and character.

Public begging has increased among us to an alarming extent, and vagrancy has even assumed the rank of a profession, in the pursuit of which men and women flit from the unsuspecting, with all the exact routine of a well-ordered system.

Drinking-houses are fostered by the law;—the cost of licenses is very small, and the penalty for selling the most poisonous drinks without authority is so insignificant as to render the offence scarcely worth avoiding.

In view of these facts, and of those collateral and incidental facts, which attach to this subject, it is proposed by the Association to collect statistics, and inquire into the causes of these and evils, and to institute measures for their remedy or removal.

Intemperance is regarded as a physical disease, as well as a moral evil. The alcoholic poison in the human system operates in its specific direction as other poisons do, to induce their peculiar symptoms. It creates a disease of the nervous system, the most terrible in its effects, and capable of being transmitted to other generations. We all know the sad desolation it creates in the moral and mental nature, and how it entails sorrow, shame, poverty, pauperism, and fearful death.

The Association proposes to offer homes for young men and women, who are addicted to this vice, or who may feel themselves tending toward the drunkard's way,—surrounding them with influences to exalt their aspirations, and bring them to suitable conceptions of their responsibilities and destiny, hoping in this way to save some, while by wholesome teaching, and earnest labor, to create in the public mind more truthful views of duty.

We commend this new movement to the favorable consideration of our readers. Many people have wealth in abundance for the use of which they must give account. It can be profitably invested in the direction of improving public morals, and thus promoting the safety of our children.

Communications on the subject may be addressed to DR. JOSEPH PARRISH, Philadelphia.

Spiritual wealth has its temptations as well as temporal wealth.

AN ANCIENT STOVE.

"The oldest stove, probably, in the United States, is one which warms the hall of Virginia's Capitol in Richmond. It was made in England, and sent to Virginia in 1770, and warmed the House of Burgesses for sixty years before it was removed to its present location, where it has been for thirty years. It has survived three British monarchs; has been contemporaneous with four kingly monarchies, two republics and two imperial governments of France. The great Republic of America has been torn by internecine strife, the breaches partly healed, and still the old stove remains, unmoved in the midst of all."

EXTRACTS FROM SECOND ANNUAL REPORT OF FRIENDS' ASSOCIATION OF PHILADELPHIA FOR THE AID AND ELEVATION OF THE FREEDMEN.

The time of our Annual Meeting having been changed from the First month to the Fifth, the Report now presented embraces a period of sixteen months.

Previous to Eleventh month last, two Associations of our friends existed in this city, both of which were engaged in collecting money and supplies, and forwarding them for the aid of the freedmen. The efforts of one were particularly directed to the relief of their physical wants; the other, while embracing this point, added to its sphere of labor that of sending teachers and establishing schools among them. As many Friends were members of both of these Associations, confusion sometimes arose in the minds of contributors in regard to their separate provinces; it was therefore concluded that an advantage would result from their union, and the "Woman's Association of Philadelphia for the Relief of the Freedmen" and "Friends' Association of Philadelphia for the Aid and Elevation of the Freedmen" were merged into one organization, under the latter title.

At the commencement of the year 1865, the schools under our care were located at Mason's Island and Camp Wadsworth; Lydia T. Atkinson, Sarah A. Cadwallader and Sarah E. Lobb being teachers at the former place, and Mary McClain at the latter. Margaret Preston, who had been engaged as nurse in the Hospital at Mason's Island, had been sent to St. Mary's County, Md., to inquire into the condition of the Freedpeople on the Government farms there. She remained a few weeks, doing what she could for their amelioration and comfort; but, that locality being subsequently selected by our friends in New York as a field of labor, and we have no organization elsewhere requiring the services of a nurse, it was concluded to leave her at liberty to make any other engagement. This faithful laborer among the Freedmen has since been removed by death.

An Industrial School, which had been established at Mason's Island, was in successful operation, and, notwithstanding the prevalence of sickness, which interfered with the regular attendance of the pupils, a large number of garments, also bed-ticks for the Hospital, were made by the women and children. The services of two competent workmen were secured to give instruction to the men and boys in mat-making and cobbling, and fifty two pairs of shoes were repaired by them, during the continuance of these schools.

On account of the continued unhealthiness of this Camp, two of our members were appointed, in Third month of last year, to represent to the

proper authorities the condition of affairs there, with a view to obtain a more suitable situation to which the people might be removed. On this mission they proceeded to Washington, and, on their return, reported that they had succeeded in obtaining interviews with the officers of Freedmen's Bureau; and, though the sickness on the Island had materially abated, there was a strong probability of an early removal of the Camp. They also reported that they visited the schools under our care, and found them in a flourishing condition; that the teachers were diligently employed in the performance of their several duties, and manifested untiring zeal and devotion to the work in which they were engaged. While in Washington, our Committee had been deeply impressed with the destitution and suffering of many of the freed-people in that city; and, in consequence of their representation, an appropriation of sanitary stores and clothing was sent to Eliza Heacock for distribution among them.

Communications received from Wm. F. Mitchell depicted great suffering at Nashville, Tenn., from insufficient food and clothing, which induced the forwarding of money and supplies to that locality. In acknowledging "their timely reception," he writes that the appropriations for the Orphan Asylum established through his exertions were especially acceptable, as he believed "they aided in saving many lives." He says further, in relation to the work, "It seemed a manifest duty to collect these poor children, and I have faith to believe that our Heavenly Father will not allow them again to be scattered. It is very pleasant to-night, in the midst of our troubles, to reflect that so many are sleeping comfortably. To one whose compassion is infinite, I commit the new family, and look to Him both for counsel as to its future mode of operation and the means for its support."

This Asylum is still under the care of its faithful originator, and we have, from time to time, met his request for assistance as far as our other engagements would justify. This institution has comforted and sheltered many a homeless little one, and we trust that the means for its support will not be withheld.

In the Fourth month, Lydia T. Atkinson was released from her position at Mason's Island, and resumed her duties at Camp Wadsworth, where she remained until the Eleventh month, when, notwithstanding her continued interest in the cause, she felt that her labors among the freed-people must for the present be closed. Our Association shared with those among whom she had been so long and so usefully employed in regret at parting with this their faithful teacher and friend. Mary K. Brosius was appointed to fill the vacancy caused by her removal. About the same time Sarah E.

Lobb, in consequence of ill health, requested to be released from service. In the ensuing month the Camp at Mason's Island was broken up by order of Government. Mary K. Brosius was thence removed to Camp Wadsworth, and Sarah A. Cadwallader engaged with a friend in a school for the Freedmen at Camp Todd. The fluctuations in the settlements of these people have subjected the teachers to frequent changes; but we believe that, in every instance, the freedmen have been permanently benefited by the residence of our teachers among them, even when it has been only for a short time.

Information having been received that Friends in Virginia had opened First-day Schools for the freed-people at Lincoln, Hillsboro' and Waterford, much interest was felt in their efforts, and a sum of money appropriated for the purchase of books and stationery to aid them in the undertaking.

The Association, viewing with deep regret the injustice practised toward the colored race in their exclusion from our railway cars, appointed a committee to visit the managers of the respective companies, and represent our feelings upon the subject. This committee had several interviews with the directors and officers of some of the companies, and were encouraged to believe that the cruel prejudice against color will gradually, though surely, be superseded by a more enlightened public sentiment, which will secure the extension to all citizens of an equal participation in the public conveyances.

Although great suffering was known to exist among the freed-people in various parts of the South, and we were sensible of their earnest importunities for school instruction, yet, for a time, it seemed almost impossible to obtain definite information of the points at which it would be safe to locate teachers, or to find reliable agents to dispose of clothing in localities where it was known to be needed. After various letters of inquiry on this account were addressed by our committees to individuals, several channels opened for the distribution of supplies, and suitable situations offered for the teachers we were desirous of sending into the field.

Through the representations of some of the agents of the Freedmen's Bureau, also of our friend Reuben Tomlinson, Inspector of Schools in South Carolina, we were induced to turn our attention toward the establishment of schools in that State. Laura Towne, of Philadelphia, who has for several years devoted her time and energies to the elevation of the colored people there, being on a visit to our city, attended one of our meetings, and gave much valuable information, which decided us to send two teachers, Philena Heald and Sarah M. Ely, to

St. Helena Island. This island, on the coast of South Carolina, is ten miles in length, and contains a shifting population of about three thousand, nearly all colored people. Most of the plantations having been sold for taxes, several of them were divided into sections, and appropriated to school purposes.

About the middle of First month, Cornelia Hancock, an applicant for position of teacher under the auspices of this Association, went to Charleston to examine into the wants of the freedmen, and to open a school, if a suitable situation could be found.

The accounts received from her decided us to re-open a school, formerly taught at Mt. Pleasant, a healthy location in Charleston harbor, about three miles from the city. The plantations in the vicinity are mostly occupied by Northern men anxious to benefit the colored race.

The school was opened in an old church, (occupied during the war as an hospital,) with fifty scholars; and, as soon as the news spread that "a real Yankee teacher" had come, the number increased to one hundred. A native teacher was temporarily provided by Reuben Tomlinson, and, subsequently, Mary A. Taylor, Carrie Taylor and Eliza E. Way were also sent to Mt. Pleasant.

In the Third month of the present year the farm known as Camp Wadsworth was restored to its former owners. The school consequently was broken up, and Mary K. Brosius was transferred to Vienna, six miles distant.

We have also established two additional schools in Fairfax County: one at Lewensville, in charge of Martha A. Wright, and one at Fairfax Court House, under the care of Mary McBride; also, recently, one at Waterford, Loudoun County, Virginia, for which Sarah A. Steer, a resident of that place, has been selected as teacher.

The position occupied by Mary McBride at Fairfax Court House is a very unpleasant one. Her mission has been bitterly opposed, even to threats of personal violence, some attempts at which have been made. Her earnestness and determination are apparent, as shown by the following extracts from a letter recently received:

"There is certainly a great deal of talk, but that troubles me very little. There are some things that are very unpleasant here for me, but I am determined to stay here until sent by the proper authorities into another field, or dismissed the service entirely." She further remarks: "It is not *labor* for me, as some would call it; I *love* the work."

Her school now numbers forty-five pupils.

The school under the care of Mary K. Brosius, at Vienna, although established so recently, is very satisfactory. There is not material in the

surrounding country for a large school, but education is none the less needed. Her last account gave the number of pupils as twenty-six. Two instances of progress were stated by her, as follows: "I have two little girls not over five years old, who have learned their letters in one week." She also states they desire her to open a First-day School, which she intends doing.

In the Twelfth month last we were called to mourn the removal by death of our beloved friend and associate, Macpherson Saunders. Connected with this Society from its organization, and ever active in all efforts to extend its usefulness, we shall long miss the steady judgment and quiet decision that gave such value to his counsels. Endearred to us by the genial cheerfulness and earnestness which he brought to the consideration of all our affairs, we mourn the loss of a valued friend and co-laborer.

By this review it will be seen that we are now less busily engaged than formerly, in supplying clothing to the destitute and suffering freedmen, who are passing from a state of servitude and dependence, with its corresponding degradation, to freedom, with all its possibilities of progress and improvement. Our present efforts are directed almost exclusively to the establishment and support of schools among them. With the restoration of peace and the general resumption of habits of industry, their privations must soon give place to comparative comfort and thrift, so that the great needs of the colored people in the future will be facilities for education and adequate protection from the prejudice and rapacity of their former masters.

The schools we have opened among them are all actively and vigorously conducted by conscientious and efficient teachers, whose sympathies are with the scholars in their efforts to learn. We have been eminently successful in securing the services of those who, from a sense of duty, have entered into the work, and who are peculiarly fitted for its varied requirements.

No feature in the remarkable history of the freed people is more striking than their thirst after the elements of knowledge. A thirst which should operate as a powerful incentive to all who have their welfare at heart, to supply to the utmost the means for their education. While we require liberal subscriptions to carry on the schools now established, we are already solicited to open others, which we are desirous of doing as rapidly as our funds will justify. Now is evidently the accepted time. The past is full of warning, to neglect no opening for service in this great work. The prejudice and cupidity which have oppressed the African race in the past, are liable to rise

again into dominion, and none can tell how soon insuperable obstacles may be thrown in the way of our efforts. The proclamation which made the bondman legally free, has not changed the hearts of those who have hitherto ruled in the late slaveholding States; and though we may hope that the light of truth is in some degree breaking through the dark cloud that has rested over the South, yet there is much to dread in the prospect of the resumption of authority by the State Governments. Let us persevere while we can, and to this end let the members of the Society of Friends, who have been so long identified with the education of these people, and whose ancestors were among the first to acknowledge their claims to the equal enjoyment of the rights of our common humanity, see to it that our present opportunity is not wasted.

The number of those who are willing to devote themselves to the work of instruction has thus far kept pace with the requirements of our schools. Will not those who stay at home give of their abundance to support those already engaged in this labor of love, and to send others into it?

By the report of our Treasurer it will appear that, after appropriating the necessary funds to meet the current expenses of the ten teachers already in our employ, but little is left to continue our operations for the ensuing season, to extend them as new fields open to our view, or to aid the cases of suffering coming to the notice of the Committees; and, in conclusion, we desire to present anew the claims of this Association upon our great body of prosperous and thriving Friends in city and country. It is but a poor recompense to the despised and oppressed descendants of the African race, whose toil has so long enriched our merchants and manufacturers, and furnished, as it were, the life-blood of American commerce, that we should pave their way from slavery to freedom by supplying the necessities of life to the helpless and infirm, who are suffering for want of them, at the same time that we open to those from whom knowledge has been so long shut out, the glorious light of education, with all its vivifying and improving results.

To pay our share of this debt should be the earnest resolve of every member of our Society, and we rejoice to know that there are those ready to be workers as far as the means are furnished. First, and most important, money is needed; second, all kinds of dried fruit and garden seeds, books, toys for the little ones, and clothing for men, women and children,—in short anything that the bounty of friends can bestow toward the needs of these objects of our care will benefit them, and at the same time bless the giver, in the remembrance of the assurance, "Inasmuch as ye have done it unto

one of the least of these, my brethren, ye have done it unto me."

Corresponding Secretary, ANNE BIDDLE, 509 Commerce Street.

Treasurer, HENRY M. LAING, 30 N. Third Street.

SHADOWS.

Oh the shadows—the beautiful shadows,
Floating far o'er the hills away;
As over the sky
The light clouds fly,
So over the mountains wander they!

Oh the shadows—the beautiful shadows,
Sleeping soft on the meadow green;
Fair are the flowers
In sun-bright bowers,
But fairer the flowers these shadows between.

Oh the shadows—the beautiful shadows,
Dancing light on the ocean's spray;
Changing each wave
From gay to grave,
Like the frowning smiles of a child at play!

Oh the shadows—the beautiful shadows,
Sinking deep in the moonlit lake,
Where the mountains seem
As if viewed in a dream,
And a world of purer beauty make.

Oh the shadows—the beautiful shadows,
In the world without and the world within;
For joy may borrow
A charm from sorrow,
And charity smile on repentant sin!

Oh the shadows—the beautiful shadows,
Falling soft on the dazzled vision,
Where the tender thought
By memory brought,
Temper the glare of hopes elysian!

And there are shadows—merciful shadows,
Dropping the balm on the bleeding heart,
When first it knows
That love's flame glows
Stronger and purer when joys depart.

Then bless the shadows—the beautiful shadows,
And take this thought as thou goest abroad,
That in heaven and earth
Shades owe their birth
To light; and light is the shadow of God!

THE OLD COTTAGE CLOCK.

Oh! the old, old clock, of the household stock,
Was the brightest thing and neatest;
Its hands, though old, had a touch of gold,
And its chime rang still the sweetest.
'Twas a monitor, too, though its words were few,
Yet they lived, though nations altered;
And its voice still strong, warned old and young,
When the voice of friendship faltered.
"Tick, tick," it said—"quick, quick, to bed—
For ten I've given warning;
Up, up and go, or else you know,
You'll never rise soon in the morning!"

A friendly voice was that old, old clock,
 As it stood in the corner smiling,
 And blessed the time with a merry chime,
 The wintry hours beguiling;
 But a cross old voice was that tiresome clock,
 As it called at daybreak boldly,
 When the dawn looked gray o'er the misty way,
 And the early air blew coldly:
 "Tick, tick," it said—"quick out of bed,
 For five I've given warning;
 You'll never have health, you'll never get wealth,
 Unless you're up soon in the morning."
 Still the hourly sound goes round and round,
 With a tone that ceases never;
 While tears are shed for the bright days fled,
 And the old friends lost for ever!
 Its heart beats on—though hearts are gone
 That warmer beat and younger;
 Its hands still move—though hands we love
 Are clasped on earth no longer!
 "Tick, tick," it said, "to the church-yard bed,
 The grave has given warning—
 Up, up, and rise, and look to the skies,
 And prepare for a Heavenly morning."

Charles Swain.

THE RESTLESS SEA.

The sea is not only the emblem of change; it is itself the cause, directly or indirectly, of nearly all the physical changes that take place in the world. Ascend the mountain summit, and there, amid the crags where the eagle builds her eyrie, and the heather grows in the blue immeasurable silence of heaven, you tread the shores of a former sea, whose shells and corals embedded in the rocks are still as perfect and beautiful as when the last retiring wave rippled over them.

Descend into the stony chambers of the earth, and there in the darkness of the quarry you will see the petrified skeletons of fish that once swam in the waters, and the sands that formed the shores of unknown seas, and the undulating ripple marks left behind by the ebb and flow of long forgotten tides. We cannot name a single spot where the sea has not some time or other been.

Every rock that now constitutes the firm foundation of the earth was once dissolved in its waters, lay as mud at its bottom, or as sand and gravel along its shore. The materials of our houses were once deposited in its depths, and are built on the floor of an ancient ocean. What are now dry continents were once ocean beds; and what are now sea beds will be future continents.

Every where the sea is still at work—encroaching upon the shore—undermining the boldest cliffs on the coast by its own direct agency. And where it cannot reach itself, it sends its emissaries to the very heart of deserts, and the very summit of mountain ranges, and the very innermost recesses of continents—there to produce constant dilapidation and change. Its own waters are confined by the shore line; but no voice has ever said to its fleet-footed

winds and its viewless vapors, "Hitherto shall ye come, and no further." They rise from their ocean bed, these messengers of the sea, and pursue their flight along the sky until some lofty peak far in the interior arrests them; and they discharge their watery burden into its bosom, forming the sources of streams, and rivers and glaciers, that carry on the work of change where the roar of the sea itself is never heard.—*McMillan in Family Treasury.*

From the Atlantic Monthly.

IN THE HEMLOCKS.

(Continued from page 238.)

I walk along the old road, and note the tracks in the thin layer of mud. When do these creatures travel here? I have never yet chanced to meet one. Here a partridge has set its foot; there, a woodcock; here, a squirrel or mink; there, a skunk; there, a fox. What a clear, nervous track Reynard makes! how easy to distinguish it from that of a little dog,—it is so sharply cut and defined! A dog's track is coarse and clumsy beside it. There is as much wildness in the track of an animal as in its voice. Is a deer's track like a sheep's or a goat's? What winged-footed fleetness and agility may be inferred from the sharp, braided track of the gray squirrel upon the new snow! Ah! in nature is the best discipline. I think the sculptor might carve finer and more expressive lines if he grew up in the woods, and the painter discriminate finer hues. How wood-life sharpens the senses, giving a new power to the eye, the ear, the nose! And are not the rarest and most exquisite songsters wood-birds?

Everywhere in these solitudes I am greeted with the pensive, almost pathetic note of the Wood-Pewee. Do you know the Pewees? They are the true Flycatchers, and are easily identified. They are very characteristic birds, have very strong family traits, and very pugnacious dispositions. Without any exception or qualification they are the homeliest or the least elegant birds of our fields or forest. Sharp-shouldered, big-headed, short-legged, of no particular color, of little elegance in flight or movement, with a disagreeable flirt of the tail, always quarrelling with their neighbors and with one another, no birds are so little calculated to excite pleasurable emotions in the beholder or to become objects of human interest and affection. The King-bird is the best-dressed member of the family, but he is a braggart; and though always snubbing his neighbors, is an arrant coward, and shows the white feather at the slightest display of pluck in his antagonist. I have seen him turn tail to a Swallow, and have known the little Pewee in question to whip him beautifully. From the Great Crested to the Little Green Flycatcher,

a museum or *repertoire*, by which the condition of the United States, in various relations, political, social and economic, could be illustrated and the influence of America rendered more apparent to foreigners, and from which any information with reference to our condition could be obtained. An act, from the Committee on Commerce, further to provide for the safety of passengers on steam vessels, and to regulate the salaries of steamboat inspectors, was called up, with amendments, and passed. A communication from the President, enclosing a resolution of the Legislature of Georgia, asking a suspension of the direct tax in that State, was laid before the Senate by the Chair, and referred to the Committee on Finance. Also, a communication from the President transmitting the acceptance by Georgia of a donation of public lands for the establishment of agricultural colleges.

In the House, among others, the Senate joint resolutions appropriating \$121,785 for negotiating treaties with the Indian tribes of the Upper Missouri and the Upper Platte rivers were passed. A resolution was adopted, calling upon the heads of the different departments to furnish information of the manner, in which applicants to the inferior grades of office are made. The Senate amendments to the joint resolution proposing an amendment to the Constitution were taken up and passed. The message from the President concerning Georgia was presented and referred to the Committee on Ways and Means. Also, a message from the President transmitting a report from the Secretary of the Interior, communicating the information required relative to the removal of the Sioux Indians, of Minnesota, and to provision made for their accommodation in the Territory of Nebraska. Referred to the Committee on Indian Affairs.

INDIAN AFFAIRS.—Reference having been made, in recent debates in Congress, to the Santee Sioux, whom it is proposed to remove to another locality, as murderers, etc., on the ground that it would be dangerous to place them in close proximity to the white settlements, it may be proper to state that H. W. Reed, one of the commissioners to treat with the Indians on the Upper Missouri, says, in a letter dated 5th mo. 28, at the agency of these Sioux in Dakota: "The universal testimony is that, as to intelligence, reliability, diligence, and morality, they are, among other Indians in the country, like a light in a dark place."

The testimony of all he heard was, the religion they possess makes them decidedly better. Some of them at personal risk rescued women and children from the cruel fate of prisoners, and yet it is proposed that they shall all share the common curse of Minnesota Sioux.

THE FRIENDS.—Reuben Tomlinson, Inspector of Schools in South Carolina, reports that in the 5th month there were 9,184 colored pupils in the School register of that State, with an average attendance of 6,320. About one-sixth of the whole were learning the alphabet; four-fifths were able to read and spell; 6,111 were pure blacks. The superintendent means, with the aid of native teachers, to keep the schools open all summer, when most of the Northern teachers will return to their homes.

In Georgia, 71 schools are reported in operation, with 104 teachers and 6,991 pupils. Twenty-eight schools and as many teachers are sustained by the freedmen alone. Six new schools were opened in 4th month, and there was an aggregate increase over 3d month of 600 pupils.

Of the teachers, 45 are colored and 51 are residents of the State.

LESSONS ON OUR COMMON SONG BIRDS.—Tickets for a course of Eight Lessons, \$3.00 each. Liberal reduction to Schools and Classes of over fifty persons.

EXTRACTS FROM THE WORKS OF ISAAC PENNINGTON.

*Of certainty, and rightly grounded assurance
in matters of Religion.*

There is a witness of and from God, in every
conscience; which in his light, power, and au-
thority, witnesseth for him, and against that
which is contrary to him, as he pleaseth to move
upon it, visiting and drawing the hearts of the
sons of men by it. From this witness proceeds
the true and well grounded religion in the
mind towards God; for this witness both tes-
tifieth and demonstrateth that there is a God,
and also inclineth the mind to desire and seek
after the right knowledge and true worship of
him. And such who keep to this witness, and
wait upon God therein, are taught by it, the
true spiritual worship; the true and pure fear
of the Most High; the faith which he giveth
to his saints; the love which is chaste and
unfeigned; the hope which purifieth the mind
and anchors it on the eternal rock; the meek-
ness, patience, gentleness, humility, &c., which
is not of man's nature, but the gift of God,
and the nature of the heavenly Giver.

And then for exercises of religion, as pray-
ing to the Father of spirits, hearing the hea-
venly voice, reading in the spirit, and with
the renewed understanding, singing and making
melody in the heart to the Lord, as his life is
felt, and the spiritual blessings and treasure
received; all these, and whatever else is judged
necessary for the soul, are taught by this wit-

ness of God in the conscience, as the soul
groweth up in the light, spirit, nature, and
holy power thereof. But now when the Lord
reacheth to his witness in men, and is teaching
their hearts by it, then the enemy, the other
spirit, whose seat is in the other part, keepeth
a noise there to overbear the voice of the wit-
ness, and to make men take up a religion in
another part, which is shallow, and reacheth
not to the depth and weight of truth, which is
in the witness of God, and which the witness
of God, gives to them that come thither.

Thus, the enemy stirreth up reasonings, im-
aginations, and consultations, about God, and
his worship; wherein he raiseth up the vain,
shallow mind, forging and bringing forth some-
what pleasing and suitable to the earthly un-
derstanding; taking up the mind therewith,
and engaging the heart in some such practices
therefrom, as may quiet and satisfy that part
in men. For the ways that men take up in
their reasonings and understandings, satisfy
their reasonings and understandings; and so
they walk in the light of the sparks, and warm
themselves by the fire of their own kindling;
but all this answers not the witness of God in
them, nor will be approved by his light in
their own consciences, when it comes again to
be revealed and made manifest in them. This
was the ground of the error both of the Jews
and Gentiles.

Now, from this part in men ariseth all the
uncertainty, and doubts, and dissatisfaction

about religion. And hence arise the opinions, and judgments, and reasonings, in the minds of men: yea, indeed, the best of men's religion here, is but an opinion or judgment, which the breath of God's Spirit will shake and dissolve every where, sooner or later. All flesh is grass; and all the beauty of men's knowledge, religion, and worship here, will wither like grass. All the buildings and churches that are raised here, how beautiful soever, are but Babylon, built by man's understanding, by man's knowledge, by man's comprehension, by man's wisdom, by man's skill, and indeed in man's will and time; and their standing, beauty, strength and glory, is but from man, and in man's day, and will fade away like a flower. But the true certainty is in the day of God, from the light of his Spirit shining into man's spirit, from God's inward reaching to his heart by his power, and testifying his truth there. And this, all the powers of darkness cannot prevail against in itself; no, nor against that man that is kept to it. For it is the rock, the only rock upon which the whole church is built, and which cannot fail to preserve every member of the church which is built upon it.

Prayer.

True prayer is the breathing of the child to the Father which begat it, from the sense of its wants, for the supply of those wants. "The wind bloweth where it listeth, and thou hearest the sound thereof; but canst not tell whence it cometh, and whither it goeth; so is every one that is born of the Spirit." John iii. 8. God, by the breath of his Spirit, begets a man out of the spirit and likeness of this world, into his own image and likeness. He that is thus begotten, wants nourishment, wants divine warmth, the breasts of consolation, the clothing of the Spirit, the garment of salvation; wants the bread of life to feed on; wants the water of life to drink; wants strength against the enemy's assaults, wisdom against his snares and temptations; wants the arm of the Deliverer to preserve and carry on the work of redemption daily; wants faith to deny the fleshly wisdom, that so he may trust and feel the virtue of the arm of the Deliverer; wants hope, patience, meekness, a clear guidance, an upright heart to follow after the Lord; yea, very many are the daily wants of that which is begotten by the breath of God, in its state of weakness, until it be drawn up into the unity of the body, where the full communion with the life is felt, the heart satisfied and the wants drowned.

Now the breathing of this child to the Father from the sense of these wants for his supply, that is prayer; nay, though it be but a groan, or sigh, which cannot be uttered, or expressed; yet that is prayer, true prayer,

which hath an acceptance with the Lord, and receiveth a gracious answer from him. In watching daily to the Spirit, the child is kept sensible of the will of the Father, and in his light he sees the way wherein he is to walk; he sees also the enemy when he is coming, yea, and the snares he is privily laying, and he feels his own weakness to withstand or escape; and in this sense his heart cries to the Father of spirits for preservation. And thus watching to the spirit, the life of a Christian is a continual course of a prayer: *he prays continually.*

Now as the Father teacheth to pray, so he giveth desires or words, if he please, according to the present need. Sometimes he gives but ability to sigh or groan; if he gives no more, he accepts that. Sometimes he gives strong breathings and plenty of words to pour out the soul in before the Lord. But if a man should catch those words, and lay them up against another time, and offer them up to God in his own will, this would be but will-worship and abomination. This I have known experimentally, and have felt the wrath of God for it. That is prayer which comes fresh from the Spirit; and that is a true desire which the Spirit begets; but the affections and sparks of man's kindling please not the Lord, nor do they conduce to the soul's rest, but will end in the bed of sorrow. Now, if the prayer be in words, for there is a praying without words, then it must be in those words which he pleaseth to give, from the sense which he kindleth, and not in the words which man's wisdom teacheth, or would choose to use. And indeed in the true religion, and in every exercise of it, man's wisdom is kept out, and nailed to the cross; by which means, the immortal life is raised, and grows in the true disciple.

So mark: prayer is wholly out of the will of the creature, wholly out of the time of the creature, wholly out of the power of the creature; in the Spirit of the Father, who is the fountain of life, and giveth forth breathings of life to his child at his pleasure.

Nature, indeed, draws tears out of the eyes, and sighs out of the breast, so quickly, that the wise man can never wholly lay aside the garb of mourning from his body; but let his soul wear none. Though philosophy may not, like a stroke of the brush of Rubens, transform a laughing child into a weeping one, it is well if it change the full mourning of the soul into half mourning, by teaching us how to bear present transient ills.

Even physical pain shoots its sparks upon us out of the electrical condenser of the imagination. The most acute pains could be endured calmly, if they lasted only the sixtieth part of a second; but in fact, we never have to

endure an hour of pain, but only a succession of the sixtieth part of a second, the sixty beams of which are collected into the burning focus of a second, and directed upon our nerves by the imagination alone. The most painful part of our bodily pain is that which is bodiless, or immaterial, namely, our impatience and the delusion that it will last forever.—*Jean Paul Richter.*

VIEWS OF CHRISTIAN VIRTUE OR TRUE HOLINESS.

BY W. E. CHANNING.

We believe that all virtue has its foundation in the moral nature of man, that is, in conscience, or his sense of duty, and in the power of forming his temple and life according to conscience. We believe that these moral faculties are the grounds of responsibility, and the highest distinctions of human nature, and that no act is praiseworthy any farther than it springs from their exertion. We believe that no dispositions infused into us without our own moral activity, are of the nature of virtue, and, therefore, we reject the doctrine of irresistible divine influence on the human mind, moulding it into goodness, as marble is hewn into a statue. Such goodness, if this word may be used, would not be the object of moral approbation any more than the instinctive affections of inferior animals, or the constitutional amiableness of human beings.

By these remarks we do not mean to deny the importance of God's aid or Spirit; but by his Spirit we mean a moral, illuminating and persuasive influence, not physical, not compulsory, not involving a necessity of virtue.

Among the virtues, we give the first place to the love of God. We believe that this principle is the true end and happiness of our being; that we were made for union with our Creator; that His infinite perfection is the only sufficient object and true resting place for the insatiable desires and unlimited capacities of the human mind, and that without Him, our noblest sentiments, admiration, veneration, hope and love, would wither and decay. We believe, too, that the love of God is not only essential to happiness, but to the strength and perfection of all the virtues; that conscience without the sanction of God's authority and retributive justice would be a weak director; that benevolence, unless nourished by communion with His goodness, and encouraged by His smile, could not thrive amidst the selfishness and thanklessness of the world, and that self-government, without a sense of the divine inspection, would hardly extend beyond an outward and partial purity. God, as He is essentially goodness, holiness, justice and virtue, so He is the life, motive and sustainer of virtue in the human soul.

But while we earnestly inculcate the love of God, we believe that great care is necessary to distinguish it from counterfeits. We think that much which is called piety is worthless. Many have fallen into the error, that there can be no excess in feelings which have God for their object; and, distrusting as coldness, that self-possession, without which virtue and devotion lose all their dignity, they have abandoned themselves to extravagances, which have brought contempt on piety; most certainly, if the love of God be that which often bears its name, the less we have of it the better. If religion be the shipwreck of understanding, we cannot keep too far from it.

We conceive that the true love of God is a moral sentiment founded on a clear perception, and consisting in a high esteem and veneration of His moral perfection. Thus it perfectly coincides, and is in fact the same thing with the love of virtue, rectitude and goodness. You will easily judge, then, what we esteem the surest and only decisive signs of piety. We lay no stress on excitements. We esteem him, and him only, the pious man, who practically conforms to God's moral perfections and government; who shows his delight in God's benevolence, by loving and serving his neighbor; his delight in God's justice, by being resolutely upright; his sense of God's purity, by regulating his thoughts, imagination, and desires; and whose conversation, business and domestic life are swayed by a regard to God's presence and authority. In all things else men may deceive themselves. Disordered nerves may give them strange sights and sounds and impressions. Texts of Scripture may come to them as from Heaven. Their whole souls may be moved, and their confidence in God's favor be undoubting. But in all this there is no religion. The question is, do they love God's commands, in which his character is fully expressed, and give up to these their habits and passions? Without this, ecstasy is a mockery. One surrender of desire to God's will is worth a thousand transports. We do not judge of the bent of men's minds by their raptures, any more than we judge of the natural direction of a tree during a storm. We rather suspect loud profession, for we have observed that deep feeling is generally noiseless, and least seeks display.

We would not, by these remarks, be understood as wishing to exclude from religion, warmth, and even transport. We honor and highly value true religious sensibility. We believe that Christianity is intended to act powerfully on our whole nature, on the heart as well as the understanding and conscience. We conceive of heaven as a state where the love of God will be exalted into an unbounded fervor and joy; and we desire, in our pilgrimage here, to drink into the spirit of that better world. But we

think that religious warmth is only to be valued when it springs naturally from an improved character, when it comes unforced, when it is the recompense of obedience, when it is the warmth of a mind which understands God by being like Him, and when, instead of disordering, it exalts the understanding, invigorates conscience, gives a pleasure to common duties, and is seen to exist in connexion with cheerfulness, judiciousness and a reasonable frame of mind. When we observe a fervor called religion in men whose general character expresses little refinement and elevation, and whose piety seems at war with reason, we pay it little respect. We honor religion too much to give its sacred name to a feverish, forced, fluctuating zeal, which has little power over the life.

I need not express our views on the subject of the benevolent virtues. We attach such importance to these that we are sometimes reproached with exalting them above piety. We regard the spirit of love, charity, meekness, forgiveness, liberality and beneficence, as the badge and distinction of Christians, as the brightest image we can bear of God, as the best proof of piety. On this subject, I need not, and cannot enlarge; but there is one branch of benevolence which I ought not to pass over in silence, because we think that we conceive of it more highly and justly than many of our brethren. I refer to the duty of candid, charitable judgment, especially towards those who differ in religious opinion. We think that in nothing, have Christians so widely departed from their religion, as in this particular. We read with astonishment and horror the history of the Church; and sometimes when we look back on the fires of persecution, and on the zeal of Christians in building up walls of separation, and in giving up one another to perdition, we feel as if we were reading the records of an infernal, rather than a heavenly kingdom. An enemy to religion, if asked to describe a Christian, would, with some show of reason, depict him as an idolater of his own distinguishing opinions, covered with badges of party, shutting his eyes on the virtues and his ears on the arguments of his opponents, arrogating all excellence to his own sect and all saving power to his own creed, sheltering under the name of pious zeal, the love of domination, the conceit of infallibility, and the spirit of intolerance, and trampling on men's rights under the pretence of saving their souls.

We can hardly conceive of a plainer obligation on beings of our frail and fallible nature, who are instructed in the duty of candid judgment, than to abstain from condemning men of apparent conscientiousness and sincerity, who are chargeable with no crime but that of differing from us in the interpretation of the Scriptures, and differing too on topics of great

and acknowledged obscurity. We are astonished at the hardihood of those, who, with Christ's warnings sounding in their ears, take on them the responsibility of naming creeds for the Church, and cast out professors of virtuous lives for imagined errors, for the guilt of thinking for themselves. We know that zeal for truth is the cover for this usurpation of Christ's prerogative; but we think that zeal for truth, as it is called, is very suspicious, except in men whose capacities and advantages, whose patient deliberation, and whose improvements in humility, mildness and candor, give them a right to hope that their views are more just than those of their neighbors. Much of what passes for zeal, for truth, we look upon with little respect, for it often appears to thrive most luxuriantly where other virtues shoot up thinly and feebly; and we have no gratitude for those reformers, who would force upon us a doctrine which has not sweetened their own tempers, or made them better men than their neighbors.

We are accustomed to think much of the difficulties attending religious inquiries; difficulties springing from the slow development of our minds, from the power of early impressions, from the state of society, from human authority, from the general neglect of the reasoning powers, from the want of just principles of criticism and of important helps in interpreting Scripture, and from various other causes. We find that on no subject have men, and even good men, engrafted so many strange conceits, wild theories, and fictions of fancy, as on religion; and remembering, as we do, that we ourselves are sharers of the common frailty, we dare not assume infallibility in the treatment of our fellow Christians, or encourage in common Christians, who have little time for investigation, the habit of denouncing and condemning other denominations, perhaps more enlightened and virtuous than their own.

Charity, forbearance, a delight in the virtues of different sects, a backwardness to censure and condemn, these are virtues which, however poorly practised by us, we admire and recommend; and we would rather join ourselves to the church in which they abound than to any other communion, however elated with the belief of its own orthodoxy, however strict in guarding its creed, however burning with zeal against imagined error.

"Don't write there," said one to a lad who was writing with a diamond pin on a pane of glass in the window of a hotel. "Why?" said he. "Because you can't rub it out." There are other things which men should not do, because they cannot rub them out: A heart is aching for sympathy, and a cold, perhaps a heartless word, is spoken. The impression may be more durable than that of the diamond upon

the glass. The inscription on the glass may be destroyed by the fracture of the glass, but the impression on the heart may last forever.

From "Life and Letters of F. W. Robertson."

UNHEALTHY EMOTIONS.

I have been pondering over your question as to the probable effect of tragedies such as "Phédre," &c., upon the mind. Now, Aristotle's deep view of the end of the tragic drama is this: that it aims through the medium of two feelings which it represents in action,—terror and fear,—to refine those very feelings in the spectators. To refine, of course, means to take off the rudeness and painfulness of such emotions, and make them almost pleasing sensations. That is, the terrible and pathetic in real life are painful things to witness; but in the mimic representation, the worst part is taken away by the consciousness that it is unreal, at the same time that it is sufficiently like-life to produce an impression somewhat similar to that which would be called forth by reality. The feeling thus made faint becomes pleasurable, just as warmth is enjoyment, though heat be intolerable. Of course it is plain that this refinement of feeling unrealizes it,—unfits for the contemplation of the terrible and pathetic in real life, substitutes the mimic emotion, which is useless, a merely artificial production, for the true one which the Creator has appointed to rise in the bosom in such circumstances for the express purpose of leading to action, exciting sympathy, hardening against danger, and so on. A person who is refined by high wrought scenes in novels, is necessarily sure to shrink from such scenes in real life, because in the mimic case he had all the excitement without the pain, and he will turn aside from circumstances where excitement cannot be had without pain. And such an one is sure to be found wanting when true feeling is required for use, because the feelings have got the habit of being roused without leading to exertion. They have got this habit in the unreal, and they will keep to it in the real. They will rise at the sight of distress or pain; but they have never been trained to pass promptly into the work of sympathising and relieving, and accordingly such persons seem and come to be looked upon as callous amidst the trials of others over which they wept in the romance. This, I fancy, is Aristotle's "refinement" of feeling, and this must be the danger in all refinement of society. The tragedy and the romance, therefore, only begin to appear when the mind of a large portion of the nation is at leisure to cultivate hot-house feelings, which are always feeble monstrosities.

It is plain to me that in this way all such reading is injurious to the generality. All the feeling we can command we want for acting.

When we come to act, the feeling is not there to make acting easy; and what we have to do we must either leave undone, or do with a cold heart; simply from having been accustomed to train the feelings to refinement, and not to action.

I wish that nature could do her own healthy work upon all our hearts. I could conceive a marvellously healing power to come from opening the soul, like a child's, to receive spontaneously, without effort, the impressions of the unliving,—and yet how living!—world around us, with all the awe that accompanies them.

One impulse from a vernal wood,
Will teach you more of man,
Of moral evil and of good,
Than all the sages can.

Also I suspect that speculative philosophy is not good to read, however interesting; at all events not alone. It has too little of a basis of proved fact to rest upon, and depends for its truth too much upon feeling. Positive science, such as chemistry, natural philosophy, mineralogy, and geology, rests on facts; and the effect of certainty which it produces on the mind is always a healthy feeling. Here again it is as I said above. The cure is to come in contact with Nature and with Fact, instead of exhausting strength by mighty blows struck at random on the yielding air, in the region of conjecture and bewildering mystery. I love that region; it is indeed the region of Faith, but it requires a brain practised much on more earthly precipices to avoid being dizzy and lost in the immense abyss.

For Friends' Intelligence.

ESTABLISHMENT OF A NEW QUARTERLY MEETING IN THE STATE OF IOWA.

In conformity with the decision of the late Yearly Meeting of the religious Society of Friends, held in Baltimore, a Quarterly Meeting was opened, on the 11th inst., at Prairie Grove, in Henry Co., Iowa, twelve miles north of the city of Mt. Pleasant.* The Committee, consisting of William Tate, Priscilla Tate, Benjamin Rush Roberts, Mary L. Roberts, Chalkley Gillingham, Daniel Matthews, Elizabeth Matthews, and Esther B. Canby, were all favored to be present, except our beloved friend, Priscilla Tate, who has passed to the higher life since her appointment. The committee arrived in time to attend Wapsipicona Monthly Meeting, in regular course, and an adjourned Monthly Meeting at Prairie Grove. All the committee, in accordance with the minute of their appointment, were present at the Meeting of Ministers and Elders. By consent of the meeting, a minister and her companion, who are members of our Orthodox Friends, sat with us, and participated acceptably in the minis-

* Mt. Pleasant is the P. O. for this Meeting.

terial exercises. The occasion was felt by all to be one of unusual solemnity. The public meeting on First-day was large, so much so, that a number were unable to gain admission within the walls of the meeting-house. The presence of the Great Head of the Church was *pre-eminently* felt to be with us. The *consecrated oil* flowed freely, baptizing the assembly. While the *life* and *power* had *dominion*, several living testimonies were borne, and the meeting closed, after utterances of fervent thanksgiving to Him who is worthy to be praised "not only in the sanctuary, but in the firmament of his power."

The General Quarterly Meeting assembled at ten o'clock, and compactly filled the house.

A suitable historical account of the origin and progress of Friends in Iowa, composed principally of the minutes of the several meetings made in the case, was read prior to the closing of the partitions. The meeting for worship was characterized by the same good feeling as had reigned the day before. The representatives from both Men's and Women's Meeting—twelve of each sex—retired and selected clerks and assistants, and then met jointly, and united to report that the name of the Quarterly Meeting be called "Prairie Grove." The Meeting then proceeded in the usual order in the transaction of its business.

The presence of the committee, and their united labor of love and sympathy with us in our efforts to advance the testimonies of our blessed Redeemer's kingdom in this vast and fertile land, was a source of consolation and strength. A living desire was evidently felt to prevail, that those on whom weighty responsibilities rest, may be unclad of self-sufficiency, and clothed in the meekness and humility of the Lamb of God, "who taketh his kingdom by entreaty, and keepeth it in lowliness of mind."

Owing to removals and a number who have come in by conviction, the meeting was larger than its most sanguine friends anticipated. While there was a goodly proportion of the venerable and aged, there was a much larger number of the precious youth, who seemed to evince a deep interest in the exercises, and who evidently, with their elder brethren and sisters, felt that it was good to sit beneath the droppings of the sanctuary, where the secret aspiration of the soul may ascend sweetly before the altar of Him who loveth a contrite spirit, and will bless all those who desire to do what is noble and good.

The Orthodox Friends continued through the several sittings, and added to the interest of the occasion by timely and weighty testimonies.

That the unsectarian gospel may be more and more spread abroad in "the daylight of Christ,"

by the inauguration of this movement west of the great Mississippi, is the desire of many who feel grateful to be numbered as lambs of the flock.

J. A. D.

Mt. Pleasant, Iowa, 6th mo. 13, 1866.

Pray earnestly for sanctification. Desire it from morning until evening. Refuse to be comforted till you are blessed. But be careful that you impose no conditions upon God. Sometimes He comes and turns out the evil legions of the heart, with observation, and with a triumphant shout. But often he is mighty in His silence, and smites his enemies by an agency so mysterious and secret, that it seems to be alike unseen and unheard.—*Upham*.

FRAGMENTS OF BARK FROM OUR CLUB.

Sixth month 9th, 1866.

To steal off into the silent woods, away from the busy hum-drum and excitement of city life, is one of our chief pleasures. It renews the mind, even as the daily transformation of our tissues renews the body.

Others, too, than myself, have been of this opinion, for about twenty earnest people have banded themselves into a Club, for the purpose of walking about over the hills and through the dells, among the tall, thick woods, and by the silent stream or tinkling spring, with their eyes wide open, just hoping to see, perchance, the *common* objects in nature's kingdoms—just desiring to listen to some of the trilling notes forever vibrating in the great orchestra of life.

The life of a bird, of a tree, of a plant, of an insect that lives but an hour, has a lesson for man, if happily we may be wise enough to read it aright. Do we not all need sympathy, and at times, too, a different reintegration than comes from our own kind? May not the winds blow into us, especially when the tall trees are rocked in their invisible arms, an idea of the majesty and power of Him who holds them in the hollow of his hand?

May not the shape of a hill, or the bare rock which adorns its side, grinning as it were at Time, tell us of that Divine love which has been operating for ages, to prepare a home for us? and as we note the lichen, the moss and the fern—those twin disintegrators with the rain-drop, whether frozen by winter's touch, or dried by summer's breath—and learn how the *minute* agencies around us produce great results, may we not become better men and women thus?

And do we not *all* need such lessons? To spell out only the simple alphabet which *pre-faces* nature's great volume, is our only ambition, and possibly it may not be in vain. Life is around us on every side, and we cannot escape from its presence. In arctic snows, and

in the desert sands; deep down beneath earth's rock-ribbed bosom; in the flowing sea, and in the air—life holds unceasing carnival.

For a time its activity may be held in check by the absence of heat or moisture, or other agencies, but the time will surely come again, when the sun's great unslumbering eye will glance into every corner, mead and dell—looking, as it were, for his tribes; and then life bursts into action; the sap travels its appointed circuit; and the fresh blood paints ten thousand forms with beauty. Are we not impressed with the magnitude of the Creator's love for all his tribes?

"There's nothing in the world, I know,
That can escape from love,
For every depth, it goes below,
And every height above.
It waits, as waits the sky
Until the clouds go by;
Yet shines serenely on
With an eternal day,
Alike when they are gone
And when they stay."

On the date above written, about one dozen of our Club met at the depot; and, in just half an hour, we stepped from the train. Now for the woods; and although it is common ground, trodden daily by many feet, we are content to gather whatever may lie in our path.

The mouse-eared chick-weed (*Cerastium nutans*) has been picked up by one of the Club. Its pod, divided at the end into ten equal teeth, resembles somewhat the peristome of a moss. At the bottom of this pod, lie many small seeds, each one traced all over with exquisite carving, too delicate for the unassisted eye, but surprisingly beautiful when placed under the binocular microscope. This little seed, moreover, is turned half-way round on the support which attaches it to the ovary, and presents therefore an illustration of what botanists call a campylotropous ovule. There are beauties which sparkle not on the surface, and this lesson we accept as the teaching of our homely *Cerastium*.

On the fence near our path twines a thick woody stem. A few inconspicuous flowers tell us the plant has obeyed the law to bring forth seed after its kind. A nearer inspection shows it to be the woody night-shade (*Celastrus scandens*). Beautiful it is not, in the common sense of that term. But why does it twine its woody fingers around other objects for support? Its stem is larger than the stems of other plants which stand alone. Are there then in the wild woods, as in the still wilder nurseries of human life, beings apparently robust, but who, from *internal organization*, cannot stand alone without some friendly arm to lean on? Let us make a very thin transverse section of this twining stem. Between the wedges of woody tissue, which extend from the central pith to

the bark, and all through them, we observe large open spaces. These are pores which traverse the length of the stem, and occupy space, which is filled in with woody tissue, in *upright* stems. Moreover, a trunk constructed on this plan generally retains a uniform diameter, that is its size at the bottom is nearly the same that it is ten or twenty feet higher up; of course such a stem cannot support itself. And on this plan are constructed the stems of our woody climbers—the poison *Rhus*, typical of uncharitableness and bigotry; the *Clematis*, which hangs its old man's beard in our hedges in autumn; the *Ampelopsis*, that prince of climbers, that glorious American plant which wreathes in gorgeous autumnal purple the aged coronals of many forests patriarchs, and also many others.

But the rich melody of the wood robin, heard only a short distance ahead, invites us still onward. Now we enjoy a fair scramble. Up the steep banks; between scraggy laurel boughs, whose leaves are beautifully spotted with fungi, on through a fence we go like sheep in single file, till we all stand before a large rock. Under its overhanging ledge, we were rewarded by a sight not without interest. We stood on the outskirts of a city, not built by human hands. Covering a space about two yards square in the dry earth, were, at least, one hundred dens of the ant-lion. Some were quite small, probably the nurseries, in which the young were acquiring their sanguinary gymnastics. Others of these inverted houses were of great size, the abodes of the rulers probably, or the grandfathers of that fierce population. Judging from the same premises which govern us in our own cities, there were distinctions here, too, founded on size of house and completeness of finish. We observed in the silent avenues and streets of that terrible city the limbs and mutilated remains of many insects. Their life had been crushed out in the terrible jaws of *Myrmeleon*, an older tyrant than *Juggernaut*, and equally cruel.

The sight made us feel more sensibly than before the wisdom and mercy displayed in making our special senses just as they are. We may hear audible music-sounds of pleasure for enjoyment—notes of sorrow for reproof. We may see forms clad in beauty acting deeds of love to all who live; or witness cruelty and wrong, as exceptional cases. All this and more is tangible and visible, but we suspect among the *invisible* tribes are cries of anguish—low, half-tones of poignant sorrow, as delicate and eolian as the organizations from which they proceed. Think what would be the morning police report of this one city of the ant-lion. In mercy are we spared the perusal of such records.

But the declining sun warns us to hasten

towards the train which is coming. In we all get, and home again we fly on wings of steam, perhaps a little weary, but surely happier, and ready for a generous supper.

ONE OF THE CLUB.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, SIXTH MONTH 30, 1866.

MEETINGS WITHIN THE LIMITS OF SALEM QUARTER, N. J.—Some months since Salem Quarterly Meeting appointed a committee to visit in love some or all of the meetings constituting it, more particularly the smaller ones. This action, somewhat similar to that which has obtained in other Quarterly Meetings, is no doubt the fruits of a concern to "be watchful, and strengthen the things which remain that are ready to die."

The advantage of religious fellowship is, that "the strong may help to bear the infirmities of the weak, and that all may labor together to be ensamples of righteousness, that "every one may help his neighbor, and every one may say unto his neighbor be of good courage." It is doubtless the province of superior meetings to review the state of their constituent branches, and to take such action as may promote their growth.

We are glad to learn through a correspondent in Salem Quarter that the meetings previously held have been "blessed by the Great Head of the Church, and that in many cases the visitors not less than the visited have been benefited thereby."

Members of the Committee will attend the meetings, to be held as follow:

Woodstown,	Seventh mo. 14
Salem,	" " 21
Oak Grove,	" " 28
Mullica Hill,	Eighth " 4
Alloway's Creek,	" " 11
Penn's Neck,	" " 18
Port Elizabeth,	" " 25
All at the usual hour.	

FRIENDS' SOCIAL LYCEUM.—The Third Annual Reunion of this Literary Association took place according to appointment at Swarthmore on the 16th inst. The day was bright and clear, and more than two thousand persons availed themselves of the opportunity thus afforded to spend it under the canopy of heaven.

The 9 o'clock (special) train from Philadelphia was heavily freighted with a precious cargo for the station near the above mentioned place, to which they were quickly conveyed. As the company wound slowly up the road and over the hill through the grounds to the spot selected for the Literary exercises, many greetings were exchanged, and smiles went forth to eyes that smiled again, as the new comers were welcomed by those who had previously arrived.

The audience quietly settled near the platform erected for the speakers. Those who obtained seats had the privilege of hearing much that was calculated to instruct and inform; but while the auditorium was unbounded, the capacity of the human voice is limited, yet those who could not hear, could enjoy the varied pictures of beauty and interest which were everywhere presented to the eye. After the appointment of Samuel Martin of Kennet Square as Chairman, a few introductory remarks were made by Thomas H. Speakman. An original poem was then read by Halliday Jackson, an oration by T. Clarkson Taylor, an essay by William Henry Farquhar, of Sandy Spring, Md., and an address by Henry Howard, interspersed with recitations by some of our young friends.

The company then dispersed for the noon lunch, which was partaken of by the different groups, near the spring, by the side of the stream, or such other spot as taste or convenience led them to select. One noteworthy feature of the occasion was the simplicity which characterized this part of the day's proceedings.

An hour or two was then spent in strolling through the woods or in lingering by the side of the peaceful stream, shaded with forest trees, and sentinelled in one place by rocks rising in rugged beauty many feet overhead, decorated with the partridge-berry, ferns and mosses. The leafy canopy above was tenanted with nature's own musicians, and ever and anon was heard the high, clear, ringing notes of the wood-robin and the softer twitterings of other less melodious birds. Few with minds properly attuned could ramble over these scenes without feeling renewed veneration for Him who "crowneth the year with goodness and maketh the little hills to rejoice on every side."

Among the exercises of the afternoon session, was an address on Education by Edward

Parrish, followed by essays and recitations. The question, "Which system of education is more effective,—That which aims at a general knowledge of many subjects, or a thorough knowledge of a few?" was then spiritedly and interestingly discussed.

While it gives us pleasure to commend the good order and propriety observed, we hope that before another such occasion, the Lyceum will see the necessity of having a judicious committee of inspection, who shall be careful to admit no recitations antagonistic to our principles and testimonies.

An almost cloudless sky greatly contributed to the day's enjoyment, of which the paramount charm was the kindness and social interest which seemed to animate every heart. As the day waned, one carriage after another might be seen slowly leaving the ground, and each retreating whistle of the locomotive was the signal that some friend had taken his departure. Ere nightfall the place which for several hours had blossomed with human thoughts and affections, was again left to the undisturbed possession of its own native denizens.

Such occasions bring us in closer sympathy with each other, and cause us to feel that our and their happiness is increased by the proper exercise of the social affections.

Two of the essays read on the occasion will be found in our present number.

DIED, on the 12th of Twelfth month, 1865, in Lower Makefield, Bucks Co., Pa., MARTHA PICKERING, aged 79 years; and on the 23d of First month, 1866, MERCY PAIST, aged 92 years.

These two Friends were sisters.

—, on the 30th of Fifth month, 1866, FRANCES, wife of George Hicks.

The above three were members of Makefield Monthly Meeting.

—, on the 4th of Sixth month, 1866, ELIZA, widow of Jesse K. Weeks, in the 80th year of her age; a member of New York Monthly Meeting for nearly forty years.

—, on the morning of the 30th of Fifth month, 1866, at his residence in Philadelphia, AMOS PEARLEN, aged nearly 86 years; a faithful Minister of the Gospel.

Thus has been removed from the field of labor in the church militant one who has stood long at his post of duty as a veteran in the Lamb's warfare, and who, we feel assured, has gone to reap the reward of "well done good and faithful servant, enter thou into the joy of thy Lord and into thy Master's rest." His health had been for some time feeble, as might be looked for at his advanced age, but was such as to enable him to attend some of the sittings of our late Yearly Meeting, including the public meetings on First and Fifth days, much to the satisfaction of

Friends. But on Sixth-day evening, after the close thereof, he was attacked with paralysis of the left side, which much reduced him, and nearly deprived him of the power of speech; still enough could be understood to convey the assurance (were that needful) that the great work was not then to be done.

Some of his last expressions were, "The foundations of God standeth sure, having this seal, the Lord knoweth them that are his; he is bound to them in an everlasting covenant. I have had a renewed evidence. I think I have kept the faith. I have fought a good fight; my way seems entirely clear. I have a prospect of a happy change. I seem almost in that Land." He lay in a quiet, resigned and sweet state of mind about eleven days, when his gentle spirit was released from the shackles of mortality. His funeral occurred on Seventh-day, the 2d of Sixth month, and was a solemn season, during which lively testimonies were borne to the faithfulness and dedication of the dear deceased.

—, on the 6th of Sixth month, 1866, at his residence near Springboro, Warren Co., Ohio, ZACHARIAH LOWME, in the 61st year of his age.

ESSAYS READ AT THE LATE ANNUAL RE-UNION.

REMARKS OF WILLIAM HENRY FARQUHAR.

The invitation extended by the Friends' Social Lyceum, to be present at their Annual Re-union, reached the directors of the Sandy Spring Lyceum, a short time ago, and at once awakened in our minds a desire to participate. Indeed there was something in the proposition that quite struck our fancy. It was so friendly and therefore appropriate to a Friends' Lyceum. It was felt to be the inspiration of social, kindly feeling, whose exercise is a better thing even than the literary culture, to which such associations are supposed to be restricted. Literature is apt to be exclusively intellectual in its influences: "plays round the head, but comes not to the heart."

Your Association, however, in adopting its title of "Social Lyceum," has evinced its appreciation of the social principles of our nature, and given a pledge that their culture shall not be neglected.

Our Lyceum at Sandy Spring, though not using the name, has been framed and conducted on the same social plan. And if a fair share of success has attended its course thus far, the favorable result may be attributed to the conjunction it has effected of intellectual and social culture. Right willingly, therefore, do we accept the hand of fellowship extended to us across the intervening space; and agree to establish an air-line railroad,—that is, railroad in the air, or spiritual telegraph,—along which currents of thought may flow and re-flow.

Now, when two persons, hitherto strangers, meet together under favorable auspices, with the view of forming an acquaintance, it seems to be a natural and proper course to institute mutual inquiries regarding each other, and to ascertain facts of their previous life, so that the new friendship about to be instituted shall

start from a good foundation ; for it is only on the solid basis of a good past life, that societies, or individual men, or young ladies, can build up a safe, permanent connection.

What I see of you here to-day, will give me some of that sort of information, which I will endeavor to take a note of, and carry home to those whom I represent on this occasion.

In return, perhaps I cannot better employ the period your kindness has allotted to me, than in giving a brief sketch of the origin, progress, and peculiar features of our own Association.

The Sandy Spring Lyceum was inaugurated in the new building erected for the purpose, on the evening of Second month 16th, 1859. This was the formal commencement. The occasion was celebrated with various appropriate exercises interesting at the time ; but it is a matter of more importance for the object I have in view, to note the precedent circumstances, out of which the Institution arose.

The young men of the neighborhood had for some time been carrying on their debating societies in the old log school-house ; and these literary meetings contributed, together with their enlivening circumstances, to arouse a degree of mental activity, that at length demanded a wider sphere for exercise and improvement. The want of an organized literary institution, and a suitable building in which to hold its sessions, now came to be seriously felt. The neighborhood having discovered that a lyceum was required, in order to supply an evident need, the steps to gratify the desire were simple and easy enough. Thus it came to pass that the demand for more efficient means of intellectual and social improvement soon took visible shape in solid foundations and beams, rafters and walls. A neat edifice, of fair proportions, and excellent acoustic qualities, with capacity to accommodate a large country audience, stood forth the natural outgrowth and external manifestation of the want keenly felt within.

So, I think, it must ever be. The inward demand must precede the outward supply. So, at a time not far distant, shall a noble and dignified structure, worthy of the wise and benevolent purposes to which it will be consecrated, rise up on the grounds where we stand, a lasting testimony of the deep interest felt by the Society of Friends in the cause of education ; or—the space left vacant, or covered only with low and narrow walls, must tell to the world a story which we will not allow ourselves even to imagine.

Returning from this slight digression to the inauguration of the Sandy Spring Lyceum, I must refer especially to one of the entertainments of the evening, which seemed to give general satisfaction.

After a few introductory remarks, Henry C.

Hallowell read an Ode, written for the occasion by a native poet. (You must not infer that I mean the author was of the masculine gender. I object to any feminine termination to that noble word. A poet is of no sex.)

The Ode was followed by the President's Inaugural Address ; in which the Lyceum was defined to be "a school-house for grown persons." The assembly were assured that the main essential for keeping up the Institution, thus happily inaugurated, would be found to consist, not as is apt to be supposed, in finding suitable speakers to address them, but in their readiness to attend the meetings. The audience was the main point : *speakers* would come fast enough.

The address concluded with the sentiment that their undertaking was to be regarded as a spoke in the wheel of progress ; "a spoke in the wheel of the car of human destiny, which, though often urged by over-zealous reformers to the brink of a precipice, and often retarded by over-prudent conservatism, still rolls resistless in its grand spiral, drawn forward by the great chain whose last link is to the throne of God."

So the Sandy Spring Lyceum was launched, and got under way. The voyage has so far been prosperous. Its success, as evinced by frequent meetings and full houses, has exceeded the expectations of those most interested in its projection. The sentiment has frequently been expressed that no joint stock in which we have taken shares has ever *paid better* than our investments therein.

The ordinary course of proceedings of the Lyceum Company proper, consists in an annual course of eight lectures, commencing in the Tenth month and closing in the Fifth. Of these, some five or six are generally by speakers from abroad. In this way we have been favored by the Chief Justices of our State and distinguished members of the Bar ; by Divines, from the rank of Bishop downward ; by Editors, learned Professors, Travellers, &c. ; who come at our invitation, occasionally, though rarely, for a monied consideration.

For the remaining lectures we depend upon native talent. This course is sometimes varied by having a debate instead of lecture every alternate month ; but I am constrained to say that the debates have had very limited success. Our experience is that nothing of much value comes without proportional preparation ; and that extemporaneous discussions, except where there exists the very rare gift of native eloquence, or where the subject has a lively present interest, are to be saved from the grievous fault of dulness by the only worse fault of personality.

At the annual meeting in the Fourth month, a person appointed for the purpose, who bears the dignified appellation of Historian, reads a

sketch of the history of the neighborhood during the year just elapsed. While this official had the opportunity of detailing the incidents of rebel invasion and raids and border warfare, in which his hearers had all to some extent actively or passively participated, it has been easy enough to hold their attention. Whether the nobler, but less exciting triumphs of peace, will afford material for successful prosecution of the history, remains to be proven.

There is another institution, commonly called the Reading Circle, which is a highly interesting and important feature of the Lyceum, though not under the direction of the company. This goes on during the lecture period, at intervals of two weeks; and the readings are varied by declamations, essays, and especially by questions asked and answered in writing. The peculiar design of the organization is, to make every member an active participant, inducing and requiring each one to contribute something to the common stock of entertainment and edification. The Reading Circle, as a social, as well as an intellectual institution, is highly prosperous. I observe a circumstance which gives me great hope of its continued usefulness. The young members, when they get married, (and that interesting event has happened quite frequently among them of late), show no diminution of interest in the meetings; having determined that, like a true circle, theirs shall know no end.

The literary exercises at our Lyceum are only a part of the functions it performs. The building serves also as a Town Hall, though we have, as yet, no township divisions in Maryland. Road meetings, Union Relief Associations, Horticultural Exhibitions, and all other concerns in which a live neighborhood can take a common interest, find there the place necessary to their existence.

Preparations are now being made to commence a collection of specimens of the natural history of the neighborhood, designed to show its plants and insects, useful and injurious, its minerals, different sorts of wood, &c.

In closing these remarks, which have perhaps gone sufficiently into detail, I would describe in two or three words the influences which our Lyceum has exerted, by saying that it has tended efficiently to promote mental activity in the neighborhood. This condition, if not carried so far as to produce too much excitement of the brain, (and I see no reason to fear such a result), must work for good. That "inert mass of mentality," which George Combe deploras as the fixed condition of mankind, is leavened and stirred up, and its forces brought into play. The future will disclose new fields for its operation, and new agencies to operate therein. The human intellect, thus quickened and enlightened, will be enabled the sooner to

break loose from the trammels of the false and injurious doctrine, that science is unfriendly to religion,—in other words, that truth is hostile to itself; the sooner will it receive the great lesson drawn from profoundest modern research, that the universe in all its aspects, material, mental and spiritual, is a perfect whole,—a Cosmos,—the work of one mighty mind, "whose powerful word said, "Thus let all things be! and thus they were."

But not to stop even at that high doctrine. The mind, rightly awakened and fairly started on its never-ending career, cannot rest in the brilliant, but unsatisfying discoveries of science. It must rise to fuller conceptions of higher themes. Nobler aspirations and desires are quickened;

"desires,
That give assurance of their own success,
And that, infused from Heaven, must thither tend."

It only remains for me to make a practical suggestion, looking toward the continued connection of the Philadelphia and Sandy Spring Lyceums.

I venture to propose that we shall interchange lecturers once in every year. That you shall, from your abundance, furnish us at least one lecture for our annual course, and we, from our scarcity, do our best to reciprocate the favor.

REMARKS OF EDWARD PARRISH.

After explaining that the announcement of an Essay on Education from him on this occasion was without his previous knowledge, and expressing his regret that a less hackneyed subject had not been allotted him, the speaker proceeded as follows:—

All along through the ages, there has been going on a war, which, amid the din of contention for political power and dominion, has been comparatively unheeded,—almost unheard. This war, which has not ceased, is a contest between ignorance and knowledge—between superstition and inquiry—between bigotry and toleration. In the distant past, ignorance, superstition and bigotry have generally had the mastery. They gave Socrates the fatal draught of hemlock, made Galileo feel the terrors of the inquisition, and granted to Columbus only a tardy and grudging opportunity.

In our time and country this contest seems rather to have turned in favor of knowledge, toleration and free inquiry, but it nevertheless rages; and the party of ignorance, superstition and bigotry, still, as of old, draws its recruits largely from the church.

In the South, this party has had nearly undivided sway. You might ride 50 miles in some sections without seeing a school-house, although, perhaps, half a dozen churches would come into view in the same territory—churches, in which ignorance and slavery, twin sisters, sat en-

throned. The rebellion was, in some sense, a bringing of this contest to the ordeal of physical force; and its appropriate sequence would be, what is now in progress, the location of a Yankee school mistress in every village and on every plantation in that benighted land.

The party of ignorance and superstition seems to be made up of two wings—those who have selfish objects to promote by keeping knowledge from the people, and those who oppose the progress of knowledge because they do not appreciate it or have a traditional fear of it.

The first of these especially figures in history. The clergy, who through what are called the dark ages, monopolized nearly all the scholastic attainments, were the means of preserving and transmitting much that is valuable in the history of the past, but they naturally suppressed what would excite the human mind to activity, and gave the bias of their own theories and conventional views to all their teaching.

That this may have been honestly done, does not make it less an evil. Men, by dwelling a long time on a favorite idea, naturally become convinced of its paramount importance, and callous to every opposing sentiment, and even intolerant of that which approaches nearest to, without being identical with, their own views. We have abundant evidence of this in our time. It is not confined to the clergy, nor even to those who are influenced by their teachings.

In nothing has the party of ignorance been so damaged as in what was appropriately called the Reformation, which so wonderfully broke the power of the Church, and split into a variety of fragments what had been before a solid phalanx of opposition to free thought and free inquiry.

The opening of the Bible to the common people was perhaps the greatest educational advance ever made by the race. It is due mainly to the wonderfully comprehensive character of the Jewish and Christian Scriptures, and their adaptation to an almost infinite variety of understanding, that we have such a number of differing sects and consequently so much discussion, upon subjects of vital interest and importance. If we could imagine the theoretical and historical writings pertaining to our religion as being so few and simple that there would be no room for discussion about them, and that the clergy had been a unit in regard to their meaning and import, it seems to me that priestcraft would have held still more undisputed sway; but the vast extent of these writings, and their wonderful power of stimulating the intellect, while nurturing the religious sentiment of mankind, has made them the greatest means by which the world has grown in knowledge and in freedom, as well as in grace.

Those, who, in our time, oppose education because they think it implies something inimical to manual labor, or even to business thrift,

constitute quite an important wing of the great party of ignorance and superstition.

I once met a man of large means, with hundreds of cattle and sheep ranging over several large farms of his own, and thousands of dollars' worth of merchandize bought on speculation and held for a rise in price, who, in conversation in regard to the education of his children, strongly objected to sending them from home to school. He could not spare either his sons or his daughters during their youth from off his farms; and besides this, he thought if they got learning they might get a distaste for the drudgery of the farm, and take to some other pursuit. One son has already taken to merchandizing, to his father's lasting regret; and he admitted his fears, that if educated, the others might be something beside toiling farmers, like their father before them.

This man was a representative of a class among farmers who prefer the culture of the ground to the culture of the minds of their children. He was a Friend, and there are doubtless many Friends like him, though I believe the number is greatly lessening.

It will hardly be expected that at a Lyceum Re-union I should go into any argument on this subject; we are all supposed to be on the side of knowledge and free inquiry; but let me suggest a question to be put when the next occasion arises. Which is the most important and characteristic part of a human being, the brain or the muscles? Whichever is most important should receive most attention in preparing him for life.

To farmers, let me say, if a liberal education will point out to your sons less laborious ways of cultivating the earth, or even lead some of them into occupations more congenial to their taste, or better fitted to their talents, don't let a slavish adherence to manual labor prevail to prevent their usefulness or to mar their prospects. The whole character and aspect of man shows that he was not intended to be a beast of burden, and yet thousands are annually consigned to premature graves through excess of physical toil; far more, doubtless, than through the want of it, though that too is an extreme to be guarded against.

There is a prevalent idea that country life is more promotive of economy, and of the homely and domestic virtues, and even of pure and simple religion, than the more artificial and crowded life of the citizen. I am very far from joining issue with this good old-fashioned idea, especially as I have never been able to content myself, though a citizen, without breathing the free air of the country for two or three months in the year; but the observation I would make here is, that country life is desirable just in proportion as its advantages and attractions are developed by education.

Every object in nature, whether upon the "hills, rock-ribbed and ancient as the sun," among the majestic woods, or in the flowing streams, abounds with interest to the awakened mind; but to stolid ignorance it is all a sealed book. Many a man goes tramping up and down this beautiful world, blind, deaf and dumb,—a mere automaton, planting corn, digging potatoes or feeding cattle, all unconscious of the glories which surround him—regardless of

"the darling theme,

Whether the blossom blows,
The summer ray russets the sky,
Inspiring autumn gleams,
Or winter rises in the blackening east."

To his dull ear the psalm of nature has never been attuned, and all the quickening impulses of this glorious universe are lost to him, because he has failed of that birthright of us all—a thoroughly awakening education.

Here let me remark upon another common idea, that scientific training is all very well, but literary culture is to be regarded in a different light. Science is said to be *useful*, but literature merely *ornamental*.

Some study of science is getting to be a necessity to every branch of industry, and even among farmers the physical sciences have practical applications which secure them respect from the most utilitarian. Thus it comes to pass that many who have no respect for education from any higher motive than the notion that it may help a man to make money, take refuge in that wing of our party of knowledge which is battling for the extension of science rather than for a literary education. On the contrary, many friends of broad and liberal culture—those who love learning for its own sake,—are found arrayed against a scientific education, simply because they connect with it no higher motive than utilitarianism.

I have long claimed a prominence for the sciences, in education, not generally accorded to them in our colleges for a very different reason than that of which I have been speaking. I believe them to be capable of promoting the highest purposes of education. They not only furnish the mind with innumerable facts of vast interest as serving to open the mysteries of the physical universe, with which we are hourly in contact, but they improve the memory, and develop the powers of classifying and memorizing facts and ideas; hence, for intellectual culture alone they are of immense value and importance.

It is, however, in their relation to what is called "Natural Theology" that I regard them of the greatest interest. The teacher who understands the true scope and object of his profession will make every branch of natural and physical science subservient to the great ob-

ject of enlarging the conceptions of his pupils of the attributes of the Creator. He cannot teach Botany or Zoology without pointing out in every organ of every plant, in every variety of structure in the animal kingdom, the handwriting of Omniscience—the typical forms everywhere combined with special ends in creation. The order which all nature shows is Heaven's first law, is displayed in every created thing, from the tiny insect under the microscope, to the distant nebula resolvable by the telescope into myriad worlds.

Let me not, then, be misunderstood in placing the sciences prominently forward in a scheme of liberal culture; it is with no view of lowering the standard of education to a utilitarian basis, nor of divorcing intellectual culture from the study of languages and literature. This disclaimer is the more important to be made, since the disposition is so widespread among well-meaning people, to shut out literature, with all its pleasures and refinements, from the homes which most need it,—our country homes, many of which are already pervaded by the communion of nature, but can only realize the wealth embodied in letters by having the works of great authors brought within their reach and comprehension.

The more we learn of the works of the Creator, as revealed by the study of science, the more we shall respect the productions of genius. I can well dispense with much of the trash that the newspapers and our weekly and monthly periodicals bring us, but I grow stronger in my love for what may be called the English classics, and live in lasting regret that my memory was not stored when young with a richer freight of precious thoughts from these. Genius is near akin to inspiration; as the latter brings spiritual truths to our remembrance, the former holds the mirror up to nature; and many to whom this glorious world of ours is dull and prosaic, even when seen through the medium of science, find it all aglow with beauty and glory when warmed with the inspiring light of poetry.

Are there any here who have not read the latest work of our own Whittier, entitled "Snow Bound,"—a true and beautiful picture of our bleak northern winter, embellished by life-like portraits of a Friend's family, knit together in the bonds of filial love, and illustrating the domestic happiness found among the true and good. I envy not the man who can read this Cowper-like word-picture without emotion. And I believe the most stolid among us will own himself the better for such a stirring up of the depths of his nature as the genius of the poet is capable of producing by such a portraiture of the homely events of our everyday life. What, then, may we not learn from the study of the great events in the past, which have illustrated the wonderful capacities of our

race, the rise and fall of empires, and the gradual growth of civilization? What may we not gain from the contemplation of the lives of the great and good, as laid open before us by master minds? What glorious fruits may we not reap from the labors of those who have been gifted to see deeply into the human heart, and to delineate those great principles by which it is influenced for good or for ill?

My friends, we want that kind of education that will bring us into companionship with the great and good of all times. This will embellish our homes; this will lead us out of low and grovelling pursuits and desires; this will bring into the midst of the family circle a means of individual and domestic culture and development which will soon be felt in society at large.

For Friends' Intelligencer.

BEAR YE ONE ANOTHER'S BURDENS.

• (A Paraphrase.)

In the wildwood's deep recesses, far away from haunts of men,
Dwelt the hermit of the valley, in a green secluded glen.
Wearied with the fierce commotions, with the hatred and the strife,
All the outrage and oppression, which upon the earth are rife—
Like the ancient seer desponding, when from Ahab's wrath he fled,
Crying, "Take my life, I pray thee, for thy prophets all are dead"—
To the wilderness he journeyed, sorely weeping as he went,
Trusting by a life of prayer, there at length to find content.
In his tent-door sat the hermit, when the day was near its close,
Vigil keeping in the gleaming, ere in sleep he sought repose,
Pondering deeply on the meaning of the words he just had read:
"Bear ye one another's burdens,"—thus the sacred volume said.
"How can I, so heavy laden, still another burden bear—
How can I, so weak," he queried, "in another's sorrow share?"
With himself thus inly questioning, sore-perplexed with doubt and fear,
Sleep his senses overpowered, and he heard (or seemed to hear)
Angel voices close beside him, in the silence of the night—
"Thou hast blindly groped," they whispered, "we have come to give thee sight."
Lo! the mountains rose before him, at his feet a valley lay,
Thronged with pilgrims bearing burdens, taking each his separate way;
Rich and poor, alike they bore them,—heavy were their eyes with tears;
Youth and infant, sturdy manhood, and the patriarch bowed with years—
All beneath some cross were bending—all some secret sorrow knew;
Many were the stricken mourners, but the comforters were few.

"Look more closely," said the angel, "see thou read the page aright,
Which in gracious condescension has been spread before thy sight."
Close beside him, sorely weeping, he beheld a little child,
Grieving for the chaplet faded, she had woven in the wild;
But to comfort her, a brother brought her flowers fresh and fair—
Gave unto the infant mourner of his stock a goodly share.
Hand in hand they homeward wended—smiles enwreathed each happy face;
Giving thus, and thus receiving, each had gained an added grace.
Weak and weary knelt a maiden who had many sorrows known—
Rough and thorny was the pathway that her feet had trod alone;
Now her strength had almost failed her, 'neath the cross she fainting lay—
Faith and Hope were both departing, they had been her only stay!
In the hour of need, to succor, came one bearing bread and wine,
Whispered words of consolation—asked for her the strength Divine;
Bore for her the burden heavy—raised her gently from the ground—
Waiting till her way-worn sister hope and strength again had found.
In the desert dry and barren, where no gushing fountains play,
Wounded sorely in life's battle, one went halting on his way.
Lo! a loving brother saw him, led him to the cooling wave;
On his feet he bound new sandals, and the cup of water gave.
Lured by pleasure and ambition from the safe, the "narrow way,"
In a labyrinth bewildered, roamed a youth in strange array;
Back a youthful pilgrim led him, where the peaceful waters flow,
To the "pastures green" and quiet, where no "Dead Sea apples" grow.
Bowed with years, a hoary pilgrim, walking softly and with pain,
Toward the River journeyed slowly,—broken was his staff in twain.
"Lean on me, O aged stranger," thus his young companion cried—
"Let me smooth the way before thee, and thy tottering footsteps guide."
Long the hermit gazed, astonished at the scene that met his view,
For, who bore another's burden, lo! his own load lighter grew;
Wreathed with flowers seemed the crosses that these gentle pilgrims bore,—
In their pathway sprung up flowers, where but thorns had grown before.
To the hermit turned the angel,—"Erring mortal, doubt no more;
Go, return unto thy fellows, give the needy of thy store;
Seek the erring, the afflicted, in their pain and sorrow share—
Thus shalt thou obey Christ's mandate, and thy brother's burden bear."

6th mo., 1866.

A. R. P.

NONCONFORMITY.

A writer in the "British Friend" makes the following remarks:

"The opinions of C. H. Spurgeon approximate on some occasions to those of Friends. A few days before the so-called Good Friday, some handbills were posted in Bishopsgate, and other streets, headed with a †, and indicating the awful consequences of neglecting the religious observance of that day. On the preceding evening C. H. Spurgeon told his congregation that there would be no religious service at his chapel on 'Good Friday,' as it would be like sanctioning the superstitious observance of that day. He further remarked, 'The religious observances were of man's designing, and therefore they ought not to keep them.' In allusion to the aforesaid handbill, he says, 'Large bills had been placarded throughout the place, surmounted by a large cross, and intimating that the day was to be observed as one of the most awful character. It was an awful and a solemn falsehood. There is nothing in this day calling for special religious observances more than any other day of the week. Every day was God's day, and in every day ought God to be recognized and worshipped.' It is refreshing to find such sentiments expressed in such a quarter, and if rightly viewed, we should derive instruction. The sight of these handbills in the city suggested some painful reflections. One of the most effectual rebukes to this sort of thing is the open shop of a consistent Friend, but this ancient and noble testimony in the authority of Christ against the superstitious observance of days and times has fallen almost into desuetude, and so ritualism rears its head and seeks to bring men under its benumbing influence. It would not have been seemly to put up in the public ways, alongside of these placards, others of a contrary tendency, but I should like to have seen a few bills, stating our reasons as a religious body for non-compliance with these observances, placed on the outer doors of Devonshire House; this, with the open shops, would have been a wholesome protest against priestly assumption, and a plea for the religious liberty which these men are endeavoring to undermine, in order to establish an authority which is not of Christ. I once heard George Dawson, in a lecture on Peter the Great, remark, 'He, the czar, came to England, and witnessed kingcraft laid in the dust, and he went to the Quakers' Meeting, and saw priestcraft laid by its side.' Alas, that priestcraft should have so little to fear from us in this day!"

Dr. Franklin, speaking of education, says: "If a man empties his purse into his head, no man can take it away from him. An investment in knowledge always pays the best interest."

"Some murmur when their sky is clear
And wholly bright to view,
If one small speck of dark appear
In their great heaven of blue;
And some with thankful love are filled
If but one streak of light,
One ray of God's good mercy, gild
The darkness of their night."

ITEMS.

The Vassar Female College, Poughkeepsie N. Y., numbers three hundred and fifty-three scholars and thirty-one teachers. About half the pupils are from N. Y., and the remainder in nearly equal numbers from New England, the Middle States, and the West. Nearly half a million of dollars, the gift of one person, has been expended on the grounds, buildings, apparatus, etc, of this institution. The regular course of instruction occupies four years.

The United States consul at Havana has enclosed to the Secretary of State a translation of the circular addressed by the present Governor General of Cuba, General Lersundi, to the governors and lieutenant governors of the various districts of the island, on the subject of the slave trade. General Lersundi expresses himself determined to suppress that traffic.

CONGRESS.—The Senate adopted a resolution calling for a detailed statement of the amount expended for public buildings in the States and District of Columbia, from 1789 to the present time. The bill to establish an American repertory in Germany was reported adversely from the Committee on Agriculture. A bill was passed to grant lands to aid in the construction of a railroad from Salt Lake city to the Columbia river. The army appropriation bill was called up, and amendments were adopted providing for the support of the Freedmen's Bureau, and repealing the acts granting the President the right to dismiss officers of the army and navy without trial. It also provides that no such officer shall be dismissed except upon sentence of court-martial. In the selection of quartermasters and other stores, domestic products are to be entitled to preference. Some other amendments were agreed to, and the bill was finally passed. A resolution was introduced and agreed to, instructing the Committees on Public Grounds to inquire into the expediency of purchasing that portion of the ground between Maryland avenue and Pennsylvania avenue, east of the Capitol to Nineteenth street, for a national park, on which to erect a Presidential mansion.

HOUSE.—The Senate amendments to the House joint resolutions to provide for the expenses attending the exhibition at Paris, was taken up and concurred in. The vote by which the bill to establish a department of education was rejected was reconsidered, and the bill was amended so as to read a bureau of education, in which shape it was passed. It provides as follows: That there shall be established at the city of Washington a department of education, for the purpose of collecting such statistics and facts as shall show the condition and progress of education in the several States and Territories, and of diffusing such information respecting the organization and management of schools and school systems, and methods of teaching, as shall aid the people of the United States in the establishment and maintenance of efficient school systems, and otherwise promote the cause of education throughout the country. That there shall be appointed by the President, by and with the advice and consent of the Senate, a Commissioner of Education, who

shall be entrusted with the management of the department therein established, and who shall receive a salary. That it shall be the duty of the Commissioner of Education to present annually to Congress a report embodying the result of his investigations and labors, together with a statement of such facts and recommendations as will, in his judgment, subserve the purpose for which this department is established. The Indian appropriation bill was reported from the Committee on Appropriations, transferring the control of the Indians from the Indian to the War Department. The bill was passed. The Senate bill to provide for the revision and consolidation of the statutes of the United States was reported back from the Judiciary Committee and passed.

THE FREEDMEN.—The receipts of the Freedmen's Savings and Trust Company for the quarter ending 4th mo. 1st are reported to amount to \$172,391 30. Of the sixteen branches, the largest deposit was made at Beaufort, S. C., \$46,118 78. Louisville deposited \$33,033 78; Savannah and Vicksburg more than \$12,000 each; Mobile nearly as much. North Carolina is poorest on the list. The largest single deposit mentioned was \$700.

Major General O. O. Howard has received the report of Brigadier General F. D. Sewell, who has recently completed a tour of inspection throughout the State of Virginia. He reports that in the interior and northern parts of the State, especially in the Shenandoah valley, the freedmen are industriously employed, at remunerative wages, and observe and seem to appreciate the force of their contracts.

In the Southern portion of the State, particularly on the peninsula, where they have congregated in large numbers in villages and camps, their condition is not favorable, as there is a scarcity of labor. Complaints are made that local magistrates are unwilling to receive the complaints of freedmen against white citizens, and without the intervention of the officers of the bureau, justice would in many cases be denied them.

The higher tribunals are disposed to deal fairly with the colored people, but the difficulty is in the inception of proceedings before the police magistrates. The intelligent whites are disposed to treat the freedmen with kindness, but the lower classes manifest great hostility to them, and an utter disregard of their rights.

The operations of the bureau have not been obstructed by direct means, though threats of violence toward the officers have been made, but not carried into execution. The influence of the bureau has been to promote industry and inculcate correct ideas of freedom, as contrasted with slavery; to instruct them in their obligations as well as the rights of citizens, and in this respect has been equally beneficial to the white citizens who are now brought in contact with the negroes as free laborers.

It is not easy to determine when the bureau may safely be withdrawn, as the destitute and dependent can only look to the Government for support. The State authorities are not yet disposed or prepared to assume their maintenance and care, and though the State laws have been greatly modified as affecting freedmen, the temper of many of the people who execute them is not such as to safely entrust the freedpeople entirely unprotected in their hands.

The schools are well conducted, and in successful operation. The teachers are devoted to their work, though in many instances subjected to insult and contumely. There are now 145 schools in the State, 225 teachers, and 17,589 scholars with an average attendance of 12,930.—*The Press.*

LETTER OF SAMUEL BOWNAS.

The following letter, addressed to a young and inexperienced minister, is supposed to have been written by Samuel Bownas, but does not appear to have been published in his journal.

S. B. F.

Dear Friend: The small time I had with thee furnished me with an opportunity of observing the disposition of thy mind, and gave me a small taste of thy ministry; both, under a proper cultivation, I think may be improved so as to render thee a member of good service in the body. In order to which, and that thou mayest, in thy public engagements, appear in the beauty of the spirit, without any mixture of the flesh,—the weak and womanish part, which in both sexes ought never to be uncovered to speak in the congregation of the saints,—I will give thee a short sketch of some of my hits and misses, when in my youth I publicly appeared in the gallery, the observations of which I hope may tend to thy profit and instruction.

I was seldom, for nearly two years after my mouth was first opened to preach the Gospel, without some degree of Divine love and virtue on my mind; but after I was called out to the service of visiting meetings abroad, I found my mind very often barren and weak, and, as I then thought, void of all good; in which state, being companion to my dear friend J. A., I cried out that I was deceived, to his great surprise, he

fearing my affliction would be too hard for me. I had imprudently thought, that having such abounding of Divine love and life, when I was daily at my work, I should be much more favored therewith when abroad in the service of the Gospel, disengaged from all other employment; but finding the reverse, I wished myself at home again, rather than travelling in such a barren state as I was then in, though at times I had eminent enjoyments; but alas! they were soon gone. In due time I was favored with the design of Providence in dealing thus with me; and the very cattle in the field, by weaning their young and turning them to shift for themselves, taught that it was meet I should be left a little to myself, and not always be kept to the breast and dandled upon the knee like an infant; but that it was needful I should grow and advance above this infant state to a degree more fit for service.

When I was thoroughly informed on this point, I longed to be a man; yea, sometimes I verily thought I was so; but met often with great disappointments therein, by undertaking matters above my growth and experience, and the weak part appearing at times to my great shame and confusion, humbled me again for some time; but recovering strength and courage, I began, as I thought, to advance above the danger of making such blunders, a confidence arising in me on imprudently comparing my service and growth as a minister with others that were in the work before me, supposing

myself (and it was self that did so suppose) more eminent than they.

Thus self prevailed, and the weak part appeared uncovered again to my shame and sorrow. But my Master's kindness and gracious regard was soon after evidently manifested, in letting me plainly see the weakness and folly of taking his honor to ourselves, which alone is due to him, when we have been drawn forth in the beauty of the Gospel, beyond what we ourselves, or those that heard us, did expect. Now I perceived the necessity of guarding against the inclinations of the flesh, which would sometimes be decking itself with the jewels of the spirit, saying I did this or that, fishing for and seeking the praise of men more than that of God. I also saw a danger of falling into a formal way of preaching, a round of words almost without variation, which, though sound, and perhaps pleasing to many, yet wanting the renewing of Divine virtue, are tasteless and unprofitable to the hearers. And the view I had of the unprofitableness of such a ministry, would have carried me too far to my own disadvantage, had I not also been favored with a clear prospect of the lawfulness, expediency, and necessity of speaking the same matter, or preaching the same doctrine to-day, being divinely opened and engaged thereto, as it was yesterday, though then entirely new to me; for nothing can be said that hath not been said, and it is the renewed evidence of the Spirit that makes it savory both to us and our hearers.

Superfluous words, tones, gestures, affected sighs and groans, I was never under any temptation to make use of; but the impertinence of self, sometimes, to my shame and trouble, would appear in my imprudently affecting eloquent terms and scholastic expressions, which seemed to me, in that weak state, to adorn my doctrine, and recommend it the better to the audience. All this proceeded from an affectation of appearing an able or skilful minister, a piece of unprofitable vanity; but I soon found it most safe and edifying to use no more words than what I well understood and could apply properly, and that the truth shines brightest in a plain dress,—no embellishment of ours can add to its lustre.

I have also, sometimes, for want of a patient and humble waiting to see my way opened, and discover clearly the leadings of the Divine gift, warmed myself with sparks of my own kindling, to a degree of zeal and passion, and began to thrash the assembly, judging and charging the unfaithful, whether any such or none there,—it was all one to me. Thus in the dark mistaking the cause of that uneasiness and straitness I found in myself, imagining myself loaded and oppressed by dark and unfaithful spirits in the assembly, after wearying myself with denouncing judgments upon them, I have sat down in

sadness and trouble. And although I have found this sort of preaching please many, and was commended, yet it was ever affecting to me, when, on reflection, I found the true cause of that uneasiness was in my own breast. Yet it may sometimes happen that the unfaithful may bring great grief and uneasiness upon us, and this may be hard to bear; but let us take care we move not till the cloud is removed from off the tabernacle, because it is unsafe going forward till then.

I have from experience found it my safest and best way, carefully to attend to my gift, endeavoring to keep my place without judging others, patiently bearing my own burden, and earnestly desiring I may judge nothing before its time, but that my understanding may be opened to see the true cause of my own barrenness; that I may be enabled to address myself suitably to the Father of spirits for help; that, first, if it be in myself, it may be removed, then, the effect will cease; or, secondly, if the weakness or backsliding of others be the cause of our barrenness and seeming desertion, when we are sympathizing with the true seed in its oppressed state, that we may patiently wait the Lord's time to receive a word from him, fitly to speak to the present state of the people; or, thirdly, if the people's too imprudent expectation of what cannot be had, unless I am favored with a superior aid, qualifying me to answer their desires; I say, if by any or all these causes at times I am shut up, the best way I have ever found is to be patient in waiting the Lord's time for relief; to seek it in our own time will be but adding sorrow to affliction.

To conclude, the most safe way I ever yet found in the exercise of my gift, is to stand up, as little regarding anything besides my opening as I can, and deliver it in my beginning, just as I do any other matter in my common discourse, not endeavor to beautify it either in matter, tone, or address; and as I keep my place, and go on as doctrine is opened in my understanding, I feel at times my voice gradually filled with virtue and power; and even then I find it safest not to speak too fast or too loud, lest I lose sight of or outrun my Guide; so lose sight or sense of that inward strength I felt increasing in my mind. This care seems to me necessary, in order to take the Apostle's advice: "Let him that ministers, do it of that ability which God giveth." This has a double signification; first, respecting the matter which we deliver, if we keep to our openings, we shall be furnished with suitable doctrine. Secondly, the wisdom and strength of the spirit and power of the Gospel will be felt in it, and at times, by our thus going on according to the ability God gives, the very spirit and marrow of religion will appear plainly laid open to the understanding of the hearers.

But when we raise our voices, or hurry above or beyond that inward strength we feel in our minds, we are apt to cloud our own minds, lose sight of, or outrun our guide, and then run into a wilderness of words, which I have too often done, and found the consequence of such imprudence, poverty and death. Though even this kind of preaching is by some unskilful auditors admired, they will say, oh! how matter flowed from him; how full was he of (emptiness and confusion say I) power and authority, say they; or rather the passion and blind zeal of the creature, the fleshly part not being thoroughly mortified or subdued. But when I am so happy as to begin with the spirit and follow its leadings in my ministry, I feel strength by degrees cover all my weaknesses; wisdom illuminating my mind, hides all my folly, so as nothing appears inconsistent with the beauty and wisdom of the Spirit. This is the vestment, the urim and thummim, that covers the whole man that is to be covered, so that no weakness or womanish part will prevail or appear in our ministry.

When I am thus conducted, (which sometimes happens), though I may be accounted in my beginning a dull, heavy or lifeless preacher, yet rarely miss of concluding with peace and inward satisfaction, and feeling the gradual increase of divine virtue in the patient exercise of my gift; I finding myself both furnished with matter and skill to divide the word aright, both which, coming from the Spirit, and not being the produce of my own wisdom or apprehension, I dare assume no part of that honor to myself, which at such times, by an imprudent audience, is lavishly bestowed upon me, who am only the instrument by which the Lord of the harvest works, but find it my safest way humbly to make thereof an offering unto him who is worthy for ever.

Thus, dear friend, I have stained some paper with a few observations on my own conduct, aiming at thy good; and conclude with desires that thou mayest endeavor to improve thy skill in this work and rightly divide the word of truth, so as neither thou thyself, nor those that hear thee, may have cause of shame or uneasiness.

With my kind love, &c.

There are women who cannot grow old—women who, without any special effort, remain always young and always attractive. The number is smaller than it should be. The secret of this perpetual youth lies not in beauty, for some possess it who are not at all handsome; nor in dress, for they are frequently careless in that respect, so far as the mere arbitrary dictates of fashion are concerned; nor in having nothing to do, for these ever young women are always as busy as bees; and it is very well

known that idleness will fret people into old age and ugliness faster than overwork.

The charm, we imagine, lies in a sunny temper,—neither more nor less; the blessed gift of always looking on the bright side of life, and of stretching the mantle of charity over everybody's faults and failings.—*Talk on Women's Topics, by Jennie Jeane.*

From Meditations on Death and Eternity.

WHY MUST THE FUTURE LIFE BE HIDDEN FROM US?

How often, when meditating on the future destiny of the soul, do not mortals say, "If we but knew how we shall fare in that future life! If we had but some slight indication of what will be the state of the spirit after the death of the body! If we had but some little knowledge of the abode into which the spirit will pass, some shadowy insight into its destination there, some faint prefigurement of its joys and sorrows in Eternity!"

Such wishes and questionings are pardonable. They do not, however, so much manifest the soul's noble longing for knowledge as they betray common curiosity and impatience. For the desire for knowledge will easily be satisfied with the conviction that the day will infallibly come when we shall know and experience it all, and that it will come as soon as it is good for us. But curiosity will not rest content with this; it wishes for knowledge merely to satisfy its craving; it is like the inquisitive child, who, though certain that at a given time it will receive a gift from its tender parents, yet uselessly endeavors before the time comes to divine what the gift will be.

Therefore human folly has ever been busy endeavoring to discover by subtle investigation the secrets of eternity. Therefore there have come into existence as many notions and fancies regarding the future life, as there have been persons who have allowed their imaginations free play respecting the subject. Among the Jews as among the Turks, among the heathens as among the Christians, the most contradictory ideas prevail, about the state of our immortal spirits after death,—ideas which are often highly unworthy of the greatness and majesty of God.

Some believe that in the next world the soul will live in a state of sensual bliss, in the midst of lovely groves and gardens, where are spread richly decked boards, at which they may feast whenever they please. Others believe that the soul sleeps in the grave until the great day of judgment shall come, when the dead shall arise and stand forth to receive their reward. Others, again, believe that, until the last day of the world, the souls will wander about partly under the earth, partly near the entrance to hell, partly in the air, partly in the

vicinity of heaven; and that they have the power to reveal themselves to living men at certain times, particularly during the night, in the form of ghosts, and thus to create terror for no reason or purpose. Others, again, think that the spirits of the departed roam about in some paradise, where their greatest happiness consists in remembering and recounting the deeds performed by them in their former existence. Others teach that before the soul is admitted into paradise, or the place of eternal joy, it must undergo a period of probation, during which it will be cleansed of all the earthly wishes, and cares, and impurities that may still cling to it, in order that it may ultimately enjoy unmixed bliss.

In vain, however, has human curiosity endeavored to force open the gates of eternity, in order to discover that which lies beyond. It has never succeeded. The darkness in which God has wrapped the land of the future remains impenetrable; and of the dead, not one has yet come back to unveil to inquisitive man the secrets of the world of spirits.

Had the Deity thought it good for mankind that we should be able to look into Eternity, and to penetrate its secrets, the power of doing so would have been bestowed upon us. But the Omniscient would not that it should be so; and we may therefore conclude that the faculty of following the spirits along their path in Eternity would not be conducive to our happiness and well-being. It is withheld from us until the important hour when we shall ourselves become denizens of eternity.

Thy inquisitive desire to solve the mysteries of the future world is therefore culpable, is unworthy of thy profession as a Christian, proves a want of trust in the wisdom and fatherly love of God. Be assured, that the knowledge of that which the Lord conceals from thee would render thee unhappy. Are there not in like manner many things which mortal parents conceal from their children in infancy, but which are communicated to them when they reach a riper age? Too early a disclosure of these matters might be injurious to the welfare of the entire family, or be hurtful to the children themselves. Who would blame the wisdom and prudence of these anxious parents, who in this very withholding of knowledge give a proof of their affection for their children? Will not the child himself in later years thank his parents for their reticence?

And the same is the case with man in regard to God! We also shall one day, when death breaks the dark seal of the mystery, recognize the wisdom of the all-loving Father, and stammer forth our thanks. We also shall smile at the futility of our endeavors, at the childishness of our fancies, respecting the eternal future. We also shall then repent with justice of our

want of trust in the eternal Wisdom and Mercy.

However incapable we may be, while dwelling here in the dust and with our limited faculties, of understanding the councils and the exalted ends of the Most High, it is much easier for us to divine why the hand of God has veiled to our eyes the face of eternity, than it is to lift this veil even in the least degree.

The less we know with certainty that which awaits us after this life, the purer, the more unselfish, will our virtue be on earth.

What is Christian virtue? Wherein consists the holiness which Jesus demands of us? In self-improvement, self-bestowed blessedness. Christian duty, as Christ understood it, must have no other end than itself; it must not be a means to secure this or that advantage; it must not be a mere measure of prudence.

What value is there in that virtue which makes me give alms to the poor, in order that I may gain honor among men—which makes me avoid enmities in order that my life may be more easy—which leads me to afford help that I may be helped in my turn—that induces me to perform acts of public utility, that I may win popularity—that makes me act honestly in order to gain confidence—that makes me amiable in manner in order that I may be praised—that makes me show friendship to those who may show me friendship in return? Is this virtue as Jesus understood it? Nay, it is but prudence! It is a calculation how to gain great advantages by means of small sacrifices. "For if ye love them which love you, what reward have ye? And if ye salute your brethren only, what do you more than others." No; "ye must be perfect, as your Father in Heaven is perfect;" that is to say, your goodness must be without selfishness, you must not debase your virtue into a mere measure of prudent calculation, you must expect no higher reward than is comprised in that virtue itself.

He who does not love it for its own sake, oh! he can never have known it! A child who is only obedient when he is promised a reward, is not a wise or good child, but a calculating and selfish one.

God is perfect, because He is God, and in His own perfection He finds the highest bliss. God is perfect not in order to gain outward advantages; and He is merciful, gracious and beneficent, not in order that weak man, a poor worm in the dust, should worship Him. And in *this* spirit Jesus tells us to be perfect, as our Father in Heaven is perfect.

We are to improve ourselves, to become holy through the practice of every virtue, not in order to receive some other reward, but because in this improvement and sanctification is

comprised the happiness of the spirit. The most virtuous and the wisest man is the happiest, simply because he is the most perfect. That which he was here below, that his spirit will remain on entering eternity; and his reward in that better life is, that he is allowed ever to approach nearer to the Divine perfection, ever to grow in likeness to God.

(To be continued.)

For Friends' Intelligencer.

DEATH BY SWOONING.

In many respects the casualties of human life have their parallels among the inferior order of animals. Death by sickness, by pining decay, and by old age, is the ordinary allotment alike of man and the inferior races, unless by the supervention of violence.

But there is one form of dissolution to which we are subject, which appears to have no type among the inferior order of animals, which is that of swooning. Perhaps the intricate and delicate machinery connected with intellectuality is susceptible of disturbance and injury, and even of destruction, from causes which do not operate with much force upon grosser organizations.

In reflecting upon the frequent occurrence of sudden deaths, the inquiry has oftentimes interestingly presented to my mind, whether more of such instances are not mere swoonings, rather than a final dissolution, than is generally believed. That the mysterious, inexplicable element of vitality called life, may and has existed in such a latent, imperceptible form, as almost to deny identification, is not to be disputed. In some instances, and perhaps not a few, it is difficult to determine the precise point where life ends and death begins. Persons under the semblance of death have revived, after having been pronounced dead by the attending physician, and after restoratives had apparently failed.

The case of W. Tenant, a young man of New Jersey, which excited much attention some years ago, is a marked exemplification of the uncertainty of the precise time when life entirely ends. He lay a number of days apparently dead, and entirely insensible, during which time his friends twice assembled, but were dissuaded from the performance of funeral rites by the earnest entreaty of a friend, who could not be reconciled to discontinue his efforts for restoration, being encouraged therein by the presence of a very slight degree of warmth under one arm.

A valued friend of the writer of this article, after a prolonged and suffering sickness, died (as his family and physician supposed), and remained in that condition about two hours, during which time, though *apparently* lifeless, he was conscious of every occurrence in the

room, and heard and understood the conversation, but was unable to speak or to move even his tongue. There were probably some evidences of lingering vitality which induced the doctor to propose warm applications, which doubtless promoted his restoration.

The preceding instances of apparent death occurred after protracted sickness; but swooning unpreceded by disease is a not unfrequent occurrence. The editorial in the "Review" alludes to the swooning of a clergyman in France, afterwards a senator, who fell down while preaching, and being officially examined and pronounced dead, remained in that condition until, when his own funeral rites were about being performed, he was reanimated by the voice of a beloved minister, who was preaching his funeral sermon. While lying in this helpless and apparently lifeless condition, his mind was yet in full activity, and suffering under the dread apprehension of a living interment.

A valued friend related that her grandmother had an attack of this character, unpreceded, it is believed, by sickness; and being supposed dead, and, according to the practice now, and then existing, placed in a coffin in a cold room, and after remaining in that condition about three days, was aroused by a cat, which jumped upon the coffin, and by a scratch, drew a small quantity of blood from the neck or face of the supposed deceased: she revived immediately, and lived many years afterwards. The mother of this last had previously experienced a similar attack, and after continuing about four days under like circumstances, revived, without any apparent exciting cause, and, without any premonition, was discovered sitting up in the coffin when some of the family entered the room. One or both of these instances were attended with perfect consciousness, during the whole period of apparent death, similar to those previously recited, but with an entire inability to speak or move.

These recitals are to show, that it must often be difficult to distinguish the precise dividing point between life and death; and in proportion to this uncertainty should be the care of survivors to determine, if possible, that life has indeed ceased, before the inevitable gate is closed, which is to bar forever all communication between the living and the departed.

Sudden deaths, not apoplectical, are now mostly ascribed to a diseased condition of the heart, or the immediately connecting artery; but there is reason to believe, that not a few are entirely uncaused by a morbid condition of those organs, which is rendered probable by the fact, that persons recovering from such attacks as those now under consideration, have subsequently lived and enjoyed many years of good health, with no symptoms of a return of the visitation.

Dr. Thomas, whose treatise, entitled the "Practice of Physic," has been the text book of English and American medical students for half a century, says in reference to the subjects herein treated of: "It may not be improper here to remark, that as the vital principle frequently remains in a latent state for some time, and as we are yet unacquainted with any certain criterion between positive and apparent death, besides that of putrefaction, some appearance of incipient decomposition should therefore be allowed to take place in every case of sudden decease before interment." And again, in treating upon the causes of sudden deaths, he says in reference to such instances that "we should be cautious in not allowing the body to be interred until evident signs of decomposition or putrefaction are apparent, as the suspension of respiration, rigidity of the limbs, abolition of sensation and motion, the want of pulsation in the heart and arteries, coldness of the body, and want of lustre in the eyes, *are but equivocal symptoms of death, and ought not therefore to be relied upon alone.*"

Since writing the foregoing, my views on the unsoundness of the theory which ascribes sudden deaths so generally to disease of the heart, have been verified by accounts recently published in Europe, of post-mortem examinations of sixty-six cases, the result of which, as reported to a scientific congress recently held at Strasburg, was, that of this number, only two died of disease of the heart, and nine of apoplexy. The alleged cause of the death of the remaining fifty-five need not here be stated, my object being to impress the sentiment that sudden deaths are not always and necessarily final, as evidenced by the instances previously stated, and that delay and recourse to restoratives may be practised to advantage more frequently than is generally supposed.

The possibility of latent vitality in such cases, according to Dr. Thomas, is always present, until incipient decomposition takes place, which consideration is sufficiently solemn to insure great deliberateness and minute examination, in order to be assured that life is wholly extinct, before the earthly tabernacle is conveyed to its final resting place, to be seen of men no more.

GIDEON FROST.

MATINACOCK, L. I., 6th mo., 1866.

The Spirit, like a peaceful dove,
Flies from the realm of noise and strife;
Why should we vex and grieve his love,
Who seals our souls to heavenly life?

A true Christian will have before his eyes the danger of wealth, more than that of poverty, and the fear of superfluity more than that of necessity.

From the Saturday Review.

EXTINCT CONTROVERSIES.

Few things are more interesting and scarcely any are more instructive, than a review of some of the more celebrated controversies which have expired in consequence of the advance of knowledge. Like extinct volcanoes of the physical world, they tell us of forces long spent, as well as of their sweep and potency while they were in action. We are admitted while studying them to glimpses of modes of thought and feeling of which hardly a trace now remains, the new moral and intellectual strata completely overlaying and hiding them from our view. Accustomed in our text-books to see the results and discoveries of ages rapidly recapitulated in a few smooth chapters, it is only by occasional excursions into old controversies that we can get a notion of the extreme slowness with which these results and discoveries were arrived at—that we can see what a troublesome, unfriended thing truth generally is on its first appearance in the world, how unnecessary it is felt to be, and how objectionable, not to say odious, those inquiring spirits are who insist upon introducing more than exists already. In fact, we come upon opinion in the making, and can see the striking contrasts between the various stages of the same doctrine as it moved towards completeness. Or again, if we are so inclined, we may obtain abundant matter for cheap exultation by comparing our own enlightenment with the "besotted ignorance" of our forefathers. We may point to the "marvellous discoveries" which they at first rejected, we may dwell on the vast and still-growing capabilities for good which these discoveries have placed in our hands, and we may triumphantly infer that our ancestors were not only a most degraded and narrow-minded set of persons, but also—seeing that they rejected these useful novelties—a most hard-hearted and indeed brutal folk withal, our descent from whom it is a positive condescension to admit. This is certainly not the spirit in which we would recommend any one to study the monuments of old controversies. Just as they will afford unlimited gratification to modern conceit, if that be the object sought for, so they will deepen the humility of the genuine truth-seeker, and widen the view of the most patient philosopher. In a word, they have a very pregnant moral in them, and one not very difficult to seize if we look for it carefully.

And when we speak of extinct controversies, we do not refer to such obsolete disputes as, for instance, the celebrated discussion of the genuineness of the Epistles of Phalaris between Boyle and Bentley. Such a controversy may be memorable, as Hallam says, for having been the first great literary war that has been waged in England. But, in this instance, the in-

terest is purely literary and antiquarian, and springs from the spectacle of a number of sprightly dunces on one side attacking, amid loud applause, a consummate scholar on the other, who was as sharp and as witty as any of them. No fertile principle was involved, no novel and fruitful truth was at stake which places the quarrel on the great highway of human progress, and makes us feel its importance now. We have in view those memorable discussions which, whether in science or politics or morals, are manifest links in the mental history of the race, and could not have been spared if the chain was to reach down to the point at which we see it—discussions at the same time which have become so entirely obsolete, in which the victory has been so complete on one side, that we are sometimes in danger of forgetting that there ever was a battle.

When we open an old work on some subject of extinct controversy, one of the first things that strikes us is that we can rarely or never entirely agree with it, on whichever side it may be. The author may have been one of the champions of what we now consider the right cause; we may have the strongest sympathy with his general drift; we may see quite plainly that he had got hold of a corner of the truth, and that his opponents are predestined to utter defeat; yet for all that, when we come to examine his arguments, to see the nonsense he takes for undoubted truth, and the futile replies which he makes to objections more futile still, we find it impossible to agree with half he says. Very often we may find him passing entirely over, or else very hastily dwelling on, the strong points of his case, while he employs pages and exerts all his powers to demolish some absurd system which he imagines to stand in his way, though to us it seems marvellous how it could detain him for a moment. Then we find him posed and brought to a painful standstill by an objection which to us is no objection at all, which we can see to be either irrelevant or not founded in fact, and not worth attending to. But it is evidently a very grave and disagreeable business to our author, who nevertheless does not deny or scorn it, but proves by a long chain of reasoning, the force of which is hard to see, that it can be reconciled with his theory, though it is clear that, if the objection were valid instead of being futile, it is downright fatal to it. And even when he gets fairly on the right track, and is combating for a principle of undoubted truth, his reasoning has often a strange obsolescence about it. He is satisfied with arguments which we feel glad are not the only ones; he draws analogies which will not bear inspection; in a word, as was to be expected, he had in view his own contemporaries and special opponents for whom he wrote, and not for us.

And this decay in the force of argument and proof is met with in quarters where, on first thought, we should be least disposed to expect it—such as in purely scientific treatises; and it is perhaps as striking in these as in any concerned with morals, politics, or religion. To support this assertion there is no need to have recourse to the preposterous fancies which have often, in the earlier period of scientific investigation, misled the minds of really great men—as, for instance, the marvellous notions which occupied the great intellect of Kepler, one of the best known of which was that the earth is an animal, that it perceives and dreads the approach of comets, and positively sweats with fear. Leaving such hallucinations, which might fairly be set down to individual peculiarity, and confining ourselves to the broad field of controversy, as it appeared, for instance, during the great battle between the followers of Copernicus and of Ptolemy, we shall find plenty to support the above view. Among the objections which were made to the Copernican theory, this was one—"that the planet Venus in the course of her revolution did not display the same succession of phases which the moon did in the course of a month. The author of that theory"—we quote from Dr. Whewell—"had endeavored to account for this by supposing that the rays of the sun passed freely through the body of the planet." Now this is just the sort of untenable reasoning on both sides to which we have called attention. The anti-Copernicans argued:—If Venus travelled round the sun, why does she not manifest a series of phases varying from the thinnest crescent up to a full moon? As these phases are not to be seen, it is clear she does not travel round the sun.—Q. E. D. And Copernicus and his immediate followers were fairly posed till Galileo's telescope revealed the very phases which had been denied because imperceptible to the naked eye. Again, it was argued that the world could not revolve on its axis, inasmuch as a stone dropped from a high tower falls at the foot of the tower, whereas if the earth revolved as rapidly as was contended, the stone must be left behind to the west of the place from which it fell, just as a heavy body let fall from a masthead of a ship in motion falls, not at the foot of the mast, but towards the stern of the vessel. This argument was the source of great trouble to the Copernicans. They even admitted the fallacious analogy, or rather the complete misstatement, of things dropping from the masthead "towards the stern" of a moving ship; and a considerable time elapsed before any one even thought of making the experiment, and finding where they did drop, which, as everybody now knows, is at the foot of the mast in the one case, as it is at the base of the tower in the other. This is quite a model of the specious but worthless

objections which are sure, sooner or later, to be brought against new discoveries. If the Copernicans had had the grasp of their case which they afterwards acquired, of course such an objection would not have detained them for a moment. But no men, whatever their genius, or whatever the excellence of their cause, can realize and present its strong points all at once.

(To be concluded.)

EXTRACT FROM ELIAS HICKS' JOURNAL.

At Pearl Street Meeting, New York, my mind, soon after taking my seat, was brought under a renewed exercise, on account of the members of our Society mixing in with the associations of other people, in their governments and politics, their bible and missionary societies, and pretended charity associations, which had a very hurtful tendency, by leavening the minds of Friends, and leading them to assimilate with the spirit of the world, and turning them away from the simplicity of our profession, thereby neglecting to support our Christian testimonies, as it regards plainness of speech, deportment, and apparel. Such conduct is particularly wounding to some of the beloved brethren, and especially some who were sometimes active in our meetings for discipline, join with such associations, it leads them into a free familiarity and friendship with such as are light and vain in their conversation and deportment, by which their tender minds are greatly wounded; and they led off from the cross, and a strict regard to that sobriety of conduct which truth requires of all its professors. I was led to communicate largely on those subjects, in a close-searching testimony; and the Lord's power was felt to prevail, and the meeting generally brought under a solemn covering.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, SEVENTH MONTH 7, 1866.

CO-OPERATION OF FRIENDS WITH OTHERS.

—A communication sent by a Friend for publication, on the subject of members of our Society "mixing in with the associations of other people," will be found in the present number. While there may have been occasion for the exercise at the time it was delivered, we are not prepared to counsel our members indiscriminately to refrain from co-operation with others for objects promotive of good, but believe it is more our province to encourage them individually to "mind the Light," which, if heeded, will bring them into the simplicity of our profession, and enable them to maintain our Christian tes-

timonies in every situation in life in which they can possibly be placed.

We think that many of our members are conscientiously filling posts of usefulness in the different charitable associations with which they are connected; and while ministering to the comfort of the indigent and suffering, or endeavoring to promote the cause of truth and righteousness in the earth, they do not necessarily compromise any of our righteous testimonies. On the contrary, we believe, that as Managers of Hospitals, Penitentiaries, Houses of Refuge, Soup Houses, and Homes for the Destitute, as Directors of Public Schools and Public Libraries, and various other benevolent and literary institutions, their influence is exerted to the advantage of the community at large.

"I pray not," said Jesus, "that thou shouldst take them out of the world, but that thou shouldst keep them from the evil;" and this is our desire for that portion of his followers known as Friends.

"When the Son of man shall come in his glory," we believe approval or condemnation will not be in accordance with whether we have or have not kept within the bounds of sect, but whether obedience has kept pace with knowledge, and whether we have been faithful and wise stewards over the time, the talents and the means entrusted to us.

No position is exempt from temptation, and under all circumstances the watch has momentarily to be maintained. Co-operation with others not of our fold, may involve the necessity for a closer watch over our motives and actions, and a greater care to live near the principle of Divine truth, that we bring no reproach upon our holy profession. If any Friend feels that advice or caution on this account is needed in individual cases, we would recommend faithful, honest, private labor; and we believe that when such duty comes clearly before the mind with the force of a concern, if performed in love, it will be rightly received; but general advice given with a vague idea that some one may be benefited thereby, is seldom understood or appreciated, and often does more harm than good.

We are requested to state that Friends wishing to enter their children at Friends' Central School, Philadelphia, for the Fall Term, should

make early application, as there are but few vacancies.

DIED, at her residence in New York City, on the 22d of Sixth month, 1866, ELIZABETH LEEDOM, in the 87th year of her age; a Minister of New York Monthly Meeting.

For Friends' Intelligencer.

A SHORT TRIP TO HAMMONTON, N. J.

BY I. HICKS.

It is a source of pleasure to the lover of nature to witness the beautiful adaptation of means for the supply of our necessities and comforts, laid up in long past ages by an Omniscient Being for the requirements of man. The unprecedented growth of our country taxes our industry and resources, and requires an ever-increasing supply. The questions of how and where are our supplies of fuel and the production of light to come from, have been satisfactorily settled, at least for this generation; but where and how are we to obtain daily food to meet all the requirements of an increasing population, is still an object of pressing interest. New York, Philadelphia, Boston, and other cities, require early vegetables and fruits, not in such scanty supplies as come from Norfolk and the Bermuda Islands, but in plenty and at less cost. We believe the sandy barrens (as they are incorrectly called) of Southern New Jersey are destined to settle that problem. Between three hundred thousand and four hundred thousand acres lie spread out in one sandy and level tract, extending from Delaware Bay to the Atlantic, and from Cape May to and across the Camden and Amboy Railroad. Settlements along the ocean and bays had been made, but the interior, excepting an occasional spot where an iron foundry or some other manufacturing establishment was erected, until seven or eight years ago was an extended wilderness. Lightly covered by drifting sand, left by the retiring ocean when our coast line was last submerged, no wonder that the tide of emigration swept onward to the more inviting West, with its fertile soil.

At our first entrance on this tract, two weeks since, as we passed on the Delaware and Raritan Bay Railroad to Hammonton, it presented a forlorn, desolate look. A fire had swept through some portions, leaving the small, blackened pine trees and oaks as monuments of desolation, and we were ready to conclude that it might still be the home of the semi-barbarous woodchopper; that innumerable rabbits might enjoy their gambols, and nibble the buds and bark without molestation; lily pads and the turkey beard grow in the swamps, and the

whortleberry; and the most beautiful Laurel *Angustifolia* and the *Andromeda Marianna* bloom unseen in the forest shades for centuries to come. Presently our train stopped at Manchester, 57 miles from New York; a special one, detailed for the accommodation of the members of the Farmers' Club of the American Institute on a trip to Hammonton, to attend a festival of their Agricultural Society, and witness the improvements made in the seven years of its growth. We learned that nearly all of this vast tract of over three hundred thousand acres had within seven years been purchased of its original unappreciative owners, by men of capital and energy, in tracts of from forty thousand down to five thousand acres, and they were fast developing its resources. Some companies were opening communications, erecting buildings, and by continued and extensive advertising, as at Vineland, selling out their lands very fast to enterprising settlers. The tract of Manchester, owned by one of the best known and influential banking houses in New York, and comprising twenty-five thousand acres, was but recently commenced. Already were there numerous new cottages, stores, hotels, &c., erected, to sell or rent in the borders of the young forest. But to us the object of interest was the cranberry meadow. It was the first we had seen, and to a casual observer it seemed like folly—a waste of money and labor—to spend from \$200 to \$500 per acre in clearing a swamp and putting it in good order. As we stood on the embankment looking over the white sand that overspread the black leaf mould, called by them muck, and saw little insignificant plants two years old, planted in straight rows about eighteen inches apart, we could not see where the returns for this great outlay were to be. Any one who has read about cranberry culture is aware that a successful field yields more profit than any other fruit that is grown, and that an acre of cranberries has been known to sell for \$1000 dollars. They sold at \$12 and more per barrel last year, and are picked by women and children at 50 cts. per bushel. A necessary requisite is to have a running stream, so that the fields can be flooded when necessary, so as to protect the plants, kill injurious insects, and destroy all grasses and weeds. Those who cultivate them first dig ditches around the field, so as to carry off the surface water, and enable them to work more readily, and also make an embankment to keep the water on the field when they wish it. The draining being attended to properly, they proceed to clear off the track by removing all trees, roots and bushes, and making it a perfect level, so that the water, when let on, may overflow every portion alike. Then they cover it with three inches of sand, and proceed to plant the cranberries. They can easily procure the wild

ones in the swamps, and they are transplanted without risk. A small sod will in three or four years cover a space of two feet, and then every stray spear of grass and weed is crowded out as the plant strikes root from the young shoots that lie on the ground like ivy and myrtle. We may here remark that cranberry culture is destined to be one of the leading features of this long-neglected country. Frequent streams rise in the interior of the State, and flow with a steady current to the sea, giving water privileges to the future industry of the inhabitants, and often passing through or forming swamps and low places a few miles from the shores of the ocean. Large tracts of these low grounds have been recently brought under cultivation, and much more soon will be by persevering capitalists; and doubtless cranberries, once deemed a luxury seen on the tables of the few, will, like blackberries, be a common fruit. After enjoying the hospitality of the company, we left Manchester and its cranberry fields, and arrived at Hammonton, a village, or rather settlement, begun about eight years ago, and now containing four thousand inhabitants. It was the time of their strawberry show, and seldom have we attended a fair, or collection of people in any place of over two hundred persons, where the inevitable cigar or pipe was not seen. Spirituous liquors are not sold there, and, like the inhabitants of New England, they have built school houses and churches the first thing. We were told they had already erected four school-houses, and two more were in course of erection. Three church spires were in sight, and a hall for scientific and other useful pursuits was there. We found berries and sweet potatoes, at present their most profitable crops, yielding a quicker return for the cost than any other crop. Their strawberry crop, as was the case in many other places, was much inferior to last year, being killed by the unusual cold weather of the winter. It was a novel sight to see strawberries growing in straight rows in the sand, many of them looking very thrifty and clear of weeds. Indeed weeds and but few troublesome insects have found their way there yet. They plant in hills, keeping off the runners, and like the Wilson's best; few others are planted. We thought they were not as acid as those we were accustomed to, the warm sand perhaps improving their flavor. They keep off the runners, and from the absence of weeds and grass, and the mellow state of the soil, they can be cultivated with much less labor than with us. We being well acquainted with the barren nature of the sandy soils of Long Island, were curious to discover why such crops could be grown here, and the first thing to observe was, what was the composition of the soil. The sand only covered the surface, and a few inches beneath, clay was intermixed, in such proportions as to

adhere when it was pressed like a handful of damp snow; and we found that in digging wells, there was no need of planking, as with us, and a concrete of water-lime formed a substitute for bricks and stones when plastered on the sides. And when we saw pear trees, grape vines, rose bushes, &c., growing with greater luxuriance than with us with the best of care, upon soil thrown out of the cellars, there was proof of its containing the elements of fertility. It was no less surprising to find grape vines and dwarf pears, which we do not consider succeed well on sandy soil, growing finely. The bark of the pear and apple trees, was of that fresh olive color, clear of lichens and other fungi, which deform their appearance where the soil is unsuitable.

Their blackberry plots were in full bloom, except the Dorchester, which was literally covered with young fruit. We saw many novel sights here. The farms lay open to the public, and scarce any fences were necessary, as cattle are not permitted to run loose, and pigs were kept in close confinement. Some had yards around their houses, and a few had gardens enclosed, but the country was so new that their yards and roadsides were seldom carpeted with green grass. It was pleasant to notice where we went that as soon as the house was finished, however small it might be, or however straitened the owner for means, trees and shrubs were planted, the climbing rose ran up the porch or against the sides, the honeysuckle had its trellis, a few grape vines and fruit trees were set out, and plinks and flowering plants grew around the door.

But the most surprising thing of all was the prices at which they were selling or asking for their little farms. "There," said our kind host, "is a piece of land I recently sold for \$300 an acre; and there is a lot, not quite an acre in extent, for which I offered \$400, as a site for a school-house, and was refused. Neither piece was yet entirely cleared of timber." "But why do you ask so much, and why will people give such prices? Here are thousands of acres around you, only three or four miles off, just as good." "Our society, the healthfulness of the country, and the bright prospects of the future," he replied, "are the reasons. More than one-half have removed here to renovate their own or their families' health, and they are generally benefited. I was from Maine, broken down and suffering from disease of the lungs; now I enjoy perfect health;" and the stalwart form and ruddy face plainly told that his words were true. Others confirmed the statement to the salubrity of the climate. They told us of large fields of wheat, rye and grass, raised there by the aid of marl or muck, rivalling in productiveness our best farming country; but most of the settlers can buy these products cheaper

than they can raise them. Early fruit and vegetables yield more profit. Sweet potatoes are extensively grown, as this is the soil they delight in. A handful of marl put in when the potato is planted is all the manure needed, and they yield from 150 to 200 bushels per acre. It would appear that the same Divine power that placed the coal fields and the mineral wealth of our country in positions where wanted, also foresaw that this country, apparently doomed to barrenness, would need the elements of fertility; and He swept the sea shells and fishes in strata over the ocean bed in long past eras, so that they could be easy of access, producing now the fertilizing marl. They were placed in position during the cretaceous period, although no chalk is found in this country. A layer of deposits from the sea, called green sand, named here marl, consists of nearly one-half sand, about one-fourth iron, from 4 to 10 per cent. of potash and soda, with a small quantity of phosphate of lime. It commences near Staten Island, and runs diagonally across the State to Delaware bay. How large a portion of this tract is underlaid with green sand we cannot tell, as the land slopes gradually from the centre towards the bay and the ocean. It comes near the surface on the edges of the layer, and can by a steam digging machine, in operation at Squankum, be loaded on a car or wagon ready to receive it at the rate of one and a half tons in one minute and five seconds. Squankum marl is considered the best, as it contains more of the animal remains of the fishes of that period; sharks' teeth, and other evidences of marine life, are often found in it. They use one hundred bushels of marl to the acre, and it costs on board the cars, eight cents per bushel. From numerous swamps that abound, muck, and no doubt peat, also is obtained. Muck can be carted at leisure times, especially in the winter; and we saw no reason why, with the industry and perseverance displayed by the new settlers, they could not keep their farms up to a high state of productiveness. From their near proximity to the best markets, and their easy access, —those near the railroads by that conveyance, and near the shore by boats,—that portion of New Jersey can and will be made the most valuable portion of the State. They will need different management from other portions of the country, no doubt. Their strawberry fields and vineyards may need mulching, to protect against severe droughts and frosts of winter, although they say they do not suffer from want of moisture in summer. Belts of timber and evergreen hedges may be necessary to protect from the strong winds blowing the light sand. It would seem that a new country was never settled under better auspices. The present landholders appear to understand their true interest, and use their large capital in develop-

ing its resources; building railroads before there was commerce or travel to warrant, opening roads for the new settlers at their own expense, and by uniting their interest with the new comers, both are benefited. We saw land that not many years ago was as white with sand as the soil of Hammonton, now of a rich brown color, made so, we were told, by the use of marl and deep ploughing. Marl will bring the clover, and clover ploughed under is a superior fertilizer for wheat and hay crops. This changed the color of the soil. The white surface sand mixed with decayed vegetation soon altered its hue and texture, and now this land in Monmouth county is worth over \$100 per acre for farming purposes. Although our stay was very short, yet we saw for ourselves, and believed that this portion of the State was nearly as represented. In the enthusiasm of new settlers, too large views and estimates are often made, but having some knowledge of raising fruits, trees, and the cultivation of a farm, we sincerely think that well directed industry here will succeed.

Westbury, L. I.

THE LESSON OF THE ROBIN.

The robin fills his little day
With song and sweetness as his part,
Unconscious that his tender lay
Shall solace any human heart.

He sings because he needs must sing,
Not out of duty, but delight;
And his instinctive offering
Is precious in his Maker's sight.

Dear God, who giv'st me larger place,
And larger hope, oh! give me, too,
In my appointed lot, the grace
My daily work with cheer to do.

Still loving all thou sendest me,
Who knowest that I am but dust,
Oh, make my life that tends to Thee
A happy song of hope and trust.

H. N. E.

SELECTED.

Take courage—'tis a little cloud,
That soon will pass away;
The hearts that now with grief are bowed
May only grieve to-day.
To-morrow up the azure height
The sun may dart his beam,
And then one joyous burst of light
O'er mount and vale shall stream,
The thwarted plans and baffled hopes
Become our only store,
And the crushed spirit barely copes
With ills unknown before.
Despond not—yet the tide will turn,
The gales propitious play;
Take courage—'tis a little cloud,
That soon will pass away.

The wise man is just, and fears God, hates covetousness, and eschews evil, and loves his neighbor as himself.—*Penn.*

From "Hours at Home."

"He shall gather the lambs with his arm." Isaiah xi. 11.

I was a straying sheep;
I wandered from my guide
Along the broad and flowery road,
My lambkin by my side.

A warning call I heard;
"Come back to me," it said;
I knew it was my shepherd's voice,
But turned away my head.

Among the giddy throng
I sported, far and wide,
By the green margin of the brook,
My lambkin by my side.

Dark clouds obscured the sky,—
I stood alone that day;
I knew it was my shepherd's hand
That took my lamb away.

He took it to his fold,—
My eyes with tears were dim;
Then through the darkness and the storm
I rose and followed him.

The steep and narrow way
With humble heart I took;
I knew it was the path he went,
The path that I forsook.

Yes! still I'll climb and pray,
Till this short life is o'er,
And strive to find my folded lamb,
And never wander more.

LYDIA H. SIGOURNEY.

From the Atlantic Monthly.

IN THE HEMLOCKS.

(Continued from page 255.)

My attention was soon arrested by a pair of Humming-Birds, the Ruby-Throated, disporting themselves in a low bush a few yards from me. The female takes shelter amid the branches, and squeaks exultingly as the male, circling above, dives down as if to dislodge her. Seeing me, he drops like a feather on a slender twig, and in a moment both are gone. Then, as if by a preconcerted signal, the throats are all atune. I lie on my back with eyes half-closed, and analyze the chorus of Warblers, Thrushes, Finches, and Flycatchers; while, soaring above all, a little withdrawn and alone, rises the divine soprano of the Hermit. That richly modulated warble proceeding from the top of yonder birch, and which unpractised ears would mistake for the voice of the Scarlet-Tanager, comes from that rare visitant, the Rose breasted Grosbeak. It is a strong, vivacious strain, a bright noonday song, full of health and assurance, indicating fine talents in the performer, but not genius. As I come up under the tree he casts his eye down at me, but continues his song. This bird is said to be quite common in the Northwest, but he is rare in the Eastern districts. His beak is disproportionately large and heavy, like a huge nose, which slightly mars his good looks; but Nature has made it up to him in a blush rose upon his breast, and the most delicate of pink linings

to the under side of his wings. His back is variegated black and white, and when flying low the white shows conspicuously. If he passed over your head, you would note the delicate flush under his wings.

That bit of bright scarlet on yonder dead hemlock, glowing like a live coal against the dark background, seeming almost too brilliant for the severe Northern climate, is his relative, the Scarlet Tanager. I occasionally meet him in the deep hemlocks, and know no stronger contrast in nature. I almost fear he will kindle the dry limb on which he alights. He is quite a solitary bird, and in this section seems to prefer the high, remote woods, even going quite to the mountain's top. Indeed, the event of my last visit to the mountain was meeting one of these brilliant creatures near the summit, in full song. The breeze carried the notes far and wide. He seemed to enjoy the elevation, and I imagined his song had more scope and freedom than usual. When he had flown far down the mountain-side, the breeze still brought me his finest notes. In plumage he is the most brilliant bird we have. The Bluebird is not entirely blue; nor will the Indigo bird bear a close inspection, nor the Goldfinch, nor the Summer Redbird. But the Tanager loses nothing by a near view; the deep scarlet of his body and the black of his wings and tail are quite perfect. This is his holiday suit; in the fall he becomes a dull green,—the color of the female the whole season.

One of the leading songsters in this choir of the old Barkpeeling is the Purple Finch or Linnet. He sits somewhat apart, usually on a dead hemlock, and warbles most exquisitely. He is one of our finest songsters, and stands at the head of the Finches, as the Hermit at the head of the Thrushes. His song approaches an ecstasy, and, with the exception of the Winter-Wren's, is the most rapid and copious strain to be heard in these woods. It is quite destitute of the trills and the liquid, silvery, bubbling notes that characterize the Wren's; but there runs through it a round, richly modulated whistle, very sweet and very pleasing. The call of the Robin is brought in at a certain point with marked effect, and, throughout, the variety is so great and the strain so rapid that the impression is as of two or three birds singing at the same time. He is not common here, and I only find him in these or similar woods. His color is peculiar, and looks as if it might have been imparted by dipping a brown bird in diluted pokeberry juice. Two or three more dippings would have made the purple complete. The female is the color of the Song-Sparrow, a little larger, with heavier beak, and tail much more forked.

In a little opening quite free from brush and trees I step down to bathe my hands in the

brook, when a small, light slate-colored bird flutters out of the bank, not three feet from my head, as I stoop down, and, as if severely lamed or injured, flutters through the grass and into the nearest bush. As I do not follow but remain near the nest, she chirps sharply, which brings the male, and I see it is a speckled Canada Warbler. I find no authority in the books for this bird to build upon the ground, yet here is the nest, made chiefly of dry grass, set in a slight excavation in the bank, not two feet from the water, and looking a little perilous to anything but ducklings or sandpipers. There are two young birds and one little speckled egg, just pipped. But how is this? what mystery is here? One nestling is much larger than the other, monopolizes most of the nest, and lifts its open mouth far above that of its companion, though obviously both are of the same age, not more than a day old. Ah! I see;—the old trick of the Cow-Bunting, with a stinging human significance. Taking the interloper by the nape of the neck, I deliberately drop it into the water, but not without a pang, as I see its naked form, convulsed with chills, float down the stream. Cruel! So is Nature cruel. I take one life to save two. In less than two days this pot-bellied intruder would have caused the death of the two rightful occupants of the nest; so I step in and divert things into their proper channel again.

It is a singular freak of nature, this instinct which prompts one bird to lay its eggs in the nests of others, and thus shirks the responsibility of rearing its own young. The Cow-Buntings always resort to this cunning trick; and when one reflects upon their numbers, it is evident that these little tragedies are quite frequent. In Europe the parallel case is that of the Cuckoo, and occasionally our own Cuckoo imposes upon a Robin or a Thrush in the same manner. The Cow-Bunting seems to have no conscience in the matter, and so far as I have observed invariably selects the nest of a bird smaller than itself. Its egg is usually the first to hatch; its young overreaches all the rest when food is brought; it grows with great rapidity, spreads and fills the nest, and the starved and crowded occupants soon perish when the parent bird removes their dead bodies, giving its whole energy and care to the foster-child.

The Warblers and smaller Flycatchers are generally the sufferers, though I sometimes see the Slate-colored Snowbird unconsciously duped in like manner; and the other day, in a tall tree in the woods, I discovered the Black-throated Green-backed Warbler devoting itself to this dusky, overgrown foundling. An old farmer to whom I pointed out the fact was much surprised that such things should happen in his woods without his knowledge.

From long observation it is my opinion that

the male Bunting selects the nest into which the egg is to be deposited, and exercises a sort of guardianship over it afterward, lingering in the vicinity, and uttering his peculiar liquid, glassy note from the tops of the tall trees.

The Speckled Canada is a very superior Warbler, having a lively, animated strain, reminding you of certain parts of the Canary's, though quite broken and incomplete; the bird the while hopping amid the branches with increased liveliness, and indulging in fine sibilant chirps, too happy to keep silent.

His manners are very marked. He has a habit of courtesying when he discovers you, which is very pretty. In form he is a very elegant bird, somewhat slender, his back of a bluish lead color, becoming nearly black on his crown; the under part of his body, from his throat down, is of a light delicate yellow with a belt of black dots across his breast. He has a very fine eye, surrounded by a light yellow ring.

The parent birds are much disturbed by my presence, and keep up a loud emphatic chirping, which attracts the attention of their sympathetic neighbors, and one after another they come to see what has happened. The Chestnut-Sided and the Blackburnian come in company. The Black and Yellow Warbler pauses a moment and hastens away; the Maryland Yellow-Throat peeps shyly from the lower bushes and utters his "Pip! pip!" in sympathy; the Wood-Pewee comes straight to the tree overhead, and the Red eyed Vireo lingers and lingers, eying me with a curious, innocent look, evidently much puzzled. But all disappear again, one after another, apparently without a word of condolence or encouragement to the distressed pair. I have often noticed among birds this show of sympathy,—if indeed it be sympathy, and not merely curiosity, or a feeling of doubt concerning their own safety.

An hour afterward I approach the place, find all still, and the mother bird upon the nest. As I draw near she seems to sit closer, her eyes growing large with an inexpressibly wild, beautiful look. She keeps her place till I am within two paces of her, when she flutters away as at first. In the brief interval the remaining egg has hatched, and the two little nestlings lift their heads without being jostled or overreached by any strange bedfellow. A week afterward and they are flown away,—so brief is the infancy of birds. And the wonder is that they escape, even for this short time, the skunks and minks and muskrats that abound here, and that have a decided partiality for such titbits.

(To be continued.)

Then shall we know, if we follow on to know the Lord; his going forth is prepared as the

mórning, and he shall come unto us as the rain ; as the latter and former rain unto the earth.—HOSEA, vi. 3.

From The Nation.

EVIDENCE OF A FORMER COLD CLIMATE IN EUROPE.

Oscar Schmidt has found in the neighborhood of Gratz, the capital of Styria, two hundred feet above the Mur, the ancient dwellings of the marmot, with the skeletons of four individuals. As the marmots inhabit only the regions bordering on the snow-line, this discovery leads back to the diluvial or drift period, when, by the extension of the glaciers, the upper Alpine animals and plants were kept down in lower levels than now, evidences of which have hitherto been found almost exclusively in Switzerland.

Among recent discoveries indicating the co-existence of man with animals now extinct, that of the musk-ox in France, by M. Lartet, is important. At the present time, this animal is only found in the arctic regions, does not descend below sixty degrees of north latitude, and ranges as high as seventy-five. The remains just referred to show that they existed at least fifteen degrees further south. Since their habitat is strictly arctic, their presence in France would seem to indicate a climate much colder formerly than now. Another discovery of far greater interest and significance comes to the support of this view. In 1864, M. Lartet, in company with the late Dr. Falconer, the eminent English naturalist, and Mr. Christy, visited the department of Dordogne, in the southwest of France, where there had been previously discovered pieces of the antlers of the deer with figures of animals rudely engraved upon them. During the stay of the naturalists just mentioned, there was found a broken plate of ivory, evidently formed from the tusk of a large elephant. When the fragments were fitted together, Dr. Falconer noticed that there was engraved upon the plate the figure of an elephant, the most remarkable feature of which was the indication that the animal was provided with long hair. No such elephant exists at the present time; but, as is well known, the celebrated mammoth, discovered in 1799 by Mr. Adams, imbedded in the ice near the mouth of the Lena, in Siberia, was provided with long coarse hair, portions of which may be seen in the museums of St. Petersburg and of the Garden of Plants, in Paris. The discovery of the engraved ivory at Dordogne, while alone it cannot be admitted as positive proof, yet, in connection with other observations, clearly points to the existence of the mammoth in France, and as a contemporary with man. For in the rude stone age to which the ivory must be referred, it is difficult to conceive of man's

having any other knowledge of the outward characters of animals than that which comes of personal observation.

In this connection it may be stated that the welcome news has been received and communicated in a letter from C. E. de Baer, of St. Petersburg, to the Academy of Sciences, in Paris, that another frozen mammoth has been found. It was first observed by a Samoeide in the neighborhood of the Bay of Tax, on the eastern arm of the Gulf of Obi. The Academy of Sciences in St. Petersburg has commissioned a distinguished naturalist, M. Schmidt, to make as complete a study as possible of these interesting remains, and of all the circumstances connected with their burial in the frozen earth where they now lie.

From the Evening Post.

THE DESTRUCTION OF THE FORESTS IN SPAIN.

In our last article we alluded to the effects upon agriculture in Spain produced by the destruction of her forests. Emerson, in his "Report upon the Trees and Shrubs of Massachusetts," says: "The dry sterility of some parts of Spain, anciently very fertile, is probably owing in a great degree to the improvident destruction of the forests and the absurd laws which discourage their renewal." Further he says: "There is little doubt, if the ancient forests of Spain could be restored to its hills, its ancient fertility would return. Now there is nothing to conduct electricity, nothing to arrest the clouds and make them pour their treasures upon the earth, no reservoirs to lay up the winter's rain in store against the droughts of summer. Forests equalize the temperature and soften the climate, protecting from the extremes of cold and heat, dryness and humidity." It will be remarked by our readers that, in giving our own conclusions upon the subjects we have been discussing in these articles, we have freely quoted from those writers whose authority is received and admitted by all. We have frequently heard the objection urged against some of our statements—(for instance, the one in which we recognise the fact that climate may undergo radical alterations from the labors of man)—that the idea is absurd that by anything we can do the seasons can be in the least affected. These objections are mainly urged by those who have it in their power to influence results,—that is, by the owners of the soil; and it is to the end that they may be convinced that we seek to fortify our conclusions by the authority of those whom all must respect.

"The cunning foresight of the Yankee," says Emerson, "seems to desert him when he takes the axe in hand." But we are persuaded that this is not the true state of the case; we only need information in order to act with the same prudence and wise precaution upon this

as upon other subjects which engage our attention, and for which we must be held responsible. Some one has said that "the Creator punishes ignorance more than any other crime." However this may be, we all very well know that we cannot escape the consequences of our acts under the plea of ignorance. The storm, wind and the tempest will just as surely destroy our crops, whether we cut down the guardian forests from the mere greed of present gain, or from any other motive.

"A garden surrounded by tall trees," says Emerson,—and he speaks from actual observation,—"admits the cultivation, even in our severe climate, of plants almost tropical." Humboldt tells us that Cortes, in his will, left sugar plantations near Cuyoacan, in the valley of Mexico, where now, owing to the cutting down of the trees, the cold is too great for sugar cane or any other tropical production to thrive. We have repeatedly spoken of similar results witnessed at Nahant, where the wind never rests, or, as say the inhabitants, "there is a continual gale of wind." Where this ever-flowing aerial tide is lifted above the soil by the tall trees and high fences, "plants almost tropical" grow and perfect their fruit, but in those cases where it is exposed to the full sweep of the tempest, scarcely a poor blade of grass can maintain a foothold; the very soil, even, is swept in some spots from the rocks and earth beneath. Of course, as we shall at once infer, what soil there is left in these exposed situations at Nahant is subject to extreme drought, while where the land is protected by trees and fences the contrary is the fact; indeed, during the seven years we resided there, we do not recollect a single instance in which vegetation suffered materially from drought inside of these protected gardens. And this fact is of so much importance in this connection that we shall do well to dwell somewhat more upon it.

High fences are not in any manner as good conservers of moisture and heat as belts of trees, and yet, as we shall see in this case, they serve their purpose well. The land at Nahant thus protected consists of from twelve to twenty acres, lying in three distinct plots, situated at some distance from each other. These plots are surrounded by fences from twelve to twenty feet in height, consisting mainly of slats two or three inches wide placed one or two inches from each other. A portion of these fences were in the first place made double, but this was found by after experience to be unnecessary, as, indeed, the single fences become every year more so as it regards the primary object for which they were at first erected, as the belts of trees designed to take their places increase in size. It was thought to be of importance that these fences should not be made entirely close, as this, it was supposed, would cause the contained air

to be operated upon in a mass by the current above, instead of being broken as into spray, in accordance with the effect produced by belts of trees. Thus it was by the foresight and generous perseverance of one man that Nahant, which scarce fifty years since was the very type of bleak and barren desolation, scarcely a single tree to be seen,

"Or flower or leaf of green,"

where only the hardy fisherman could endure the climate save for a brief season in summer, has, in this short space of time, become so changed that there is no spot in all New England so far north that is more productive, or that yields better returns for the labor bestowed upon it.

And even the winters, which are supposed by those who do not trouble themselves to examine the matter to be so very severe, we found by actual experience during our residence there to be a good deal warmer and more equable in temperature than the neighboring inland towns. During seven years we had but two or three drifting snows, and these we should have laughed at in our earlier years while residing in the country, so comparatively slight were they. Another important fact in regard to Nahant should be mentioned. We have it from Mr. Tudor, as well as others of the oldest and permanent residents: That is, that since the trees have grown there has not been half the trouble from the failure of well and springs as formerly. In our own experience, residing on the south side of the peninsula, we had no failure of pure fresh water from a well not over nine feet in depth.

However this may be in regard to so small a place as Nahant, there cannot be the least doubt that the widespread destruction of our forests is the main cause of the failure of our springs and streams, and the frequent droughts to which we now are subject.

Philada., 6th mo. 29, 1866.

ITEMS.

Professor Agassiz is reported to be delivering a course of lectures before the Imperial family and the Brazilian magnates, respecting his discoveries in his recent tour up the valley of the Amazon. He has won very high commendation from his royal auditors, who, till the visit of the distinguished American, were said

to be entirely ignorant of the treasures of their great river. The researches of Prof. Agassiz will have a wider value than were at first anticipated, if they have the effect of making the great Southern Continent better known to the world, and of bringing the United States into a closer intercourse with the most productive country on this side of the ocean.

CONGRESS.—In the Senate the House bill amendatory of the act organizing Washington Territory was taken up and passed. The bill to amend and continue in force the Freedmen's Bureau was taken up, and after some opposition was passed. It now goes back to the House for concurrence in the amendments. A bill was introduced to establish certain ocean post-routes between the United States and Europe, and to regulate the transportation of mails thereof, and reduce the expenses. Referred to the Committee on Post Offices and Post Roads. A bill to repeal an act to retrocede Alexandria to the State of Virginia, was reported from the Committee on the District of Columbia. The object of this bill is to annex Alexandria to the District. The Senate concurred in the House amendments to the bill to regulate the transportation of nitro-glycerine. The amendments were merely verbal. The Judiciary Committee were instructed to inquire into the expediency of providing for a reorganization of the civil service, particularly the Post Office, Treasury and Interior Departments, providing for boards of examination for applicants for position, and assimilating their government more nearly with the regulations of the army and navy. The National Telegraph bill was called up, and, after considerable discussion, was passed.

HOUSE.—The Post-Office Committee was instructed to inquire and report what further investigation may be necessary to prevent abuses and frauds in the franking privilege. Among the bills introduced the following were passed: The Senate bill regulating the transportation of nitro-glycerine. A bill authorizing the issue of registers to certain vessels. The Senate bill for the prevention of smuggling. A bill extending the privilege of the Government Lunatic Asylum to civilians in military employment. The Senate amendments to the Freedmen's Bureau bill were read, but not concurred in, and a committee of conference was ordered.

INDIAN TREATIES.—The Senate has recently ratified treaties with the following tribes of Indians, viz: the Nez-Perces of Idaho; Shoshones of Ruby valley, N. T.; the Great and little Osages in Kansas, and the Choctaws and Chickasaws of the Indian territory west of Arkansas. It is probable that other important treaties will be submitted to that body within a few days for ratification.

THE FREEDMEN.—Gen. Scott, assistant commissioner for South Carolina, contradicts the charges of Gens. Steadman and Fullerton against Chaplain French and Lieut. Lott. He denies that these officers are running plantations, or have anything to do with planting, directly or indirectly.

Superintendent Tomlinson reports 75 schools in South Carolina, with 9,017 pupils, and an average attendance of 8,574. There are 148 teachers, of whom 58 are natives and fifty colored. One other school, from which there were no returns, would swell the number of pupils to 10,000. The interest of the colored people in the schools continues unabated, and that of the white people is growing; yet there are some places where it is said no school could be established nor tolerated after the garrison has been withdrawn. A very successful public examination of the colored school held in the Normal School building took place in Charleston, Fifth month 30th.

Virginia counts 225 teachers of colored schools and 17,589 pupils, whose average attendance is 12,930. In Florida there have been several cases lately of violence done to teachers. The colored people of Helena, Arkansas, have voted to ask General Sprague to tax them for the support of their schools. Several colored schools have recently been opened in Raleigh, North Carolina, by "colored teachers who are competent, and who were born and raised among us," to use the language of the Raleigh *Sentinel*, which is opposed to Northern "school-marks," as it chooses to call them.—*The Nation*.

The Fisk Free School, at Nashville, for colored children, closed its first term on the 15th instant. A large number of citizens crowded the chapel to witness the examination. Nearly one thousand pupils are taught in this school, by fifteen excellent teachers.

LESSONS ON OUR COMMON SONG BIRDS.—Tickets for a course of Eight Lessons, \$3.00 each. Liberal reduction to Schools and Classes of over fifty persons.

*A Memoir of Yonge Street Monthly Meeting,
(Canada West,) concerning our deceased
friend JOHN WATSON.*

The subject of this Memoir was born at
Deptford, near London, England, on the 8th
of First month, 1779, of respectable parents,
who were members of the Episcopal Society,
and early sought to imbue his mind with re-
ligious truths, as taught by their Society.
This teaching, no doubt, laid the foundation for
that religious walk his after life manifested.

In his advancement from youth to the state
of manhood, he passed through the various
vicissitudes incidental to youth, which often
led him from the path of rectitude, to indulge in
the gratification of his passions, almost without
limitation; but in this state he was not left
entirely to himself, for he was followed from
time to time so closely, that he would oft re-
pent, and as oft would sin again. During this
season of wandering, a fond mother often plead
with him, oft counseled him, and although her
labors seemed to produce no immediate effect,
they proved like bread cast upon the waters,
found after many days.

After the death of his father, he concluded
to migrate to America, and arrived in Phila-
delphia in Seventh month, 1802. Shortly after,
he removed to a new settlement in the western
part of Pennsylvania. He was hitherto entirely
unacquainted with the Society of Friends and
their principles; but not long after settling
here, he fell in with some Friends, who were

travelling in the ministry; and after attending
some of their meetings, and mingling with them,
he became seriously impressed, and desirous to
know more of them; and as there were some
families of Friends settled near him, he became
induced to make inquiries concerning them.
He says, "after I had read 'Penn's No Cross,
No Crown,' and 'Phipps on the State of Man,'
and meditated thereon, I found a Christ revealed
in me the only hope of glory; and I then re-
cognized that the Lord had been with me, and
I knew it not." Continuing to hold commu-
nion with this Spirit, in which he recognized
his Lord, he was led along in various ways, into
a more intimate acquaintance with the princi-
ples and practices of Friends, till at length it
seemed to be right for him to unite in mem-
bership with them; and he was accordingly received
about the year 1804, and was afterwards, in
accordance with the order of Friends, united in
marriage with ANN EVES, of Fishing Creek,
Pennsylvania, on the 25th of Ninth month,
1806, who proved a true helpmate to him.

After his marriage, having embarked largely
in business, several severe reverses occurred
which reduced him in temporal circumstances,
and closely tried his spiritual strength; yet, as
he was thus deeply humbled, he was enabled to
adopt the language to his Heavenly Father,
"Do with me as thou pleasest; I am the clay;
Thou, O Lord, art the potter; make of me what
thou wilt."

In these days of humiliation, it was given

him to see that if he was faithful, he should have to declare to others of the Lord's goodness, and of His dealings with him. Though he felt deeply his own unworthiness, it was also given him to see that he must not call that common or unclean which the Lord hath cleansed. Although not always faithful and obedient, when he felt a word to offer in the assemblies of the people, when he did yield, he was favored with the reward of peace.

In the year 1827, with the approbation of his friends, he removed to Canada, and settled within the verge of Yonge Street Monthly Meeting, where he continued to reside the remainder of his life.

He still felt it was at times his duty to bear his testimony in religious meetings, and Friends having unity therewith, acknowledged his ministry in 1834. Though not lengthy, his communications were always pertinent, solid and lively, carrying with them the evidence that they emanated from the true Fountain. His travels in this work were not very extensive; yet he made several religious visits from home, from all of which, it appears, he returned bringing with him the reward of peace.

He was ever found diligent in the attendance of his religious meetings, when health permitted; and his solid deportment therein, evidenced that his mind was drawn to the Master, and was drinking at the Fountain the pure waters of life.

His amiability of disposition, and gentleness of manner, as evinced particularly in the latter part of his life, endeared him to a large circle of friends, both old and young.

It was his lot to meet many trials and severe bereavements, in the removal, by death, of a loved companion, with whom he had lived in unity nearly forty years; and of affectionate children, some of whom were taken away under trying circumstances, which led him to adopt the language, "Not my will, O Lord, but Thine be done;" and thus to meekly and humbly bow before the strokes, feeling them all to be in wisdom.

In the year 1848, he was united in marriage with MARY H. BROWNLOW, with whom he lived in harmony and affection the remainder of his life. Their spiritual exercises harmonizing, they made several religious visits together, in which their labors were satisfactory to those among whom they mingled, and brought the sweet reward of peace to their minds.

While the infirmities of age enfeebled his physical powers, the mental were preserved in freshness. Thus did his sun descend the western horizon, marked with the same patient resignation which had so long been a characteristic of his life.

He last attended meeting on First-day, the 1st of First month, 1865, where he was favored

in communication; and after returning from meeting, he was taken very ill, and soon it became evident that it would prove to be his last sickness. On Second-day, a relative coming in to see him, he remarked, that all had been done for him that could be done; all that remained for him was to be patient, and that he was going home. During his intervals of release from suffering, he would express that his heart was filled with love, not only to those around him, but to the whole world. At times, speaking to his kindred, he would exhort them to attend to the inshinings of the Light of Truth in their own souls. On Fifth-day evening, he was favored with a spell of apparent ease, during which his mind appeared to be absorbed in meditating on the never ending glories of the celestial state that was opening before him; and when he aroused, he exclaimed, "Oh the beauty, the glory of that heavenly sight! I would not have missed seeing it for a world!" On Sixth-day evening, after having suffered very much through the day, he remarked to his wife, "What shall I do? It is so trying." But, in a few seconds, added, "Oh how I pity those who put their trust in fine gold; what will it do for them in an hour like this!"

Then, becoming more calm, he appeared to be wrapt in solemn meditation, and then remarked, "It is finished!" no doubt alluding to his earthly work; and in about an hour said, "I feel the the world to be receding from me;" and soon added, "I feel my faculties are going."

He continued sensible of all about him until 2 o'clock on Seventh-day, when he apparently became unconscious of any suffering, and continued to breathe shorter and shorter, until 7 o'clock in the evening, when all became still in death, having reached the advanced age of eighty-six years.

After a solemn meeting, his remains were followed to the grave in the Friends' burying ground, by a large concourse of friends and relatives, on Third-day, the 10th of First month, 1865.

By direction of Yonge Street Monthly Meeting of Friends, held at King, 14th of Ninth month, 1865,

JOHN D. PHILLIPS, }
MARY E. STEVENS, } Clerks.

I confess that increasing years bring with them an increasing respect for men who do not succeed in life, as those words are commonly used. Heaven is said to be a place for those who have not succeeded on earth; and it is sure that celestial grace does not thrive and bloom in the hot blaze of worldly prosperity. Ill success sometimes arises from a superabundance of qualities in themselves good—from conscience too sensitive, a taste too fastidious,

a self-forgetfulness too romantic, and modesty too retiring. I will not go so far as to say, with a living poet, that "the world knows nothing of its men;" but there are forms of greatness, or at least excellence, which "die and make no sign;" there are martyrs that miss the palm but not the stake; heroes without the laurel, and conquerors without the triumph.

DIVERSITY IN UNITY.

Men have formed to themselves two ideas of unity: the first is a sameness of form—of expression; the second an identity of spirit. Some of the best of mankind have fondly hoped to realize a unity for the Church of Christ, which should be manifested by uniform expression in every thing; their imaginations have loved to paint, as the ideal of a Christian Church, a state in which the same liturgy should be used throughout the world, the same ecclesiastical government, even the same vestments, the same canonical hours, the same form of architecture. They could conceive nothing more entirely one than a Church, so constituted that the same prayers, in the very same expressions, at the very same moment, should be ascending to the Eternal Ear. There are others who have thrown aside entirely this idea as chimerical; who have not only ceased to hope it, but even to wish it; who, if it could be realized, would consider it a matter of regret; who feel that the minds of men are various—their modes and habits of thought, their original capacities and acquired associations, infinitely diverse; and who, perceiving that the law of universal system is manifoldness in unity, have ceased to expect any other oneness for the Church of Christ than that of a sameness of spirit, showing itself through diversities of gifts. Among these last was the Apostle Paul: his large and glorious mind rejoiced in the contemplation of the countless manifestations of spiritual nature, beneath which he detected one and the same pervading Mind. Now, let us look at this matter somewhat more closely.

All real unity is manifold. Feelings in themselves identical find countless forms of expression: for instance, sorrow is the same feeling throughout the human race; but the Oriental prostrates himself upon the ground, throws dust upon his head, tears his garments, is not ashamed to break out into the most violent lamentations. In the North, we rule our grief in public; suffer not even a quiver to be seen upon the lip, or brow, and consider calmness as the appropriate expression of manly grief. Nay, two sisters of different temperament will show their grief diversely. One will love to dwell upon the theme of the qualities of the departed; the other feels it a sacred sorrow, on which the lips are sealed forever; yet

would it not be idle to ask which of them has the truest affection? Are they not both in their own way true? In the same East, men take off their sandals in devotion; we exactly reverse the procedure and uncover the head. The Oriental prostrates himself in the dust before his sovereign; even before his God the Briton only kneels; yet would it not again be idle to ask which is the essential and proper form of reverence? Is not true reverence in all cases modified by the individualities of temperament and education? Should we not say, in all these forms worketh one and the same spirit of reverence? Again, in the world as God has made it, one law shows itself under diverse, even opposite manifestations; lead sinks in water, wood floats upon the surface. In former times men assigned these different results to different forces, laws, and gods. A knowledge of nature has demonstrated that they are expressions of one and the same law; and the great difference between the educated and the uneducated man is this: the uneducated sees in this world nothing but an infinite collection of unconnected facts,—a broken, distorted, and fragmentary system, which his mind can by no means reduce to order. The educated man, in proportion to his education, sees the number of laws diminished; beholds, in the manifold appearances of nature, the expression of a few laws, by degrees fewer, till at last it becomes possible to his conception that they are all reducible to one, and that that which lies beneath the innumerable phenomena of nature is the one Spirit,—God.

All living unity is spiritual, not formal; not sameness, but manifoldness. You may have a unity shown in identity of form, but it is a lifeless unity. There is a sameness on the sea-beach,—that unity which the ocean waves have produced by curling and forcibly destroying the angularities of individual form, so that every stone presents the same monotony of aspect, and you must fracture each again in order to distinguish whether you hold in your hand a mass of flint or fragment of basalt. There is no life in unity such as this. But, as soon as you arrive at a unity that is living, the form becomes more complex, and you search in vain for uniformity. In the parts, it must be found, if found at all, in the sameness of the pervading life. The illustration given by the apostle is that of the human body,—a higher unity, he says, by being composed of many members, than if every member were but a repetition of a single type. It is conceivable that God might have moulded such a form for human life; it is conceivable that every cause, instead of producing in different nerves a variety of sensations, should have affected every one in a mode precisely similar; that instead of producing a sensation of sound, a sensation of color, a sen-

sation of taste, the outward causes of nature, be they what they may, should have given but one unvaried feeling to every sense; and that the whole universe should have been light or sound. That would have been unity if sameness be unity; but, says the apostle, if the whole body were seeing, where were the hearing? That uniformity would have been irreparable loss,—the loss of every part that was merged into the one. What is the body's unity? Is it not this? The unity of a living consciousness which marvellously animates every separate atom of the frame, and reduces each to the performance of a function fitted to the welfare of the whole,—its own, not another's; so that the inner spirit can say of the remotest and in form most unlike member, "That too, is myself."

None but a spiritual unity can preserve the rights both of the individual and the Church. All other systems of unity, except the apostolic, either sacrifice the Church to the individual, or the individual to the Church.

Some have claimed the right of private judgment in such a way that every individual opinion becomes truth, and every utterance of private conscience right; thus the Church is sacrificed to the individual, and the universal conscience, the common faith, becomes as nothing; the spirits of the prophets are not subject to the prophets. Again, there are others, who would surrender the conscience of each man to the conscience of the Church, and coerce the particulars of faith into exact coincidence with a formal creed. Spiritual unity saves the right of both in God's system. The Church exists for the individual just as truly as the individual for the Church. The Church is then most perfect when all its powers converge, and are concentrated on the formation and protection of individual character; and the individual is then most complete—that is, most a Christian—when he has practically learned that his life is not his own, but owed to others,—“that no man liveth to himself, and no man dieth to himself.” Now, spiritual unity respects the sanctity of the individual conscience. How reverently the apostle Paul considered its claims, and how tenderly! When once it became a matter of conscience, this was his principle laid down in matters of dispute: “Let every man be fully persuaded in his own mind.” The belief of the whole world cannot make a thing right to me, if I in my heart believe it wrong. You may coerce the conscience, you may control men's belief, and you may produce a unity by so doing; but it is the unity of pebbles on the sea-shore,—a lifeless identity of outward form, with no cohesion between the parts,—a dead sea-beach, on which nothing grows, and where the very sea-weed dies.

Out of eight hundred millions of the human race, a few features diversify themselves into so

many forms of countenance, that scarcely two could be mistaken for each other.

There are no two leaves on the same tree alike, nor two sides of the same leaf, unless you cut and kill it. There is a sacredness in individuality of character; each one born into this world, is a fresh, new soul, intended by his Maker to develop himself in a new, fresh way. We are what we are; we cannot be truly other than ourselves. We reach perfection not by copying, much less by aiming at originality; but by consistently and steadily working out the life which is common to us all, according to the character which God has given us.

And thus will the Church of God be one at last,—will present a unity like that of heaven. There is one universe in which each separate star differs from another in glory; one church in which a single Spirit, the life of God, pervades each separate soul; and just in proportion as that life becomes exalted, does it enable every one to shine forth in the distinctness of his own separate individuality, like the stars of heaven.

F. W. ROBERTSON.

“*They shall know Me.*”—To know God indeed, is to have such a knowledge of His glorious goodness as shall fill us with holy *delight* in Him, intense desire after communion with Him, and enjoyment of His favor. Farther, it is so to behold His glory, as to be ourselves *transformed* into the same image of holiness and goodness; to be ourselves “partakers of the divine nature.”—*Goode.*

EXTRACTS FROM THE WORKS OF ISAAC PENINGTON.

Spiritual Unity.

What is Spiritual Unity? *Ans.* The meeting of the same spiritual nature in divers, in one and the same spiritual centre or streams of life. When the spirits or souls of creatures are begotten by one power, into one life, and meet in heart there; so far as they thus meet, there is true unity among them. The doing the same thing, the thinking the same thing, the speaking the same thing; this doth not unite here in this state in this nature; but only the doing, or thinking, or speaking of it in the same life. Yea, though the doings, or thoughts, or words be divers; yet if they proceed from the same [divine] principle and nature, there is a true unity felt therein, where the life alone is judge.

How is the unity preserved? *Ans.* Only by abiding in the life; only by keeping to the power, and in the principle, from whence the unity sprang, and in which it stands. Here is a knitting of natures, and a fellowship in the same spiritual centre. Here the divers and different motions of several members in the body, thus coming from the life and spirit of

the body, are known to, and owned by, the same life, where it is fresh and sensible. It is not keeping up an outward knowledge or belief concerning things, that unites, nor keeping up an outward conformity in actions, &c., for these may be held and done by another part in man, and in another nature; but it is by keeping and acting in that which did at first unite. In this there is neither matter nor room for division; and he that is within these limits, cannot but be found in the oneness. How is the unity interrupted? *Ans.* By the interposition of any thing of a different nature or spirit from the life. When any thing of the earthly or sensual part comes between the soul and the life, this interrupts the soul's unity with the life itself; and it also interrupts its unity with the life in others, and the unity of the life in others with it. Any thing of the man's spirit, of the man's wisdom, of the man's will, not bowed down and brought into subjection, and so not coming forth in and under the authority and guidance of life, in this is somewhat of the nature of division: yea, the very knowledge of truth, and holding it forth by man's wisdom, and in his will, out of the movings and power of life, brings a damp upon the life, and interrupts the unity; for the life in others cannot unite with this in spirit, though it may own the words to be true.

How may unity be recovered, if at any time decaying? *Ans.* In the Lord alone is the recovery of Israel, from any degree of loss in any kind, at any time; who alone can teach us to retire into, and to be found in that wherein the unity is and stands, and into which division cannot enter. This is the way of restoring unity to Israel, upon the sense of any want thereof; even every one, through the Lord's help, retiring in his own particular, and furthering the retirings of others to the principle of life, that every one there may feel the washing from what bath in any measure corrupted, and the new begetting into the power of life. From this the true and lasting unity will spring again, to the gladdening of all hearts that know the sweetness of it, and who cannot but naturally and most earnestly desire it. Oh! mark therefore! the way is not by striving to beget into one and the same apprehension concerning things, nor by endeavoring to bring into one and the same practice; but by alluring and drawing into that wherein the unity consists, and which brings it forth in the vessels, which are seasoned therewith, and ordered thereby. And from this, let all wait for the daily new and living knowledge, and for the ordering of their conversations and practices in that light, and drawings thereof, and in that simplicity and integrity of heart, which the spirit of life at present holdeth forth and worketh in them; and the life will be felt and

the name of the Lord praised in all the tents of Jacob, and through all the inhabitants of his Israel; and there will be but *one heart, and one soul, and one spirit, and one mind, and one way and power of life*; and what is already wrought in every heart, the Lord will be acknowledged in, and his name praised; and the Lord's season contentedly waited for his filling up of what is wanting anywhere.

And unity in the life is the ground of true brotherly love and fellowship. Not that another man walks just as I do; but though he be weaker or stronger, yet he walks by the same principle of light, and is felt in the same spirit of life, which guideth both the weak and the strong, in their several ranks, order, proper way, and place of subjection, to that one Spirit of life and truth, which all are to be subject to. Nay, he that is truly spiritual and strong in the light and Spirit of the Lord, cannot desire that the weak should walk just as he does; but only as they are strengthened, taught, and led thereunto by the same spirit that strengthened, taught, and led him.

Quest. How may I come to the seed; and how may I wait aright to feel and receive the power which raiseth it? *Ans.* Mind that in thee which searcheth the heart, and what it reacheth to, and quickeneth in thee; what it draweth thee from, and what it draweth thee to; how it sheweth thee thine own inability to follow, and how it giveth ability when thou art weary of toiling and laboring of thyself. Oh! this is he whom we waited for! Thus he appeared to us; thus he taught us to turn in, and to turn from the kingdom of darkness within, towards the kingdom of light, which the good Seedsman had sown in us as a grain of mustard seed; which when we found, we knew it to be the pearl of price, and were made willing to *sell all for it*.

Oh, hungering and thirsting soul after life, after truth, after the Lamb's righteousness, do thou also wait to be taught of the Lord, who thus taught us, and then do thou go and do so likewise, and thou will never repent of this purchase, or what thou partest with for it, when once thou comest to enjoy and possess any proportion of it.

"No way whatsoever," says Locke, "that I shall walk in against the dictates of my conscience, will ever bring me to the mansions of the blessed. I may grow rich by an art that I take no delight in; I may be cured of some disease by remedies I have no faith in; but I cannot be saved by a religion that I distrust, and a worship that I abhor. It is vain for an unbeliever to take up the outward shadow of another man's profession; faith only and sincerity are the things that procure acceptance with God."

From Meditations on Death and Eternity.

WHY MUST THE FUTURE LIFE BE HIDDEN FROM US?

(Concluded from page 277.)

If any one avoid evil from fear of punishment, he is prudent, but not virtuous. If any one refrain from stealing from fear of chains and prison, shall we therefore call him pious? Who can assure me that he would not steal if there were no chains, no prison? If any one refrain from sin through fear of hell, is he therefore righteous? Or, when any one does good in this life in the hope that he will be richly rewarded in the next, is he therefore a saint, in the spirit of Jesus? If he had no hope, or only a vacillating hope of future reward, would he act equally well? And if not, is his selfish virtue other than a well-calculated means to purchase a great good for a small outlay; to gain, at the price of a small sacrifice of a few minutes' duration, an eternity of bliss?

Nay, it is a beneficent arrangement that earthly eyes should not be able to penetrate eternity. Our virtue on earth is thereby rendered so much the more pure and unselfish, because, ignorant as to what is to follow, we are thrown entirely upon ourselves.

But suppose a revelation of the future world should be made to us, should we be able to comprehend it? How is it possible that, bound in the fetters of earth as we are, and with faculties proportionately limited, we should have the power of comprehending the supernatural? How can the sensual embrace the spiritual? All descriptions would be insufficient to enlighten us, because we lack means of comparison.

If a traveller from our part of the globe visited the savages of the Pacific, and attempted to describe to them the comforts of life and the mental superiority enjoyed by man in our regions, how would he make himself understood, as no conception of the kind exists in the mind of the savage? If a man blessed with sight were to describe to a man born blind the beauties of a landscape, the sublime forms of the lofty mountains at the foot of which roll majestic streams, and around whose summits are gathered clouds glowing in the golden rays of the setting sun, in what words would he represent to the blindman who knows not what light is, the wonderful beauties of creation? The blind man would remain, as before, in darkness, without the power of comprehending what the other attempted to convey to him; but greater sadness would take possession of him at the thought that he was excluded from so much happiness that fell to the share of others.

Well, then, what are we mortals more than persons born blind as regards the glories of the

future existence that awaits us? Those glories can only be seen by earth-freed spirits, and were one of these to appear to us, and to describe the greatness, the goodness, the majesty of the Creator, as they are manifested in those blessed realms, and the condition of the souls that have thrown off the bonds of flesh, should we be able to comprehend what he told us? Should we not be overwhelmed with sadness at the thought that other creatures of God were so infinitely more perfect and more blessed than we? Should we not think the joys which God has bestowed upon us here below very insignificant in comparison with those He has in store for us? Oh, let us rest assured, that it was with a wise hand that the eternal God veiled the glories of eternity from the eyes of those who, being here on earth, cannot yet be allowed to partake of them; for to behold them would but make us less happy than we are now, when the joys that we do feel are the greatest that we know.

Were we allowed to have a glimpse of the bliss of future worlds, our impatience to attain it would embitter our life upon earth. How soon, and how easily, may not the barriers of life be overleapt! How many thousand sufferers would not in moments of impatience, forgetful of their duties, determine to leave this world!

But it is God's will that we should work out our destination on earth, as far as it is to be fulfilled here; that we should not voluntarily and capriciously put an end to our earthly career, but that we should pursue it to its furthest goal.

Therefore, he placed as guardians before the closed gates of eternity, fear and anxious doubt and the awful stillness of death, and impenetrable darkness.

These guardians drive back the human race, that it may pursue to the end its appointed path on earth.

In spite of all the discomforts of life, in spite of our impatient longing to be reunited with the friends who have gone before us to our eternal home, the terrors that surround the portals of eternity repel us, and we continue our earthly journey with calmer spirits.

Were it not for that darkness and terror, should we not be like wearied mariners, who, after a long voyage on the stormy seas, behold at a short distance the shores of their beloved country? They see the calm and secure haven, where wind and tempest no longer threaten destruction; they already discover the verdant trees and the peaceful cottages; their hearts yearn towards their homes; their eyes are suffused with tears of mingled joy and sadness at the long-missed sight. They tremble. Every minute before they reach the shore seems a year. Ah! they recognize already their wives,

their brothers, their parents, their children, their beloved maidens waiting for them there. They see their arms opened to receive them, and hear from afar the longing cries of affection. What prevents them from flying at once into those arms, to weep out their joy on those bosoms, in which the heart beats so tenderly for them? "Oh home! oh joy! which we have so long missed!" all exclaim. They forget the helm of the ship, the waves of the sea, the rocks, the surf around them; they forget the treasures which they have gathered together on the long and wearisome voyage—they throw themselves into the sea, to reach the sooner the shores of their home.

Such would be the lot of mortals, did not the dark ocean separate them, for their own good, from their heavenly home.

But not for ever, O my God! does it separate me from the dearly beloved beings who are awaiting me there! I shall one day behold these shores of my better fatherland; I shall at length see them again, those loved ones, to whom my heart clings so tenderly; and shall rest among them after the dangers and hardships that I have undergone on my voyage across the stormy waters of life.

EXTINCT CONTROVERSIES.

(Concluded from page 280.)

Passing into another order of ideas, let us take Locke and his defense of civil government against the advocates of passive obedience. There are few philosophers of the seventeenth century whose methods of observation and reasoning are still so fresh and modern as Locke's. Yet it is hardly too much to say that one-half of his celebrated treatise of Government is now effectually obsolete. No less than fifty-six folio pages out of one hundred and twenty-five are taken up with the demolition of Sir Robert Filmer's ludicrously absurd theory, that all mankind are born slaves by reason of the sovereignty given by God to Adam. It is impossible to exceed the minuteness and tediousness with which he combats this view step by step. The titles of the chapters are enough to show this:—Chapter 3, "Of Adam's Title to Sovereignty by Creation;" Chapter 4, "Of Adam's Title to Sovereignty by Donation"—Genesis i. 28; Chapter 5, "Of Adam's Title to Sovereignty by the Subjection of Eve;" Chapter 6, "Of Adam's Title to Sovereignty by Fatherhood," &c. The obsolescence of a controversy was never more vividly manifest. Some have hinted that Locke rather wasted his time in refuting such nonsense, but this is to show a want of the historic spirit which never fails to recognize the successive aspects under which truth and error may appear at different epochs. Not to say that Locke had a distinct personal

stake in the issue of the controversy, and that he was the last man to waste his time in trifling, the vigor and pungency of his dialectics are as brilliant in this treatise as in any of his works, and it is clear enough that he considered this portion of the dispute a serious and important one. Some of his arguments are most amusingly pointed and racy, and positively explode poor Filmer into space. As, for instance, "And if God made all mankind slaves to Adam and his heirs by giving Adam dominion over every living thing that moveth on the earth (Gen. i. 28), as our author would have it, methinks Sir Robert should have carried his monarchical power one step higher, and satisfied the world that princes might eat their subjects too, since God gave as full power to Noah and his heirs (Gen. ix. 2) to eat every living thing that moveth, as he did to Adam to have dominion over them,—the Hebrew words in both places being the same." In fact, Locke, in his defence of liberty, would scarcely appear less antiquated besides his greatest English successor, Mr. Mill, than would Sir Robert Filmer beside his modern representatives in the advocacy of absolutist opinions—namely, Mr. Carlyle and De Maistre.

There are two ways of looking at an old controversy. There is the narrow, vulgar way, which patronizes or despises all the past, and indignantly scorns the people who in former times were not violent partisans of the last new-fangled views; and there is the less easy and obvious but more philosophic way, which allows for differences of mental standpoint, and strives to appreciate the difficulties with which both innovators and their opponents had to contend. The temptation to regard the former opponents of a now clearly-established truth as either very stupid or very unconscientious is often great. As Dr. Whewell says—"We have a latent persuasion that we in their place should have been wiser and more clear-sighted; that we should have taken the right side, and given assent at once to the truth. Yet in reality such a persuasion is a mere delusion." Nothing, we imagine, is more likely to dispel such delusions than an occasional study of the details of some great controversy. Opposition to a new discovery will generally be found to take place somewhat in this way. A vigorous and observing mind is struck by a fact or series of facts, and in process of time educes from them a new generalization which is presented as a newly-discovered law of nature. Opponents start up, and argue, and protest; and it will generally be found that they are not resisting from mere mental inertia and stupidity, which cannot admit or grasp a new conception, but that they are battling for some other larger and older theory which the new-comer is supposed to impugn. They appear as champions of old es-

established truth against upstart novelty. Perhaps the old theory, hitherto received as a canon of thought, is not denied even by the innovator, yet his innovation is clearly fatal to it. Vehement efforts at compromise and reconciliation are made. The discoverer protests that he has no wish to unsettle the important principle with which his new views are supposed to clash. His opponents make light of his wishes, and point triumphantly to the revolutionary tendency of his doctrines. And so the contest goes on. The advocates of the old system are at least as conscious of integrity and love of truth as their opponents. All their intellectual furniture and apparatus resent and resist the introduction of the intruder who threatens to bring confusion and ruin among views in which their minds and characters have been formed; and if, as it has often happened, they have been accustomed to consider the views thus endangered as of transcendent importance, not only to the present, but to the future and eternal welfare of humanity, their anxiety, and difficulty can well be understood, if not completely excused. It was in this way that most of the discoveries of the great mathematicians who preceded Newton were met by their supposed antagonism to the doctrine of the Church, or the letter of Scripture. Neither Copernicus nor Galileo believed one whit more in his geometry and mechanics than did the zealous Churchmen who withstood them believe in the supremacy and all-sufficiency of Holy Writ. If geometry appeared to say one thing and Scripture another, they had no doubt which was in the wrong. To suppose that ordinary men, at the bidding of a problem or calculation, would, so to speak, empty their minds of all previous opinions and beliefs, can only arise from an imperfect and one-sided view of human nature. Of course, in process of time the new discovery, if it were really one, and founded on fact, acquired such clearness and evidence that it was impossible for any rational being to deny it, follow what would. What generally followed was a quiet and unobtrusive modification of the old theory in whose behalf the battle had been fought. To what an extent this occurred in the instance which we have just cited will be at once recollected by our readers.

But while it behooves us to hold the balance fairly, and to avoid injustice even to men who have been dead and gone ages ago, simply for our own sakes, it is nevertheless to be remembered that resistance to truth is no light thing, even if it be made on the highest and most conscientious grounds. The old battle fields on which, in the sixteenth and seventeenth centuries, the strife was so hot and animated, are now quietly tilled by peaceful workers, undisturbed by hostile inroads. Astronomy, me-

chanics, chemistry and almost geology itself, preserve the even tenor of their way unmolested by controversy, except by such as arises in their own private dominions, and among their own most loyal subjects. These are mere family quarrels which soon pass off, and are followed by greater harmony and prosperity than ever. But the contemporaries of Darwin and Huxley, of Mill and Comte, need not be told that the old wars have broken out in new places, and that discussions are now pending which will one day rank among the most important of philosophical *causes célèbres*. By both of the contending parties we think that a useful moral might be drawn from the facts and precedents to be met with in numerous and all but forgotten extinct controversies.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, SEVENTH MONTH 14, 1866.

CIRCULAR MEETING, held at Frankford, Philadelphia, on First-day, the 1st of 7th month.—We always have pleasure in adverting to these meetings as they come in course, for we are always able to speak of them as seasons of favor.

There are but few Friends in the neighborhood of Frankford, consequently their usual meetings are small; but on the occasions of these appointed meetings, which are held quarterly, their meeting-house is well filled with their neighbors, who freely respond to the invitation. Indeed, when reminded that the time has again come round, the answer is not unfrequently heard, we consider these are *our* meetings, and we do not forget the time.

Several of the Committee were in attendance at Frankford, and also other Friends from the city and elsewhere. Gospel testimonies were borne, and the meeting was considered a refreshing season.

NEW YORK YEARLY MEETING.—No extracts from the minutes of this Meeting have been received.

GENESSEE YEARLY MEETING was held at Pickering, C. W., commencing on Second-day, the 11th inst., and continuing until the ensuing Fifth-day.

A friend has kindly sent us the Extracts, by which it appears that the representatives were present with eight exceptions. Certificates were read from Friends who were in attendance

from other Yearly Meetings, as follows:—Arden Seaman and David H. Barnes, ministers, and Solomon Haviland and James Birdsall, elders, from New York Yearly Meeting; Ann Weaver, a minister, from Green Street Monthly Meeting, Philadelphia; Rebecca Price, a minister, Rebecca Turner, an elder, and Levi K. Brown, a member, from Baltimore Yearly Meeting.

Epistles were also read from the five Yearly Meetings in correspondence, giving evidence of continued concern for the maintenance and advancement of the principles of Truth.

John J. Cornell was re-appointed Clerk, and Jacob S. Cronk Assistant Clerk.

The Committee on Indian Affairs made the following report, which was united with, and they released from further service:—"We, the Committee on Indian Concerns, appointed in 1862, report, that we have been mindful of our appointment, and that nothing has occurred since that time to require our attention; and we are of the opinion that the time has come when the services of such a Committee may consistently be dispensed with."

The exercises of the meeting are portrayed in the ensuing minute:—

"The Meeting then proceeded to the consideration of the state of Society, as exhibited in the answers to the queries received from our Quarterly and Half Yearly Meetings, summaries of which were adopted, and directed to be recorded, as descriptive of our present state.

During this examination into our condition of faithfulness in the maintenance of the several testimonies we are called to bear, as they were thus brought to view, much pertinent counsel and many exhortations were handed forth, to encourage us to a greater degree of dedication to, and a closer walking with, the requisitions of that Power from whom we feel that these testimonies emanated.

The continued lukewarmness apparent in the attendance of our religious meetings, called forth much lively exercise. We were feelingly reminded of the first great commandment, "Thou shalt love the Lord thy God with all thy heart, with all thy might, with all thy mind, and with all thy strength"—and were shown that as we were careful to seek for this state, we should be prepared to fulfil the second—"Thou shalt love thy neighbor as thyself;" and as the mind became thus imbued with this holy feeling, we would embrace every opportunity to worship the Author of this holy principle, and hence would desire to mingle

with those of like feelings, in making a sacrifice from which flows strength to the soul, and therefore would love to attend all our meetings.

But, if we suffer the things of this world to engross our attention, and to almost imperceptibly claim our affections, we, in proportion, lose our love for the Great Supreme, and hence are not prepared or qualified to rightly worship Him; and thus our interest in these solemn seasons of adoration and praise will become weakened.

The young were appealed to, to make the seeking of this condition of mind, wherein the affections of the heart are placed upon God, and to make the performance of His will the chief object of their lives; and they were shown that they would realize the gracious promise, that those who "seek first the kingdom of Heaven and its righteousness, would have all things necessary added unto them;" that while thus making their religious obligations their first care, they would be so led as to provide all things needful for themselves and those dependent upon them.

We were reminded that the possession of this powerful principle of Love, if lived in, would enable us, when offended by a brother, to carry out the injunctions left by the blessed Jesus, in that memorable sermon on the Mount, and thereby be instrumental in drawing him unto us, instead of widening the breach; that as the spirit of forgiveness flowed forth towards him, prompted by pure love, it would unite him to us; and we were exhorted that when we find ourselves in the wrong, that we be willing to acknowledge our error to our brethren. We were shown that such a course, instead of degrading, would ennoble us in the estimation of a brother, and would oftentimes become the means of reconciling that which otherwise might separate in feeling, and raise a barrier of enmity not easily destroyed.

Our testimony against a hireling ministry has again claimed our serious consideration; and while we feel concerned for its faithful maintenance, while we desire that a free, pure gospel ministry, may supplant it, we also feel to extend a spirit of charity towards those who are educated under its influence, feeling that however clearly we may discern the baneful effects it has upon the human family, that it never can be eradicated by harsh denunciations or bitter anathemas, but only by convincing the mind that there is something better, that a ministry which flows from the Father, will baptize into its own essence; and as He is love, so that which emanates from Him, works by love to the purifying of the heart. Where our ministry bears this holy impress, there it will reach; will overleap the partition wall of sectarian prejudice, and by convincing the minds

of men that it is better and purer than a man-made ministry, 'eradicate its influence from the heart.

Having to acknowledge with grateful hearts that we have been truly blessed, in thus assembling together to transact the business of the Society, in that we have realized His presence to be with us, who is the true crown and diadem of all rightly gathered assemblies, binding and cementing us more closely together, causing our hearts to rejoice, and strengthening us to endeavor to more faithfully walk as He directeth, who alone knoweth in what path we may safely tread, we now adjourn, to meet at Farmington, N. Y., the usual time next year, if consistent with the Divine will."

We give as the leading article of our present number a memoir of our late friend, John Watson, of Canada West, taken from the Extracts. We also subjoin a minute of the exercises of the Women's Meeting.

"During the different sittings of the Meeting much counsel and encouragement has been handed forth, and we were exhorted to mind the light that illumines the heart, that we may know of an advancement in the Truth. We were encouraged to become more conversant with the Scriptures of Truth, by the frequent perusal of them, believing, that inasmuch as they were given forth by Divine inspiration, they would prove profitable for our learning, directing us as a schoolmaster to Christ.

While many deficiencies are reported in the answers to the queries, as existing among us, particularly in the maintenance of our testimony against a hireling ministry, yet we feel that we have cause for gratitude that love and unity are so fully maintained among us.

We were encouraged to be diligent in the attendance of our religious Meetings, and to endeavor to go with a right preparation of heart, and were shown that when thus gathered, our strength would be renewed and our spirits refreshed together in love, and will thus be enabled to say, 'Come, brother, come, sister, let us go up to the mount of the Lord, and He will teach us of His ways, and enable us to walk in His path.'

We were feelingly exhorted to watch and pray, lest we wander from the Father's house, and become a cause of stumbling to those who are seeking the way of life and salvation.

Mothers were encouraged to faithfulness in the discharge of their duty to their offspring, although they may not live to witness the fruits of their labors, trusting that it may prove like bread cast upon the waters, which may be found after many days.

Our dear aged mothers in Israel, who have long borne the burden in the heat of the day,

were feelingly encouraged, and fervent aspirations ascended unto our Heavenly Father on their behalf, that He would be around and sustain them in the evening of their day, and that a succession of standard-bearers might be raised up, and qualified by His all-sustaining power, to receive the mantles as they fall from their shoulders, when their purified spirits enter into eternal rest.

Having finished the business of this Meeting, in which we have been comforted together in that fellowship which is in the truth, we feel to offer thanksgiving and praise to our Heavenly Father, who has so graciously owned us by his presence and united us in love. Under feelings of deep solemnity, we adjourn, to meet at Farmington, N. Y., the usual time next year, if so permitted.

PHEBE W. CORNELL, *Clerk.*"

DIED, on the 23d of Sixth month, 1866, at the residence of her grandson, G. Y. Atlee, near Washington, MARGARET, widow of Edwin A. Atlee, M. D., in the 87th year of her age.

For Friends' Intelligencer.

THE GREAT WEST.

CHICAGO, 6th mo. 18, 1866.

The apparently boundless plain on which *Chicago* reposes, or rather where busy life in all its phases manifests its tireless activity, was now in sight, and we were soon ushered into that scene of perfect chaos which is the fate of every traveller availing himself of railroad conveyance, but out of which, in every well-regulated depot, *order* eventually comes triumphant. Baggage secured, &c., we were soon domiciled with our relatives, from whom we received a hearty welcome, and amidst whose hospitalities are our experiences thus dotted down. This place bears the fancy cognomen of "*The Garden City of the West.*" Like all other large cities, its entrance by rail is through the most forbidding portion of it, almost tempting one to substitute another title—the *mud city*, &c. A few days' acquaintance with it, however, has dispelled much of previous prejudice, and it rises in estimation and importance the wider and more extended this acquaintance.

Before proceeding to speak of the city, it may be well to embody some facts which I have gleaned from an address delivered on the 8th inst. by Dr. G. S. Bailey, referring to the State of *Illinois* itself. Alluding to its rapid settlement, he asserted that "the State of *Illinois* had excelled all the other States and Territories in this respect.

"Thirty-four years after the Declaration of American Independence, in 1810, *Illinois* was occupied almost entirely by Indians, and a few

French traders, with here and there an American family. Twenty years later, in 1830, it contained a population of 157,415. In twenty years more, in 1850, its population was 851,470, and in fifteen years more, in 1865, it had 2,148,173, having gained in the last fifteen years, 1,296,708. This is 500,000 more than the gain of any other State in the country in the last fifteen years, and 500,000 more than any other of our States ever gained in the same length of time. Its increase during the five years of war has been 486,227, and that too when Illinois sent 258,000 men to the army."

While, as regards its agricultural prospects, present and prospective, he furnished the following data:

"Out of 85,400,000 acres of land, Illinois contains 33,000,000 acres of tillable ground. Only one-seventh of this has yet been touched by the plow, yet this one-seventh has sustained our own population of 2,148,178, and furnished a surplus of food for exportation, enough no doubt to sustain 2,000,000 more. Now, if one-seventh of our State, with its imperfect culture, furnishes food for four millions of people, cannot the whole State sustain a population of twenty-five millions?"

While perambulating this place, I found my descriptive powers very much at a loss, when I chanced to meet with an editorial in one of the daily papers of yesterday afternoon, a portion of which I here embody:

"Chicago has not much to recommend it to the eyes of the tourist in search of the picturesque. He may walk along the shores of the lake, or over the prairie in any direction his fancy may direct, and not once have occasion to take his sketch book from his pocket. He will see cows browsing in the green pastures; but they are commonplace cows, and could only be rendered interesting by being introduced as a portion of Dutch landscape. One thinks only of fresh milk and prime butter when looking at them here. They can by no effort of the fancy be made to form a conspicuous part of a picture. There are a few trees to be seen, but they are scrubby. No hyacinthine haze is ever to be seen dreaming around their roots. No soft moss is there to convert into a cushion the rotted old oak stump. There is nothing to be seen in the shape of a ruined tower, and a view of a dilapidated shanty does not serve to inspire poetic reverie. Neither the crib nor the Artesian Well would seem interesting in water colors, and the residences that overlook the lake, and which one sees at intervals as he wanders along the shores, are for the most part but commonplace compositions of brick or timber, and can be rendered interesting only to their owners, or if their wine cellars and larders are properly stocked, to their owners and friends.

All we can boastingly talk of, if we attempt

to astonish the stranger with whom we have undertaken to "do" Chicago, is the youth and vigor of the city. See how we grow. Look in that direction. A few years ago a marsh, a mere marsh, now one of the busiest thoroughfares in the world. Then take a stroll round the suburbs. See the number of new houses in course of erection. Growing faster than ever, and still more house accommodation wanted."

The want of a sufficiency of dwelling-houses above alluded to, results in that bane of house-keeping that appears to exist everywhere—*high rents*. Two story frame houses, in only tolerable repair, not over twenty feet front and four rooms deep, that four years since rented for *two* hundred dollars, now readily command tenants at *six* hundred. So, residents of Philadelphia and New York need not think to escape this tax by fleeing elsewhere.

While our editor is in the main correct, this place has some redeeming traits, and I do not think he has done Michigan Avenue, which fronts the lake of same name, justice. I have walked, driven and *steamed* almost, if not quite, its entire length, and especially remember its many fine buildings, either completed or in process of erection. True it is there are many not entitled to admiration; but where progression is the order of the day, every thing should have its due. And as to the trees, where they are planted on the side walks, or cultivated in gardens, they appear to flourish well.

From what I can learn of the early days of Chicago, *money making* was the all absorbing idea of its inhabitants, the *future* well-being of a great city seeming to occupy little or no place in their thoughts.

But a few years since and the entire Chicago might have been said to be standing on *stilts* of from two to six or eight feet in height, composed for each house of a few square timbers entered a few inches only in the ground, this space sometimes boarded in, in other cases left open—that she possessed no *cellars*—that the streets were *not paved*, and the choice in crossing them lay between wading through an indefinite depth of mud or of dust ground to an impalpable powder, as the case might be—that such of the footways as were paved were of *wood*, with wooden curbs only—that each property owner used his own judgment as to what the height of his footway should be; thus one block sometimes having half a dozen different elevations to overcome, either by positive steps or inclined planes—and all the buildings were of frame, about as varied in their appearance as were the faces of their owners.

Enough of these things still exist to justify their being viewed as the rule, and their opposite as the exception. The march of improvement, however, is onward, and here is making rapid strides, particularly in the business

throughfares and some of the fashionable "avenues." In the former colossal store-houses have been erected, and some firms are occupying two large fronts as one, while a few monopolize three: The *Chamber of Commerce, Court-House*, one or more *hotels*, as well as some other buildings recently erected, are of massive proportions, well adapted to the different purposes for which they were intended; which, with the permanency of their construction, furnish additional evidence of the progressiveness of the age. The Chamber of Commerce, with its numerous offices, and its magnificent "change" room, with a ceiling *forty five feet* in height, covered with splendid fresco paintings, is especially entitled to admiration. I attended there during "change hour" twice, and it was truly a busy mart of "money changers." Samples of almost every kind of agricultural product were exhibited for sale on the marble top tables, while the initiated could point out the different knots or groups all over the room, as the "*grain dealers*"—the "*pork, &c., dealers*"—and so on through the various departments of mercantile trade. I was amused at some of the fancy brands of flour—"Torrid Zone," "*Cream of the Earth*," "*Solomon's Choice*," &c.

But to return to the city itself. It is said that four years have wrought a wonderful change—many business streets have been paved—while for the footways of these a uniform grade has been established as with us; and those which formerly were plank only from the houses to the curb, are being replaced with stone, many of which are elevated from two to three and four feet above the streets, making an unpleasant inclined plane at almost every crossing. I presume the fact is, dirt enough cannot be found in the whole place or within reach to fill up with. Indeed, one of the papers stated a day or two since that "*dirt had jumped in price from 28 to 85 cents per load*." How sufficient descent can ever be obtained for drainage I cannot imagine. And as to *cellars*, they must be obtained by elevating the houses, which is now being done; although in the out skirts I noticed many in process of erection on the old stilt system. J. M. ELLIS.

THE DEATH OF SLAVERY.

BY WILLIAM CULLEN BRYANT.

O Thou great Wrong, that through the slow-paced years
Didst hold thy millions fettered, and didst wield
The scourge that drove the laborer to the field,
And look with stony eye on human tears,
Thy cruel reign is o'er;
Thy bondmen crouch no more
In terror at the menace of thine eye;
For He who marks the bounds of guilty power,
Long-suffering, hath heard the captive's cry,
And touched his shackles at the appointed hour,
And lo! they fall, and he whose limbs they galled
Stands in his native manhood, disenthralled.

A shout of joy from the redeemed is sent;
Ten thousand hamlets swell the hymn of thanks;
Our rivers roll exulting, and their banks
Send up hosannas to the firmament.
Fields, where the bondman's toll
No more shall trench the soil,
Seem now to bask in a serenest day;
The meadow birds sing sweeter, and the airs
Of Heaven with more caressing softness play,
Welcoming man to liberty like theirs.
A glory clothes the land from sea to sea,
For the great land and all its coasts are free.

Within that land wert thou enthroned of late,
And they by whom the nation's laws were made,
And they who fill its judgment-seats, obeyed
Thy mandate, rigid as the will of fate.
Fierce men at thy right hand,
With gesture of command,
Gave forth the word that none might dare gainsay;
And grave and reverend ones, who loved thee not,
Shrank from thy presence, and in blank dismay,
Choked down, unuttered, the rebellious thought;
While meaner cowards, mingled with thy train,
Proved, from the book of God, thy right to reign.

Great as thou wert, and feared from shore to shore,
The wrath of God o'ertook thee in thy pride:
Thou sit'st a ghastly shadow; by thy side
Thy once strong arms hang nerveless evermore.
And they who quailed but now
Before thy lowering brow

Devote thy memory to scorn and shame,
And scoff at the pale, powerless thing thou art.
And they who ruled in thine imperial name,
Subdued, and standing sullenly apart,
Scowl at the hands that overthrew thy reign,
And shattered at a blow the prisoner's chain.
Well was thy doom deserved; thou didst not spare
Life's tenderest ties, but cruelly didst part
Husband and wife, and from the mother's heart
Didst wrest her children, deaf to shriek and prayer:
Thy inner lair became
The haunt of guilty shame;

Thy lash-dropped blood; the murderer, at thy side,
Showed his red hands, nor feared the vengeance due.
Thou didst sow earth with crimes, and, far and wide,
A harvest of uncounted miseries grew,
Until the measure of thy sins at last
Was full, and then the avenging bolt was cast.

Go, then, accursed of God, and take thy place
With baleful memories of the elder time,
With many a wasting pest, and nameless crime,
And bloody war that thinned the human race;

With the Black Death, whose way
Through wailing cities lay,
Worship of Moloch, tyrannies that built
The Pyramids, and cruel creeds that taught
To avenge a fancied guilt by deeper guilt—
Death at the stake to those that held them not.
Lo, the foul phantoms, silent in the gloom
Of the flown ages, part to yield thee room.

I see the better years that hasten by,
Carry thee back into that shadowy past,
Where, in the dusty spaces, void and vast,
The graves of those whom thou hast murdered lie.
The slave-pen, through whose door
Thy victims pass no more,
Is there, and there shall the grim block remain
At which the slave was sold; while at thy feet
Scourges and engines of restraint and pain
Moulder and rust by thine eternal seat.
There, 'mid the symbols that proclaim thy crimes,
Dwell thou, a warning to the coming times.

—Atlantic Monthly.

IN THE HEMLOCKS.

(Concluded from page 255.)

I pass on through the old Barkpeeling, now threading an old cow-path or an overgrown wood-road; now clambering over soft and decayed logs, or forcing my way through a network of briars and hazel; now entering a perfect bower of wild cherry, beech and soft maple; now emerging into a little grassy lane, golden with buttercups or white with daisies, or wading waist deep in the red raspberry bushes.

Whir! whirl! whirl! and a brood of half-grown Partridges start up like an explosion, a few paces from me, and, scattering, disappear in the bushes on all sides. Let me sit down here behind this screen of ferns and briars, and hear this wild hen of the woods call together her brood. Have you observed at what an early age the Partridge flies? Nature seems to concentrate her energies on the wing, making the safety of the bird a point to be looked after first; and while the body is covered with down, and no signs of feathers are visible, the wing-quills sprout and unfold, and in an incredibly short time the young make fair headway in flying.

The same rapid development of wing may be observed in chickens and turkeys, but not in water fowls, or in birds that are safely housed in the nest till full fledged. The other day, by a brook, I came suddenly on a young Sandpiper, a most beautiful creature, enveloped in a soft gray down, swift and nimble, and apparently a week or two old, but with no signs of plumage either of body or wing. And it needed none, for it escaped me by taking to the water as readily as if it had flown with wings.

Hark! there arises over there in the brush a soft, persuasive cooing, a sound so subtle and wild and unobtrusive that it requires the most alert and watchful ear to hear it. How gentle and solicitous and full of yearning love! It is the voice of the mother hen. Presently a faint, timid "Yeap!" which almost eludes the ear, is heard in various directions,—the young responding. As no danger seems near, the cooing of the parent bird is soon a very audible clucking call, and the young move cautiously in the direction. Let me step never so carefully from my hiding place, and all sounds instantly cease, and I search in vain for either parent or young.

The Partridge (*Bonasa umbellus*) is one of our most native and characteristic birds. The woods seem good to be in where I find him. He gives a habitable air to the forest, and one feels as if the rightful occupant was really at home. The woods where I do not find him seem to want something, as if suffering from some neglect of nature. And then he is such a splendid success, so hardy and vigorous. I

think he enjoys the cold and the snow. His wings seem to rustle with more fervency in midwinter. If the snow falls very fast, and promises a heavy storm, he will complacently sit down and allow himself to be snowed under. Approaching him at such times, he suddenly bursts out of the snow at your feet, scattering the flakes in all directions, and goes humming away through the woods like a bombshell,—a picture of native spirit and success.

His drum is one of the most welcome and beautiful sounds of spring. Scarcely have the trees showed their buds, when, in the still April mornings, or toward nightfall, you hear the hum of his devoted wings. He selects not as you would predict, a dry and resinous log, but a decayed and crumbling one, seeming to give the preference to old oak logs that are partially blended with the soil. If a log to his taste cannot be found, he sets up his altar on a rock, which becomes resonant beneath his fervent blows. Have you seen the Partridge drum? It is the next thing to catching a weasel asleep, though by much caution and tact it may be done. He does not hug the log, but stands very erect, expands his ruff, gives two introductory blows, pauses half a second, and then resumes, striking faster and faster till the sound becomes a continuous, unbroken whirl, the whole lasting less than half a minute. The tips of his wings barely brush the log, so that the sound is produced rather by the force of the blows upon the air and upon his own body as in flying. One log will be used for many years, though not by the same drummer. It seems to be a sort of a temple, and held in great respect. The bird always approaches it on foot, and leaves it in the same quiet manner, unless rudely disturbed. He is very cunning, though his wit is not profound. It is very difficult to approach him by stealth; you will try many times before succeeding; but seem to pass by him in a great hurry, making all the noise possible, and with plumage furled he stands as immovable as a knot, allowing you a good view and a good shot if you are a sportsman.

Passing along one of the old barkpeelers' roads which wander aimlessly about, I am attracted by a singularly brilliant and emphatic warble, proceeding from the low bushes, and quickly suggesting the voice of the Maryland Yellow-Throat. Presently the singer hops up on a dry twig, and gives me a good view. Lead-colored head and neck, becoming nearly black on the breast; clear olive green back, and yellow belly. From his habit of keeping near the ground, even hopping upon it occasionally, I know him to be a Ground Warbler; from his dark breast the ornithologist has added the expletive Mourning, hence the Mourning Ground-Warbler.

Of this bird both Wilson and Audubon con-

fessed their comparative ignorance, neither ever having seen its nest or become acquainted with its haunts and general habits. Its song is quite striking and novel, though its voice at once suggests the class of Warblers, to which it belongs. It is very shy and wary, flying but a few feet at a time, and studiously concealing itself from your view. I discover but one pair here. The female has food in her beak, but carefully avoids betraying the locality of her nest. The Ground-Warblers all have one notable feature,—very beautiful legs, as white and delicate as if they had always worn silk stockings and satin slippers. High tree Warblers have dark brown or black legs and more brilliant plumage, but less musical ability.

The Chestnut-Sided belongs to the latter class. He is quite common in these woods, as in all the woods about. He is one of the rarest and handsomest of the Warblers; his white breast and throat, chestnut sides, and yellow crown show conspicuously. Audubon did not know his haunts, and had never seen his nest or known any naturalist who had. Last year I found the nest of one in an uplying beech-wood, in a low bush near the roadside, where cows passed and browsed daily. Things went on smoothly till the Cow Bunting stole her egg into it, when other mishaps followed, and the nest was soon empty. A characteristic attitude of the male during this season is a slight drooping of the wings, and tail a little elevated, which gives him a very smart bantam-like appearance. His song is fine and hurried, and not much of itself, but has its place in the general chorus.

A far sweeter strain, falling on the ear with the true sylvan cadence, is that of the Black-Throated Green-backed Warbler, whom I meet at various points. He has no superiors among the true *Sylvia*. His song is very plain and simple, but remarkably pure and tender, and might be indicated by straight lines, thus, ————; the first two marks representing two sweet, silvery notes, in the same pitch of voice, and quite unaccented; the latter marks the concluding notes, wherein the tone and inflection are changed. The throat and breast of the male are a rich black, like velvet, his face yellow, and his back a yellowish green.

Beyond the old Barkpeeling, where the woods are mingled hemlock, beech and birch, the languid midsummer note of the Black-throated Blue-Back falls on my ear. "Twea, twea, twea-e-e!" in the upward slide, and with the peculiar *z-ing* of certain insects, but not destitute of a certain plaintive cadence. It is one of the most languid, unhurried sounds in all the woods. I feel like reclining upon the dry leaves at once. Audubon says he has never heard his love-song; but this is all the love-song he has, and he is evidently a very plain hero with

his little brown mistress. He is not the bird you would send to the princess to "cheep and twitter twenty million loves;" she would go to sleep while he was piping. He assumes few attitudes, and is not a bold and striking gymnast, like many of his kindred. He has a preference for dense woods of beech and maple, moves slowly amid the lower branches and smaller growths, keeping from eight to ten feet from the ground, and repeating now and then his listless, indolent strain. His back and crown are dark blue; his throat and breast, black; his belly, pure white; and he has a white spot on each wing.

Here and there I meet the Black and White Creeping-Warbler, whose fine strain reminds me of hair wire. It is unquestionably the finest bird-song to be heard. Few insect strains will compare with it in this respect; while it has none of the harsh, brassy character of the latter, being very delicate and tender.

That sharp, interrupted, but still continued warble, which, before one has learned to discriminate closely, he is apt to confound with the Red eyed Vireo's, is that of the Solitary Warbling Vireo,—a bird slightly larger, much rarer, and with a louder, less cheerful and happy strain. I see him hopping along lengthwise of the limbs, and note the orange tinge of his breast and sides and the white circle around his eye.

But the declining sun and the deepening shadows admonish me that this ramble must be brought to a close, even though only the leading characters in this chorus of forty songsters have been described, and only a small portion of the venerable old woods explored. In a secluded swampy corner of the old Barkpeeling, where I find the great purple orchis in bloom, and where the foot of man or beast seems never to have trod, I linger long, contemplating the wonderful display of lichens and mosses that overrun both the smaller and the larger growths. Every bush and branch and sprig is dressed up in the most rich and fantastic of liveries; and, crowning all, the long bearded moss festoons the branches or sways gracefully from the limbs. Every twig looks a century old, though green leaves tip the end of it. A young yellow birch has a venerable, patriarchal look, and seems ill at ease under such premature honors. A decayed hemlock is draped as if by hands for some solemn festival.

Mounting toward the upland again, I pause reverently as the hush and stillness of twilight come upon the woods. It is the sweetest, ripest hour of the day. And as the Hermit's evening hymn goes up from the deep solitude below me, I experience that serene exaltation of sentiment of which music, literature and religion are but the faint types and symbols.

For Friends' Intelligencer.
 REVIEW OF THE WEATHER, &c.
 SIXTH MONTH.

	1865.	1866.
Rain during some portion of the 24 hours,	12 days.	11 days.
Rain all or nearly all day,...	1 "	0 "
Cloudy, without storms,.....	6 "	3 "
Clear, in the ordinary ac- ception of the term,.....	11 "	16 "
	30 "	30 "
TEMPERATURE, RAIN, DEATHS, &c.	1865.	1866.
Mean temperature of 6th month per Penna. Hospital,	76.73 deg.	73.00 deg.
Highest do. during month,	93.00 "	95.00 "
Lowest do. do. do.	64.00 "	57.00 "
Rain during the month,.....	4.75 in.	2.96 in.
Deaths during the month, being for 4 current weeks for 1865, and 5 for 1866,	1296	1072
Average of the mean temperature of 6th month for the past seventy-six years,.....		71.57 deg.
Highest mean of do. during that entire period, 1828-1831.....		77.00 "
Lowest do. do. do. 1816		64.00 "

COMPARISON OF RAIN.

	1865.	1866.
First month	3.61 inch.	3.14 inch.
Second month.....	5.83 "	6.81 "
Third month.....	4.71 "	2.15 "
Fourth month.....	2.83 "	2.93 "
Fifth month.....	7.21 "	4.68 "
Sixth month.....	4.75 "	2.96 "
Totals for the first six months of each year.	28.94 "	22.47 "

The month under review for the present year shows a mean of about three and three-quarters degrees less than that of last, with, however, an excess of extremes, as also an excess of a degree and a half above the average for the past seventy-six years. It may also be observed there is a diminution in the quantity of rain during the six months of this year, as compared with last.

PHILADELPHIA, 7th mo. 2d, 1866. J. M. ELLIS.

INDIAN SAGACITY.

It is said that an Indian, upon his return to his hut, one day, discovered that his venison, which had been hung up to dry, had been stolen. He went to look for the robber, and met some persons, of whom he inquired if they had seen a little, old, white man, with a short gun, and accompanied by a small dog with a bob-tail. They replied in the affirmative; and the Indian assured them that the man, thus described, had stolen his venison. They desired to be informed how he was able to give such a minute description of a person he had not seen. The Indian answered thus:—"The thief, I know is

a little man, by his having made a pile of stones to reach the meat from the height I hung it, standing on the ground; that he is an old man, I know by his short steps, which I have traced over the dead leaves in the woods; that he is a white man, I know by his turning out his toes when he walks, which an Indian never does; his gun I know to be short, by the mark which the muzzle made by rubbing the bark of the tree on which it leaned; that the dog is small, I know by his tracks; and that he has a bob-tail, I discovered by the mark of it in the dust where he was sitting at the time his master was taking down the meat.

ITEMS.

On the evening of the 4th inst. a disastrous fire occurred at Portland, Maine. The conflagration swept through the city, destroying everything in its track for a space of a mile and a half. Half the city is represented to have been destroyed. Some fifty buildings were blown up in the endeavor to check the range of the fire. All the banks and newspaper offices and nearly all the business portion of the city were a mass of ruins. The loss is estimated at not less than thirty millions of dollars. About two thousand buildings are said to have been destroyed.

The cholera has quite disappeared from quarantine at New York, and but few cases have occurred in that city, or in the country generally, notwithstanding the extreme heat of the weather.

CONGRESS.—In the Senate a bill was reported from the select committee on the reconstruction of the levees of the Mississippi river, making an appropriation for the repair and reconstruction of the levees of that river in Arkansas, Mississippi and Louisiana, and also for the general improvement of the river. A report was made from the committee of conference on the disagreement of the two Houses on the subject of the Paris Exposition. The committee struck out the words in coin which were in the Senate bill, after all appropriations, and thus amended the bill goes to the President. A report was made from the committee of conference on the disagreeing votes on the Freedmen's Bureau bill, and was agreed to. The report sustains the Senate propositions relative to the South Carolina lands occupied by freedmen. It authorizes the assistant commissioners for South Carolina and Georgia to determine the validity of all titles of lands claimed under General Sherman's special field orders, and to give each person having a valid claim a warrant on the direct tax commissioners for South Carolina for twenty acres of land, which will entitle him a lease for six years, at the end of which time, on payment of a sum not exceeding one dollar and fifty cents per acre, a certificate of sale may be obtained. Upon the completion of transfers of these lands, the former owners shall have restored to them the lands occupied under General Sherman's order. The joint resolution authorizing the purchase of the law library of the late J. M. Pettigrew, of South Carolina, was passed. The House amendments to the Senate bill to prevent smuggling, were concurred in. The Indian appropriation bill was taken up. The amendment transferring the bureau to the control of the War Department, was rejected, after which the bill was passed. A resolution calling on the President for information as to the number of American vessels destroyed by pirates on the coast of China during the last year, and whether any additional legislation is needed for the protection of American interests in that quarter.

HOUSE.—A bill was introduced establishing conditions for the admission of the States of Nova Scotia, New Brunswick, Canada East and Canada West, and for the organization of Territorial governments. Referred to the Committee on Foreign Affairs.

The report of the Committee of Conference on the Freedmen's Bureau Bill was agreed to. The Committee of Conference on the Tax bill made a report, which was agreed to. This bill has now passed both Houses and goes to the President. The amount of income exempt from taxation remains at six hundred dollars. The Tariff bill was several times under discussion, but has not yet reached a conclusion.

THE INDIANS.—D. N. Cooley, Commissioner of Indian Affairs, has received a telegram from E. B. Taylor, president of the Laramie commission, dated at Fort Laramie, June 29, 1866, which announces that a satisfactory treaty has been concluded with the Sioux and Cheyenne Indians. The representation was large, and the Indians manifested a cordial feeling toward the Government and its agents.

THE FREEDMEN.—F. D. Sewall, Inspector General of the Freedmen's Bureau has submitted his report of affairs in some portion of Maryland and Virginia.

At Baltimore much service has been rendered to freedmen in assisting them to settle their contracts, collect their wages, and instructing them in their rights and obligations as citizens. In the counties of Maryland east of Chesapeake Bay, General Sewall had frequent interviews with both white and colored citizens. The Freedmen are industriously at work at remunerative wages, and there is little, if any, idleness among them in that section, as laborers are in demand. The negroes are generally well treated, except by a class of dissolute and lawless young men, whose acts are discountenanced by the better classes. Last winter a number of school houses and a few churches used by freedmen were destroyed, but no outrages of that kind have been committed recently. In the northwestern part of Maryland the freedmen represent but a small minority of the population, and no difficulties between the whites and blacks have lately occurred. The Freedmen in that section are general engaged in agricultural pursuits, and are an industrious, frugal, and well-disposed class of people. In West Virginia the colored population is small, and the freedmen enjoy their rights and are as well protected as the same class of people in the North. Schools are in successful operation in different portions of the district, and no hostility toward the teachers has recently been manifested.

S. N. Clark, an inspector of the Bureau, reports discouragingly of the state of St. Mary's and Calvert Counties, Maryland, except that he found a considerable number of the colored people owners and lessees of land. Laborers wages are \$5 per month for women, and \$12 and \$18 for men with rations and quarters. No schools have yet been established, and great opposition would be made to them. The apprenticing of colored children has been carried to a large extent, and the civil rights bill is quite disregarded.

Col. Palmer, agent of the Bureau, is making a thorough investigation of affairs in West Tennessee. He reports that the freedmen are generally well treated by their employers; that it would be something rare to find an idle negro, and that the relations between white and black are much better than at the commencement of the year. Schools and churches are springing up everywhere for the use of the freedmen, while in some counties such a thing as va-

grancy is unknown. The average pay of the colored folks, which planters cheerfully give, is \$143 per year, house room, rations and medicine. About three-fourths of the freedmen, however, are working on shares, the contract allowing them, where they give nothing but their services, one-third of the crop.

LESSONS ON OUR COMMON SONG BIRDS.—Tickets for a course of Eight Lessons, \$3.00 each. Liberal reduction to Schools and Classes of over fifty persons.

WORDS OF ENCOURAGEMENT FOR THE TRIED AND TRIBULATED.

BY JOE SCOTT.

I have learned through painful experience, that however seemingly forsaken, patience is best for me; and that as it has been carefully abode in, the Lord my God has never failed, in *due season*, to arise and console my soul, by the lifting up of the light of his countenance upon me. I say, in *due season*, because, though in times of deep probation, I have often been ready to think, his seasons of hiding himself from me were long, if not too long; yet, I have over found that when he has appeared again, a fullness of evidence has appeared with him, that all the sinkings and besetments attending his seeming absence, (unless I have imprudently given way to impatience, or to sink below hope,) have worked for my good, and eventually wrought an increasing enlargement, and very often a renewed and additional qualification for service. Then why should I ever again *cast away my confidence*, or give way to any degree of distrust or impatience? For, although it is permitted in wisdom, and I conclude it must be for our improvement, that we are again and again so left, as that it seems almost impossible we should ever recover or revive again, yet, as we have kept the faith, and been preserved in the patience, we have again been lifted up, as it were, on high; our souls have been filled with joy, and our hearts with songs of gladness.

Well, therefore, may the tried and painfully

exercised soul still, under all, *have hope*; yea, may he not with experimental propriety, even *hope against hope*. For, when all present feeling grounds of hope seem cut off, let him ask his own soul, Did I ever before sink so low as not to rise again? Did the Lord ever so forsake me, as not to comfort me, after all? Did he ever hide himself from me so long, as never to visit me again? To all these, and many more such like questions, the answer, on an impartial retrospection, must be in the negative. Why then should we, or how can we believe that the present trial will terminate in a final dereliction, or utter forsaking of us? Oh! no: it will not. Indeed it cannot so terminate, unless we first forsake him. His covenant, with all the true seed, is an everlasting covenant, and is as sure with them, in the night, as in the day. His covenant with the day, and with the night, is so sure that it never will nor can fail or cease.

Therefore, O exercised pilgrim! stand fast. Keep the faith. Abide in the patience. Stand still, and thou shalt surely see the salvation of God. And even in the midst of thy deepest trials, thou mayest, if thou hold fast thy integrity, adopt the language of a deeply experienced servant of God, "Why art thou cast down, O my soul? and why art thou disquieted within me? Hope thou in God; for I shall yet praise him for the help of his countenance." This, indeed, is a most consoling thought. And though my poor soul has, time after time, been so stripped and emptied of all sensible enjoy-

ment of divine consolation, as almost to give over, to yield, and conclude, I never more should see good; yet I have always found, as I have properly bowed, that though bitterness, mourning, and sorrow, may remain for a night, or even many days and nights, yet, in a good, a precious, and seasonable time, "joy cometh in the morning." And, therefore, as I always, heretofore, might have truly said to my soul; however depressed, "Hope thou in God, for I shall (not, *perhaps I may*, but *certainly shall*, if faithful,) praise him for the help of his countenance;" so I now conclude, and most assuredly believe, I henceforward may, with equal propriety and assurance, adopt the same consoling language, in every proving moment, yet for me to pass through. Wherefore, may I ever have faith, hope and patience, and under all, in sincerity say, Not my will, O Lord, but thine be done. Amen.

Some murmur when their sky is clear
And wholly bright to view,
If one small speck of dark appear
In their great heaven of blue;
And some with thankful love are filled
If but one streak of light,
One ray of God's good mercy, gild
The darkness of their night."

From "The Fells of Swarthmoor Hall and their Friends."

About sixty-eight or seventy years after the death of George Fox, the circumstance occurred which is related in the following letter. It is deserving of notice in Quaker history, as marking a change which had taken place during the interim in the practice of the Friends, relative to headstones in their burial grounds, inscribed with names of the deceased and dates:—

LETTER FROM BENJAMIN READ.

"5th mo., 1852.

"When my father, Thomas Read, who died about thirty-four years ago, at the age of 76, was about 15 years of age, being apprenticed to John Biddle, of Whitechapel, J. B. was employed by the Society of Friends to remove a wall on part of their burial ground, Bunhill Fields, in order to enclose an additional piece of land purchased by the Society. On taking down the old wall, the footings of which were many feet deep below the surface, it was found expedient to remove the coffin which contained the remains of our worthy predecessor, George Fox. Whilst in the act of digging, after removing the headstone, several fragments of the oak case which surrounded a leaden coffin were found, and to one of them was attached a breast plate about 14 inches by 10, on which were engraven the initials of the name, the age and the birthplace of the interred; but the inscription was barely legible. The leaden coffin was in pretty good condition, and before it was disturbed, my father's

curiosity was so great that he urged one of his fellow-workman to cut a hole in the top of it, near the broadest part, about 12 inches by 8, so that one side or end answered for a hinge. On raising this flap, the countenance of the corpse appeared to be in a perfect state, showing the features very distinctly, with the hair over the forehead. As soon as my father had seen it, he went in haste to acquaint his master, J. Biddle, with the circumstance, but previous to his arrival the features became shapeless, and very little could be seen beside the hair and skull. Some influential Friends, on hearing what had taken place, gave directions for the flap above mentioned to be securely soldered, when they fixed upon a place for re-interment. *But they would not allow the headstone to be put up again, on which there was a similar inscription to that on the breast-plate.* They only suffered a small stone about six inches square, to be built in the wall opposite the head of the grave, with the initials, G. F., cut in it. This stone I well remember when a child to have seen. BENJN. READ."

Let no one suppose that the change which the foregoing letter indicates originated among the Friends in an absence of tenderness and love towards deceased relatives, or any deficiency in reverence for the memory of departed worth. It was quite the contrary. They who started it, and they who carried it out for upwards of a century, were assuredly not among those who could have been cold in feeling, or deficient in reverence;—they were not among those who slighted the beautiful evidences of a tender, loving, Christian spirit, whether manifested towards departed or living worth. But they did not think that it needed any monumental stone to keep *them* in remembrance of the spot where the remains of those they had loved and revered were laid. They therefore preferred giving up the former custom, rather than involve a danger which they apprehended was likely to creep in—having doubtless on some occasions felt the painfulness of remonstrating with relatives of deceased persons for attempting to deviate from the prescribed simplicity of inscription. Hence, about the beginning of the 18th century, they came to the decision, to which rich and poor alike agreed, to have no memorial stone at all; nothing but the simple grass-covered mound,—trusting to the loving memory of relatives and friends to know and point out the graves of the departed. After that, head stones were not usually placed in their burial grounds; but those that had previously been erected appear to have remained till the graves were re-opened for another interment, and then they were not replaced. That practice became universal in all the graveyards belonging to the Society for more than a century. But at length, when old chroni-

clers, who delighted in keeping memorial registers of departed Friends in their minds, died off, and were not succeeded by others equally versed in such lore, the graves of the early fathers and mothers in the church, or in the family, were less certainly recognized. This was often disappointing to strangers, as well as to relatives, who wished to recall the memory of ancestors or of departed worthies, whilst standing by their graves. Hence about twenty years ago the question was raised as to the propriety of a change, and finally another change took place, the Yearly Meeting deciding that those Friends who desired to have small memorial stones on the graves of their relatives simply inscribed with names and dates, should be at liberty to have it carried out under the supervision of their respective Monthly Meetings. But in some places Friends have not availed themselves of the permission, regarding it as a modern innovation, instead of, as it truly is, a return to the practice of the early Friends.

George Fox's idea of inaugurating a Philadelphia Botanic Garden, so much in advance, as it appears, of the age he lived in, and so little as we might suppose likely to be suggested by his own pursuits, may find a solution in the fact that Thomas Lawson, the famous botanist, was his and the Swarthmoor family's intimate friend. And Lawson was more than a mere botanist; the medicinal properties of plants claimed his especial attention. Croese, as before remarked, speaks of him as the greatest herbalist in England; and we may remember one of the items copied from the Swarthmoor account book proves that he gave the family at the Hall instruction in the medicinal use of herbs. That George Fox, under these circumstances, perceived the importance of promoting such tastes and researches as his Philadelphia plan embraces, is no way surprising. He who on another occasion gave it as his opinion, in relation to education, that our young people of the Society of Friends should be taught "all things civil and useful," must have had comprehensive ideas of the knowledge and intellectual culture that should be aimed at.

John Thompson, of Hitchin, in Hertfordshire, one of Thomas Lawson's descendants, has in his possession numerous manuscript notes, made by his ancestor in his walking tours throughout England in search of plants. They seem to have constituted a book of botanical memoranda, which he carried about with him: there is a heading for each county, and he particularises where he found special plants. J. T. says he can still find around Hitchin, after the lapse of 200 years, the same plants, in the same places, he specified.

In the fifth chapter some account has been given of Thomas Lawson's early connection

with Friends, and also of the religious works he wrote. He became by profession a literary teacher after he resigned his clerical living at Rampside. In 1658 he was married. We have an account of four of his children, three daughters and a son. Jonah, who was the youngest of the four, died when he was about 14 years of age. In an article entitled "Serious Remembrancer," which Thomas Lawson wrote soon after that event, he mentions him thus:—"I had an only son, who though educated in a mixed school, where his progress exceeded his years, was so influenced and preserved, that during the whole course of his short life I never knew him at variance with any one; I never knew that he uttered an oath, committed a breach of truth, or ever sought to disguise its simple and plain acknowledgment. He was grievously afflicted with the small-pox, and after we judged he had passed its height, unfavorable symptoms recurring, in a few days carried him off. The nearer he drew to his end, the more he wished for my company. The night before he died, one inquiring how he was, he answered, 'I'm well, spiritually, but indifferent in body.' Soon after, being affected, and full of love towards him, I said, 'Jonah, we will talk of a better mansion, our stay here must be transient—think of that city whose builder and maker is God. This world is at best a bitter sweet, but heaven is unmixed happiness. Have God in thy thoughts.' He replied, 'I am willing to die, if it be His pleasure, or to live to praise him.' His sister Ruth weeping beside him, he said to her, 'Weep not, sister, I hope we shall meet in heaven.' Not long before his departure, he uttered these words, 'The time thou hast appointed for me on earth give me grace to praise thee.'

"He expired the 23d of 12th month, 1683. Notwithstanding that his bodily distress was extremely great, he never in the course of his illness dropped an inconsiderate or impatient word, which with his many affecting and tender sentiments, wrought in me such a frame of spirit, that I could freely commend him to the Lord, in much confidence of his future happiness. I wish I may never forget the finishing of his course, nor do I ever remember it but I am bettered by its reflections." Dated 1684.

The sister Ruth who is mentioned in the foregoing was Thomas Lawson's eldest daughter. Several of her letters written in Latin are still extant. Her marriage was a source of trouble to her father, whose annoyance was increased by the blame that some individuals belonging to the same meeting were disposed to cast on him. The circumstances are developed in the following letter, which is copied from the original in the possession of John Thompson. It is dated 1686, and was written on the occasion of a letter arriving from George Fox,

which alluded to the importance of "healing breaches and restoring brotherly love." In order to attain that end, Thomas Lawson said he must speak out, and show to those who had been blaming him the injustice of their censures. And thus he wrote:—

"Friends,—I must for unity [sake] speak something in answer to the charges contained in your letter, which with much diligence hath been dispersed, even, 'from Dan to Beersheba,' as I may say.

"You say I was faulty in the concern of the marriage of Christopher Yeats and my daughter Ruth, in encouraging the same, and not showing my utter dislike thereunto, and in not re-training her to my utmost.

"I answer:—When first he mentioned the thing, I said such marriages were unequal, and contrary to the law settled in our Church, grounded on the Law and the Gospel, which I would not deviate from; and that I would not join my daughter to that which for conscience sake I had forsaken. That he might not think I denied him on earthly accounts, I said if he were the greatest prebend in Carlisle he should have this answer; and from this I never varied in word or thought. The next morning I spake to her, and perceiving he had got some place in her affections, I put her in mind of her duty, and by many arguments, mixed with much sharpness, I endeavored to quench the same. After that, when she went to the meeting at Shap, I commonly went with her, to prevent their meeting. My endeavors not being prevalently answerable to my mind, I sent her to Thomas Cowens (Lancaster,) where she continued a pretty considerable time; withal writing to Margaret Fox and acquainting her with the concern, and with my great dissatisfaction, of which she can testify to this day. She and others there endeavored to alienate her affections from him, and I wrote letters to her there; as (I also did) when she was at home, and I had occasion to go abroad, when I would leave her a letter so to touch her, as that in my absence she might not be ensnared. Truth I wrote to a tittle; though indeed I now want the words which love and trouble then made me even abound with. If any question the truth hereof, the letters I believe are yet extant.

"What should I have done [that I have not done?] I am not a man-hater, who by pretence could clap her into the ship of Turk or Pagan, and 'let her sink or swim,' as one of you said. And you have also said, that months after the affair commenced, I admitted 'the proud Christopher Yeats' into my house, pretending him to be my scholar, which was no little encouragement to them.

"I answer. John Blakeing, coming to our town, said to me, 'Shap Friends blame thee much, saying thou art rough in thy proceedings;

if thou blames thy wife, and threatens to disinherit thy daughter, I would not have thee to do so, only keep *thyself* clear.' Thomas Wilson told me much to the same purpose. I confess there was truth in it; but if rightly understood, this implies my clearness from assenting. However, not being glued to my own understanding [of the case] or to my former method of austerity, when afterwards I casually met with Christopher Yeats, I refused not to talk a little with him about other things, but if ever he mentioned the aforesaid concern, I bid him hold his peace, for my last words about it should answer my first, and never a man that spake with a tongue should ever steer me one jot from my resolution, it being of divine account. Again, having her word of not marrying without my consent, I tried this to bring him to desist. Christmas, so called, coming on, three or four young men came to learn Hebrew with me, and he, unwilling to be behind in that accomplishment, raised interest to prevail with me if he might go along with them: I was very unwilling, and at first denied. It was cast upon me that I was envious in denying him that common civility granted to others, and he told me if he spake a word to her [on the occasion] to turn him out of the house. So he came some seventh day, about the tenth hour, went directly to the chamber above, to the other young men, and went away about the third hour. I confess some might take occasion of jealousy as to my assenting from this, but I am sure he felt no encouragement by it, for being questioned by some he he said, 'He is fair in this, but about the other business, I believe he is unalterable.'

"Suppose any of you had a daughter so circumstanced, might you not make him [who was attached to her] a pair of shoes, weave him a web, or use civil commerce, and yet not give, nor he take encouragement thereby?

"Being some weeks from home, and coming by your town I first heard of their marriage, which ministered such offence and grief, that I was as really resolved to turn her out of my house, as ever David was to destroy Nabal, when Abigail's advice and wisdom prevented the same; so in a weighty sense David blessed the Lord, and her advice, which had kept him from shedding blood. I had not omitted any Christian way that presented to me to prevent it, so I had peace in that I did. Then such scriptures as these, from the Holy Book of God, arose within me, about restoring such in the spirit of meekness as were overtaken with a fault, and to be watchful and strengthen that which remains that is ready to die. As I walked from your town that day home, it became the whole concern of my mind, that she might be preserved from further straying, and for her restoration, in order whereunto it was my

judgment to keep her in my house, fearing if she went, she might make further shipwreck. My end was good, and God has blessed the same. If any would have taken other measures, I judge him not as I am judged."

Thomas Lawson did not long survive his friend George Fox. He died about a year after him, in 1691. His will, procured from the registry of the court of Carlisle, is now before me. After specifying some money bequests to his daughters, Deborah and Hannah, he thus remembers Ruth and her family.

"I give to my two grandchildren, Frances and Jane Yeats, the sum of five pounds. I give to my daughter Ruth, the best cow I have but one. I give to my son in law, Christopher Yeats, and his heirs and assigns for ever, one parcel of ground, called Backstanbar, in the lordship of Great Strickland, with the field and house thereon, being three roods by estimation, held in fee simple, paying one pepper-corn when lawfully demanded. I give also to the said Christopher, Camden's Britannica, my Hebrew Lexicon, and all my manuscripts. All the rest of my goods, movable and immovable, I give unto Frances my wife, and Deborah and Hannah my daughters, whom I made joint executors of this my last will and testament."

Frances Lawson survived her husband about two years. After her death, a gentleman who had been Thomas Lawson's pupil, and entertained great regard for him, asked those who composed the meeting of Great Strickland to allow him to erect a tomb over the remains of his departed friends. They declined on the ground of such erections being contrary to their practice. At Thomas Lawson's request this gentleman had given the piece of ground which was occupied by the Friends as a burial-place; therefore he replied,—Though he had given the spot in question to his friend Thomas Lawson, for burial ground for himself, and family, and friends, he had not made it over either to him, or to them, by any legal transfer, and would resume his control over it all if they continued to decline permitting him to erect the tomb. Under these circumstances they allowed him to carry out his own plan. A plain tomb was accordingly built, and the remains of husband, wife, and son, therein deposited. That tomb forms one of the very few such erections which were raised in the early times in Friends' burial-grounds. It remains there singly, surrounded by the simple grassy graves which mark the last earthly resting place of all the other deceased friends who belonged to Great Strickland from that day to this.

Novels, like vessels of light draught of water, are adapted to make their way only in *shallow* channels. In the overflowing streams of litera-

ture, they are as so many buoys indicating to the intellectual navigator "shoal water here."

"THY WILL BE DONE AS IN HEAVEN SO IN EARTH."

To do the will of God is the highest privilege, blessedness and perfection of our natures. It is the employment of angels and glorified spirits in Heaven; it is the delight of holy and regenerate men upon earth; there is in short no blessing, no peace, no protection, either in heaven or in earth, either temporal or eternal, but what in some degree or other is the happy proportion of that pious Christian who hath learnt to rejoice in doing the will of God.

God willeth, and can never cease to will to bring all men into the bosom of His peace. He hath no delight in the miseries or the imperfections of His creatures; but it is His unchangeable desire that every disorder of nature should be removed; that all worlds and all beings in all worlds should rejoice in the communications of His infinite goodness; that not only the kingdom of this world, but of every world, and of every soul, should become *the kingdom of the Lord and of His Christ*.

Here, then, we may establish this one great truth in the utmost degree of sober certainty, that so far as we form the spirit of our lives according to a spirit of love towards God and towards one another; so far as this spirit produceth in us the fruits of humility, of meekness, of patience, of wisdom, of mercy and of charity; so far as it overcometh in us all sloth and indolence, and renders us diligent in our several employments to the glory of God and the good of one another; so far as this spirit thus prevaileth in us, in the same degree we shall attain unto the spirit and life of the holy angels: the communication betwixt their kingdom and that of our hearts will be opened. God's WILL will be done on earth, as it is in heaven, and this world thus be changed into the image of the glory and blessedness of heaven, and ourselves into the image of the glory and blessedness of its holy inhabitants.

To find, then, the good effects of this prayer, we must, as our BLESSED LORD intended, make it the daily rule of the spirit of our lives. We must learn by it to do and to suffer every thing as the *will* of God, and to respect Him and the influences of HIS HOLY SPIRIT in all our daily thoughts and actions. We must, for this purpose, enter upon a vigorous repentance from all our sins, and become true converts to JESUS CHRIST. We must labor also, through His divine grace, to live useful lives; to renounce all sloth and indolence as things most destructive to our spiritual interests; and to respect the great laws of "Justice and Judgment" in all our employments, thoughts, words and works."—*John Clowes*.

For Friends' Intelligencer.

AN EXTRACT FROM LAW'S "SPIRIT OF PRAYER."

It is manifest that no one can fail of the benefit of Christ's salvation, but through an unwillingness to have it, and from the same spirit and tempers which made the Jews unwilling to receive it. But if thou wouldst still farther know how this great work, the birth of Christ, is to be effected in thee, then let this joyful truth be told thee, that this great work is already begun in every one of us. For this holy Jesus, that is to be formed in thee, that is to be the Saviour and new life of thy soul, that is to raise thee out of the darkness of death into the light of life, and give thee power to become a son of God, is already within thee, living, stirring, calling, knocking at the door of thy heart, and wanting nothing but thy own faith and good will, to have as real a birth and form in thee as He had in the Virgin Mary. For the eternal Word, or Son of God, did not then first begin to be the Saviour of the world, when He was born in Bethlehem of Judea; but that Word which became man in the Virgin Mary did, from the beginning of the world, enter as a word of life, a seed of salvation, into the first father of mankind; was inscribed into him, as an ingrafted word, under the name and character of a bruiser of the serpent's head. Hence it is that Christ said to his disciples, *the kingdom of God is within you*; that is, the divine nature is within you, given unto your first father, into the light of his life, and from him, rising up in the life of every son of Adam. Hence also the holy Jesus is said to be the light, which lighteth every man that cometh into the world. Not as He was born at Bethlehem, not as he had a human form upon earth; in these respects He could not be said to have been the light of every man that cometh into the world. But as He was that eternal Word, by which all things were created, which was the life and light of all things, and which had as a second creator entered again into fallen man, as a bruiser of the serpent; in this respect it was truly said of our Lord, when on earth, that He was that light which lighteth every man that cometh into the world. For He was really and truly all this, as He was the Immanuel, the God with us, given unto Adam, and in him to all his off spring. See here the beginning and glorious extent of the Catholic church of Christ. It takes in all the world. It is God's unlimited, universal mercy to all mankind; and every human creature, as sure as he is born of Adam, has a birth of the bruiser of the serpent within him, and so is infallibly in covenant with God through Jesus Christ. Hence also it is that the holy Jesus is appointed to be judge of all the world; it is because all mankind, all nations

and languages have in him, and through him, been put into covenant with God, and made capable of resisting the evil of their fallen nature. . . . Poor sinner! consider the treasure thou has within thee; the Saviour of the world, the eternal word of God, lies hid in thee, as a spark of the divine nature, which is to overcome sin and death and hell within thee, and generate the life of heaven again in thy soul. Turn to thy heart, and thy heart will find its Saviour, its God, within itself. Thou seest, hearest, and feelest nothing of God, because thou seekest for him abroad with thy outward eyes; thou seekest for him in books, in controversies, in the church, and outward exercises; but there thou wilt not find him, 'till thou hast first found him in thy heart. Seek for him in thy heart, and thou wilt never seek in vain, for there he dwelleth; there is the seat of his light and holy spirit.

"HE THAT EXALTETH HIMSELF SHALL BE ABASED."

Our departure from this world, however active our lives, or influential our positions, will not awaken much attention among the men we leave behind. "We perish forever without any regarding it." My proud friend, whatever thou mayest think about the wondrous esteem in which thou art held by thy compeers, and of the importance of thy life to society, though thou art a merchant, whose vast transactions influence the markets of the world, or a statesman, whose speeches control the doings and destinies of cabinets, or, what is greater still, a writer, moving the minds of the millions, but few of the men that know thee will pause in their business to think of thy death, and fewer still will drop a tear on thy grave. The sorrow of those that love thee most will be but as a cloud upon the sky, however dark for the moment, soon dispersed. In a few short days after the earth has closed on thy remains, thy very children shall gambol on the hearth, with their little hearts as gladsome as ever; and the convivial laugh and jest of domestic joy will be heard as usual in thy dwelling. The world can do without thee, my friend; everything will progress as usual when thou art in thy grave. Thy death will be but a blade withered in the fields; the landscape can spare thee—a drop exhaled from the ocean; the mountain billows will not miss thee.—*Methodist*.

POLITENESS.

In politeness, as in many other things connected with the formation of character, people in general begin outside, when they should begin inside; instead of beginning with the heart, and trusting that to form the manners, they begin with the manners, and trust the heart to chance influences. The *golden rule*

contains the very life and soul of politeness. Children may be taught to make a graceful courtesy, or a gentlemanly bow; but unless they have likewise been taught to abhor what is selfish, and always prefer another's comfort and pleasure to their own, their politeness will be entirely artificial, and used only when it is to their interest to use it. On the other hand, a truly benevolent kind-hearted person will always be distinguished for what is called native politeness, though entirely ignorant of the conventional forms of society.—*L. M. Child.*

THE LARK.

Take it for all, no bird in either hemisphere equals the English lark in heart or voice; for both unite to make it the sweetest, happiest, the most welcome singer that was winged like the high angels of God's love. It is the living ecstasy of joy when it mounts upon its "glorious privacy of light." On earth it is timid, silent and bashful, as if not at home, and not sure of its right to be there at all. It is rather homely withal, having nothing in feather, feature or form to attract notice. It is seemingly made to be heard, not seen—reversing the old axiom addressed to children when getting noisy. Its mission is music, and it floods a thousand acres of the blue sky with it several times a day. Out of that palpitating speck of living joy there swells forth the sea of twittering ecstasy upon the morning and evening air. It does not ascend by gyrations, like the eagle or birds of prey. It mounts up like a human aspiration. It seems to spread out its wings and to be lifted straight upward out of sight by the afflatus of its own happy heart.

To pour out this in undulating rivulets of rhapsody is apparently the only motive of its ascension. This it is that has made it so loved of all generations. It is the singing angel of man's nearest heaven, whose vital breath is music. Its sweet warbling is only the metrical palpitation of its life of joy. It goes up over the roof-tree of the rural hamlet, on the wings of its song, as if to train the human soul to trial flights heavenward. Never did the Creator put a voice of such volume into so small a living thing. It is a marvel, almost a miracle. In a still hour, you can hear it almost a mile's distance. When its form is lost in the hazy lacework of the sun's rays above, it pours down upon you all the thrilling semitones of its song, as distinctly as if it were warbling to you in your window.—*Elihu Burritt.*

Let every man sweep the snow from before his own door, and not busy himself about the frost on his neighbor's tiles.—*Chinese Proverb.*

"SOCIETY" AND COMMERCE.

A commercial career has become one of the liberal professions, and has taken on itself alike the dignities and the duties of its station. Society, as it is termed, regards a thriving merchant pretty much as it looks upon a successful barrister or physician; it sends its sons into mercantile houses, not only without any of that shuddering which once passed for gentility, but with unclouded satisfaction; it accepts the training of a counting-house as no bad qualification for high political office; and acknowledges that merchant princes are not merely to be tolerated as fathers-in-law to younger sons, but to be admitted into the most absolute social equality. On the other hand, commerce has learned something from society. It has been awakened to a sense of the value of high mental training and intellectual accomplishments. It has abandoned the belief in the blessings of ignorance on every other subject than the business in which men may be engaged. Hence the bracing discipline, physical and intellectual, of our public schools, and the social polish of our universities, are being more and more enlisted in the service of commercial education. Successful men of business have become convinced, for the most part, that no training can be too good for a career which calls for the exercise of the highest mental and moral qualities. There are different ideas, indeed, as to the merits of rival schemes and systems of education,—as to the superiority, for instance, of a general over a special training,—but there is no difference of opinion upon the question whether a merchant should be as well educated as any member of those classes with whom he is thrown into social contact. Nor has this change in the view which society takes of commerce affected education only. It has influenced the habits and the tastes of men of business. It has led them to take delight in the fine arts, in literature, and in those æsthetic enjoyments which inform with grace and beauty the cold realities of our daily life. There are few more munificent patrons of art than the men of commerce, few warmer friends of literature, few whose private houses show greater traces of refined and elegant tastes. The old school of merchants is fast fading out of sight, to the infinite grief, perhaps, of the survivors, but to the certain benefit of the world at large. The men whose vision was bounded by the outlook from their counting-houses; the men of one idea, that, namely, of amassing money they knew not how to spend; the men whose pride it was to have sacrificed everything to money-getting, and to have found themselves at fifty with solid fortunes, but with shattered constitutions, are fast giving place to a school of refined and cultivated gentlemen, no less keen in the pursuit of wealth, but regarding it as a

means rather than as an end—a means of happiness to themselves and of good to their neighbors.—*Travers's Circular.*

FRIENDS' INTELLIGENCER.

PHILADELPHIA, SEVENTH MONTH 21, 1866.

FRIENDS TRAVELLING IN THE MINISTRY.—

Joseph A. Dugdale has obtained a minute from Prairie Grove Monthly Meeting to visit the families of Friends of Prairie Grove Quarterly Meeting, and to make a general visit among Friends and others in the State of Iowa and the western part of Illinois.

Nathan Thomas obtained one from the same meeting, endorsed by Prairie Grove Quarterly Meeting, to attend Ohio and Indiana Yearly Meetings, and to appoint some meetings within their limits among those not in membership with Friends.

EFFORTS FOR THE FREEDMEN.—Though the Report of "Friends' Association of Philadelphia for the Aid and Elevation of the Freedmen" has been widely circulated within the limits of our own Yearly Meeting, yet as many of our readers in other sections are also deeply interested in the labors for this people, a portion of it was republished in our 17th number. In reference to it a Friend from Forest Hill, Md., writes: "As the dumb cannot speak, and the blind cannot see, so these down-trodden people cannot express to the world in words their gratitude for the many substantial evidences of love and care bestowed upon them through the Friends' Aid Societies, and their self-sacrificing instruments in the field."

Vast as the work has been, and still is, those who have felt bound to engage in it, either by active personal efforts, or by giving their means for its advancement, have a satisfaction in believing that great sorrow, sickness and destitution have been averted through the little that they have done. It is fearful to contemplate what the sufferings of these poor creatures might have been, had no friendly hand of help or sympathy been extended for their relief.

The teachers of the Association, believing themselves called to devote a portion of their life to the education of the freedmen, have been made willing to separate themselves from the endearing ties of home and kindred, and endure

privations that can scarcely be understood by those unfamiliar with their surroundings. With little society, save that of their dark-hued scholars, they are laboring earnestly and faithfully for their elevation, sustained by the gratitude and improvement of those they seek to benefit, by the feeling that they are in the line of duty, and by the evidence that He who requires of them the sacrifice, is strength in every time of need.

Though at this season of the year there is not an extensive demand for clothing for them, yet a certain amount is always necessary. The sick, the aged and the young children can make little provision for their own support, and philanthropy should continue its protecting care until such time as their own people can assume the charge. The cast off clothing that accumulates, and is laid aside for distribution in most families, will be most acceptable to them, and such or any other contributions for the Freedmen will be gladly received by Henry Laing, Treasurer of the Association, No. 30 North Third St., Phila.

THE CHILDREN'S FRIEND.—This little paper is free from the objections that attach to other periodicals for children that we have seen. If some of the pieces are considered a little too mature for a juvenile journal, they all contain instruction, and the spirit of love and gentleness that breathes throughout its pages will insure it a welcome in the family.

A periodical of this description that would present sacred truths and correct ideas in a lively and agreeable form, adapted to interest and impress for good, the minds of children, has long been needed among us, and we hope the effort now made to supply the want, will meet with encouragement. Those who write for children should use simple language, and as much as possible divest their minds of the idea that their contributions will be read by "children of a larger growth."

The last number is interesting and attractive.

MARRIED, on the 10th of Seventh month, 1866, in accordance with the order of the religious Society of Friends, CHARLES EVANS, of Philadelphia, to MARGARET, daughter of Enoch Middleton, of Crosswicks, N. J.

DIED, on the 5th of Third month, 1866, CECILIA WHITELEY, wife of Daniel Whiteley, aged 66 years; a member of Milford Monthly Meeting, Wayne Co., Ind.

DIED, on the 28th of Sixth month, 1866, at his residence near Alliance, Ohio, after being confined to his room for near four years, NATHAN HSAOCK, in the 84th year of his age; a member of West Monthly Meeting, formerly of Quakertown, Bucks Co., Pa.

As the sun silently sinks in the western sky, so his peaceful spirit took its departure to repose in the bosom of its God.

—, on the 28th of Fifth month, 1866, JEDIDAH CORBIN, wife of David Corbin, aged 77 years; a member of Oak Hill Monthly Meeting, Albany Co., N. Y.

Extracts from the Yearly Meeting of Women Friends, held in New York, by adjournments, from the 28th of Fifth month to the 31st of the same, inclusive.

At our unusually large and interesting assembly, we have been made to own the life-giving power and presence of the great Shepherd and Bishop of Souls—and we have desired to preserve for your spiritual refreshment, some of the many living exercises with which we have been favored. We have felt the sweet and animating influences of Heavenly love to pervade our several gatherings—in which our hearts have been more closely cemented together, and which bids us to own, and salute, in the fellowship of the Gospel, every absent member of our fold.

We have been called to no new path—we have received no new Gospel. There is but *one* way to the end we seek—and *that* lies through the door of obedience to the requirings of our Divine Master, however small and inconsiderable they may appear to be.

In reviewing the state of society, as portrayed in the answers to the queries, a sorrowful neglect is apparent in the support of many of our ancient and valued testimonies, especially those relating to simplicity in our dress, address and manner of living—the attendance of our religious meetings—the frequenting of places of diversion, and a free Gospel ministry. Many powerful and stirring appeals have been made to rouse us from our apathy in these respects; particularly in the reasonable duty of assembling ourselves together for divine worship. We have been assured that, if we would press forward through every difficulty, the way would be made for us to perform this service, and we should return to our homes with joy; bearing with us the answer of a good conscience—and oftentimes also, those sweet “fruits of the Spirit,” which are the result of obedience.

It confirms us in every good word and work, to mingle with our friends in solemn worship—the love of the Father often flows from vessel to vessel—and even when there is no outward ministration, we may hear the voice of that great Teacher, who “speaks as never man spoke,” for He alone hath “the word of eternal life.”

Our example may lead others also to “behold the beauty of the Lord, and inquire in His

temple,” His will concerning them. Oh! did we fully realize the force of consistent example, how careful would we be to do nothing which might cause our brother to stumble or offend. Those, especially, who have the care and training of the young, would strive after a more pure standard of excellence, that they might be able to say to their children, “Follow us, as we follow Christ.”

An earnest desire has arisen in our minds, that mothers should be more concerned to take their children to meetings for worship and discipline—instructing them in very early life to know and love our principles and testimonies. Were this the true concern of parents and guardians, how soon would our strength be renewed, and the glory of our first estate be restored to us as a people. Then, should we behold the children pressing forward to fill the ranks of faithful laborers, already thinned by the hand of Death, and there would be a succession of “judges, as at the first, and counselors, as at the beginning.”

The young have been warned in the spirit of tender love and solicitude, not to waste the strength of their prime, in the pursuit of the frivolous and unsatisfying pleasures of this world, which are unworthy of the attention of immortal and accountable beings who must ere long, know the realities of that eternal world to which we are all hastening. They have been implored to pause *now*, in their career of folly, that they may not have to mourn in the day of account, over misspent time and wasted opportunities. They have been urged to use their influence over their brethren, by refusing to become partners with them in worldly and debasing pleasures—endeavoring to lead them into channels of higher and purer enjoyment, and inducing them to refrain from those intoxicating draughts, which, though at first sweet to the taste, in the end, bite like the serpent and sting like the adder.”

Mothers in Israel have been exhorted to be faithful to the end, which, to some of them, cannot be afar off, when they shall reap the full fruition of their hopes, in that rest which remains for the people of God. They have been urged still to extend a guarded care over the younger mothers of the flock, strengthening and encouraging them by their counsel and experience to a faithful discharge of every important duty.

The subject of providing suitable reading for the young has also been brought before us—with desires that parents might seek for their children that kind of reading which will open the understanding to the wonders of the world created by Him, who is great and marvellous in all His works—thus preventing their thoughts from centering in those trivial pursuits, which too often engross their attention, and obstruct

the growth of that tender germ of life, implanted in every soul. Much concern has been expressed that our testimony with regard to plainness of speech may not be lightly set aside, believing that this distinguishing characteristic of our Society is often a hedge of protection to its members, as well as a call and a watchword to others.

It is earnestly desired by many that we, not only as individuals, but as the Society of Friends, may prove faithful in our duty toward the colored people, who are passing from slavery to freedom, helping them from ignorance and degradation to an appreciation of their new responsibilities as free men and women.

A living testimony has been borne to the necessity in all our movements, especially in our religious concerns, that we wait for the holy anointing of the Lord's spirit to qualify for every good word and work; not daring to put forth a hand to steady the ark, unbidden by the Great Head of the Church—lest we bring spiritual death on ourselves—and our influence go to lead others from that power and wisdom of God, that alone qualifies for his work.

The Committee appointed last year to present a memorial to the President of the United States and other heads of the Government reported: that soon after their appointment, they proceeded to Washington and presented the address to the President and several of his Cabinet, and in their intercourse with them were kindly received, and treated with much respect.

The President and Secretaries to whom the address was presented assured them that they were glad to receive it, and that it would be duly considered. It was also stated to the meeting by one of the Committee that the individuals whom they visited, feeling the great weight of responsibility that rests upon them, felt and appreciated our sympathy and our prayers for them, that they may be endued with wisdom and sound judgment to discharge the various high and important duties to our Nation that rests upon them, and be instrumental in settling the people down in quiet submission to the laws of the land.

"Your prayers," said one of them, "have done more for us in the severe trials through which we have passed, than if you had buckled on the instruments of war and gone into the battle field."

On behalf of the meeting,

RACHEL HICKS, Clerk.

THE NORTH POLE.

Two French gentlemen recently explored the island of Spitzbergen in a manner never before done. They have measured the mountains, mapped the whole coast, examined the vegetable products, the geological composition, &c., of the island. They found that the long day,

extending over several months, during which the sun never sets, became intensely hot after a month or two, by the unceasing heat from the sun. In this period, vegetation springs up in great luxuriance and abundance. The North Pole is only a matter of 600 miles from the island, and it is thought by the two explorers, as by many others, that the pole itself, and the sea which is supposed to surround it, could be reached from Spitzbergen without any great difficulties being encountered. A singular fact noticed by the explorers in connection with this island is the enormous quantities of floating timber which literally cover the waters of the bays and creeks. A careful examination of the character, condition and kind of those floating logs would, no doubt, lead to a conclusion as to whence and how they came, and probably suggest new theories for the solution of geographical problems connected with the Arctic seas.

For Friends' Intelligencer.

THE GREAT WEST.

(Continued from page 300.)

CHICAGO, 6th mo. 20th, 1866.

There is much to interest a stranger in this place. We visited the "*Union Stock Yard*," some miles below the city. The President of the company informed me, that one year ago not a fence enclosed their grounds—now they have over *eighty acres* planted over—*twenty millions* of lumber have been used about the premises; and it is said the avenues between the cattle pens, if measured in a straight line, would amount to *ten miles*. The largest number of cattle they have ever had in one day has been *fifteen thousand*; although, with an eye to the future, they have accommodations now completed for *twenty-five thousand* head. They have also a splendid hotel, containing in all 353 rooms, 254 of which are lodging rooms. The top of this building gives a magnificent view of the country.

Our ride this morning was anything but pleasant, in consequence of a collision, from the probable consequence of which we made a narrow escape. The minutiae of the occurrence it is unnecessary to narrate. Suffice it to say the only car of which our train was comprised became jammed between our own locomotive and that of another train—the former being prevented from proceeding in consequence of a car from still another train off the track; at which moment a fourth train came backing down on us at the rate of ten miles per hour, driving the cowcatcher under us, throwing us off the track, breaking the cast iron head of the cylinder off, crushing platform, steps, railings, &c. For a few moments, the choice appeared to be between being crushed in the rear by one locomotive, or just as dangerously situated with another in front, in the effort to escape there. All escaped

without injury, though the victims of a well-grounded fright.

We also visited two Artesian wells, situated completely on the outskirts of Chicago, both of which are 711 feet deep. One of these having a pipe of *five* inches in diameter, discharges 800,000 gallons per day, was commenced in the Fifth month, 1865, and completed on the 1st of *Eleventh* month the same year. A printed document hangs up in the building, which states the work was commenced under the direction of the "*Spirits*." A large drawing also adorns the wall, purporting to delineate the geological formation of the whole boring, executed, I believe, before the work was commenced, accompanied with the information, that under the same direction this was drawn in *sixty* hours. The draughtsman and projector, who is said to be no geologist, challenges any person who is, to accomplish such a drawing in less than *three* months. These things are given forth as facts, and however much we may justly discard the reputed influences, the undertaking itself is a decided and valuable success. A chemical analysis has been made of the water, and it is said to be admirably adapted for drinking purposes.

A great undertaking has been commenced to supply the city with pure water, and with every prospect of success. A tunnel is projected, which is to extend *two miles and a quarter* out into Lake Michigan, or rather under its bed. At this point a "crib" has been built, from which the tunnelling has progressed *two thousand* feet, while from the shore about *sixty-five hundred* feet are completed. At this point the excavating goes on each day until 3 o'clock, when another set of workmen descend, and brick up all this space, carrying their work into the night until completed, thus making everything secure each day, and leaving nothing exposed. I presume the same regulations are observed at the other end.

We were a few minutes too late to see the two sets of workmen exchange places, but looked down the great shaft and saw the dim lights burning at the depth of *eighty-five* feet.

Nor were the "*elevators*" and *hog killing* and *packing* establishments forgotten, several of which I visited. One of the former has a capacity for the storage of a *million and a quarter* bushels of grain.

At two of the latter I witnessed the *modus operandi* of converting, in a very few minutes, the *living* brute into the animal *prepared* for the market. The expedition, system, and cleanliness of the entire operation is well worthy of admiration. In one of these establishments, during the busy season, *two thousand* hogs are despatched per day of ten hours each.

During our stay, the "*sharpshooters*," a German association, corresponding with the "*Tur-*

ners," of Philadelphia, held their annual festival, and, from the sale of railroad tickets and other data, it was computed that on the first day *fifteen thousand* persons were in attendance at this garden; a portion of these of course outside spectators. Very many Germans live and are in business directly on the route to the garden; and this portion of the city presented a gay appearance. These residents, where there were no trees, had nailed to the wooden curb either entire trees of from two to four or five inches in diameter, or very large branches; and, in addition, decorated the outside of their houses with greens and with flags. A very fine arch was also erected for the cars to pass under. The customary exercises marked the occasion during the five or six days of its continuance. Many other matters of considerable interest claimed our attention, which time and space forbid dilating upon,—not forgetting their *cemetery*, of which, however, it is possible mention may yet be made.

CLEVELAND, 6th mo. 22d, 1866.

We are delighted with this place. Strolling through its business thoroughfares, the same busy hum was observable as elsewhere; while a drive through its streets and avenues, especially *Euclid* Avenue, presented such a *succession* of splendid residences as I have never seen elsewhere. The lawns in front of these seem to be objects of especial care and attention. So very beautiful are they, that the renowned "*Burlington banks*," on the river Delaware, (N. J.), bear no comparison to them. The grass is of the finest and closest kind, and really looks like a carpet of green plush. They use a rotary cutting machine, resembling a cast iron roller, which is trundled over the lawn, from which the grass flies just as the corn does from a cornsheller. This is used so repeatedly that the cuttings or clippings are not over an inch in length; and as to the residences themselves, it looks as though each owner had vied with his neighbor as to how much money he could expend in its erection and decoration. Their fences, gates, &c., are also of the most expensive character. We were shown one enclosure having several places of entrance, the gate-posts of which were of elaborately worked stone, costing *five hundred dollars* each. Upon expressing the view that these things must embody or represent a large amount of *wealth*, I was responded to that there had been, in many instances, an *unsubstantial* spirit of rivalry, resulting in a constant struggle to keep up appearances, although in other cases a reality existed.

A day or two previous to our arrival, the severe storm had raged, accounts of which have already been published; and we had pointed out one of the wrecks from which several lives had been lost, scarcely visible above the surface of the water. Upon gazing upon the now

beautiful and placid lake, it seemed almost impossible to believe it could ever be lashed into the fury and destructiveness of which the sad results bore such unmistakable evidence.

A new depot is in process of execution, which, when completed, it is said will be the largest in the United States, and that it will cost not less than *half a million of dollars*. Some estimate that its total cost will reach a much larger sum than even this. The ample space its walls enclose, and its splendid arched roof, supported without a single pillar, cannot but elicit admiration, even in its present unfinished state.

J. M. ELLIS.

For Friends' Intelligencer.

SILENT CITIES.

Earthly glories quickly vanish, like a shadow sped away;

Noblest works by man erected, bear the impress of decay;

"Ichabod" is written on them. Change, they one and all have known;

Time, the all-destroying angel, hath their power overthrown.

Where is now that Queen of nations, mighty Babylon the Great,

In the valley of the willows, sitting throned in regal state?

Lo! the diadem no longer rests upon her haughty brow—

Torn her robes of royal purple, broken is her sceptre now!

Nineveh, that goodly city, now is desolate and lone—
As the prophet saw in vision, none is left her to bemoan;

Like to Admah and Zeboim, every trace is swept away

Of the gorgeous council-chambers, where Assyria's kings held sway.

And in Tyre, the "mart of nations," now is heard the bitter'n's cry;

Broken are her stately columns—in the dust her towers lie;

In her banquet halls deserted, reigns the silence of the dead—

On her walls and pillars broken, lo! the fisher's net is spread!

Princely Tadmor, in the desert, where Zenobia of yore

Swayed her sceptre undisputed, sitteth throneless evermore!

Where the festive throng once gathered, there the herds now fearless roam—

There, her web the spider spineth, there the bats have found a home.

Lo! on Thebes, the mighty city, time has laid his ruthless hand—

Temples, columns, sculptured marble, strew the desert's hoary sand.

Through her "hundred gates" no longer do her battle chariots pour,—

Gone her glory, pomp and splendor, to return again no more!

Itumoa's far-famed city, hewn from out the solid rock,

Bids defiance to the tempest, and the earthquake's mighty shock;

But its streets are now deserted,—gloomy silence reigneth there—
Where the sullen owl broodeth, and the wild beasts make their lair.

"Flocks are feeding in the Forum,"—towns lie buried in the deep—

'Neath Italia's sunny vineyards, cities, long-forgotten, sleep.

Touched by Time's "effacing fingers," lo! their glory passed away,—

All that mortal hands have builded, have the impress of decay.

Earth has no "continuing city," no abiding-place secure,

But a "mansion" is prepared us, whose foundation standeth sure;

In the land beyond Death's river, rise its walls as crystal clear,

They alone are ever-during, of decay they know no fear!

A. R. P.

THE NEW EXPLOSIVE SUBSTANCE, NITRO-GLYCERINE.

"Glycerine, as we all know, is the sweet principle of oil, and is extensively used for purposes of the toilet, but it has now received an application of rather an unexpected nature. In 1847 a pupil of M. Pelouze's, M. Sobrero, discovered that glycerine, when treated with nitric acid, was converted into a highly explosive substance, which he called nitro glycerine. It is oily, heavier than water, soluble in alcohol and ether, and acts so powerfully on the nervous system that a single drop placed on the top of the tongue will cause a violent headache, which will last for several hours. This liquid seems to have been almost forgotten by chemists, and it is only now that M. Nobel, a Swedish engineer, has succeeded in applying it to a very important branch of his art—namely, blasting. From a paper addressed by him to the Academy of Sciences, we learn that the chief advantage which this substance, composed of one part glycerine and three parts of nitric acid, possesses, is that it requires a much smaller hole or chamber than gunpowder does, the strength of the latter being scarcely one-tenth of the former. Hence the miner's work, which, according to the hardness of the rock, represents some five to twenty times the power of the gunpowder used, is so short that the cost of blasting is often reduced by fifty per cent. The process is very easy. If the chamber of the mine presents fissures, it must be lined with clay to make it water-tight; this done, the nitro-glycerine is poured in, the water after it, which, being the lighter liquid, remains at the top. A slow-match, with a well charged percussion cap at one end, is then introduced into the nitro-glycerine. The mine may then be sprung by lighting the match, there being no need of tamping. On the 7th of June last three experiments were made with this new compound in the open part of the tin mines of Altenburg, in

Saxony. In one of these a chamber thirty four millimetres in diameter was made perpendicularly in a dolomitic rock sixty feet in length, and at a distance of fourteen feet from its extremity, which was vertical. At a depth of eight feet a vault filled with clay was found, in consequence of which the bottom of the hole was tamped, having a depth of seven feet. One litre and a half of nitro glycerine was then poured in; it occupied five feet; a match and a stopper were then applied, as stated, and the mine sprung. The effect was so enormous as to produce one fissure fifty feet in length, and another twenty feet."

From The Examiner.

Alexander von Humboldt; or, What may be accomplished in a lifetime. By F. A. SCHWARZENBERG. Hardwicke.

There is room for a much fuller memoir of Humboldt than could possibly be given in this little volume; but till that appears—and Mr. Schwarzenberg here shows himself competent to the work—this brief sketch claims attention as being far better and more comprehensive than any other available to English readers. Drawing most of his material from Professor Klenke's "Denkmal," Mr. Schwarzenberg fills about fifty pages with a rapid survey of Humboldt's scientific attainments, and then proceeds, in a hundred and fifty other pages, to give some account of his personal history. The book is well planned, and yields a few hours' excellent reading.

Humboldt was born at Berlin on the 14th of September, 1769. His father, who died in 1779, was a retired major, and sometime favorite of Frederick the Great, and his mother was a niece of Princess Blucher. Both parents were wise and learned, and during the father's life-time the old castle Tegel, in which he dwelt, was a favorite resort of men famous in literature and science, as well as of princes and state officials. There Göthe visited in 1778, and made his first acquaintance with the two boys, Alexander and his elder brother Wilhelm, who were hereafter to become his intimate friends. As boys, Wilhelm was thought the cleverer of the two, Alexander being sickly and unfit for great mental labor. He was prudently encouraged in natural history studies and other healthful pursuits, and developing a great aptitude for these, he prepared himself, when good health came, for wonderful mastery of them. In 1786 he went for two years to the Frankfort university, and thence he proceeded, for another two years, to complete his studies, to Göttingen, where Blumenbach, Heyne, and Eichhorn were among his teachers, and George Forster, who had gone round the world with Captain Cooke, was his best friend. These associates proved very helpful to him in his diligent study of physical,

archæological, and philological studies. Closing his university life in 1790, he was as diligent a student as ever, for nearly seventy years more. Among other instances it is noted that, in 1834, being in Berlin, with some winter hours to spare, he took his seat among the students of the university, and attended lectures on Greek literature and antiquity, noting down the principal topics of the lectures, as he had been accustomed to do some five-and-forty years before. He learnt everything that he could, and he never forgot what he learnt. "A friend once called upon him," says Mr. Schwarzenburg, "to discuss some points relative to the topography of Jerusalem, and astonished at what he considered his marvellous memory of the streets and houses of the Holy City, asked how long it had been since he was there. 'I never was there,' was the answer; 'but I intended going sixty years ago, and therefore prepared myself.'" In illustration of another kind of memory, we are told that on one occasion "some ladies were brought to his house to be introduced to him. Among them was the daughter of a gentleman in Philadelphia, with whom he had resided in 1804, long before she was born. On entering the room, Humboldt exclaimed, without the slightest doubt or hesitation, 'You must be the daughter of my old friend in Philadelphia.'"

Studying books with all his might, Humboldt turned his attention most diligently to the unwritten book of nature. According to Mr. Schwarzenberg,

"He directed himself to facts; he examined and compared, without ever taking a direct part in the battle of the philosophers, because he had entered upon a new road—a higher and a more comprehensive point of view. He endeavored to comprehend the universe in all its grandeur. Nature should, through a perfect comprehension of its powers and its laws, in general and in particular, become a lively object of human knowledge—an open book in which the isolated and the small explains itself through the whole and the great. The immense territories of his researches were: 1. The knowledge of the earth and its inhabitants; 2. The discovery of the higher laws of nature, which govern the universe, men, animals, plants and minerals; 3. The discovery of new forms of life; 4. The discovery of territories hitherto but imperfectly known, and their various productions; 5. The acquaintance with new species of the human race,—their manners, languages, and historical traces of their culture. In this extensive field Humboldt labored with unwearied activity, care and perseverance. The natural consequences of his researches manifested themselves in all the branches of scientific and practical knowledge, and found application in numerous circles of life. His vivid

and glowing description, never yet surpassed, of scenes witnessed in distant countries, awakened a desire for travel; they furnished new instruction; the charm of his descriptions inspired numerous youths with a love for nature's beauty; many a thoughtful man, with a resolve to study the laws of nature, and even many a female heart, attracted by the fabulous tropics and the love for grandeur of scenery, learned to pronounce with veneration the name of him whose person is surrounded, in the conception of many, with the enchanting brightness of the mysterious and marvellous, when they meet him in the description of mariners, or the perilous wanderings, in the wild burning territories of the southern hemisphere."

Humboldt, however, is to be admired even more for what he himself did than for what he encouraged others to do. Spending the best years of his life in minute, personal exploration of several of the most interesting parts of the world, he heaped up a mass of curious knowledge, which shaped itself in his all-grasping and well-regulated mind, into whole systems of science and scientific teaching, or rather, entire ramifications of the one vast system of nature, when he made it his great business to describe.

"He was the first who regulated and classified isolated scientific facts of the past and the present, and who assigned to everything its proper place, in order to establish the necessary harmony of the whole. His critical insight assigned to the apparent lawless a fixed law; the isolated found its kindred groups. He thus revealed and laid open the united life and activity of our planet in its actual being. He became, as testified by his life, the founder of a comparative cosmography, the originator of the science of geognosy, and indicated, with his friend Leopold von Buch, the volcanic activity which influences the formation of our earth. He was the founder of the geography of plants, an entirely new science, regarding the laws of their distribution. He discovered a new world, with new forms, new life, manners, languages, and the remains of an unknown antiquity. He likewise was the reformer of geographical maps; and, lastly, the originator and the representative of a new method in the investigation of general science which is daily becoming more developed. He endeavored to realize a more universal standpoint, tracing continually the mutual connection of the divers branches of science, watching nature in her secret laboratory, searching for new facts, and discarding all kinds of speculations. The internal complication of cause and effect, isolated, and in its relation to the whole, afforded him a guide to the discovery of its laws. He originated the modern school which unites physical science with human history, and which has produced, in its mode of investigation, remarkable results.

This mathematical, exact method of research is due to Humboldt. It is at present the acknowledged method of the most eminent naturalists, though it cannot be denied that it led to the most trifling empiricism in those who only adopted Humboldt's method, without possessing his powers of combination, and his lofty insight into the laws of the physical Cosmos."

(To be continued.)

THE OLDEST MAN IN AMERICA.

Joseph Crele, who was probably the oldest man in the world, died in Caledonia, a little town of Wisconsin, on the 27th of January last, at the age of one hundred and forty-one years. Twice threescore and ten years may be called a ripe old age. He attained an age greater by twenty years than that enjoyed by the next oldest man of modern times, Jean Claude Jacob, a member of the French National Assembly, who was called the "Dean of the human species," who died at the age of one hundred and twenty-one. Joseph Crele bore arms at Braddock's defeat, was an old man when Jackson defeated Pakenham at New Orleans, venerable when Taylor whipped Santa Anna at Buena Vista, and yet was not too old to rejoice when Lee surrendered to Grant.

Joseph Crele was born of French parents, in what is now Detroit, but which was then only an Indian trading station, in 1725. The record of his baptism in the Catholic Church in that city establishes this fact beyond a doubt. He was a resident of Wisconsin for about a century, and was the "oldest citizen" in that State beyond any dispute. He was first married, in New Orleans, in 1755, after having grown to be a bachelor of thirty. A few years after his marriage he settled at Prairie du Chien, while Wisconsin was yet a province of France. Before the Revolutionary war, he was employed to carry letters between Prairie du Chien and Green Bay. A few years ago he was called as a witness in the Circuit Court of Wisconsin, in a case involving the title to certain real estate at Prairie du Chien, to give testimony in relation to events that transpired eighty years before, and many years before the litigants were dreamed of.

For some years past he had resided at Caledonia with a daughter by his third wife. This child was a little over seventy years of age a couple of years ago, but we do not know whether she survives her father or not. He was sixty-nine when she was born. Up to 1864, Mr. Crele was as hale and hearty as most men of seventy. He could walk several miles without fatigue, and was frequently in the habit of "chopping" wood for the family use. He went to all elections, and from the time he first voted for Washington, he had always voted the

straight-out Union ticket. He had no bad habit, except that he was an inveterate smoker. In person he was rather above the medium height, spare in flesh, but showing evidences of having been in his prime, a century or so before, a man of sinewy strength. Of late years a haunting sense of loneliness overwhelmed and seemed to sadden him. The only weakness of mind which he ever betrayed was in the last year or two of his existence, when he frequently remarked, with a startling air of sadness, that perhaps "Death had forgotten him;" but he would always add, and, with more cheerfulness, that "he felt sure God had not."

CENTENARIANS IN EUROPE.

A French journalist has made a list of the number of deaths in the year 1865 of persons who attained the age of one hundred years and upwards, France not included. England holds a respectable place in the list, having five names out of only nineteen collected from the whole world. The following is the list, which might be added to by further investigation:—Burchell, 100 years, Brighton; Isabella Ross, 105 years, Market Weighton; Mary Flinn, 100 years, London; Margaret Burtis, 103 years, Shalton Rectory, Norfolk; Sarah Englefield, 101 years, Wakefield; E. Nauwelaers, 103 years, Brussels; Isabelle Somer, 100 years and eight months, Destelbergen, Belgium; Catherine Van Welle, 101 years, Alost; Lorenzo Rizzo, 100 years, Rossighone, Liguria; M. Agathange, formerly abbot of the Russian convent of St. George, Crimea, 108 years; the Austrian general, Count Civalart de Happancourt, 100 years; the Indian warrior, Bloody Hand, 100 years, at Cattaraugus; Madame Angelique Doyer, 113 years, at Quebec; Widow Gaggero, 106 years, at Genoa; Luisa Maria De Oliveira, 107 years, arrondissement de Louza, Portugal; Jean Schlagentweit, 117 years, Vienna; Madame Daniel Couture, 102 years, Levis, Canada; Rabello De Penafiel, Portugal, 106 years.

ITEMS.

The Jamaica Commission has brought its report. They conclude that there was ground for fearing a general insurrection of the blacks, had the rioters been successful; commend the energy displayed by Governor Eyre in the earlier steps taken for the restoration of order; condemn him for the discretion accorded to military officers after the disturbances had ceased; pronounce the hanging, whipping and destruction of property to which these gentlemen resorted unnecessary, wanton, and cruel; and declare the trial and execution of Gordon illegal. The report is on the whole judicial in its tone, though displaying everywhere a strong desire not to bear too hard on Eyre in its inferences. But the mere facts which the commission rehearse, as proved, are in themselves a worse condemnation than any opinion the report could pronounce. The reluctance of the commissioners to speak out their full mind has excited a good deal of severe comment in England. But had the victims of Eyre's negligence or

cruelty been white, we are satisfied that no man in the country would have dared to put one line on paper which would even look like extenuation of the governor's conduct. Mr. Eyre has been removed, but it is to be hoped that the matter will not rest here. Gordon's trial was illegal, and his execution was murder. If its perpetrators are allowed to go unwhipped of justice, no man's life in a colony would be safe.—*The Nation*.

THE ATLANTIC TELEGRAPH.—The Great Eastern was expected to leave her moorings in the Medway, at the latest, on the 30th ult. The whole of the 1,660 knots of new cable has been completed. The weight of the new cable is about 38 cwt. per mile, which is almost double the weight of the original Atlantic cable. The total quantity of cable to be taken out will exceed 2,700 miles. The work of laying the cable will commence about the 8th of July.

CONGRESS.—During the week the following bills have passed the Senate. A bill prohibiting any State from making laws in relation to pilots and pilot charges discriminating against any other State. A bill extending the time for the acceptance of the public lands donated to the States and Territories of the United States to aid in the establishment of agricultural colleges. The bill regulating the time and manner of holding elections for Senators in Congress was taken up. It provides that elections shall be held on the second Second-day after the organization; that the voting shall be *viva voce*, and a majority of the whole vote shall be necessary to election, and failing such majority, a vote shall be taken each day during the session of the Legislature until a choice is made. A bill to repeal the act retroceding the county of Alexandria to the State of Virginia was taken up, and after considerable discussion, it was rejected. A resolution was adopted instructing the Secretary of the Treasury to cause a statement to be prepared, in tabular form, showing the duties levied on all imports by all the tariff acts from 1842, including the bill now pending in the Senate, and to report the same to the Senate at its next session. A resolution was passed placing at the disposal of the authorities of Portland, Maine, certain tents, hospital stores, &c., belonging to the Government, for the use of the families whose dwellings were burned by the late conflagration, also one suspending the collection of the taxes assessed on such persons as suffered materially by the late fire. The Tariff bill was received from the House and read twice. A motion was made to refer the bill to the Committee on Finance, and an amendment offered instructing the Committee to report on the second Second-day in 12th month next. The motion, as amended, was then passed. The bill for the construction of a ship canal around Niagara Falls was then taken up, and several amendments were agreed to.

HOUSE.—The House resumed the consideration of the Tariff bill with the amendments thereto, as reported from the Committee of the Whole. After a lengthened discussion, the bill was finally passed. The bill to quiet land titles in California was passed without a division. The bill regulating the time and manner of holding elections for Senators in Congress was reported from the Committee on the Judiciary. The bill granting to any telegraph company the right of way over any post-road, military route, and over the public domain, was passed after a long discussion. The Senate joint resolution to furnish tents, &c., to the Portland sufferers was agreed to. An appropriation of two hundred thousand dollars was made for the erection at Washington of a fire-proof building to afford to the Treasury additional room for the

preservation of papers; and also an appropriation of one hundred thousand dollars to rebuild the custom house at Portland, Maine.

THE CALIFORNIA INDIANS.—Commissioner Cooley has received a report from the Superintendent of Indian Affairs in California, dated San Francisco, June 15th, in which he gives a very encouraging account of affairs in that region. The prospect of excellent crops is now made certain by the late rains. The Indians through the State are now peaceable, and will remain so, unless badly abused by lawless whites. Abundant subsistence, in the way of grain and vegetables, for the Indians, will be secured, and the Indians are improving in general health, and are becoming more industrious.

EDUCATION OF FREEDMEN.—The citizens of Oxford, Mississippi, at a recent popular meeting, put forth the following plea for the education of the freedmen:

That the time has arrived when measures should be adopted by the southern people themselves to provide the ways and means of educating the freedmen, is a conclusion to which we have been led by the following considerations:

1. These people are now thrown upon their own resources in a state of freedom, for which they are to a certain extent unprepared.
2. They consider us, their former owners, to be now, as we have always been, their natural guardians and their best friends.
3. It is our interest, as well as our duty, to diffuse the blessings of education as widely as possible among all classes of people in our country.
4. If it ever was good policy to keep them ignorant, it certainly is no longer so, but the very reverse.
5. The right of suffrage will, in all probability, be given to this people at some future day.
6. Ignorant voters are the curse of our country.
7. If we do not teach them some one else will, and whoever thus benefits them will win an influence over them which will control their votes.
8. If we perform this service, then we shall secure their identification with us in promoting all our interests.

Means of Instruction.—We propose the establishment of a Sabbath school for the oral instruction of colored people, as well as to teach them to read. We have organized this school with more than one hundred pupils and twelve teachers. Regular preaching also is provided for them by the resident ministers of the different churches of Oxford. We desire to enlist in this work all our fellow citizens, as there is room enough for all and work enough for all. In such a work as this, no doubt, the conviction of duty and the command of God should be sufficient motives to actuate us. But while we would not plead for the authority of great names as a sanction of our course or an inducement to others, at the same time we rejoice to find, that in many parts of the South, the prominent citizens and official dignitaries are actively moving in this matter. In South Carolina, Governor Orr and the first citizens of Charleston, are urging the establishment of a common-school system for the freedmen. In Alabama ex-Governor Moore and ex-Congressman Curry are engaging in the movement, and elsewhere in Mississippi, this field of labor is occupied by some of the most distinguished of our citizens. All this shows that the influence is at work which is to put into general operation an effective system of instruction for this people in sacred and secular knowledge. Let us, therefore, engage in the work in earnest, according as God shall open the way for us, and consider your duty in connection with the work, we ask you to decide upon that course that you will prob-

ably approve when the light of a coming eternity shall be shed upon the subject.

J. N. WADDELL, S. G. BURNBY,
A. I. QUINCHE, T. E. B. PAGURS,
WM. DELAY, J. W. McPHERSON.

Oxford, Miss., June 12, 1866.

North Carolina has 133 schools, 155 teachers, and 10,806 scholars.

On the 30th of 6th mo. there was a meeting of the Superior Court at Augusta, to consider the subject of establishing schools for the freedmen. The mayor promises his aid, and the colored people gladly respond to his request that they shall co-operate.

WM. HEACOCK, General Furnishing Undertaker, No. 18 North Ninth Street.—A general assortment of ready-made Coffins, and every requisite for Funerals furnished.

Being entrusted with the oversight of "Fair Hill" Burial Ground,—Funerals, and all other business connected with the ground, will be promptly attended to. 311. 1y. was m p.

LESSONS ON OUR COMMON SONG BIRDS.—Tickets for a course of Eight Lessons, \$3 00 each. Liberal reduction to Schools and Classes of over fifty persons.

Address GRACE ANNA LEWIS,
Care of EDWARD PARKER,
616 3m. 800 Arch St., Philada.

DOMESTIC DRY GOODS.—Always on hand, a large assortment of Domestic Dry Goods; Muslins of all kinds and of the best makes, both Bleached and Unbleached; Flannels of all grades, White and Colored, Twilled and Plain; Calicoes, Gingham, Check, Shirtings and Drillings, Bleached and Brown Table Linens, Towelings by the piece and by the yard. Men's and Boys' wear, a well assorted stock. 721 tfaxn. 1638 Market St., Philada.

SAMUEL TOWNSHEND & SON, Produce Commission Merchants, No. 52 Light Street, Baltimore, respectfully solicit consignments of Grain, Flour, Seeds, Butter, Eggs, Beans, Poultry, &c. Constantly in store and for sale, Clover, Timothy, Orchard Grass, and other Field Seeds. Also Bone Dust and other Fertilizers. Dried Fruits bought and sold. 721 tfaxn.

A YOUNG WOMAN of experience wants a situation in a private school, or as Governess in a family. Address 721 tf. E. W. C. Hockessin, Delaware.

WANTED, by a Female, a situation as Teacher: qualified to instruct in the usual branches, having had several years' experience. Good recommendations given. Address or apply to 5m w 4t dya. EMOR COMLY, 144 N. Seventh St., Phila.

BELLEVUE FEMALE INSTITUTE—The Fall and Winter Term of this healthfully and beautifully located BOARDING-SCHOOL FOR GIRLS will commence 10th mo. 1st, 1866, and close 4th mo. 12, 1867. For further information apply for a Circular to ISRAEL J. GRAHAM, } Principal.
JANE P. GRAHAM, }
Attleboro' P. O., Bucks county, Pa.
72 tf.

MOORESTOWN BOARDING SCHOOL FOR GIRLS.—The next Term of this Institution, which has been in successful operation for 24 years, will commence on the 1st of 10th mo. next, and continue 40 weeks. For Circulars, apply early to MARY S. LIPPINCOTT, Principal, Moorestown, Burlington Co., N. J. 630.721 200p

CHERRY STONERS.—(seed 2 bushels an hour.) Peas and Bean Shellers, (shell 50 qts an hour,) Carpet Sweepers, Wire Dish Covers, Champion Cog-Wheel Clothes-Wringers, (we consider them the best yet invented for durability and convenience;) and a variety of other new articles of Hardware, Cutlery and Tools. For sale by TRUMAN & SHAW, 310a330 No. 335 (Eight ThirtyFive) Market St., below Ninth.

FRIENDS' SCHOOL, High St., West Chester, Pa.—This school, for both sexes, will reopen on 3d of Ninth month, 1866. For Circulars address CHARLES SWAYNE, Principal.

EFFICACY OF SPIRITUAL PRAYER.

BY JOE SCOTT.

Lord! let not thine hand spare nor thine eye pity, until thou bringest forth judgment unto victory in me. I find it good for my soul to wait upon, look unto, and, as living desires arise, breathe to and supplicate my God. For though I know I cannot alter him; he is always, altogether alike, and the same; yet, as his operation is steadily upon us, by drawing near to him in that whereby he is drawing us to himself, he draws near to us, as to our sense and enjoyment of him. He is steadily drawing, or operating upon the hearts of men; and when men yield thereto, so as to let him arise, or be lifted up in them, he will draw all such unto him; agreeably to our Saviour's words, “And I, if I be lifted up from the earth, will draw all unto me.” But, take notice, he does not do it till he is lifted up in them, and he cannot be lifted up in them till they will let him arise. Hence the propriety of the injunction, “Let God arise, and let his enemies be scattered.” Hence, also, the truth and propriety of Christ's mournful exhortation with the Jews, “How often would I have gathered you, &c., but ye would not.”

Man can never make God arise, nor profitably attempt to awake the beloved of souls till he please. Yet man may and ought to *let him arise*. On the contrary, man can and too often does, hinder his arising in his own soul. His proper business is to wait on him in a silent, inward travail of spirit, to feel his arising.

This is that drawing near unto God, which issues, if rightly and perseveringly performed, in his drawing near unto us; that is, we feel more and more of his presence. As when a man in a boat, with a rope made fast to a rock, by pulling at the rope draws himself to the rock, though the rock seems to move toward the boat; so in drawing near to God he seems to meet us, and we more fully behold and enjoy him; notwithstanding he rests and remains as to himself just where and what he was, unmoved, unaltered. This simile, though pertinently descriptive of the true waiting upon and prayer to God, may seem to such as don't experience the thing itself in themselves, to imply the propriety of vocal prayer to God at any set time that men may appoint; because, in case of the rock, it is optional with the man in the boat. But this thought goes not deep enough. For, beside, that the rock is dead, and God is alive forever, and that God has a most powerful influence and operation on the souls of men, which the rock has not, it should be considered that unless the rope from the boat has fast hold of the rock, (which sometimes it has not), all the man's pulling and toiling will be in vain; as that of the fishermen who toiled all night and caught nothing. But as they, when day arrived, (the proper time to work), and he who had a right to direct and put them forth, gave the direction, and they attended thereto, caught a very great draught of fishes; so may the man in the boat, when the rope has fast hold of the rock, draw

himself to it, and so may the soul, in true prayer, having firm and living hold of the eternal Rock, draw nigh unto it and feel it drawing nigh to him.

But as no comparison holds absolutely, so here. It is God that is the first in operation. He loves us before we love him. He is, of his own unchangeable love and goodness, and according to the necessity of *his* nature and *ours*, and to his design in our creation, moving and operating upon us for our good, and in order to draw us to himself. This influence and operation we should more abundantly and sensibly feel than many often do, were we enough inward and attentive to it, and waiting for it. Other attentions divert us from it; and by absorbing and taking up our thoughts, and occupying our minds, render us almost insensible of those operations upon us, which it is impossible we should be wholly without, and which would soon become lively and powerful upon us if enough attended to. This is the business of silently waiting upon God. It is to witness the mind diverted of those incumbering and intruding things which hinder a lively sense of the drawing cords of God's love and power upon us; that being thus divested we may stand open to, and be fully and feelingly sensible of divine operation. And herein, (as it is the divine life thus turned to by turning from other attachments that quicken us, not we, ourselves), we feel ourselves to have some firm hold of the eternal Rock; and as we watch unto prayer, first watching, (for the injunction is "watch and pray,") we often feel the true spirit of supplication revive in our souls, wherein we draw nearer and nearer unto God. And this, often at first, and frequently throughout a whole meeting, arises only to an inward fervent prayer to God that cannot be safely, or without loss of the life of it, vocally expressed; because, the spirit at such times helpeth our infirmities only with and in inward groanings that cannot be rightly uttered. And how greatly should we err were we to attempt to utter ourselves in vocal supplication at a time when all the aid and assistance received arises only to and terminates in such inward groanings.

But at other seasons he who opens and none can shut, so helps us, opens our way and aids our utterance, that in fervent, vocal intercessions our souls are sweetly and very profitably poured forth to God, who, in this case, always hears, for he cannot deny his own. Though he changes not, is not altered by any of our petitionings, yet if we lie low and humbly wait under his influence upon us till it results in solemn supplication, and we keep to it singly in the spring and motion of his divine word of life and power, not putting ourselves forth nor going before nor beyond this quickening influence, opening and leading, we shall pray only for

what is according to his good will to grant us. This is true prayer. This is truly drawing near to God, which is the same to us as his drawing near to us. But a hasty, zealous approach in words, in our own time and anxious desires, effects no good purpose. It certainly cannot alter God, and as certainly it cannot draw us nearer to him, because not in his motion upon us and without our having any true and substantial hold of him. Men pray as if they thought they could move or alter God. They think if they stir up themselves to ask, and, with a good deal of creaturely animation, do ask for what they *think* they stand in need of, it will induce him to hear and grant their request. But in all this they are too ignorant of him, his nature and attributes. His unalterable nature is such that all good to our souls is of him and through his operation on us; and, therefore, if ever we pray to any real advantage we must be sensibly drawn and wrought into a substantial spirit of true prayer by his divine power; else we may, to almost as good a purpose, pray to Mahomet or Baal, as to God. For Baal could as soon hear and answer his prophets as God can hear, with approbation, and grant the prayer that is not of his own begetting.

We act as if we would change according to our will the true, living and unchangeable God, when we attempt to prevail on him, by words of our own creaturely conceiving, to do something for the good of our souls. He acts from his own eternal nature and disposition, and that always the same, and is to us just according as we are to him. If we accost him in words prompted by our own active, anxious, hasty desires, without knowing our hearts livingly touched by his own live coal from his heavenly altar, we can but obtain the empty echo in return to the sound of our voice, for he will not be moved; but if we do livingly and feelingly lay hold of him and draw near to him, in the drawings of his cord of divine love upon us, he draws near to us, and we receive substantial blessing. Because, he is to us just as we are to him. If we are *alive* to him, we feel him in the same proportion *alive* in us. If we are dead to him, even though we pray ever so loud and often, and tell him ever so solemnly, "The Lord liveth," we speak falsely. For, as to any sensible, living knowledge of him he is as a dead God to us. Therefore, as it is in ourselves or in our actual state, so only it is in reality. And he that can be satisfied with a lifeless round of set devotions that join not his soul to God in a holy, cementing, consoling union in the divine life, does but snuff up the wind and will reap the whirlwind. He but mocks God, and God will mock him when his fear cometh.

True prayer is always heard and meets a hearty return of the divine complacency, for its spring,

and motion, and life, is the very life of God in the soul, and joins the soul to him. And "he that is joined to the Lord is one spirit," where he will not deny his own. The rest is all chaff and vanity, and tends directly to exalt the creature and its own activity in opposition to the life and energy of God. From the nature of the Deity, and his unwavering tendency towards union with us, he must operate on us. This, if submitted to and rightly lived under by us, will result in true prayer, and that prayer in substantial union; and no possible substitution of words, and mere creaturely supplications, will ever, in the least degree, promote this divine union and fellowship; but will forever retard it and set up man in separation from God, the divine life, in stead thereof.

"AND FROM THENCE WE CAME TO PHILIPPI."
Acts 16: 12.

"I say unto you, that there is joy in the presence of the angels of God over one sinner that repenteth." Nothing can more powerfully imply the importance of conversion than this declaration of the Saviour, the faithful and true witness. However lightly or contemptuously conversion may be thought of among men, celestial beings, proverbial for their wisdom, and incapable of mistake, always behold it with wonder and delight. With them, the improvement of art, the discoveries of philosophy, the exploits of heroes, the revolutions of empires, are comparatively nothing to the salvation of a soul. At the first creation, the morning stars sang together, and all the sons of God shouted for joy: but they sing a new song, and with peculiar rapture, at the second, when old things pass away, and all things become morally and spiritually new.

Luke the historian was like minded. He here speaks of his coming, with Paul and Silas, to Philippi. Philippi was built by Philip, the father of Alexander. From the beginning it had been noted; but within comparatively a recent period it had been rendered exceedingly remarkable by the two great battles which the Romans fought in its plains. In the one Julius Cæsar vanquished Pompey. In the other, Augustus defeated Brutus. Though every battle of the warrior is with confused noise, yet Luke says nothing of the work of Philip; of the prowess of Cæsar; of the fortune of Augustus. But he mentions what would immortalize the place in the annals of the soul and eternity—the conversion of two individuals, Lydia and the jailor. Lydia was amiable and moral; a proselyte to the Jewish religion, and a worshipper of the true God. The jailor was a heathen; an idolater, vicious in his disposition, as rude and savage in his apul as in his office. The conversion of the one was in answer to prayer; gentle, gradual, imperceptible in its

progress, but obvious in its result. The conversion of the other was sudden, extraordinary in the circumstances, and accompanied with terror and anguish. *She* was overcome by the smiles of mercy, and drawn by the cords of love. *He*, with the arrows of the Almighty sticking fast in him, and with a wounded spirit which he could not bear, was dragged to the judgment seat, looking only for the sentence of condemnation. Her heart the Lord opened, as the sun opens a flower in spring. His heart was stormed like a citadel, where the strong man armed kept his palace and his goods in peace.

Hence we see by what various methods divine grace operates on different persons. The Saviour may come in the roar of the storm; but His presence and agency are no less real in the still, small voice. Samuel was called by grace, as well as Manasseh; and Watts was saved by grace as well as Bunyan."—*Jay*.

ACCESS TO GOD.

However early in the morning you seek the gate of access, you find it all ready open; and however deep the midnight moment when you find yourself in the sudden arms of death, the winged prayer can bring an instant Saviour near, and this wherever you are. It needs not that you ascend a special Pisgah or Moriah; it needs not that you enter some awful shrine, or put off your shoes on some holy ground. Could a memento be reared on every spot from which an acceptable prayer has passed away, and on which a prompt answer has come down, we should find *Jehovah-shammah*, "The Lord hath been here," inscribed on many a cottage hearth, and many a dungeon floor. We should find it not only in Jerusalem's proud temple, David's cedar galleries, but in the fisherman's cottage, by the brink in Genesaret, and in the upper chamber where Pentecost began. And whether it be the field where Isaac went to meditate, or the rocky knoll where Jacob lay down to sleep, or the brook where Israel wrestled, or the den where Daniel gazed on the hungry lions and the lions gazed on him, or the hill side where the Man of Sorrows prayed all night, we should still discern the prints of the ladder's feet let down from heaven, the landing place of mercies, because the starting-point of prayer.—*Hamilton*.

Upham says, "Some Christians remain in the condition of *servants*, followed and scourged by an inward condemnation, and do not cheerfully and boldly take that of sons. They wander about, oftentimes led captive by Satan, in the low grounds of the gospel life, amid marshes and tangled forests; and do not ascend into the pleasant hills and land of Beulah, where are the spicy breezes and perpetual sunshine."

For Friends' Intelligence.

The subjoined extracts from a letter on the principles and doctrines of the early Friends were written by a clergyman in England, in the year 1701. The interest of the sentiments contained therein is much increased, from the fact that the author was one not in profession with Friends, but was willing to own the truth, although it was found among those who were despised and persecuted by his brother professors.

S. B. F.

Reverend Brother,—The long knowledge I have had of your wisdom, temper and moderation, for which I can truly say, without the least umbrage of flattery, you deserve to be highly valued, hath given me encouragement to communicate to you my free and impartial thoughts concerning the controversy between some of our brethren on the one hand, and the Quakers on the other. Though I am a great admirer of solitude and retirement, being seldom seen in the crowds of the talkative and unthinking multitude, but sequestering myself, as much as I possibly can, from public noise, that I might have the more opportunity to introvert my mind, and wait upon and adore my Creator; for when my mind is silent and retired, and my own imaginations and reasonings are shut out, then I can hear his still small voice, and have an inward sensible perception of his Divine presence with my soul. Yet I am not such an absolute recluse as to cloister myself wholly up from the things of this world, for I admit of visits from particular friends, read books at seasonable intervals, and hold epistolary correspondence with yourself and a few more select persons, who know the worth of privacy by the benefit they enjoy in it. So that, though I am no actor in the public theatre of the times, yet I never have been, nor am, an ignorant and unconcerned spectator of those transactions that have happened in our day.

And of all occurrences, the dissensions about religion, and those often attended with violent heats and reflections, by men of furious and intemperate spirits, have most affected me. All profess themselves to be Christians, to be disciples and followers of Christ; and yet, how few imitate him whom they pretend to be their Master? And it is a sad but true observation, that they who have the worst cause and weakest arguments are very apt to give hard names, and to revile and slander their opponents; that since they cannot refute them by dint of fair ratiocination, they might, if possible, pollute them with the dirt of filthy reflection. You know whose practice this has been in their former quarrels with other dissenters; and now, in a more particular manner, with the Quakers, especially since Mr. Bugg and Mr. Keith came amongst us; persons who were not so much deserters, as cashiered men, for their immoralities;

for they did not come, but were thrust out from amongst the Quakers; at which, taking deep resentment, and cherishing that bad humor in themselves, which caused their expulsion, their whole mass seems to be so corrupted, that their enmity is become implacable against that people.

And as it is natural for malignant humors to spread, especially over those parts which were before infected, so these men, coming full, amongst us, of envy, hatred and malice, have infused their venom into some of our brethren, who have formerly been tainted; and those having received the infection themselves, how industriously do they endeavor to spread it amongst others.

I am heartily sorry to see it; but what pains do they take? Yea, what artifices do they use, to possess not only private persons with prejudice, but also to stir up persecution in the government against the Quakers, as though they were not fit to live amongst us? The pulpits ring with invective, and the presses groan with abusive books and pamphlets against them. The common charge is, that they are guilty of blasphemy against God, Christ, and the Holy Scriptures; thus our Norfolk brethren: yea, of blasphemy and heresy; so Mr. Keith. But the Quakers have answered those charges again and again; and cleared themselves in the face of God and the world, as appears by their printed books and papers. To be plain; let any indifferent man compare their books with ours, and he will soon see to whom the blasphemy and heresy belong.

You may remember, sir, what you gave me in your last, as your opinion about the cause of our brethren's outcry against the Quakers, rather than other dissenters,—viz.: Their opposition to tithes, which the others generally pay; and your sense was, that if the Quakers would comply in that one thing, the noise of blasphemy and heresy would be no more heard against them. And I am inclined to believe it, because you know that tithes are the very pillars of our church; take away them, and the sumptuous fabric quickly falls into a heap of rubbish. We cannot subsist without them; we cannot furnish our libraries, nor maintain our families without them. It is granted they are not due to us by virtue of the divine law, as they were to the Levites; but they are settled upon us by the law of the land; and so we claim them, and so we receive them, and upon no other foot of account.

The Quakers have said so much against our old plea of divine right, and made it out so fully and plainly by Scripture, that none but some zealous novices, or superannuated bigots, will now offer to use it; and, therefore, the wise amongst us have quitted that pretence, and do insist only upon a right issuing from mere human constitution.

I have diligently looked into the controversy that is between our brethren and the Quakers, not with a partial or captious, but with a single and indifferent eye; and I do not find that the Quakers are either guilty of those real errors that are laid to their charge; or, that those, which our brethren suppose to be errors in them, are errors at all, but are rather glorious gospel truths. I will give some instances in both.

First. Our brethren suppose that the Quakers are in error about the light within, and there upon have bestowed upon it many opprobrious, not to say blasphemous, names, as ignis fatuus, a diabolical light, &c. So some: and others, a spark from the devil's forge; so our Norfolk brethren (its wit) Doctor Beckham, Mr. Meriton, and Mr. Topcliffe, in their principles of the Quakers, &c., p. 6. A whimsical witness fetched from Terra Incognita, p. 57. A Counterfeit Phantasm, p. 74. The Phantasm of a Christ within, p. 86, *ibid.* Another calls it a monstrous notion, and affirms it to be the ground and foundation of all their other errors and blasphemies; so the author of *The Snake in the Grass*, 3d edit. p. 8. But I have faithfully examined the Quaker's notion about the light within, and compared it with the Scriptures, and do find that they speak of it as the Scriptures do,—viz.: that Christ is the light of the world, and that he doth enlighten every man that cometh into it, with divine saving light. I am sorry our brethren should be so dark as to oppose it.

Secondly. Our brethren charge immediate revelation upon them, as another great error; which is not an error, but a glorious truth; for if immediate revelation were ceased, as our brethren say, there could be no such thing as the Christian religion in the world; for there is no saving knowledge of the Father and the Son attainable without it. I have the testimony of Christ himself for what I say, and therefore am bold to assert it, "No man knoweth the Son but the Father; neither knoweth any man the Father save the Son, and he to whomsoever the Son will reveal him." (Matt. xi. 27.) Take away immediate revelation, and farewell to the Christian religion; a name and notion of Christianity may be kept up, but the life and power cannot subsist without it. "The Quakers do not plead for any new gospel faith or doctrine different from that which Christ and his holy apostles and prophets taught, and is recorded in the Scriptures of truth; but for the revelation of that which they taught, and is therein recorded."—*Defence of the People called Quakers*, p. 6.

Thirdly. Our brethren charge it as an error upon the Quakers, for asserting the sufficiency of the light within to salvation, without the Scriptures; but this is no error in the Quakers' sense, for I perceive by their writings that they

do not oppose the light within to the Scriptures, nor do they exclude the Scriptures, where they are afforded unto men; but by the light within, they understanding Christ, who said, "I am the light of the world," (John ix. 5;) and is "God blessed forever," (Rom. ix. 5;) and therefore able to save to the uttermost, do testify to the sufficiency thereof, to save all those who believe in and obey it; though the Scriptures are withheld from them by the providence of God. For, as those that have the literal knowledge of the Scriptures are not saved merely by that, without the experimental knowledge of the work of the Spirit in and upon their hearts; so those that have the experimental knowledge may be saved without the literal. And as many are injured by the fall of the first Adam, who know nothing of him, or his eating of the forbidden fruit, so many are made partakers of the great salvation, that comes by Jesus Christ, the second Adam, though ignorant of the history of his sufferings and death. Therefore, unless our brethren will deny the all-sufficiency of Christ, or exclude all those from the pale of divine mercy, who know not the Scriptures, (which is both contrary to Scripture and to the repeated testimony of God's goodness recorded therein,) I cannot see what pretence they can make for impugning this assertion of the Quakers.

Fourthly. Another truth held by this people, and misalled error by our brethren, is sinless perfection on this side the grave; but if such a state is not attainable in this life, to what end are there so many precepts about it, so many exhortations to it, so many prayers for it, and so many examples of it recorded in the Scriptures? Why do we pray, "Vouchsafe, O Lord, to keep us this day without sin? In morning prayer: grant that this day we fall into no sin, neither run into any kind of danger; but that all our doings may be ordered by thy governance, to do always that which is righteous in thy sight? In the litany: from all evil and mischief, from sin, from the crafts and assaults of the devil, from thy wrath, and from everlasting damnation, good Lord deliver us?"

"From fornication, and all other deadly sin, and from all the deceits of the world, the flesh, and the devil; good Lord deliver us? Mortify and kill all vices in us? For the circumcision of Christ: grant us the true circumcision of the Spirit, that our hearts and all our members, being mortified from all worldly and carnal lusts, we may, in all things, obey thy blessed will? Grant us, we beseech thee, that having this hope, we may purify ourselves, even as he is pure? Give us grace to use such abstinence, that our flesh being subdued to the Spirit, we may ever obey thy godly motions, in righteousness and true holiness? Grant us so to put away the leaven of malice and wickedness, that

we may always serve thee in pureness of living and truth? Nourish us with all goodness, and of thy great mercy keep us in the same? Keep us ever by thy help from all things hurtful, and lead us to all things profitable to our salvation? Make us continually to be given to all good works? Lord, we beseech thee, grant thy people "grace to withstand the temptations of the world, the flesh and the devil; and with pure hearts and minds to follow thee the only God? Grant that the Holy Spirit may, in all things, direct and rule our hearts? Grant, we beseech thee, merciful Lord, to thy faithful people, pardon and peace, that they may be cleansed from *all* their sins?" Why, I say, do we pray thus? And why do we teach our children, in the Church Catechism, to pray to be kept from *all* sin and wickedness, if it be impossible to be obtained?

You know, sir, that sinless perfection in this life is the doctrine both of the law and the gospel, the doctrine of Moses and the prophets, of Christ and his apostles: of Justin Martyr—of Origen—of Cyprian—of Chrysostom—of Hieron—of Augustin—of Gregory—of Prosper, and many others. Yea, you know that the most learned bishops of our church, as Bishop Andrews, Bishop Overal, Bishop White, and Bishop Taylor, were of this opinion. That King James I. saith, upon the Lord's Prayer, that it is blasphemy to say that any of Christ's precepts are impossible; for that were to give him a lie, who told us out of his own mouth, "That his yoke is easy and his burden is light;" and Christ's intimate disciple saith, (1 John v. 8,) "That his commandments are not grievous." See also what Dr. Thomas Drayton hath written upon this subject in his proviso or condition of the promises; and Mr. William Parker, in his revindication of the said doctor, wherein he clearly proves these two assertions to be the orthodox protestant doctrine.

First.—That there is a possibility, through the grace and help of Christ, of the total mortification of sin in this life.

Secondly.—That there is a possibility of perfect obedience, through the grace and help of Christ, to the law of God in this life.

Yea, Mr. Keith himself, though denying sinless perfection, as held by the Quakers, yet asserts it in his own terms, as fully as can be; see the account of an occasional conference between him and Thomas Upshare, p. 15, where he affirms, "That persons, by the help of God's grace and Spirit continually assisting them, may, before death, come to perfection in the true sense of Scripture, so as with sincerity of heart to love God, and walk in all his commandments, and to be free from the condemning and commanding power of sin, and from all, not only scandalous, but deliberate and wilful sin, though liable to sinful imperfections." For, do

not the Quakers grant, that there remaineth always, in some part, a possibility of sinning, when the mind doth not most diligently and watchfully attend unto the Lord? See R. Barclay's Apology, Prop. 8. So that Mr. Keith both denies and affirms sinless perfection in the same paragraph; for a *liableness* to sin doth no more exclude sinless perfection now than it did to Adam before his fall; who, though he was liable to fall, yet was perfect before he fell.

I could add many more testimonies in confirmation of this doctrine, but I feel I should exceed the bounds of an Epistle, and therefore shall draw towards a conclusion; humbly advising my brethren, that are so hot and violent against the Quakers, to cool a little and to abate of their impetuosity.

We profess to be ministers of Jesus Christ; let us imitate him in his meekness, lowliness, gentleness, and in his loving and peaceable dispositions; and not demonstrate to the world, by our contrary practice, that he never sent us. Moderation is a virtue that will commend us, not only to our own people, but to those that dissent from us; but fierceness and animosity, strife and contention, render us contemptible unto all. If it be possible, as much as in us lies, let us live peaceably with all men.

My advice is, to put an end to these paper skirmishes with these sober, peaceable people, and make war against our lusts and sins, of all sorts; this will be the noblest cause we can engage in, and the most comfortable and glorious of victories to obtain it. For how doth iniquity abound among us? Are not all orders and degrees of men and women infected? May we not all truly say, we are miserable offenders, both priests and people, being full of wounds and bruises, and putrefying sores? What atheism and profaneness, what pride and luxury, what lewdness and intemperance, what lying and swearing, what chambering and wantonness, what gaming and sporting, what cozening and cheating, what injustice and oppression, overspread the nation! We cry, *The Church! the Church!* as some of old did—the temple of the Lord! the temple of the Lord! are we, whilst Satan hath his seat amongst us, and we have left off pure and primitive Christianity in our communion, We are so degenerated from that life and power, that appeared in our first reformers, that we are become a reproach to the reformation. And now we make a great ostentation of essentials and fundamentals in words, when we are departed from the foundation in our practices.

It was the saying of the primitive Christians, *non magna eloquimur, sed vivimus*; we do not speak great things, but we live. But behold how notoriously the apostasy of this generation contradicts it! So that we may take up our lamentation and say, *magna eloquimur, sed non*

vivimus. Our impure conversations are a shame to our splendid professions. The Quakers, whom some call heretics and blasphemers, but still want proof of these odious epithets, are sound and orthodox livers: yea, they not only outstrip us in real piety and virtue, but in faith and principles, too; and for my part, I do believe they are the people whom God hath raised up, in this dreggy age of the world, to refine it, and restore fallen Christianity to its primitive state of perfection and innocency.

O let not our church become a slaughter house, nor her priests instruments to stir up cruelty and persecution against a quiet and truly religious people. But let us all study to promote love, peace, truth and righteousness, both by preaching and living; that God may look down upon us in mercy, and stay his hand, which is stretched out against us for the sins and transgressions of our priests and people.

For Friends' Intelligence.

OUR HOMES.

Let us not, dear sisters, while we co-operate with outside public measures for the destruction of this modern Goliath,—Intemperance,—neglect our little private opportunities for pushing on this good work, remembering it was not the weapons of the Israelites which slew the giant of Gath, but the pebble-stones from the brook in David's hand. Let us look well within our homes, that by our firesides no seed is sown likely to bring forth bitter fruit in years to come; that we not only abstain from handing spirituous liquors forth as a drink, but that we banish them from our cooking; for surely they are often thus presented in their most attractive forms. A taste thus engendered may grow, with added years, until the unhappy victim sinks helplessly in the net encoiled around him; tracing back, perhaps, through years of dissipation, to some dish offered at a friendly board as the first impetus given him on the downward road that leads to the chambers of death.

A MEMBER.

A REMARKABLE CITY.

The city of Nice, so interesting to the Christian for the celebrated council once held there, and to the artist, for the beautiful fragments yet remaining of ancient splendor, now shares with many of its compeers the dust of oblivion. At the mandate of the Emperor Constantine, A. D. 226, there assembled within its walls a greater number of Christian ministers than the world had ever before seen together. From the splendid cities of Asia, from the caves of remote Europe, and the burning sands of Africa, three hundred and eighteen Bishops, and a large number of priests and deacons, and laity assembled in council, upon the welfare of the Christian Church, and established the cele-

brated declarations of faith, hence called the Nicene Creed. It is said the appearance of this city, after you ascend the hills which environ it, is of the most striking and romantic character. An extensive and beautiful plain meets the eye, mapped by streams of water and scenery of the most pleasing aspect.

In its centre, the waters of the famous Lake Ascanius repose—fringed with the enlivening green of the forest trees, so luxuriantly beautiful in this tropical climate. At the extremity of this plain is the large and beautiful city of Nice. Its walls are six miles in circumference, and are of imposing height—from twenty-five to thirty feet thick at the base—and bid fair to continue for centuries. They are mantled as usual with parapets and battlements, and the walk upon the summit is very beautiful.

The entrance is by three gates, the one inside the other, richly ornamented with figures and basso relievos. The second centre gate is of magnificent size and workmanship, with frieze cornices, and all the monuments which mark the pure age of architecture, and is in a perfect state of preservation.

There is an inscription on the frieze over the gate, intimating its erection by the Emperor Adrian. The whole exterior is imposing, and would plainly tell the most indifferent observer that he was in the neighborhood of one of the largest cities. The traveller would wonder, on his approach to this spot, at the circumstance of meeting none of the inhabitants without its gates. But this wonder would be changed to amazement when, on entering its walls, he finds neither street, nor house, nor inhabitant, nor even the remains of either of them.

The whole enclosure is one vast solitude. Of all the splendid palaces, marble fountains, paved courts, magnificent amphitheatres, temples, baths, and innumerable dwellings which once filled this great and populous city, not a vestige remains. The only trace of any buildings having existed within this large space, are the walls of the Greek chapel yet remaining, covered with tracery in Mosaic and Greek inscriptions and figures, worked like embroidery in small square stones. There is also a spot on which some fragments of a large building yet remain, which is said to have been the palace of Constantine. From the fragments which yet strew the spot, but little doubt can be entertained of these being the remains of the celebrated palace.

Here met the holy men of Christendom, the illustrious disciples of the sainted dead; and though their declaration of faith—their creed—yet remains, their bones whiten every land—their names are lost, and the magnificent and time-defying palace in which they assembled has now crumbled in the dust. Nay, even the vast and populous city in which they met has

been swept away with a besom of destruction from the face of the earth.—*Christian Recorder*.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, SEVENTH MONTH 28, 1866.

In two selected articles in our 19th number, one written by Isaac Pennington, the other by F. W. Robertson, a Minister of the established church in England, there may be recognized (allowing for the difference of phraseology caused by an interval of 200 years) the same enlightened principles of toleration and appreciation of what constitutes true "Unity."

In the selection of the two articles the similarity was not noticed, but the reflecting, liberal mind must be struck with the fact, and rejoice that the principles which were at the foundation of the Reformation, and which were much more fully carried out in the rise of the Society of Friends, are advancing in the world.

In the beautiful writings and sermons of F. W. Robertson, (sermons not written out at the time, but supplied afterwards from notes and recollections), there is much that is calculated to nourish and strengthen the spiritual life. While there are parts which give evidence that he was not fully emancipated from an undue reverence for some of the forms and doctrines of his church, there are others which show such deep insight into the work of Divine grace in the soul, that they could only be the utterances of one who had drank of the cup his Master drank of, and been baptized with the same baptism.

Believing, as we do, that the principles professed by Friends are founded in truth, it is not a sectarian feeling that leads us to observe with pleasure, that in some of the religious works lately published, even where their authors appear not to understand the views and characteristics of Friends, there is a marked approach toward some of their rational and spiritual views. This is also observable to some extent, as we have been informed, in the practice of some of the religious denominations, in the encouragement of more silence in their assemblies, and in trusting more to unpremeditated utterances in their sermons. It would be interesting to trace minutely all these advances toward Friends in doctrine, practice and testi-

monies. The progress, indeed, seems slow, and circumstances arise at times, which cause a fear that the so-called Christian World may be retrograding; but if we compare long periods of time, there is encouragement to believe that those vital principles, which have ever been professed by Friends, (weakly and imperfectly as they have been carried out,) are slowly spreading in the religious world.

MARRIED, on the 27th of Sixth month, 1866, in accordance with the order of the religious Society of Friends, JOSEPH S. BUNTING, of Philadelphia, and HANNAH R., daughter of Obery Levis, members of Darby Monthly Meeting.

DIED, on the 3d of Sixth month, 1866, in West Philadelphia, MARTHA PYLE, aged 70 years.

—, at the residence of her sister, Alice Hunter, on First-day evening, 10th of Sixth month, 1866, MARY HUNTER, aged 61 years.

—, at Milton, Pa., on the 26th of Sixth month, 1866, ABRAHAM W. COMLY, in his 45th year.

—, on Second-day evening, 9th of Seventh month, 1866, ANNE S., widow of Caleb Foulke, late of Quakertown, Pa.

—, on the 9th of Seventh month, 1866, at Upper Darby, ESTHER H., wife of Samuel G. Levis, in her 47th year.

—, on the 12th of Sixth month, 1866, at Evergreen Hill, near Trenton, N. J., NANCY E., wife of C. V. Mead, in the 36th year of her age, daughter and only child of Charles and Mahala Drake, (the latter deceased.)

She was sick one year, and her physical sufferings which she endured with Christian resignation, were intense. When she died, it was like one falling into a sweet sleep. She was a member of Oswego Monthly Meeting of Friends, Dutchess Co., New York.

—, on the morning of the 15th inst., ODESSA TOWNSEND, son of the late Isaac Townsend, in the 49th year of his age.

—, on Sixth-day, the 18th inst., ISAAC ROBERTS, of Norristown, in the 53d year of his age.

—, at her home in Greene Co., Ohio, on the 21st of Fifth month, 1866, ABIGAIL SCHOOLER, wife of Wm. Schooler, in the 64th year of her age; an exemplary and useful member of Green Plain Monthly and Oakland indulged Meeting.

—, in Baltimore, on the morning of First-day, the 15th inst., PATTY ELLICOTT, daughter of James E. Tyson, in the 12th year of her age.

—, on the 14th of Seventh month, 1866, SAMUEL K., infant son of Philena and H. A. Salter, aged 11 months.

—, at Norristown, on the 4th of Seventh month, 1866, RACHEL SHONMAKER, in her 47th year.

—, on Sixth-day evening, 13th of Seventh month, 1866, WILLIAM T., only child of Thompson and Rachel T. Shourds, aged 2 years; members of Philadelphia Monthly Meeting.

CIRCULAR MEETINGS IN SALEM QUARTER.—CORRECTION.—An error appears in the arrangement as published. It should read *First-day, Seventh month 15th*, instead of *14th*, and all the following meetings each one day in the month later.

Never neglect one duty under pretence of attending to another; you honor God as much in

attending to your calling in a right spirit, as you do when upon your knees.

INQUIRY OF OLD FRIENDS.

The undersigned would anxiously ask the attention of Old Friends of Philadelphia and vicinity, also Camden and vicinity, to retrospective memories of from twenty-five to thirty years. I am lost from all my friends,—know not a cousin, even,—and am well nigh without a clue, though I have a few memories, as I seem to recollect my mother's family were Friends,—by name Gardiner. My aunt, who had charge of me before my first memories, bound me out when near two years old, probably, and I have never heard from her since. Her name was Rachel Gardiner. My father's name was Fitzgerald. He had a trade of lady gaiter making. He died at sea. My mother died when I was an infant. She gave me to her sister Rachel, and she married a McColligan. Her friends disowned her, and she went to Baltimore, Md. It appears to me she (my aunt Rachel) told me of her uncle Keats, or Sheets,—I am not sure which. There were four or five nearly grown girls in the family. It was in or near Philadelphia, I think, where the family lived. I shall be very glad to find some one who is my blood kin. My life has been rough all through, but a rather good organization was my fortune. I am not a member of any religious sect. I am weary living unknown, and earnestly solicit the notice of Friends; and if any one claims me, or can give information, and will address by letter to Highpoint, Decatur Co., Iowa, I shall feel very happy and obliged.

CHAS. GARDINER FITZGERALD.

The long continued heat we have recently witnessed will be remembered as the "hot term" in the 7th month, 1866, and as a matter of record, we copy the following statements for future reference.

THE HOTTEST WEATHER FOR A CENTURY.

The following statement from Yale College will be read with interest:

This afternoon, at 3 P. M., my thermometer, suspended in the shade upon the north side of the New Haven Hotel, indicated 103½ degrees, being the highest temperature known to have been obtained in New Haven since 1778, a period of 89 years. The highest temperature recorded before the present season was 102 degrees, viz: June 24th, 1864. Previous to this the thermometer had been twice observed at 101 degrees, viz: in 1798; and there have been three other cases in which the thermometer has risen to 100 degrees, viz: in 1781, 1800 and 1845; making in all seven known instances in

which a thermometer, fairly exposed in the shade, had risen to 100 degrees and upward.

The period just passed has been quite as remarkable for the long continuance of extreme heat, as for its intensity. Within a period of eleven days, the thermometer has risen five times to 95 degrees and upward. Since 1778 there has been only one other instance in which the thermometer has risen to this height, five times during the same summer, viz: 1845; and these cases are spread over an interval of thirty-six days. During the same period, there have been but two other cases in which the thermometer has risen to 95 degrees, as many as four times during the same summer, viz: in 1780 and 1798.

The hottest month at New Haven since 1778, was the month of July, 1825. The heat of the past thirty days has been somewhat higher than that of July, 1825, so that we seem authorized in asserting that the heat of the recent period has been more intense, and the extreme heat has been longer continued, than has occurred before in eighty-nine years, and probably for a much longer period. E. LOOMIS.

Yale College, July 17, 1866.

The change in the temperature of the weather within the past forty-eight hours may be recorded as decidedly agreeable, yet very seductive. The mercury at one time yesterday (20th) was as low as sixty-six degrees—a fall of thirty-three degrees from the hottest period of the recent heated term. Although this low temperature felt very refreshing, yet the change was so sudden that individuals were likely to catch cold. The heated term seemed to extend over a vast region of the country. Even as far north as New Haven, Conn., the mercury reached a little over 103 degrees in the shade. At Long Branch, on the sea coast, it was 101 degrees; at Atlantic City 97, and at Cape May 97. In the interior of New Jersey it rose to 105; at Camden 101; on Smith's Island 99. This was the state of the weather about the same hour on the 18th, the hottest day of the season. The bill of mortality among children was very great. Healthy little ones early in the week sunk rapidly under the effects of cholera infantum, and many of them died within forty-eight hours.

A PARADISE IN PENNSYLVANIA.

Eloise Hunt, of Heiner's Run, Clinton county, Pa., writes thus:

"My home has been for six years in a little rocky basin shut in on every side by the Alleghanies, without a neighbor, a church, or a school, seeing no human face for weeks,—aye, even months sometimes,—except those of my husband and child. Living thus I have come to love in a strange absorbing way all that nature has thrown around me. Earth with its

varied growth of trees and shrubs, plants and mosses, rocks and water, the clouds, blue sky and stars, every thing is beautiful to me; even the dead leaves, the old decayed trees and bare rocks are beloved. Think, then, how inexpressibly dear the living trees and flowers and moving water.

"I have tame trout, six yards from the door, that leap above the water to catch bits of meat from my fingers. The pheasants make their nests in sight of the house, and sometimes the male bird is seen drumming on the old log only a few rods up the mountain side. I have planted wild flowers round my doors, and in summer, the humming birds go through the open house on their visits to the flowers. Strangers from the world have said:

"How can you exist in this dreary place?"

"Their eyes cannot see as mine; nor can they hear any of the pleasant voices I hear, and so I simply tell them what they comprehend: 'It is my necessity.' My place, which is so lonely to others, is so pleasant to me that I have named it Paradise, and here I will teach my son a love of truth, purity and beauty.—
The Press.

LABOR.

From the days the first in Eden,
Hand in hand our parents stood,
Through the slowly gliding ages,
Every thing that's great and good
Has by constant toil been wrought—
Work the price with which 'tis bought.

Brother, haste then! on to action!
Nerve thy limbs for toil anew;
Lo! the "fields are white with harvest,"
But the "laborers are few;"
Bring thy sickle, brother, haste,
Idly not a moment waste!

Life is labor—life is conflict;
Brother, gird on sword and shield—
In the conflict be not beaten,
Come forth victor from the field;
Fierce and constant is the strife,
In the battle stern of life!

Wrong and outrage, grim oppression,—
Unto these are altars built,
Where the fire is ever burning,
And where human blood is spilt;
Brother, beat their altars down—
In the contest win the crown!

Brother! not while life remaineth,
Mayest thou lay the armor by;
From the morn till fades the sunlight
In the gorgeous western sky,
Thou wilt find enough to do,
Battling for the Right—the True!

Help some weary, wounded brother,
Who has cast aside his shield;
Bring to him some healing balsam,
Lest he to the foe should yield.
Strongly tempted, all are weak—
Brother! words of comfort speak.

Pain and care and weary watching,
They must bear the prize who win;
Taste of suffering, self-denial,
In the crusade against Sin!
In the furnace gold is tried,
So by pain we're purified.

Toil is ever noble—holy;
Suffering sanctifies the soul;—
And though oft our feet are wounded
Ere we reach the distant goal,
Yet the Crown his brow shall grace
Who's victor in the race!

A. R. P.

"CONSIDER THE LILIES OF THE FIELD."

BY CHRISTINA G. ROSETTI.

Flowers preach to us if we will hear:—
The rose saith in the dewy morn:
I am most fair;
Yet all my loveliness is born
Upon a thorn.
The poppy saith amid the corn:
Let but my scarlet head appear
And I am held in scorn;
Yet juice of subtle virtue lies
Within my cup of curious dyes.
The lilies say: Behold how we
Preach, without words, of purity.
The violets whisper from the shade
Which their own leaves have made:
Men scent our fragrance on the air,
Yet take no heed
Of humble lessons we would read.

But not alone the fairest flowers:
The merest grass
Along the roadside where we pass,
Lichen and moss and sturdy weed,
Tell of His love who sends the dew,
The rain and sunshine too,
To nourish one small seed.

For the Children.

ASK MOTHER FIRST.

How many pleasant things we can see and hear every day, if we watch and listen!

I was walking toward home late one afternoon in Winter. The country all around was covered with a deep snow, that seemed of a purer white than ever in the light of the departing day. I heard the voices of children behind me; and their little feet stepped fast over the hard, crisp snow. They passed along beside me, and I saw one was a little girl of about eight years, and her companion was a boy somewhat older. The girl wore a pretty crimson hood, which was quite becoming to her cheeks, made rosy by the fine Winter air. She was drawing a sled. The boy had a sled too.

"Come, Anne," he said, "let's go down to Pine Hill now; it's splendid coasting there; and we shall have time for some first-rate slides before dark."

"I must go and ask mother first, Henry," said Annie. She did not drawl out the words dolefully, as if she did not like to have to ask her mother; but she spoke in a very pleasant and cheerful tone. She hurried along with her

sled, and Henry after her. I soon lost sight of them; but I could not forget Annie. I thought to myself, "How safe that child will always be, if she keeps to her rule—'I must ask mother first!'"

I know children who have sometimes got into a great deal of trouble because they did not "ask mother first." Remember, that it is unsafe to do any thing you think it possible your mother would not like to have you do.

Children, I mean boys as well as girls, you will be saved a great deal of unhappiness if you *ask mother first.*—*Child at Home.*

[From the Salt Lake (Union) Vidette, May 31.]

THE NIAGARA OF THE WEST—A WORLD'S WONDER—THE GREAT SHOSHONE FALLS.

Away in the wilds of Idaho, midway between Salt Lake and Oregon, the air is thundered and the earth is rent by a cataract as imposing as Niagara. Situate on the sage brush plains, which calmly sleep between the Rocky Mountains and the Cascade Range, and are alike untenanted by Ceres or the god of gold, the Great Shoshone is a world-wonder which for savage scenery and power sublime stands unrivalled in America. As tourists tell, the cataracts of Southern Asia and the falls of the fair Rhine; the Victoria Falls, of Zambesi, Africa, as explored by Livingstone, and the Fall of Staubbach, Switzerland, as immortalized in Byron's Manfred, may each have special charms which won celebrity for special points, but as a whole, for wildness and for witchery, for width and volume, this "Niagara of the West" will stand second to none of all. These falls of the Snake or Lewis Fork of the Columbia have been but a couple of years discovered, and have been seen as yet by scarce as many scores of white men; but before a few more years, with steam communication stretching from Salt Lake to the Columbia, their shrine is destined to have its thousands of worshippers and sight-seers, every season, from the travel across the continent. Idaho or the "Gem of the Mountains" contains in one of its counties (Owyhee) perhaps the richest gold and silver mines in the Great West; it has been described by ready writers often in the past few years, but it would seem that "quartz on the brain" prevented them from even making mention of the most magnificent phenomenon to be seen on the western slope of North America, the "Great Shoshone Falls." This majestic master-piece of nature's engineering lies a few miles off from the Overland Stage-route running northwesterly between Salt Lake and Boise cities, and half way (or about 200 miles) from those said capitals of Idaho and Utah. North of it, and distant fifty miles, though seeming closely near, the Salmon River Mountains show their shivering peaks, gray with

the cares of countless ages. East and west of it, as far as eye can see, the sage-brush prairie loads the desert air with its wild perfume. Southerly, the Great Salt Lake, a hundred miles away, is hidden by the Goose Creek Mountains, whose water partnership with the earth and clouds has caused them to believe themselves such Titans that they

"Wear their caps of snow

In very presence of the regal sun."

But here we must make note how singular the fact—to the shame of American exploration be it added—that neither Lewis and Clarke, in their travellings through this country sixty years since, nor Fremont, Stevens and certain others of later years, not to speak of the immigrants to Oregon and California, from 1847 to 1863, discovered—even accidentally—this Western queen of cataracts! This honor seems to have rested in reserve for parties of the 1st Oregon Cavalry, commanded respectively by Col. Steinberger, 1st Washington Territory Infantry, Major Truaxe and Captain Drake, 1st Oregon Cavalry, while scouting after Indians in the summer of 1863, through this section of Idaho, on the mail road between Salt Lake and Boise Basin, and at a point about a hundred miles southwest of old Fort Hall.

Travelling by compass from that station, northward for ten miles, across the boundless sage-plains, where no living being breaks the desert stillness, (save here and there a hissing snake, half hid between a regiment of horned toads, and a high range of ant-hills), and the roar of the cataract, that could be plainly heard at starting, has gradually died away. The sage-plain remains unbroken to the view, and no appearance of any river. Can it be possible, asks the traveller, that I have lost my way, or has Snake river grown a myth? Still riding on, and, suddenly, without warning, he reins up on the brink of a perpendicular precipice over a thousand feet in height, at the foot of which apparently unfathomable abyss Snake river seems but like a narrow silver ribbon. Down stream, about a half mile distant, a long monument of mist walls earth to heaven; hence, thinks he, there at least must be the safety-valve of foaming hell and liquid thunder. After proceeding along the edge of the cliff, down a graded slope that permits us to see the water's edge just above the falls, we leave them and descend still farther, to obtain a view of the great waterfall. The silence here is wonderful. A dull thump and a smothered roar alone are heard at intervals, but they seem to be miles away, and less loud than they sounded fifteen miles before. Ascending to the top of a cliff covered by groves of junipers, we turn around and see the queen of cataracts fast marching on with awful pomp, primeval peace and purity prismatic. Soon the eye conceives the scene's

great awe, the canyon's enormous depth, the river's width, and the tremendous *tumble* it takes into a canyon deeper still. Dazzled and wonder-struck, the observer is obliged to turn away for a few moments only to gaze again with increased admiration at the sublime sight. Presently the mind expands to its immensity, and the eye is educated to its exaltation. Surely there must be a God above who made this earth with all its majesty—who spread this parched plain and bid the water-power leap to lave them! The majesty and *morale* of Nature stand here revealed, and the mind made worshipful with an intensity based on the strongest stratum of the soul—devotion—is reminded of its immortality and bows before the great Unseen who engineered all this with awful uniformity, forcing the most useful element of nature from its oradle in the mountain—the playground of the Oregon and Missouri—to thus wheel south and form this Snake river, as an epic of creation through these plains of prose! Intuitively the merest infidel is here obliged

"To look from nature up to nature's God!"

It is from the above spot that the best view of the whole of these falls is obtained. The river, about two hundred yards in width, coming slowly from the southeast, overtowered by perpendicular walls of basaltic rock, over eight hundred feet high, suddenly expands into a basin of twice its width, and there is divided into a half dozen streams by dark-looking rocks which raise their gloomy crests above the sparkling surf of the maddened waters. Every stream rushes over a fall of thirty feet, and every fall is of a different shape, seeming fanciful and fluctuating, yet physically fixed, as they have ever been while centuries like shadows have flown over them. The river, resuming its course, is again divided, and takes a second tumble of sixty feet still farther, but this time by only three different streams. Three falls are the result; one on each side, unbroken and falling in solid sheets; the central one being formed by seven fan-shape steppes of rock. From the one of these benches to the other underneath, the water falls in a smooth, transparent sheet, forming a cascade unsurpassed in the world, and contrasting strangely, by its dark transparent color, with the rustling, roaring, foaming streams surrounding it both above and at the sides. The river becomes once more smooth and dark in color. Its banks suddenly jut out from both sides, narrowing the channel to four hundred feet; and through this gap the confined mass of water participates itself in one whole volume, without break or hindrance, into an ominous abyss almost three hundred feet in depth. No pen can describe this scene. This is in reality the "Great Fall," and is well worthy of its

name, leaping as it does from the loom of nature like a colossal sheet of silver.

Forming a slight horse-shoe, its central waters appear blue until they meet the spray that rises ever heavenward from the foot of the foaming cataract. The sides are frayed into foam, and remind one of the pictured avalanches of the Alps. Right on the edge of the fall stands a lone pillar of gray sandstone, on whose summit, undisturbed by the whizz of waters or the fear of fate fast yawning on their eyrie, a pair of bald-headed eagles have built their nest, and are now rearing their young, secure in sight of the sublimity and solitude surrounding. The cataract's sound, but slightly heard above, is absolutely deafening as you reach the river's base, the roar of the falls confined as it is by the high walls of the canyon, rushing down the chasm and increasing in volume as it rolls, so as to be heard full thirty miles southwest. Close to the cataract is a square-shaped cave of fifteen feet each side and twenty high, whose walls are supported by basaltic columns, the regularity of whose formation is unsurpassed by anything in the Isle of Staffa or the Giant's Causeway. Sliding out of this cave, and falling about eight feet on to a grassy slope that leads to the water's edge, within two hundred feet of the foot of the falls, you are right in the middle of the mist, and wet through in an instant. It is here that, by looking up, the enormous altitude of the fall can be realized, and the first feeling is one of self-preservation, and involuntary drawing back, for the whole mass seems ready to drop and crush you where you stand. Never can the weird beauty of this scene be forgotten by beholders. Rainbows of a thousand hues seem to surround you, and their irises to arch you in the skies.

The white foaming waters form a brilliant background to the magic prisms pictured by the spray. The dark, frowning rocks, relieved by the bright green junipers, make a fitting frame for this magnificent sight, second to none in point of volume, as it is second to none in savage grandeur. As measured by officers of the 1st Oregon infantry, encamped adjoining, the main fall is 210 feet from the edge to the level of the water below. The upper falls have not yet been measured, but the total fall of the river, on the three distinct tumbles it takes, cannot be less than three hundred feet, while the river itself is over four hundred feet at its narrowest width. The channel of the stream below the falls is a chasm 1,500 feet in width and 1,000 in depth, with perpendicular walls of rock enclosing it.

Writers who have visited Niagara state that it cannot compare with these of the Snake river, Idaho. A volume might be written on this wonder of the West, and withal not half ex-

haust its interest. The outstretched earth over-looked by the everlasting mountains, mighty pyramids of stone that rear their snow capped bastions to the skies—the prancing fountains and the pouring floods—the solemn caves and continental clouds, true vaults of earth and stalactites of heaven—are fit surroundings of these great Western falls, which soon shall mock the magic art of Eastern ones and sink them into insignificance.

SINGULAR DISCOVERIES.

The salt mines of Hallstadt, in Austria, are well known as being among the richest in Europe; but a new interest will henceforth attach to them in consequence of the patient researches continued for the last fourteen years by their present director, M. Ramsauer, as we collect from a letter addressed by M. Fournet to M. Elie de Beaumont, and by the latter communicated to the Academy of Sciences. In the neighborhood of Hallstadt there is the Rudolfsthrum, a tower situated in the midst of an Alpine valley, in which the salt mines above alluded to are situated. Here M. Ramsauer has discovered and explored no less than nine hundred and sixty-three tombs, of the ages of bronze and iron. In some of these tombs the skeleton was found entire, in others only the ashes; in others, again, the bodies were found to have been only partially burnt, sometimes the head only, and sometimes the feet. When the head only had been burnt, its ashes were placed at the feet of the body.

The objects found in these tombs are extremely interesting; among them we may mention one hundred and eighty-two bronze vases, the largest of which are ninety centimeters in height. In those days soldering seems to have been unknown, since these vases are composed of pieces neatly riveted together. Besides these there are scarfs and belts, not of skin or textile materials, but of thin bronze with ornamental chasings, quite similar to those found in Helvetic and ante-Roman tombs, as, for instance, near Besancon; then knives, daggers, swords, and lance-heads, both bronze and iron; hatchets of bronze, of two principal patterns, one called the celt, and the other the palstaf, with four blades; then amber collars, some very few glass beads, two small glass vases, hundreds of fibulæ hair pins, bronze bracelets, and other trinkets, some of the latter attached to chains not unlike our modern watch chains; also, a deal of ornamental pottery; a few ivory articles, such as knife handles and sword hilts, one of which is inlaid with amber; and lastly, a little gold, but not a particle of silver, and not a trace of money or an alphabet.

M. Ramsauer has also discovered in the mines themselves, the old galleries worked by the ancient race whose traces he has discovered, and

the tools with which they had been worked. These tools are bronze pick-axes; and beside one of them there were found a fibula like those of the tombs, some remnants of woolen stuffs and chamois leather. It appears that these mines must have been worked for centuries before the Christian era.—*A. S. Standard.*

Alexander von Humboldt; or What may be accomplished in a Lifetime. By F. A. Schwarzenberg. Harwicke.

(Concluded from page 318.)

Of Humboldt's travels and researches in Central Asia, Central America, and other parts of the world, Mr. Schwarzenberg gives a succinct and interesting account. Of his personal history he says less than one would wish to hear, though, perhaps, there was not so very much to be told about the private life of a bachelor, wedded wholly to science. These few paragraphs are, from this point of view, the most interesting in the volumes before us:

"When he first commenced his geological studies at Freiberg, and was more intimately associated with one of his fellow-students, Freiereben, with whom he, for the first time, descended into the mines, we find his character already shaped as it appears in his latter days. On that occasion, his fellow-student said: 'The most prominent features of his amiable character are unwearied kindness, warm sympathy for friends, and love for nature; modesty, simplicity, and sincerity in his whole conduct; always attractive powers of communication; a cheerful and humorous disposition.'

"Those qualities which assisted him in after-years to obtain the good will of the savage races, amongst whom he lived for a long time, and in the civilized world everywhere, admiration and sympathy; the same traits of character gained him, in his early youth, the general friendship and love of his fellow-students.

"The expressions of Göthe, after Humboldt had paid him a short visit in December, 1826, indicate the further development of his character. In a state of considerable excitement, Göthe said to Eokermann, who entered his room soon after Humboldt's departure: 'Alexander von Humboldt has honored me with his presence for a few hours this morning. What a remarkable man he is! Though I have known him some time, I am anew surprised, and ready to say that in thorough knowledge he has no equal, and a universality which I never encountered before. Choose any topic you like, and you will find he is at home. He will remain a few days, and I feel already as if I had lived with him for years.'

Having spent his middle age in travelling, he passed most of his later years in his native town.

"He inhabited for a long time, in a quiet

part of Berlin, a house in the 'Oranienburger Strasse,' formerly the property of the father of one of Germany's hero-poets, the well-known Theodor Körner.

"In an aged valet, named Seiffert, who had been the companion of Humboldt in his exploration of the deserts of Asia, and who was for nearly forty years acquainted with all his habits, he found, more especially in the declining years of his life, a most valuable and devoted servant and friend.

"The peculiar military appearance of this personage could not escape the notice of the visitors who entered the house of Alexander von Humboldt, and his whole bearing produced the impression of his entire devotedness to his illustrious master.

"Those who obtained access to the great savan were first conducted by Seiffert to the waiting room, a place filled with various kinds of birds, fishes, &c., scientific instruments, its walls being adorned by landscape paintings; from thence, through the library, to the audience room which has become familiar to a great number of the public. Humboldt entered this room from a private cabinet to receive his visitors, and pointing them to a seat on the sofa, whilst he took his place in an arm-chair near his writing desk, being ready to hear, encourage discussion, or lead the conversation. To listen to him was undoubtedly the desire of every visitor, and in a kindly manner he encouraged their addresses.

"Humboldt was a man of middle stature; his feet and hands were small; his massive forehead adorned by snow-white hair; his blue eyes lively, expressive; his lips, around which played a peculiar smile, half benevolent and half sarcastic, were the involuntary expressions of his superiority of mind.

"He walked at a pretty quick pace, though with somewhat faltering steps, his head slightly bent forward.

"During his conversation he looked habitually on the ground, but would frequently raise his eyes in expectation of a reply, or inviting further discussion.

"An inexpressible sign of sympathy was manifested in his noble countenance, if he recognized in his visitor a man of taste and mind. In such a case, his conversation was unrestrained, full of wit and humor, though he always expressed his opinion with delicate consideration, and was ever master of the word. Humboldt knew many languages: the Englishman praised his pure English, the Frenchman his Parisian accent.

"About thirty years ago, Humboldt rose regularly at four o'clock in the morning during the summer months; received visitors so early as eight o'clock, and only about twelve years ago he stated occasionally, that he was com-

pelled to pursue his scientific labors at a time when most people were asleep, because he was during the ordinary business hours obliged to be with the King; but he could, speaking from experience, content himself with four hours of rest. In his latter days, however, after he had reached the age of eighty, nature demanded her right. He rose subsequently not before eight o'clock, over his frugal breakfast perused the letters received, and answered the more important, immediately. He afterwards dressed himself, in order to receive visitors, or to make visits himself. At two o'clock he was again at home, at three drove, nearly every day, to dinner at the royal palace, from whence returning at seven, he occupied himself until nine with reading or writing; proceeded again to the Court, or into other society, and returned generally about midnight. In the silence of the night this remarkable man commenced his real scientific labors, and not before three o'clock, when in summer already the new day greeted him, he allowed a short rest to his body, so powerfully influenced by its master spirit. During the closing years of his life he was, however, compelled, in consequence of frequently returning illness, to deviate from this rule.

"Humboldt was never married. The children of his brother claimed and received his love. His birthday, September 14, was generally celebrated at the castle Tegel, the residence of his niece, Madame de Bulow. On that occasion, his friends assembled, and science and art presented their cordial homage to the illustrious man.

"Although to all appearance Alexander von Humboldt led the quiet life of a man of science, he was, nevertheless, a magnet, who attracted the foremost minds of all nations, whose intellectual focus he was, and through him all scientific events were directed towards Berlin. His house was, to the end of his days, the centre of numerous intellectual aspirations, and he was intimately associated with all that was good, noble and wise. Every honest effort found in him a warm and sympathizing friend, whilst, on the contrary, he opposed every kind of unreality. Having once recognized the true and the good, Humboldt was ready with encouragement, with counsel, and with assistance. From the most remote parts of the globe he received applications for advice, not only in scientific, but in public matters. To afford assistance to real talent, he considered an imperative duty. He knew neither envy nor resentment, and no opposite opinions could wound him, if he was sure that they originated from a desire after true knowledge.

"And though the outward life of the great savan seemed, in the latter period, calm and quiet, he was, nevertheless, in active commu-

nion with the whole world, manifesting a youthful energy of mind. A pension granted by the King of Prussia, and the well-deserved success of his published works, afforded him pecuniary means in excess of what he required, considering his frugal manner of life. The surplus he employed in the furtherance of science, and in acts of beneficence."

The good and great man died on the 6th of May, 1859, nearly ninety years old.

From the Evening Post.

FORESTS PREVENT THE FORMATION OF WINDS.

"Forests not only protect from winds, they must prevent their formation. The air resting over a broken surface cannot be rapidly heated to a uniformly high temperature, so as to rise upwards in great masses and create a violent wind." The importance of this fact is well illustrated on the western prairies, where the wind often blows a gale as violent as is experienced on the wide ocean, before which men and animals can hardly stand, and which must operate very unfavorably upon the stock raisers, as well as those more directly engaged in agriculture. We do not remember to have seen this subject discussed in its relation to the cattle raisers of the West. An English stock raiser remarks: "The fact that climate may be thus improved, that is by planting trees, has in very many instances been sufficiently established. It is indeed astonishing how much better cattle thrive in fields even but moderately sheltered, than they do in an open exposed country. In the breeding of cattle a sheltered farm or a sheltered corner in a farm is a thing much prized; and where fields are taken by the season for the purpose of fattening cattle, those most sheltered never fail to bring the highest rent."

Dr. Deau has observed, "pasture lands should be well fenced in small lots—and these lots should be bordered at least with rows of trees. It is best that trees of some kind or other should stand in scattered groups in every point in a pasture, not only to serve as a shelter from heat and cold for all kinds of stock, but for the equally important reason that they are absolutely necessary to the preservation of the quantity and quality of the grasses growing upon the soil. Often, indeed, are pastures once celebrated for their fertility rendered entirely sterile by the careless destruction of the protecting trees."

We have given this extract in this connection as we have just met with it—with the hope that some of our readers may see in it the solution of some of the evils complained of in regard to this important branch of rural economy. It will be seen that in a country so well informed upon the subject of the raising of cattle as England is regarded to be, the fact is considered

as settled, inasmuch as fields or pastures sheltered by trees command much higher rents to this end than those without such protection.

There is a good illustration of the effects of protection in modifying the season within our own observation where we now write. It consists of an enclosure of about half an acre of land which we have planted mostly with dwarf pears. These trees are set in precisely the same kind of soil, all of it being a compost made in one mass and supplied to each tree to the depth of two feet, and five feet in diameter, and of course, as will be seen, furnishing all the food for each tree for the present season, the trees having been planted last fall. The whole of this small orchard is a portion of a plot of land of a number of acres sloping considerably to the south and east. About one-half of the orchard sinks abruptly down a number of feet below the general slope, preserving the same direction, however, that is to the south and east; and here in this depression these young trees have already made from nine to twelve inches of growth, while those on the height above are just beginning to make a vigorous start. And so of several hundreds of trees which we have planted during the past two years, a like difference of growth may be observed.

Another fact in this connection which may be of importance we have observed within the last few days, that is that our peach trees which are exposed to the wind are coming out with the curled leaf, while those in the same orchard which are somewhat sheltered, show no signs of this trouble. At Nahant we have witnessed the same effect in regard to peach trees shielded to some extent by low fences. The tops of the branches which grew above the shelter produced curled leaves, and invariably died down to a level with the fence during the winter. It was the observation of this very fact which first led Mr. Tudor to try his experiments with high fences.

ITEMS.

CONGRESS.—The Senate passed the Freedmen's Bureau bill over the President's veto, yeas 33, nays 12. The report of the Committee of Conference on the Indian Appropriation bill was agreed to. The Tariff bill passed by the House was taken up and referred to the Committee on Finance. The joint resolution fixing the time for the final adjournment of Congress was read and laid on the table. The bill to reduce the rate of interest on the national debt and for funding the same was taken up and considered in Committee of the Whole. It was then reported to the Senate, and the amendments agreed to by the Committee were adopted, with the exception of one which restricted the powers of the Secretary of the Treasury. The bill was then passed. The Civil Appropriation bill was then taken up, and a number of amendments were adopted. A bill was introduced providing for the immediate recognition of the Government of Tennessee. It was ordered to be printed. The bill providing for the relief of the sufferers by the fire at Portland, Maine, was taken up. An

amendment was agreed to authorizing the President to place fifty thousand dollars at the disposal of the Governor of that State. The bill was then passed. The Committee of Conference on the bill to further protect the lives of passengers on steam vessels, made a report, which was agreed to.

The House passed the bill authorizing the construction of bridges over the Mississippi and making certain of them post roads. A message was received from the President, in which he refused his signature to the Freedmen's Bureau bill, on nearly the same grounds as before, with the added reason, that the Civil Rights act had rendered it unnecessary to protect the rights of the blacks. A vote was at once taken on the bill, which resulted in its passage—yeas 103, nays 33. The bill continues the Freedmen's Bureau for three years, and returns the sea island lands, now held by negroes, to the former owners on First mo. 1st, 1867. As it has also been passed by the Senate over the veto, it now becomes a law. The Committee of Conference on the Congressional and Diplomatic Appropriation bill, and the bill to provide for the additional safety of passengers on steam vessels and for other purposes, made reports, which were agreed to, and the bills were passed. The House then took up the joint resolution for the admission of Tennessee, which was passed without discussion. The resolution simply declares, that as Tennessee in good faith adopted the Constitutional amendment passed by Congress, she is now restored to her former rights in the Union, and is entitled to representation in Congress.

THE INDIANS.—The Commission sent to Fort Laramie to make a treaty with the Indians, telegraphed to the Department on the 16th inst., that satisfactory treaties of peace have been concluded with the Upper Platte, Sioux and Cheyennes Indians at Fort Laramie. The contradictory reports are without foundation. The President has proclaimed the treaty between the United States and the Choctaw and Chickasaw nations of Indians, by which the latter covenant and agree that slavery shall never exist among them, and in consideration of the sum of \$300,000 cede to this Government the territory west of the ninety-eighth degree west longitude, known as the leased district, and obligate themselves to bestow upon all persons of African descent, residents in the nations, and their descendants, all the rights, privileges and immunities, including the right of suffrage, of citizens, and also give them each forty acres of land, on the same terms as the Choctaws and Chickasaws. The United States declare a general amnesty of all past offences committed by these Indians, and restore them to all the civil rights which they enjoyed before they took part in the late rebellion.

THE FREEDMEN.—The Georgia reports for the 6th month enumerates 79 schools, 113 teachers and 7,792 pupils. All the schools taught by Northern teachers are having a recess until the Tenth month.

The Freedmen's Saving and Trust Company has declared a dividend of five per cent. on its deposits, which in fifteen months have amounted to upwards of \$370,000.

The Commissioner of Freedmen's Affairs has received a report from Major General Foster, military commandant and assistant commissioner for the State of Florida. The General states that the colored people of Tallahassee celebrated the Fourth of July by merry-makings, barbecues and parades. The white citizens as a general thing discouraged any celebration of the day, and although many believed there would be violent interference by the evil disposed with the rejoicing of the freedmen, the day passed off quietly and peaceably.

A Memorial of Jericho Monthly Meeting con- cerning our deceased Friend, JOHN PLUM- MER.

John Plummer, the subject of this memoir, was born in Falmouth, England, 2d month 20th, 1784.

His parents, Enoch and Abigail Plummer, had removed, but a short time previous to his birth, from Long Island, in the State of New York.

His father holding a military commission under the British Government, as appears, caused him to remove thither. But it soon became apparent that, for the health of the mother and child, they would be required to return to their native land.

About the eighteenth year of his age, his father was removed by death, leaving his widow and children with limited means for support; he therefore found it necessary to rely upon his own exertions for a livelihood, and apprenticed himself to a carpenter, in connection with the business of a wheelwright, which, together with that of agriculture, he continued to follow during most of the remainder of his life.

As he grew up to the state of manhood, being possessed of an active disposition, he was often led to join the young in their sports and pastimes, in some of which he greatly delighted; but even during those occasions, according to his own account, he sometimes felt the solemnizing power of truth operating on his mind, producing serious thoughtfulness.

He was educated in the forms and doctrines of the Episcopal Church. His mind becoming religiously awakened, he was led to look around and inquire as to the reality and truthfulness of what he had been taught. He therefore visited the meetings of different religious societies, by which he was surrounded, but did not find that satisfaction he was seeking for, and finally his mind seemed drawn to attend on the first day of the week a meeting of Friends, held at Westbury, about five miles distant. He accordingly went, and on foot. After sitting there in silence for a time, an aged woman Friend arose, and spoke a few words, which appeared so applicable to his state of mind as to make a lasting impression; and from that time he continued to attend that meeting, and soon requested to become a member of it, and was received accordingly. This occurred about the twenty-fourth year of his age, at which time he wrote a letter to his mother, from which the following extract is taken:

"When the Lord first began to strive with me, to bring me off from my evil ways, I was but young, yet there was something within me that reproved me for sin, which often caused me to pray to the Lord for strength to overcome it, and for a time I found some ease. But alas! my resolutions were made too much in my own will and strength, so that the first temptation bath led me away again; but when I have again as it were come to myself, I have had to grieve alone in the bitterness of my soul, and have

had to cry out with the Holy Apostle, 'O wretched man that I am, who shall deliver me from this body of Death?' In this state I went about seeking for the living among the sepulchres of the dead.

But blessed be the name of the Lord, for he hath at length brought me to see that he did not dwell in temples made with hands, but would dwell in and be worshipped by sanctified hearts."

Soon after his connection with the Society, while he was sitting in one of their meetings, he conceived it required of him to address a few words to the people. But he endeavored to put the impression aside, pleading like Moses to the Lord, "I am not eloquent, neither heretofore nor since thou hast spoken to thy servant, but am slow of speech and of a slow tongue," and suffered the meeting to close without a compliance; but his chastisement was so great that he resolved if he again should have so clear an intimation of duty, he would yield thereto, fully believing in the promise, "Now, therefore, go, and I will be with thy mouth, and teach thee what thou shalt say," which was remarkably realized, being able in his public communications to overcome an impediment in his speech, which, in private conversation, was at times embarrassing.

Thus by submitting to the manifestations of the Holy Spirit, he was, in after time, qualified to declare to the people the way of life and salvation.

About the year 1815, he removed to Bethpage, a branch of Jericho Monthly Meeting, and in the year after joined in marriage with Martha Powell, a worthy member of that meeting.

In the year 1817, his ministry was acknowledged by the society. Sometime after this, he expressed to his Monthly Meeting a prospect of religious duty to make a visit beyond the limits of our Yearly Meeting, and although there was no opposition expressed, there was not that unity felt as to qualify the meeting to give him a certificate of approbation, and the concern was put at rest. He quietly acquiesced in the decision, but was heard to say it occasioned close searching of heart.

In after time he opened the concern again, when he received the cordial assent of the meeting.

The service was performed, and he expressed, on his return, that he was fully satisfied with the decision of the meeting in the first instance; showing the importance of waiting for the evidence to be clear, not only to his own mind, but also to that of his friends.

His religious labors were mostly performed at or near home, although he had attended all the Yearly Meetings in correspondence with us, and some of the subordinate meetings.

Living in a neighborhood where there were many not members of our Society, but more or less convinced of our principles, by whom he was much esteemed and respected, he was often invited to attend the funerals of such, and his services, on many of those occasions, were peculiarly acceptable.

In the year 1818, he met with a severe loss in the death of his wife. In 1850, he joined in marriage with Elizabeth Dodge, another member of that meeting, who still survives him.

On Third-day morning, the 11th of 4th month, 1865, he was violently attacked with pleurisy, which proved beyond medical skill.

This sickness was borne with much resignation, showing his mind was stayed on the supporting arm of Divine Power.

To a friend who called to see him the day previous to his death, he said he felt perfectly resigned as to the result; that the religion of Christ produced peace and quietness, a state he now enjoyed; and that if his Master had anything more for him to do, he would be enabled to perform the requisition.

At another time, when he appeared to be near his end, he desired his family not to be alarmed; that he did not think his time had quite arrived, and that he saw his way clear, and was now ready to be offered up.

Again, shortly before his death, when his family were gathered around him, he took each one by the hand, and, bidding an affectionate farewell, earnestly entreated them to do right, and to "seek first the kingdom of God and His righteousness, and all things necessary would be added;" when gradually growing weaker and weaker, until he quietly breathed his last, on the morning of the 17th of the same month, in the 82d year of his age.

Signed by direction and on behalf of Jericho Monthly Meeting, held 3d month 15th, 1866.

DANIEL UNDERHILL, } Clerks.
CAROLINE UNDERHILL, }

At Westbury Quarterly Meeting, held in Westbury, 4th month 25th, 1866.

The foregoing memorial of our friend, John Plummer, was read, approved and directed to be forwarded to the meeting for sufferings.

At a Meeting for Sufferings, held in New York on the 28th of 5th month, 1866,

Westbury Quarterly Meeting forwarded a memorial of Jericho Monthly Meeting, concerning our friend, John Plummer, deceased, which was read, approved and directed to the Yearly Meeting. SAMUEL WILLETS, Clerk.

BRIEF EXTRACTS FROM A FEW LETTERS CONVEYING WEIGHTY, EDIFYING COUNSEL.

BY ISAAC PENINGTON.

It is of the infinite mercy and compassion of the Lord, that his pure love visiteth any of us, and it is by the preservation thereof alone, that we stand. If he leave us at any time, but one moment, what are we? In the truth itself, in the living power and virtue, there is no offence; but that part which is not perfectly redeemed, hath still matter for the temptation to work upon, and may be taken in the snare. Let him that stands, take heed lest he fall; and, in the bowels of pity, mourn over and wait for the restoring of him that is fallen. That which is so apt to be offended, is the same with that which falls. O, know the weakness of the creature in the withdrawals of the life, and the strength of the enemy in that hour, and the free grace and mercy which alone can preserve.

When the pure springs of life open in the heart, immediately the enemy watcheth his opportunity to get entrance; and many times finds entrance soon after, the soul little fearing or suspecting him, having lately felt such mighty unconquerable strength; and yet how often then doth he get in, and smite the life down to the ground; and what may he not do with the creature, unless the Lord graciously help.

Friends,—Be not discouraged because of your souls' enemies. Are ye troubled with thoughts, fears, doubts, imaginations, reasonings, &c; yea, do you see yet much in you unsubdued to the power of life? O, do not fear it; do not look at it, so as to be discouraged by it; but look to him; look up to the power which is over all their strength; wait for the descendings of the power upon you; abide in the faith of the Lord's help; and wait in the patience till the Lord arise; and see if his arm do not scatter what yours could not. So be still before him, and in stillness believe in his name; yea, enter not into the hurrying of the enemy, though they fill the soul; for there is yet somewhat to which they cannot enter, from whence patience, and faith and hope, will spring up in you, in the midst of all that they can do. So into this sink; in this be hid in the evil hour; and the temptations will pass away, and the tempter's strength be broken, and the arm of the Lord which brake him, revealed; and then ye shall see, that he raised but a sea of trouble in your souls, to sink himself by; and the Lord will throw the horse and his rider, which trampled upon and rode over the just in you, into that sea; and ye shall stand upon the bank, and sing the song of Moses to him that drowned him, and delivered you from him; and in due season ye shall sing the song of the Lamb also, when his life springs

up in you in his pure dominion; triumphing over death, and all that is contrary to God, both within and without.

Now, friends, in a sensible waiting and giving up to the Lord, in the daily exercise, by the daily cross to that in you, which is not of the life, this work will daily go on, and ye will feel from the Lord *that* which will help, relieve, refresh, and satisfy, which neither tongue nor words can utter.

And then as to what may befall us outwardly, in this confused state of things, shall we not trust our tender Father and rest satisfied in his will? Are we not engraven in his heart, and on the palms of his hands, and can he forget us in any thing that he doeth? Yea, shall he not bear up the mind, and be our strength, portion, armor, rock, peace, joy, and full satisfaction, in every condition? For it is not the condition makes miserable, but the want of him in the condition; he is the substance of all, the virtue of all, the life of all, the power of all; he nourisheth, he preserveth, he upholds with the creatures or without the creatures, as it pleaseth him; and he that hath him, he that is with him, he that is in him, cannot want. Hath the spirit of this world content in all that it enjoys? No: it is restless, it is unsatisfied. But can tribulation, distress, persecution, famine, nakedness, peril or sword, come between the love of the father to the child, or the child's rest, content and delight in his love? And doth not the love, the peace, the joy, the rest felt, swallow up all the bitterness and sorrow of the outward condition? So let us not look out like the world, or judge or fear according to the appearance of things, after the manner of the world; but sanctify the Lord of hosts in our hearts, and let him be our fear and dread, and he shall be an hiding place unto us in the storms, and in the tempests which are coming thick upon the earth.

Concerning Love.

What shall I say of it, or how shall I in words express its nature! It is the sweetness of life; it is the sweet, tender, melting nature of God, flowing up through his seed of life into the creature, and of all things making the creature most like unto himself, both in nature and operation. It fulfils the Law, it fulfils the Gospel; it wraps up all in one, and brings forth all in the oneness. It excludes all evil out of the heart, it perfects all good in the heart. A touch of love doth this in measure; perfect love doth this in fullness. But how can I proceed to speak of it! Oh! that the souls of all that fear and wait on the Lord, might feel its nature fully; and then would they not fall of its sweet overcoming operations, both towards one another, and towards enemies. The great healing, the

great conquest, the great salvation is reserved for the full manifestation of the love of God. His judgments, his cuttings, his hewings by the word of his mouth, are but to prepare for, but not to do, the great work of raising up the sweet building of his life; which is to be done in love, and in peace, and by the power thereof. And this my soul waits and cries after, even the full springing up of eternal love in my heart, and in the swallowing of me wholly into it, and the bringing of my soul wholly forth in it, that the life of God, in its own perfect sweetness, may fully run forth through this vessel, and not be at all tintured by the vessel, but perfectly tincture and change the vessel into its own nature; and then shall no fault be found in my soul before the Lord, but the spotless life be fully enjoyed by me, and become a perfectly pleasant sacrifice to my God. O! how sweet is love! how pleasant is its nature! how talkingly doth it behave itself in every condition, upon every occasion, to every person, and about every thing! How tenderly, how readily, doth it help and serve the meaneast! How patiently, how meekly, doth it bear all things, either from God or man, how unexpectedly soever they come, or how hard soever they seem! How doth it believe, how doth it hope, how doth it excuse, how doth it cover even that which seemeth not to be excusable, and not fit to be covered! How kind is it even in its interpretations and charges concerning miscarriages! It never overchargeth, it never grates upon the spirit of him whom it reprehends; it never hardens, it never provokes; but carrieth a meltingness and power of conviction with it. This is the nature of God; this, in the vessels capacitated to receive and bring it forth in its glory, the power of enmity is not able to stand against, but falls before, and is overcome by it.

THE LIGHT OF CHRIST.

Placing the power of redemption from evil, in the light, is as sound in spiritual doctrine, as it is wise in moral experience. "Look unto me, and be ye saved," says He, who proclaims himself the light of the world; and who shines not partially on this or that individual, but who is the "true light that enlighteneth every man that cometh into the world." And who is there that, under the heaviest pressure of conscious guilt, has yet fixed a calm, humble, silent, but inwardly supplicating eye upon this day-star in the heart—this mighty one, who wounds but to heal—who kills but to make alive—who is there, we may confidently ask, that has steadily and perseveringly done this, and has not experimentally known, that the Most High "is a God at hand, and a present help in the time of trouble."—*Mary Ann Kelly.*

For Friends' Intelligencer.

"TRAINING UP THE YOUNG."

The subjoined article was published many years ago in the "American Annals of Education." The remarks are close and searching, but they exhibit a true picture of the practice of many who profess to be the followers of Christ.

S. B. F.

The child will, as a general rule, love, worship, or adore what he discovers to possess the supreme regard or love of his parents. He is not slow to discover the bias of a parent's heart. He is not slow to worship what the parent worships.

It is hardly necessary to stop here to meet an objection which some may bring forward. To love a person or object with all our hearts may be said to be a very different thing from worshipping or adoring it. There may, indeed, be a difference in theory, but what is the practical difference? If it were possible for a person to love an object with all his heart, mind, soul, and strength, without adoring it, the consequences would be the same in both cases; since such entire love of an object, whatever that object might be, would at least exclude the possibility of any high-toned affections to any other object. And how does this differ in its practical results and consequences from adoring it.

We say, then, and we say it with confidence, that the child will be devoted to that which he sees to be the object of devotion in his parents. If it be good eating or drinking, that will become the object of his worship; if it be dress or equipage, he will worship extravagance and luxury; if it be money, he will worship that; if office or station, that will be the idol.

We have abundant reason for believing that there are some parents among us, of those who bear the name of Christian, and verily suppose themselves to be disciples of Christ, who, instead of training up their children in the way they should go, as if the latter were the supreme object; instead of training them up to love God with all the heart, they train them up by that example which always teaches more effectually than precept, to love with all the heart, mind, soul and strength, inferior objects.

Such parents as we have been describing may, indeed, tell their children that they have souls; that these souls are not perishable, after the lapse of a few years, like the body, but that they are to live on forever. And they may urge them to consider the great worth of the soul, compared with the body, and even compared with a whole world, like that in which we live. And yet what is their example? Do they spend nearly their whole time for the wants, present and future, of this very valuable soul? And

do their children see that it is so? Or do they find reason to think the parent does not believe, in reality, one word of all he says to them? What! shall we labor twelve, fifteen, eighteen hours a day, year after year, for the meaner body, and scarcely half an hour daily, the first day of the week excepted, for the immortal soul! Is not the child fully justified in the inference, that if the parent believes in the immortality of either soul or body, it is that of the latter? Could a rational disinterested being make any other conclusion?

They tell them of heaven, and speak occasionally of this life as a mere pilgrimage thither. But do they conduct in such a manner that the child can believe they care a straw about the country to which they profess to be going? If they are going on a journey to Ohio, or even to Maine, there must be preparation. And this preparation of the whole family to migrate, is often long and absorbing. How frequently is the journey and the plan of destination not merely the subject of much thought, but of much interesting conversation? With what animation are they spoken of? How the parental eye brightens, and how the heart throbs, when contemplating the pleasures and advantages which are wrapped up for him and his family in the great future? Is conversation on the Christian's course, and on the Christian's home, ever seen by the children of such parents as we are speaking of to enkindle any such raptures or emotions? But why not, if the heart is there? Why not, if the Father in heaven be the object of supreme regard?

They talk to their children or their pupils of the joys of heaven. But when, where, how long, and under what circumstances? Is it when they go out and when they come in, when they walk by the way, and when they sit in the house, when they lie down and when they rise up? In short, is it at every convenient opportunity? Do they so speak of these joys that every one can perceive they speak from the abundance of the heart? Or is a hundred fold more time spent in conversation about good eating and drinking, gay clothes, costly equipage and furniture? And when do the eye and countenance brighten, and the heart swell with emotion, and the tongue get loosened? Is it not most frequently in view of the pleasures of sense, such as we generally say are short lived, and perish if the using?

They talk to them, it may be, of a Heavenly Father, of a redeeming Saviour, and of a sanctifying Spirit. They endeavor, certainly once a week, to draw forth their admiration and per-adventure enkindle their love for Him who is the author of their bodies and spirits, and their great preserver and bounteous benefactor. They speak of the preciousness of the Saviour, his glorious career, and his wonderful and never-

failing love. They urge them to become his humble disciples and followers.

And yet, if they have any serious regard for the Saviour, how is it manifested? Can the greatest dunce in the world fail to discover that they look brighter, think most rapidly, speak most cheerfully, and act with most sprightliness and energy, when God is not in all their thoughts, but when they are engaged in making a good bargain, or at least, in *contriving* how to make one; in adding to their acres, their bank stock, their deposits, or their chests?

In short, go where you will, and who is not spending the sum total of his days and hours and minutes—a few short moments at morning and evening, and a few short hours of the Sabbath excepted—in worshipping the god of this world? Who does not love his body and the pleasures of time and sense, and the bodies of those earthly friends that God has given him, with all his heart, mind, soul and strength? and who does not worship them as surely as he worships any thing? And what child, who is not an idiot, does not know this? We thank God there are exceptions; there are those who do not deserve the severity of this charge. We only wish they were more numerous. Can we wonder at the prevalence of infidelity? According as we sow, must we not reap? Does not the passing seed-time betoken such a harvest of unbelief as no eye hath yet seen, and no human heart yet fully conceived? Is not such an expectation justified by the assurances of Him who cannot lie? Does not the promise which accompanies the command, "Train up a child in the way he should go," apply with equal force to the case of those who train him up in the way he should not go?

Let not the Christian friend of education pass lightly over these few pages, and regard them as the ravings of a distempered brain. Let him pause and consider whether the thoughts which they contain may not be founded on the truth of God, and dictated by truth and soberness. Let him not put away such friendly, and, at least, well meant admonitors, as something which only concerns others. If we are correct in our views, and have rightly defined idolatry, then it necessarily follows that idol worship is a thousand times more common among professing Christians than they are wont to admit or even to believe. Let him consider the danger of setting the example of a supreme devotion to material objects. Let him, in short, consider his course, and see whether it is, or is not, that which, though it "seemeth right" to a man, ends in "death."

A sunny cheerful view of life,—resting on truth and fact, with practical aspiration ever to make things, men, and self, better than they are,—is the true healthful poetry of existence.

THE NEED OF MORE HEART WORK.

It is very sad indeed that the heart should ever be dull and cold; but oh its-stupidity, its lifelessness, its distance from the atmosphere of the canticles, is known and felt every day. The shallowness and narrowness of the flowings of the Spirit through us are well understood in the secret of the soul within us.

I am not sure that we have not been a little hasty after knowledge; and the soul in its search has not given space to pour itself out over the word with sufficient desire. *Better to break the heart over one truth than get many truths in the mind.* The Lord keep us that our growth in knowledge may be healthful! It is not our stock of knowledge which we need to have increased, so much as to have that stock to become more active and lively in our souls, to stir itself there, to be made a quickening mass, giving character to our minds more and more.

The Lord direct our hearts into the deeper affections of the Spirit, that we may be afraid to pursue any inquiry or seek any knowledge apart from the power of communion with Himself.—*British Herald.*

THE DUTY OF COMFORTING THE AFFLICTED.

In every point involved in the whole course of a godly life, the soul needs the light and touching kindness which can be shed upon its doubts and expressed for its struggles by the heart which has felt similar perplexities and anxieties. A stranger intermeddled not with its sorrow, because he is a stranger. "As in water face answereth to face, so the heart of man to man." It will be seen in the order of Providence that those whom God designs for the greatest instruments of good to mankind, are prepared for their work by the discipline of suffering, and usually of the very kind of suffering which they are subsequently so largely to alleviate. Was there ever a Reformer whose heart was not pierced with the ills which he afterwards so valiantly combated and signally conquered? And do we not see that those servants of God who are most eminent in the power to comfort Zion, to build up and sustain sinking, doubting hearts, are those who themselves were the subjects of harassing skepticism or searching personal troubles? Their own trials have rendered them acquainted with the troubles of others, and tender and patient of them.

If we would comfort those who are in affliction, we can not be at a loss for opportunity or means. If we can do no more than express our sympathy, it will help. To go to those in sorrow, not with a patronizing air, or affecting our superior virtue, or reminding them that their sin had brought on their misfortunes, but entering into their trouble with a sincere "weep-

ing with those who weep," must assuage the burdened heart. We can at least point the oppressed spirit to God as a refuge, to the precious promise of his holy word, to the relief to be found in faith and prayer. We may dilate upon some of the alleviating uses of affliction, and so aid the bewildered mind in some clear apprehension of the benevolent designs of the Heavenly Father in chastening his children. We can cite with due modesty the simple story of our history, its lights and shadows, its reverses and deliverance. There are none but have received comforts the recital of which will do good to others, though the causes of trial may not be precisely alike. "And when thou art comforted strengthen thy brethren." And how faithfully Peter did this, let his epistles attest! But instruction is not the only, nor the chief good imparted. People in trouble need not so much to learn new truths as to see and feel old truths as related to themselves. The ablest physician in illness requires the physician as much as the most untutored. He is rendered by pain incapable of the diagnosis of his own disease, and of administering the appropriate remedy. Any mind in severe trial, whatever its wisdom, piety, and faith, absolutely wants the ministry of another mind independent of, though not indifferent to its sorrow. "When the stern gladiator is exhausted in the contest, even a child may refresh him with a cup of cold water."—*The Methodist.*

THE AMERICAN FAMILY AND DISCIPLINE.

. . . American parents, as a rule, have very little inclination to tyrannize over their children, and are very strongly disposed to loosen the reins of family government. Looking around among our own acquaintance, we do not call to mind a single parent who is a terror to his children; and we rejoice that is so. But we do know multitudes of parents who never had their children under their control; and this we cannot rejoice over. The days when children were tied to bed-posts and flogged for slight transgressions are, thank Heaven, substantially past; but the extreme to which our grandfathers carried their notions of discipline is no justification for the other extreme into which we are now disposed to run. If there is really no middle path, doubtless the license which is now allowed to children is better than the excessive severity of old times; but no such excuse for laxity can be truly made. There is a middle path; but it requires more patience, perseverance, and enlightened parental love than either of the rival systems of wholesale flogging or *laissez faire*.

A certain distinguished clergyman once told in our hearing an incident which illustrates our meeting. His little girl, then a little over three years old, was playing in his room, when

he called upon her to fetch his shoe. She had often done it before and been proud to do it; but this time she looked at her father with a smiling face and did not stir. "I repeated my command," said the father "but with no better result. 'Now,' said I to myself, 'comes the crisis, and we must see who is to gain the day.' I called her to me, and she came to me quite cheerfully. I pointed to the shoe, but she would not look at it; she threw her arms around my neck, and would kiss me just as long as I would let her; she brought me an apron, a book, anything but the shoe; that she would not touch. And nothing but the shoe would satisfy me. 'Fetch me that shoe,' said I; but no. For more than two hours the conflict lasted, and then she suddenly grasped the shoe in her little hand, and rushing up to me, threw herself into my arms in a violent fit of weeping, her little frame perfectly convulsed with sobs; but she was conquered." Such struggles as these occur at least once in the life of every high-spirited child. The majority of American parents find it easier to abandon the contest, and let their children enjoy a demoralizing triumph, than to persist with mingled firmness, tact, and patience till obedience is secured.

Divine wisdom has made obedience necessary to the true happiness of every child. A spoiled child is the emblem of misery to itself and discomfort to all around. And American children are universally presumed to be spoiled, not merely by the judgment of foreigners, but by the tacit evidence of our own people. Why is it that landlords are so unanimous in preferring tenants without children? Why is it that children, in all other countries esteemed the object of marriage, are here so commonly thought of as its drawback? There can be no doubt that it is because they are expected, as a matter of course, to be a source of irritation and anxiety, undisciplined little nuisances, worrying their parents' lives and driving off their parents' friends. Unquestionably the most judicious training fails in many instances; but as a rule it develops a condition of moral health which makes children the joy of the household and the special attraction of visitors. And it is from the rule and not from the exceptions that the common judgments of men are formed. We conclude, therefore, from the general anticipation that children, at any rate *other people's* children, will be disagreeable and mischievous, that there is a general belief that children are badly trained.

We have already been led incidentally to remark how much discomfort, and even crime, is indirectly caused by the general lack of proper family discipline. These are, however, only part of the evils to which it gives rise. "Young America" is proverbially pert, obtrusive, and irreverent. Unaccustomed to obey

at home, our young men are apt to lack respect for lawful authority everywhere; untrained at home, they rush into life with shallow thoughts and little training of any kind. Probably half the cost of our late civil war may be fairly charged to the lack of *habits* of discipline, obedience, and self-command on both sides.

It is even more melancholy to witness the causes which most frequently excite parents to the exercise of their authority, and the manner in which that authority is spasmodically exercised, than it is to observe the general absence of parental control. A falsehood, a petty theft, an act of meanness or cruelty, which ought to excite the parent at once to grief and indignation, is usually passed over with slight reproof or total indifference. Charley may torture the cat, or destroy his baby sister's doll, or steal her apple, or show a meanly-selfish spirit toward his playfellows, with comparative impunity, though he is thus giving way to the basest tendencies of his nature; but woe be to Charley if he breaks his mother's china, or stains her silk dress, even though it should be done by pure accident and in the excess of affectionate zeal. On the one hand the child displays a temper which, if entirely unchecked through life, would make it a fiend. For this it receives no punishment. On the other hand, through mere natural thoughtlessness, it injures a few dollars' worth of goods, which must in any case soon perish. This brings upon it bitter words, perhaps bodily chastisement. Everyone knows that this is a contrast daily witnessed in thousands of families. For ourselves, we see it often, and with ever-growing abhorrence.—*Western Christian Advocate.*

HOW TO WIN A CHILD'S HEART.

The heart of a child is easily won. It needs no besieging, no formidable preparation for a grand assault, no advancing by regular approaches. You have only to go, in the name of love, and demand a surrender; and without parleying, the prize is yours.

"Love begets love." Anger and hate beget anger and hate. Smiles are like musical voices amid the hills which come back to those that utter them with all their original sweetness.

Did you ever smile on a child without receiving an answering smile? On the contrary, when you have looked down coldly, perhaps with a frown, into the eyes of a child, have you not seen the reflection of your manner and expression in the mirror-like face of the little one?

Love children, and they will love you. Let children feel that you care for them—that you sympathize with them in all their little sorrows, and rejoice with them in all their little joys, and that you are their true and unselfish friend, and in those feelings you have the key to their hearts.

One word for you, dear teachers. You want to be loved by your scholars; then love your scholars. If you do love them, it will not be necessary for you to say so, in order that they may be conscious of the fact. Children read hearts intuitively. They read your affection for them in every line of your face, in your moistened eye, in your unforced smile. They hear the declaration of it in every tone of your voice. They have the assurance of it in your manner—in your actions, which “speak louder than words.”

Happy are ye who have the love of little ones under your care. It is a fountain of no common joy to your heart, and it gives you an influence over them which can be obtained in no other way. Thus may you win those dear young hearts to Jesus. God help you to do it. — *Western Christian Advocate.*

FRIENDS' INTELLIGENCER.

PHILADELPHIA, EIGHTH MONTH 4, 1866.

MARRIED, on the 11th of Seventh month, 1866, in the city of Poughkeepsie, N. Y., at the residence of Alexander J. Coffin, after the order of the religious Society of Friends, RICHARD C. SOUTHWICK and AVIS COFFIN, all of said city.

—, on the 30th of Eleventh month, 1865, in accordance with the order of the religious Society of Friends, EDWARD P. THOMAS to MARY H., daughter of Richard T. and Edith T. Bentley, all of Sandy Spring, Md.

DIED, on the 20th of Fourth month, 1866, at his residence in Yorktown, West Chester Co., N. Y., WRIGHT FROST, aged 68 years; a member of Amawalk Monthly Meeting.

—, on the 22d of Seventh month, 1866, BENJAMIN COX, in his 55th year; a member of the Monthly Meeting of Friends of Philadelphia.

—, on the 15th of Seventh month, 1866, ELIZABETH M. BRUNER, aged 54 years.

In the draft of a proposed treaty sent out from England to Madagascar—a treaty of amity and commerce between England and Madagascar—there occurred these remarkable words:

“Queen Victoria asks, as a matter of personal favor to herself, that the Queen of Madagascar will allow no persecution of the Christians.”

In the treaty that was signed, there occurred these words:

“In accordance with the wish of Queen Victoria, the Queen of Madagascar engages that there shall be no persecution of the Christians in Madagascar.”

Let us cherish, in religious exercises, serenity and love, and gentleness of mind and feeling.

Meekness and modesty are the rich and charming attire of the soul.—*Penn.*

Extracts from the Minutes of the Yearly Meeting of Friends, held in New York, opened on the 28th of 5th Month, 1866.

At a Yearly Meeting of the Religious Society of Friends, held in New York, and opened on the 28th of 5th month, 1866.

The following named Friends from other Yearly Meetings, are acceptably in attendance with us with minutes of concurrence from their respective Monthly Meetings, viz:

Samuel Townsend, a minister, from Baltimore Monthly Meeting.

Elizabeth Paxson, a minister, from Middletown Monthly Meeting, Pennsylvania.

Ann P. Jackson, a minister, from Birmingham Monthly Meeting, Pennsylvania.

John Hunt, a minister, from Burlington Monthly Meeting, New Jersey.

Catharine P. Foulke, a minister, from Richland Monthly Meeting, Pennsylvania.

Hannah B. Lester, her companion, from Richland Monthly Meeting, Pennsylvania.

William Dorsey, a minister, from Philadelphia Monthly Meeting, Pennsylvania.

Rachel Wilson Moore, a minister, from Green Street Monthly Meeting, Philadelphia.

Mary A. Smith, a minister, from Medford Monthly Meeting, New Jersey.

John and Mary Haines, companions of Mary A. Smith, from Chester Monthly Meeting, New Jersey.

Seth W. Bosworth and Catherine E. Bosworth his wife, elders from Farmington Monthly Meeting, New York.

Mary B. Needles, a minister, and John Needles, her husband and companion, an elder, from Baltimore Monthly Meeting, Maryland.

George T. Trimble informed that he was requested by the Representatives to propose the name of Nathaniel S. Merritt for Clerk, and of Thomas Foulke for Assistant Clerk, which being separately considered and united with, they were appointed to the respective services.

The accounts from Westbury Quarterly Meeting inform that that meeting (both men's and women's) was united in proposing that an addition be made to our Discipline at the end of the first paragraph of the article under the head of Distilled Spirituous Liquors, of the following words, viz: “and also against renting their premises for the purpose of selling or manufacturing them.”

The proposition was referred to a joint Committee of men and women Friends, to report their judgment thereon at a future sitting.

The following proposition is contained in the accounts from Nine Partners Quarterly Meeting, viz: “This meeting has under consideration the subject of establishing a Boarding School, to be located at Oswego, and to ask of the Yearly Meeting a proportion of the Yearly Meeting's School Fund for that purpose.”

It was concluded to refer the case to the Committee appointed last year on the subject of the Yearly Meeting's School Fund, for their consideration, to report at a future sitting.

Job S. Dennis, a minister from Farmington Monthly Meeting, acceptably attended this meeting with a minute of unity from that Monthly Meeting.

The meeting resumed the consideration of the State of Society, as shown in the Answers to the remaining Queries.

The many departures exhibited in them from the support of some of our Christian testimonies, brought exercise over the meeting. Much excellent counsel was extended by concerned Friends, tending to turn our minds to an attention to that principle and power which alone can furnish strength successfully to resist the temptations which have led into some of these deviations.

The joint Committee to consider the proposition from Westbury Quarterly Meeting to make an addition to our Discipline, reported that they were united in recommending the addition of the following words, viz: "Or renting their premises for the purpose of selling or manufacturing them." And they propose that the added words shall follow the words, "vending ardent spirits," in the first paragraph in the clause of our Discipline, under the head of "Distilled Spirituous Liquors."

The Report was approved of by the meeting, and was referred to the Women's meeting for their judgment in the case.

The Committee continued last year for the purpose of presenting the memorial adopted on behalf of the Freedmen, presented the following report:

TO THE YEARLY MEETING:

The Committee appointed last year to present the memorial to the President of the United States and other heads of the Government, report, "That soon after their appointment they proceeded to Washington and presented the address to the President, and to several of his Cabinet, and in our interviews with them, were kindly received and treated with much regard. The President and Secretaries to whom the address was presented assured us, that they were glad to receive it, and that it would be duly considered."

On behalf of the Committee,

SAMUEL WILLETS,
RACHEL HICKS.

New York, 5th month, 28th, 1866.

A verbal communication was made by one of the Committee, giving a more detailed statement of many interesting circumstances that occurred during the interviews with the President and members of his Cabinet, which was satisfactory to the meeting.

An exercise arose in this meeting in regard

to the fact shown by the Answer to the First Query, in the report from Nine Partners Quarterly Meeting, that in one of the Monthly Meetings in that Quarter, no mid-week meetings have been held for a considerable time past. After deliberate consideration it was concluded that an advantage might arise from the appointment of a Committee of men and women Friends to inquire into the causes of this omission, and to render such advice and assistance as may seem necessary in the case.

The subject was then referred to the Women's Meeting for their judgment in the matter.

A memorial of Jericho Monthly Meeting concerning our friend, John Plummer, deceased, approved by Westbury Quarterly Meeting, and examined by the Meeting for Sufferings, was now read. It was satisfactory to the meeting, and was directed to be recorded.

The Committee appointed last year to consider the proper disposition of the fund held by the Yearly Meeting for Educational purposes, made the following report:

TO THE YEARLY MEETING:

The Committee appointed last year on the School Fund of the Yearly Meeting, and to consider the subject of a Boarding School for the guarded Education of the children of Friends—

Report, That they have given careful and deliberate attention to the subject committed to them, but are not prepared to report fully at the present time, and they would therefore propose to the Yearly Meeting that the Committee be continued another year.

They have also considered the proposition of Nine Partners Quarterly Meeting, referred to them the present year, and are united in proposing to the Yearly Meeting to pay over to that Meeting their proportion of the School Fund in accordance with their quota, for the purpose of assisting them in the establishment of a Boarding School under the care of that Meeting. The amount to be paid when the title of the property shall have passed to Trustees appointed by the Quarterly Meeting.

On behalf of the Committee,

THOMAS FOULKE.

New York, 5th month 30th, 1866.

The Committee was continued another year, as proposed.

The recommendation of the Committee to pay the Nine Partners Quarterly Meeting that meeting's proportion of the funds now in the hands of the Treasurer of this Meeting, was united with, and the Treasurer was authorized to pay to the Trustees, when appointed, as proposed by the Committee, the proportion of the amount that would belong to that Meeting under the quota at the time of payment.

Women's Meeting informed that they have appointed a Committee to unite with one from this meeting to render such advice and assistance to Nine Partners Quarterly Meeting as way may open for in relation to the omission to hold mid-week meetings in one of their Monthly Meetings. A Committee was appointed to that service by this meeting.

The Women's Meeting also informed that they were united in adopting the proposed addition to the Discipline, as recommended by the Committee.

The following minute embraces some of the exercises of the meeting:

The minds of many of us have been tendered under a renewed sense of the continuance of Divine goodness, mercifully extended during the several sittings of this meeting.

The necessity of meeting together as a public acknowledgment of love for and dependance upon the Author of our being, is admitted to be an important duty.

Our worthy predecessors, those faithful sons of the morning, permitted neither persecutions nor sufferings to restrain them from assembling for this purpose. It is to be regretted that we, their descendants, who profess to believe in the spirituality of the Gospel dispensation, should, many of us, be more deficient in this respect, even than others of the professed Christian name. Yet it is too evident from the reports of our subordinate meetings that many deficiencies exist amongst us in the fulfilment of this duty.

The great importance of love in the family circle was feelingly alluded to, and Friends were encouraged to cultivate it. It was set forth that this heavenly principle only can bind and cement the family together. Under its influence parents and children would be drawn together, and would often be enabled to sit in heavenly places, and enjoy the sweet incomes of peace. Then might we hope again to behold that which formerly was so beautifully witnessed in the Christian Church, that in place of the father would be the son, and of the mother, the daughter, prepared to sustain our principles and testimonies.

The awful effects of intemperance have been feelingly portrayed by instruments, who, through the mercy of God, have been preserved to testify of the efficacy of his grace, and of the impotency of creaturely resolutions merely, in extricating the poor victim from the toils of this dreadful evil.

The pernicious tendency of much of the current literature of the day has caused renewed concern at this time, and Friends were feelingly advised to a frequent and serious perusal of the Scriptures of Truth, invoking the aid of the Holy Spirit for a right appreciation of them.

Though the desolations of war have been

stayed amongst us, and peace proclaimed throughout the land, yet we feel drawn to urge close attention to guard against the influence of the spirit of war, remembering that our testimony in favor of peace, and against injustice and oppression must ever remain important to be upheld.

For Friends' Intelligencer.

FRAGMENTS OF BARK FROM OUR CLUB.

NO. II.

It is now summer's high noon. The heat is intense. Over the golden grain fields and silent tree tops it quivers with delight. The winds are held back, and even the zephyr's breath is hushed, or employed in ruffling the silver edges of the clouds seen floating in the west.

"The taller grass upon the hill,
And spider's threads, are standing still;
The feathers dropped from moor-hen's wing,
Which to the water's surface cling,
Are steadfast, and as heavy seem,
As stones beneath them in the stream."

But nature's true lovers know right well that many phenomena of plant-life can be studied best when the heat is greatest. Our club on this occasion preferred the cooler paths along the water-courses and by the shaded streams. We could dip our bare arms into the current, or pour great handfuls on our hot heads as we stooped to look beneath the surface. We saw the blue sky—calm, patient, unfathomable, heaven's typical image—reflected from the river. We looked into the spring, as we knelt to drink from its lips: the same unfathomable blue was painted on its surface. And in the dirty mud puddle, still holding a little water, was mirrored the same suggestive reflection. And is it not so in human life? None are so great or so high but the Highest is still above them; and no human soul is so degraded or unclean, but it may reflect that Divine light which descends from above.

Covering the water all over in places with a carpet of green, we found the little duck-meat (Lemna minor) probably our smallest flowering plant. Its minute blossoms, when found, project from the margins of the leaves at this season, unshaded from the fiercest suns. Depending from its minute leaves are the roots, about half an inch long, each one having in the centre a bundle of spiral vessels; and on its free end a little cap, not unlike in form the extinguisher sometimes placed over candles in former times. This little cap may be separated from the root by gentle pressure without being crushed, and will give an idea of what is meant by a spongiola, which exists in some form on the ends of all roots. These little leaves, moreover, give off buds from their edges, which sink in the water, and remain buried until the sun of another summer warms the water and brings

them to the surface. But we have not yet seen all the beauties of our little Lemna. Place one of its round leaves on the thumb nail and shave off the upper surface. Now place it under a microscope, and we behold nearly every cell containing a crystal. That floating carpet, then, is spread over a crystal pavement, and shades with its bud-spangled and gem-decked canopy myriads of little animals and smaller plants, whose names alone would fill a column of this journal.

The water-shield (*Brasenia peltata*) grows a near neighbor often with the duck-meat. We found it in water more than a foot in depth, sending up from creeping root-stalks, thread-like stems, wholly encased in transparent jelly. Each stem bears on its summit one or more peltate, oval leaves, one or two inches in diameter. It is very interesting to observe the unfolding of these leaves, as we have done for many days in succession. In the bud, they are rolled up from two opposite edges, thus forming a line resting on the water. Gradually these convoluted edges unfold, exposing the polished dry surface of the leaf with its edges turned up a little all round. Now they lie flat on the water like little shields, drinking the sunshine, or like fairy cradles rocked on the bosom of the lake, lovelier

"Than Naiad by the side
Of Grecian brook, or Lady of the Mere,
Sole sitting by the shores of old romance."

In the roots of the water-shield we find starch granules of larger size than probably in any other plant.

Near the margin of a pond we found the *Saururus cernuus* growing in profusion. Its beautiful spikes of white flowers nodding over the stream resemble somewhat a lizard's tail, and from this circumstance the plant derives its common name.

In our walks looking for common things, we observed that plants and animals are not found in reality arranged in natural orders like we find them in our books. We see earth's green carpet woven of *dissimilar* materials, all interlapping with each other; and we take our illustrations therefore pretty much as we find them in our path, without aspiring after scientific arrangements, caring more for *hidden* beauties, generally unseen by those who are amused by the names and ever-changing dress of classification. Our sharp knives and dissecting needles reveal to us in the stem of the common spatter-dock, beautiful and brilliant stars, piercing the fragile cells with their sparkling rays. We admire the structure, but we also obtain an idea of a portion of the *unchanging* framework of nature; of something which has been from the beginning, and will be long after botanists shall have discarded the name of Nuphar. To us it is inspiring to know of that beautiful galaxy of

stars in the stem of the spatter-dock, and by them to be reminded, that not only aloft in the immeasurable distance, do stars of beauty twinkle, but often *close around* us, if we could only see their cheering light.

We saw the round, dark, green leaves of the lotus lying on the bosom of the sluggish stream, one or two feet in diameter; or lifting their umbrella-like forms above the surface. From the stems which come up in the centre of these leaves radiate many ribs or aquatic rafters, filled with air cavities, which help to buoy them up. The cream-colored flowers are very beautiful, and often six inches in diameter when mature. The numerous petals surround a many-celled ovary, resembling in size and form a boy's top when in the position for spinning. In each cell is one large round seed which the boys eat, and call water chinquapins. The broad leaves of the lotus roof over many tiny inhabitants of the stream. The water snails come and glue to them their crystalline eggs, and the young snails hatch out and travel round the leaf—a world of their own. The water-tigers, (larva of *Dityscus*), with jaws more terrible in miniature than their royal namesake of the jungle, hunt their prey among the convolvuloid filaments velveting their surface. Or we find the social *Lascinararia*, often fifty in the same family, caressing and consoling each other because of the wickedness going on around them. Truly the lotus is a right royal plant. To our fancy it expresses the idea of silence. Its ribbed and ample leaves rest on the water with such unspeakable repose. It looks old, even as Egypt is old among the nations; it was fashioned when Time was young, and employed his building materials vigorously and generously. We love plants more after having seen the lotus.

In our walks after water-plants, we observe some are fashioned to float on the surface. Are there not parallels in human life? Their leaves are broad and entire, seldom marked with eccentricities around the margin. They give *shade* to other beings; and are we not thankful for a little shade? Others are adapted to live only *beneath* the surface,—to go down into the tide and struggle with the contending eddies and currents. These have finely divided leaves, thus offering multiplied points of contact,—giving a great surface to the elements. This class of plants has a *vital* office to perform, viz., to purify our lakes and rivers by their life-giving oxygen. There are stagnant pools along the margin of life's stream, which can be purified only by living *beneath* the surface, and by putting out many points of contact with the elements. Then, when Divine light touches these multiplied surfaces, oxygen will stream through their sluggish channels.

The Water Ranunculus, lifting its delicate,

white blossom above the surface—the Anacharis, with its calyx tube, often three inches long, pouting its sweet lips out of the water to kiss the sunshine—the bladder-wort, which fills its leaf-stems with air just at flowering time, and thus floats its curious golden blossoms to the light—the stately Vallisneria unrolls its green ribbons beneath the surface—the horn-wort too, that graceful nurse of the higher infusoria; and the chara and nitella, like spun glass, twine their transparent stems *beneath* the surface. We love these plants, and accept their teachings. We cherish them as true friends, as counsellors, who have never spoken but in the language of truth and wisdom.

But nature is inexhaustible in her offerings. We have gathered only a few sheaves from the harvest. Others stand ripe and waiting. We will part your sweet company for the present, joyously looking to the future.

ONE OF THE CLUB.

For Friends' Intelligencer.

VOICE FROM THE SOUTH.

BY JOHN COLLINS.

Men of the Northland, sons of Pilgrim Fathers,
To lonely wilds by persecution driven,
Whose souls soar upward, as the tempest gathers,
Nearer to heaven;
Long as the shadow of your granite mountains
Tells the swift progress of the circling sun,
Long as the sparkling water of your fountains
Shall sea-ward run;
Nor time nor fate shall bend the free-born spirit
That once could dare a haughty despot's rage;
Millions unborn your boldness shall inherit
From age to age.
From lofty peaks the cry is ever swelling,
"Power—Freedom—Right, must come from God alone!"
And the wild waves the same stern truth are telling,
In thunder tone.
It thrills the pulses of the sinewy farmer,
It swells the chorus of the maiden's song,
And sparkles, from the clinking of the hammer,
Hatred of wrong.
O! many a year we watched the North star shining
To guide the fugitive to other lands,
Raising to heaven forever, unrepining,
Our suppliant hands.
That prayer was heard—through crime and tears and
battle;
Our chains are broken by an avenging God;
No longer cannons boom and muskets rattle
Where armies trod.
Hushed is the slaver's whip—the shriek of anguish
From dear ones torn apart to meet no more—
Rusted, the prison fetters,—none may languish
Within its door.
Yet though we hail, with songs of rapturous glad-
ness,
The birth of Freedom for our dusky race,
To mar our joy a passing gleam of sadness
Darkens each face.

Of what avail that we no more forever
Shall water with our tears the soil we tread,
If to the dignity of manhood never
We raised the head?
Can sordid gain from ill-requited labor
Beget the generous sympathy we need,
If no kind friend, no Christ-like loving neighbor,
Bid us God-speed?
Must we still bend before each former master,
Abject, degraded, as in Slavery's years,
And dream of blighted hopes, while fast and faster
Flow bitter tears?
Have we not fought beneath our starry banner,—
Emblem of liberty in far off lands?
Have we not bled to save it from dishonor
By traitorous hands?
O! by the love of right and truth we cherish—
By all the hopes that crown Columbia's brow,
By our long sufferings—leave us not to perish
Neglected now.
Men of the Southland! who have seen the sorrow
Your iron will inflicted on the slave,
From earliest day till nightfall, while the morrow
No respite gave,
Shall not the memory of our age of trial
Attune a chord of pity in your breast?
How long must we abide the cold denial
To give us rest?
The sunny skies,—the rich and boundless meadows,
Where flies the breeze o'er myriad scented flowers
Or panting herds repose in cooling shadows
At noon-tide hours;
The cane's rich sweetness, or the golden splendor,
When Autumn tints the waving fields of maize,
Awake they not the grateful heart to render
The meed of praise?
Shall not the night, in almost tropic beauty,
While brilliant galaxies of stars above
Light all the heavens, teach man the solemn duty
Mankind to love?
And, more than these, will not the oft-told story
Of all our toils and watchings, stripes and wrongs,
Plead earnestly for freedmen old and hoary,
With thousand tongues?
Born side by side and nursed by sable mothers,
May we not claim your sympathy to share?
May we not bend the knee, as friends and brothers,
In reverent prayer?
Shall we, to alien lands in exile driven
Hopeless and outcast from our cabins, pine,
Till retribution drops from outraged heaven,
In wrath divine?
No! while the bondman's cry is heard no longer,
And Freedom's glory glids our humble home,
Dearer than ever, all our vows grow stronger,
Never to roam.
Men! Christians! Patriots! heal our wounds yet
bleeding,
Bind up the broken-hearted, while ye may;
O! hear the voice of Truth and Mercy pleading
To hold their sway.
Deal justly, truly, kindly with the living,
For their sake who have toiled in by-gone days,
And from our hearts shall rise in loud thanksgiving
One hymn of praise.

A person may believe as he pleases about things; but things will not, therefore, be as he pleases.

For the Children.

HABITS OF FLOWERS.

Flowers have habits, or ways of acting, just as people have. I will tell you about some of them.

All flowers naturally turn toward the light, as if they loved it. You can see this, if you watch plants that are standing near the window. The flowers will all be bent towards the light, if you let the pots stand just in the same way all the time. By turning the pots a little every day or two while the blossoms are opening, you can make the flowers look in different directions.

There are some flowers that shut themselves up at night, as if to go to sleep, and open again in the morning. Tulips do this. I was once admiring in the morning some flowers that were sent to me the evening before by a lady. Among them were some tulips, and out of one of these, as it opened, flew a humble-bee. A lazy, drowsy bee he must have been, to be caught in this way as the flower was closing itself for the night. Or, perhaps, he had done a hard day's work in gathering honey, and just at night was so sleepy that he staid too long in the tulip, and so was shut in. A very elegant bed the old bee had that night. I wonder if he slept any better than he would have done if he had been in his homely nest.

The pond lily closes its pure white leaves at night as it lies upon its watery bed. But it unfolds them again in the morning. How beautiful it looks as it is spread out upon the water in the sunlight. The little mountain daisy is among the flowers that close at night, but is as bright as ever on its "slender stem" when it wakes up in the morning. When it shuts itself up, it is a little round green ball, and looks something like a pea. You would not see it in the midst of the grass, if you did not look for it. But look the next morning, and the ball is opened, and shows "a golden tuft within a silver crown." And very beautiful it is when there are so many of the daisies together that the grass is spangled with them in the bright sun. It is supposed that this flower was at first called "day's eye," because it opens its eye at the day's dawn, and after awhile it became shortened to daisy.

The golden flowers of the dandelion are shut up every night. They are folded up so closely in their green coverings that they look like buds that had never yet been opened.

There is one curious habit which the dandelion has. When the sun is very hot, it closes itself up to keep from wilting. It is in this way sheltered in its green covering from the sun. It sometimes, when the weather is very hot, shuts itself up as early as nine o'clock in the morning.

Some flowers hang down their heads at night, as if they were nodding in their sleep; but in the morning they lift them up again to welcome the light.

Some flowers have a particular time to open. The evening primrose does not open till evening, and hence comes its name. The flower named four o'clock opens at that hour in the afternoon. There is a flower commonly called go-to-bed-at-noon, that always opens in the morning, and shuts up at noon.

Most flowers last for some time; but there are some that last only a few hours. The red flowers of the delicate and rich cypress vine open in the morning, and in the afternoon they close up, never to open again.

It is delightful to one who loves flowers to see every morning a new set of these bright blossoms appear among the dark green leaves of this vine.—*Worthington Hooker.*

THE CHALET OF THE ALPS.

Those who have not in person visited the Chalets can form but little idea of the primitive simplicity with which these rude dwellings are built. In some places they are merely made of large stones piled on one another, with a sloping roof, and surrounded by a narrow gutter to carry off the rain; others, when situated within reach of the forests, are built of rough logs of wood, placed across each other, the interstices being filled with moss and dried leaves; those are better than the stone huts, as they are much warmer and retain less damp. The whole building is about 20 ft. by 14 ft., and divided by a slight wooden partition, the larger portion being used as a cowshed. Above this apartment, and under the slanting roof, is the place where the hay is stored, and which forms the shepherd's sleeping chamber. The remainder, a space of about 14 ft. by 6 ft., is reserved for kitchen and parlor, and is not unfrequently shared by one or two favorite goats, or even a pig. This part is open to the roof, and through a trap door, kept open by means of a long fire-pole, the smoke finds exit, chimneys not being in vogue. It has also another slight partition or screen across one corner, which is appropriated as pantry or larder.

There being no windows, daylight is admitted through the door, which is kept open for that purpose. The floor is of stone, or rather a mixture of earth, rock and stone; and there is no fireplace, a fire being made when required on the ground in a corner. Its furniture consists of a wooden bench or settle, and perhaps a large stone boulder, which serves as a table or seat, as may be required. The kitchen utensils comprise two or three porringers, a kettle, and a few wooden spoons, besides two milking-pails. Above the hearth, which is formed of stones, is suspended a little wooden crane that turns on a pivot, upon which is hung the great copper cauldron that the king of the herd brought up in triumph on his head from the village below, and in which the milk is scalded

preparatory to making it into butter and cheese. There is no lack of ventilation in the dwelling, for around, above and between the bare rafters which form the walls the wind and cold air from the glaciers above whistle freely, though this is in a measure tempered by the warm and fragrant breath of the cows, which are closely packed every night within the hut.—*Chamber's Journal.*

From the Evening Post.

A NEW BOOK ON AFRICA—BAKER'S DISCOVERY OF THE NILE SOURCES.

The explorations of Bruce, Livingston, Speke and Grant have thrown much light upon the topography of Africa, and now Samuel White Baker, "Gold Medallist of the Royal Geographical Society," tells us of his own discoveries in the latest and most successful effort to trace the sources of the Nile. His account of his remarkable expedition has just appeared in London, in two volumes, under the title of "The Albert N'yanza, Great Basin of the Nile, and Explorations of the Nile Sources."

Mr. Baker says that he has been "permitted to succeed in completing the Nile sources, by the discovery of the great reservoir of the equatorial waters, the Albert N'yanza, from which the river issues as the entire White Nile." Speke and Grant started from Zanzibar, pierced the African continent from the east, and went due west for a time, turning northward to the Victoria Lake—the object of their labors—and thence home through Abyssinia and Egypt. Mr. Baker started from Cairo, and travelled against the stream of the river, taking its own channel for a guide as far as Gondokoro. At this point he met Speke and Grant on their return. Mr. Baker was naturally "disheartened at the idea that the great work was accomplished, and that nothing remained for exploration." He asked Speke if there was not a leaf of laurel left for him?—a question frankly answered, and in words which at once restored hope and opened a new area of investigation.

From Gondokoro Mr. Baker struck southeast through Ellyria, described as a rich and powerful country, in which, however, he could get no provisions, for the natives refused to sell. Mr. Baker and his wife (who bravely accompanied him during the whole journey) were compelled to select a new path. They went east, passed through the Latooka country, where more trouble was caused by the superstitions of the natives, and then made a sharp turn to the southwest, and thence to Obbo, where an elevated plateau was found, fourteen hundred feet above the general level of the country, on the east of the mountain range.

The Obbo country is not only desolate, but the climate is unhealthy. Mr. Baker suffered four months of misery, and Mrs. Baker was

prostrated by a gastric fever. The journey was then resumed in a southwesterly direction towards Shooa, which is described as a lovely place, the country forming a natural park, "remarkably well watered by numerous rivulets, ornamented with fine timber, and interspersed with numerous high rocks of granite, which, from a distance, produced the effect of ruined castles." The government is somewhat patriarchal. Mr. Baker speaks of the district as "flowing with milk and honey," the people "precisely the same as at Obbo in language and appearance, exceedingly mild in their manner, and anxious to be on good terms." Continuing their southerly course, the travellers passed through immense prairies, hindered and delayed by dangerous swamps, and again troubled by sickness.

Soon afterwards, however, success rewarded Mr. Baker's perseverance. He reached Karuma Falls, on the White Nile—the point to which Speke tracked the river from Victoria Lake. From its exit it takes a northern course; at Karuma it turns suddenly and directly west, and when Speke and Grant, on the northward course, left it in latitude two degrees seventeen minutes—not to meet with it again until they arrived in latitude three degrees thirty-two minutes—they attached great importance to an exploration of its unknown channel. "The natives and the King of Unyoro had assured them that the Nile from Victoria N'yanza, which they had crossed at Karuma, flowed westward for several days' journey, and at length fell into a large lake called the Luta N'zigé; that this lake came from the South, and that the Nile on entering the extremity almost immediately made its exit, and, as a navigable river, continued its course to the north, through the Koslu and Madi countries." Such, in the main, proved to be the truth; and the exploration of this channel, with the discovery of the lake and the new exit of the Nile, form the distinguishing features of Mr. Baker's memorable labors. Thus Speke was right in supposing that this lake was a second source of the Nile; and in revealing it Mr. Baker earned the laurel leaf he despaired of winning.

The route then lay parallel with the river, and the goal was Lake N'zigé. During this portion of the journey a terrible catastrophe occurred—no less than the prostration of Mrs. Baker by sunstroke, and the supervention of positive madness. This scene is described by Mr. Baker with great power. His wife happily recovered, and, in due time, they reached the lake. The story of its discovery is told as follows:

THE ALBERT N'YANZA.

"The zigzag path to descend to the lake was so steep and dangerous that we were forced to leave our oxen with a guide, who was to take them

to Magungo and wait for our arrival. We commenced the descent of the steep pass on foot. I led the way, grasping a stout bamboo. My wife, in extreme weakness, tottered down the pass, supporting herself upon my shoulder, and stopping to rest every twenty paces. After a toilsome descent of about two hours, weak with years of fever, but for the moment strengthened by success, we gained the level plain below the cliff. A walk of about a mile through flat sandy meadows, of fine turf interspersed with trees and bush, brought us to the water's edge. The waves were rolling upon a white pebbly beach; I rushed into the lake, and thirsty with heat and fatigue, and with a heart full of gratitude, I drank deeply from the sources of the Nile. Within a quarter of a mile of the lake was a fishing village named Vacovia, in which we now established ourselves. Everything smelt of fish, and everything looked like fishing; not the "gentle art" of England, with rod and fly, but harpoons were leaning against the huts, and lines almost as thick as the little finger were hanging up to dry, to which were attached iron hooks of a size that said much for the monsters of the Albert Lake. On entering the hut I found a prodigious quantity of tackle; the lines were beautifully made of the fibre of the plantain stem, and were exceedingly elastic and well adapted to withstand the first rush of a heavy fish; the hooks were very coarse, but well barbed, and varied in size from two to six inches. A number of harpoons and floats for hippopotami were arranged in good order, and the *tout ensemble* of the hut showed that the owner was a sportsman."

The exit of the Nile from the northern end of the lake was plainly visible, and Mr. Baker designed to navigate it straight back to Gondokoro. But this purpose was finally defeated by the unwillingness of his escort and of residents at Magungo to pass through a district where "they would all be killed." Nothing was left, therefore, but to retrace his steps, and, after a northerly course, to strike the river at the earliest point. This was done at Apuddo, the junction of the Un-yamé with the Nile, in latitude three degrees and thirty two minutes north.

POWER OF FORGIVENESS.

A worthy old colored woman was walking quietly along a street in New York, carrying a basket of apples, when a rollicking, mischievous, and partly intoxicated sailor seeing her, saucily stumbled against her, and upset her basket, and then stood to hear her fret at his trick, and enjoy a laugh at her expense. But what was his astonishment when she meekly picked up the apples without any resentment in her manner, and giving him a dignified look of mingled sorrow, kindness and pity, said, "*God forgive you*

my son, as I do." That touched a tender chord in the heart of the rude Jack tar. He felt ashamed, self-condemned and repentant; the tear started in his eye; he felt that he *must* make some reparation. So heartily confessing his error, and thrusting his hands into his pockets, and pulling out a lot of loose "change," he forced it upon the wondering old black woman, exclaiming, "*God bless you, kind mother, I'll never do so again.*" Thus it is always sweet to forgive and be forgiven. Let us beware lest we should be only asking God to condemn us when we say, "Forgive us our trespasses, *as we forgive those who trespass against us.*"—*Union Magazine.*

THE ATLANTIC CABLE.—The great news of the week is the successful completion of the Atlantic Cable, through which messages have been transmitted to the heads of Government both in England and America, as well as private dispatches to some of the journals of this country.

CONGRESS.—A substitute for the joint resolution passed by the House for the admission of Tennessee was reported to the Senate from the Committee on the Judiciary. Several amendments were proposed and adopted, and the resolution was then passed. It declares that as Tennessee has ratified the amendment to the Constitution abolishing slavery and the amendment lately passed by Congress, the said State is restored to "her former proper practical relations to the Union, and is again entitled to be represented by Senators and Representatives in Congress." This resolution went back to the House for concurrence. The Civil Appropriation bill was then taken up and the following amendments agreed to: the amendment appropriating one million five hundred thousand dollars for the repairs of the levees on the Mississippi River; the amendment appropriating nearly one hundred and eighteen thousand dollars to pay for repairs on the Senate wing of the Capitol; an amendment fixing the yearly pay of members of Congress at five thousand dollars—the mileage to remain as heretofore; an amendment appropriating forty thousand dollars for the expenses of a survey of the Isthmus of Darien, with a view to the construction of a ship canal, and one appropriating twenty thousand dollars for repairing and furnishing the President's house. The Committee of Conference on the Indian Appropriation bill made a report, which was adopted. The Committee of Conference on the Amendatory Tariff bill made a report, which was adopted. The bill for the admission of Nebraska and the House bill for the relief of the sufferers by the late fire in Portland were passed. It was resolved that all subjects now before the Senate, and which shall not be disposed of at the present session, be continued until the next, as if no interval had occurred.

The House concurred to the Senate amendment to the bill for bridging the Mississippi, which provides for a bridge at St. Louis, and also to the amendments to the bill annulling the thirty-fourth section of the declaration of rights of the State of Maryland, so far as it applies to the District of Columbia. The Senate amendments to the House joint resolution for the admission of Tennessee were concurred in, and also the Senate amendments to the preamble of the same, on which a separate vote was taken. A motion was made and agreed to that the members from Tennessee be paid for the full

Congress. A message was received from the President announcing his approval of the joint resolution for the admission of Tennessee. He takes occasion however to express his opinion that Congress has no power to fix terms of restoration, and maintains that Tennessee has not ratified the Constitutional Amendment. The House agreed to the report of the Committee of Conference on the Indian Appropriation bill, and the bill was passed; also the Senate bill providing that in the election of United States Senators by the State Legislatures the voting shall be *viva voce*. House refused to concur in the Senate amendment to the House bill to amend the tariff, and asked for a Committee of Conference. A message from the President was laid before the House. It enclosed a letter from the Secretary of State, stating that a correspondence had been entered upon with the Government of Great Britain for the release of Fenian prisoners. It was ordered to be printed and referred to the Committee on Foreign Affairs. The Special Committee on the Memphis riots made a report, which was ordered to be printed. A bill was passed for the relief of the Portland sufferers, by suspending the customs duty. The Civil Appropriation bill, with the Senate amendments, was reported back from the Committee on Appropriations, and concurrence in some and non-concurrence in others of the amendments was recommended. The Senate amendment appropriating one million five hundred thousand dollars for repairing the levees on the Mississippi was disagreed to, after some discussion, on the ground that it would benefit "Rebels." The amendment increasing the pay of members of Congress, after being twice referred to a Committee of Conference, was finally agreed upon. The Senate bill for the admission of the State of Nebraska into the Union was concurred in.

Congress adjourned on the 28th ult.

THE FREEDMEN.—Major General O. O. Howard recently received a report of the operations of the Bureau and the condition of the freedmen in the State of Mississippi. The first year of the existence of the Bureau in Mississippi closed Sixth month 30, it having been organized about the commencement of Seventh month, 1865, under the direction of Col. Samuel Thomas, Assistant Commissioner, formerly Provost Marshal General of Freedmen for the department of Mississippi under the military establishment.

The entire regulation of labor was placed in the hands of the civil authorities Twelfth month 31, under the State laws on contracts, and since that date the operations of the Bureau have been almost exclusively by means of the laws, ignoring or rejecting such as were in conflict with orders or abrogated by competent authority.

At the present time, the importance and value of the work accomplished during the first few months of the existence of the Bureau under the administration of Colonel Thomas are fully realized. The civil authorities are generally disposed to administer justice without prejudice; the people, with a few exceptions, manifest good feeling toward the freedmen. There has been little opposition to the establishment of colored schools, and the freedmen, appreciating this state of affairs, are faithfully at work. Some persons are disposed to take advantage of the ignorance of the freedmen, and discharge them without breach of contract on their part, simply because the necessity for their services is not so imperative as during the earlier part of the season. The number of outrages are rapidly diminishing, and affairs are becoming more settled throughout the entire State.

EXTRACTS FROM THE JOURNAL OF ELIAS HICKS.

First-day, the 28th of 11th month, 1813.
Feeling my mind drawn last evening and this
morning to attend Friends' meeting at Martini-
cock, I submitted thereto and went alone. In
the forepart of the meeting, I had to combat a
spirit of ease and stupefaction, which is gen-
erally prevalent among the worldly-minded, al-
though they may be pretty steady in attending
meetings; yet it is to be feared with little or
no profit, if it be true what the beloved apostle
has affirmed, that, "If any man love the world,
the love of the Father is not in him." In the
latter part of the meeting, I was led to view
the excellency of the pacific principles of the
gospel, as promulgated by Jesus Christ and
his apostles; and to show to the people, the
very great and essential benefit and blessing
which would result to the professors of Chris-
tianity by a strict adherence and submission
thereunto; as they stand in direct opposition
to the spirit of violence and war, and breathe
forth nothing but peace on earth and good will
to men. It proved through mercy a season of
favor; many hearts were contrited, and the
faithful and poor in spirit comforted and
strengthened; and my own mind inspired with
gratitude and thankfulness for such unmerited
mercy.

First-day, the 5th of 12th month. The six
working days of last week were principally
spent in my worldly concerns, except attending

our Fifth-day meeting, and the Charity Society
meeting yesterday; an institution of Friends
for educating the children of poor black people.
Our funds, agreeably to the last report of a
settlement with the Treasurer, amount to up-
wards of thirteen hundred dollars; the interest
of which is yearly expended for the above pur-
pose, by a committee of the Society, who super-
intend the educating of said children. The
directors of the Society are limited to thirty
members, who meet quarterly for the promo-
tion and oversight of the institution. I attended
our Fifth-day meeting in silence, and sat our
meeting in like manner to-day, in poverty of
spirit, which terminated in a peaceful close.

First-day, the 12th of 12th month. At our
meeting to-day, my mind was largely opened to
set forth before the people the difference be-
tween the law state and that of the gospel. It
was, I trust, an instructive edifying season,
worthy of grateful remembrance.

Second-day afternoon I rode to New-York, in
order to attend the meeting for sufferings to
be held there the next day. It opened at the
ninth hour. We got through the business at
two sittings, and closed in the evening. Fourth-
day afternoon I rode home. Fifth-day was our
Monthly Meeting. The meeting for worship
was, I think, a favored comfortable season; and
the testimonies communicated instructive and
edifying: such repeated favored seasons make
it evident beyond controversy, that we are still
a highly favored people, and shall be account-

able according to the manifold mercies and blessings bestowed upon us: and we have great cause often to query, like the psalmist formerly, "What shall I render unto the Lord for all his benefits towards me;" for his mercies are new every morning; great is his faithfulness.

Sixth and Seventh-days. Spent in my ordinary concerns; yet, I trust, my mind was preserved in a state of watchfulness and care, that what I do, even in my temporal business, may all be done to the glory of God, and be useful to myself and to my fellow creatures.

First-day, the 19th of 12th month. While silently musing in our meeting towards the latter part, a subject opened which led to the necessity of communication, wherein that petition in the prayer our Lord taught his disciples, viz: "Thy kingdom come; thy will be done in earth as it is in heaven;" was opened to the audience; and the necessity of our individually witnessing it fulfilled in us, as the only medium through which we can obtain salvation, and a preparation for the kingdom of heaven. This was pressed upon the people, showing from the analogy of things, that as there is nothing but the Lord's will done in heaven, a soul that is not reconciled thereto, cannot enter therein, nor partake of its celestial enjoyment.

The rest of the week was carefully employed in my household concerns, with the attendance of our Fifth day meeting, agreeably to my invariable practice when at home, if not prevented by indisposition. It was a quiet, comfortable meeting.

Sixth-day. Attended the funeral of our honest friend Richard Townsend. There was a large collection of Friends and neighbors, he being generally esteemed. A meeting was held on the occasion, which proved a very solemn season. The people's attention was called to the necessity of a timely preparation for death in a large arousing testimony; setting forth the great and singular advantages which would redound to the children of men, by their obtaining right ideas and apprehension of God. The want of these left them to be led away into a belief of many strange and ideal notions concerning him, particularly that of foreordination; the inconsistency of which, my mind was led to unfold to the auditory, by this and other undeniable arguments:—that, as God's ordination, and God's creation, and God's will, are always in perfect unison, and cannot be diverse one from the other; and as all that he wills and creates is immutably good, agreeably to his own declaration in the work of creation; hence, whatever he ordains must likewise be immutably good: therefore, if there is any such thing as sin and iniquity in the world, then God has neither willed it nor ordained it; as it is impossible for him to will contradictions. And secondly, if he has, pre-

vi-us to man's creation, willed and determined all his actions, then certainly every man stands in the same state of acceptance with him, and a universal salvation must certainly take place; which I conceive the favorers of foreordination would be as unwilling as myself to believe. And moreover, if man was not vested with the power of free agency, and a liberty of determining his own will, in relation to a choice of good or evil, he could not be an accountable creature; neither would it be in his power to commit sin. It was a time of favor, and the Lord's blessing on the labors of the day was reverently supplicated. O, saith my soul, may they have the desired effect.

First-day, the 26th of 12th month. Sat the greater part of our meeting in much weakness and poverty of spirit, to which I felt perfectly resigned, believing it to be agreeable to the Lord's will. But towards the close an honest elderly Friend, though young and small in such service, expressed a sentence or two accompanied with a degree of life, which seemed to give spring to a concern on my mind, which led to communication. The subject which opened was to show that plainness and simplicity were the true marks and badges of the Lord's people and children in every age of the world, witnessed to be the true nature and analogy of all things in the universe; and confirmed by the testimony of the grace and good spirit of God through his servants in all the generations of mankind. The youth were exhorted and tenderly invited to submit to the cross of Christ, with the assurance assented to by the experience of all the faithful; that if they bowed willingly to his yoke, it would become not only easy but delightful. But alas! how true is that declaration of the prophet: "Who hath believed our report, and to whom is the arm of the Lord revealed?" Certainly to none but the obedient, which number, if we are to judge by their fruits, is doubtless very small.

Second, Third and Fourth days. Spent mostly in my temporal business, but not without a watchful care, lest it should engage too much of my attention. The evenings were partly spent in reading the scriptures, in which I greatly delight. How excellent are those records! although old, yet they seem ever new.

The prophecy of Micah was a part of my present reading: what a dignified sense and clear view he had of the gospel state and worship; and how exceedingly it lessened the service and worship of the law, in his view, in the clear sense given him of its full and complete abolishment, with all its shadowy rituals; when he was led to set forth its insufficiency, in this exalted language: "Wherewith shall I come before the Lord, and bow myself before the high God? Shall I come before him with burnt-offerings, with calves of a year

old? Will the Lord be pleased with thousands of rams, or with ten thousands of rivers of oil? Shall I give my first-born for my transgression, the fruit of my body for the sin of my soul?" No, none nor all of these were sufficient to give access to the divine presence, or to the divine law under the gospel; they being only shadows, and therefore could only give access to the outward law and outward lawgiver Moses, and the law and ordinances given by him; which were also shadows of the true substance. For Moses, and his outward law and ordinances, stood in the same relation to outward Israel, under the shadowy dispensation, as Christ the spiritual Moses, with his spiritual law written in the heart, does to his spiritual Israel under the gospel; "which is a dispensation not" of shadow, but of substance; as is clearly shown by the sequel of the testimony of Micah above alluded to, where he goes on as follows: "He hath showed thee, O man, what is good;" then certainly not shadow nor sign, but real substance, "and what doth the Lord require of thee," not only by an outward, but by his inward, divine law, "but to do justly, and to love mercy, and to walk humbly with thy God." This is the sum and substance of all true religion and worship, and needs not the continuance of any outward elementary washings or eatings or drinkings; but opens to the necessity of our drinking at that spiritual river, the streams whereof make glad the whole heritage of God. For those that drink thereof will never thirst again, at least for the water of any other stream.

Fifth-day. Sat our meeting to-day in silence. It is not unpleasant to feel ourselves sometimes circumstanced as Mordecai formerly, sitting at the king's gate, and, in its season, is as grateful to the truly humble and submissive mind, as riding on the king's horse, and all bowing before us.

First-day, the 2d of 1st month, 1814. Another year is ended. Oh my soul, how hast thou improved it, and what progress hast thou made in thy heavenly journey? As I sat in our meeting to-day, my mind was led to contrast the law and gospel, or shadow and substance. "While I was musing the fire burned," and my heart became warmed within me; "then spake I with my tongue," and endeavored in a zeal for the Lord's cause, to open to the people, the superior excellency of the gospel, above and beyond that of the law, as set forth by the precepts, doctrines, example and commands of our great and gracious lawgiver Jesus Christ. The life rose towards the close of the meeting into a good degree of dominion, through hard labor and toil. For many professors lie so securely in their graves, that nothing short of the powerful voice that raised Lazarus formerly, is sufficient to quicken and raise them therefrom.

Second-day. This day principally spent in making provision more favorably to meet the inclemency of the ensuing winter.

Third-day. Spent as yesterday. In the evening read Thomas Ellwood's relation of his sufferings and cruel usage from his father, because, for conscience' sake, he could not pull off his hat and stand bare before him; and for using the plain language of thou and thee, instead of the plural, you. Alas! what a spirit of pride, arrogance and cruelty governs the children of men, while living in the lusts of their fallen nature, estranged from God and from his true nature and image. And it is to be feared that many in this day, who profess to be the successors of those primitive sufferers, our worthy predecessors, who stood faithful, and patiently bore the burden and heat of the day, through many years of cruel persecution, are now turning back like a broken bow; and through the fear or favor of men, are disregarding the testimonies which their forefathers in the truth purchased at so dear a rate; and are ready to account many of them but small, or as indifferent things, which may, or may not, be attended to, at their own pleasure. But alas for these, it is to be feared they will never have a view, much less be permitted to enter the promised land, the heavenly Canaan: but will fall in the wilderness as did the unbelieving and rebellious in former ages. I often mourn and take up a lamentation, when I behold the children of believing parents, turning aside, disobedient to their parents, and disregarding the travail and exercise of their concerned Friends, who are laboring for their return: but those who are faithful to give the watchword in season, will be clear of their blood, and the Lord will be clear. For he will have a people, and, as formerly, will send his servants into the highways and hedges, and gather from thence, that his house may be filled: but those children of the kingdom, who are making excuses, and will not come when they are bidden, will be cast out into outer darkness, where will be weeping and gnashing of teeth.

RULES BY FLORENTIUS.

Never speak ill of any one, unless it be to benefit him or some other.

When you find fault, do it with true pity for the person, as a weak brother.

Do not envy any one for being superior to you in piety or reputation; but love the gifts of God in him, and they will be your own.

It is dangerous to have to do with civil rulers and ecclesiastical dignitaries; rather eschew the worldly and great.

Abide in humble simplicity, and Christ will abide in you.

In doing what is good, do it simply and purely

for the glory of God, and wholly without self-seeking.

A short account of our esteemed friend A. M. Carpenter has been sent us, from which and a few notes from her diary the following is compiled for the *Intelligencer*.—Eds.

ANNA M. CARPENTER.

Anna M. Carpenter was the daughter of Wm. and Mary Carpenter, and was born in Elsinborough, Salem Co., N. J., Ninth month 19th, 1819.

In early life she felt an obligation to be faithful to the manifestations of truth in her own mind, but like many others she endeavored to put them aside and suffered the pangs of a guilty conscience in the quiet of the night season. She often tried to be more faithful, but the love of "the things of this world" prevented a full surrender, whereby she was deprived of what afterwards became her chiefest joy. She was blessed with the comforts of this life, but they failed to yield the happiness which her young and tender spirit craved.

When about eight years old she had had an attack of inflammatory rheumatism, and her constitution being naturally weak, she was a great sufferer. She applied to divers physicians, from whom she derived but little benefit, and felt the best remedy consisted in doing what was required of her.

To lay aside her gay dress was a great trial to her, but she made a change gradually, hoping by that means to avoid remark.

By the removal of her parents to Salem in 1837, she was situated favorably for the attendance of meetings, and was diligent therein, notwithstanding her delicate health. In 1849 she had a paralytic stroke, by which her eyes were ever afterwards affected, though in other respects she partially recovered. Her mind became increasingly exercised for her own salvation, as well as that of others. She had been educated by her parents in the principles of the Society of Friends, her mother being in membership with them, and after many deep exercises of mind she also became a member.

In 1850 she met with a sad bereavement in the death of her brother, a very promising youth, who fell from a building, by which he was so seriously injured that it occasioned his death, after lying five days in an unconscious state. His sudden removal seemed almost more than Anna could bear; but she sought for resignation, and, under the deep impression it made upon her mind, she endeavored to perform faithfully the duties devolving upon her. Among these was the cause of the poor and destitute, whose pressing wants she was often enabled to relieve, through the kindness of her parents. When queried with, why in her delicate health

she should feel thus called upon, she spoke of the example of her grandmother, Mary Ware, whom she believed to have been a good woman—"and she turned none away."

About this time (1850) she felt her mind drawn to note the dispensations through which she was passing, in order not only to strengthen her own good resolutions, but for the encouragement of others, to press through the many hindering things which might encompass their pathway. She felt this to be a weighty matter, and was discouraged with the feeling of a want of a qualification for it; but said, as she yielded to the impression, she felt great comfort in trying to do what she thought was right.

From the record thus kept, it appears she was seriously impressed with the importance of being prepared to render an account of her stewardship, and frequently felt the language applicable, "Set thine house in order, for thou shalt surely die." She therefore was concerned "not to put off till to-morrow the work of to-day," but to have her "lamp trimmed and burning."

Retirement of mind is several times alluded to as producing strength and peace; and as she became acquainted with the benefit derived from silent and spiritual communion, she felt an increasing concern on account of the delinquency apparent in the attendance of our religious meetings, and was very desirous that parents might feel the importance of taking their children with them for the purpose of public worship. She also notes her concern that the New Testament and Friends' writings should be more frequently read in Friends' families, and by her young friends. She feared that the abundance of newspaper reading, and the light literature of the times, were sometimes perused to the exclusion of that which would satisfy the cravings of the immortal spirit, and cautioned her young friends against what she feared was a growing evil. In conversation, too, she would have them circumspect, as for want of care in this particular we might not only wound the precious life in ourselves, but be instrumental in doing harm to others. She cites in her own case one or two instances in which she has suffered much for slight equivocations: so dear does the truth become to those who abide under its teachings.

Being mostly confined at home on account of feeble health, our friend sometimes used the pen to express the concern she felt for individuals, and acknowledges that faithfulness to the intimations of duty in this respect brought its own reward. Her interest was not confined to her own sect, but her love flowed out freely towards others, and she fain would have gathered all into the peaceful enclosure of the Shepherd of Israel. She had long felt there was no cloud intervening between her and a future

life, save a natural dread of the poor body being laid in the earth. But as she has said this dread would be removed, so it proved; and when the frail tenement yielded to the weight of disease which it had for years borne, she was as one who, having fought the good fight, was prepared for the crown of righteousness which fadeth not away. She died on the morning of the 23d of Third month, 1855, in the 36th year of her age. She was interred in Friends' burial ground at Salem.

The Lord is more or less present in every human soul; and from His dictates to the mind the righteous speak. He is no where so present as in the mind of a good man. "For behold the kingdom of God is within you."

When all self is merged in the Lord, or controlled by the divine precepts, then it is seen that every one that wilfully offends against his neighbor, offends against his own soul, and injures himself far more grievously than he can injure another.

"Against Thee, and Thee only have I sinned, and done this evil in Thy sight."

When the will of God is perfectly accomplished in us and concerning us, we shall enter into the region of rest and peace.—*Rays of Light.*

EDUCATION OF THE SENTIMENT OF VENERATION.

Reverence is an original sentiment constituting an element of every mind, and, like other gifts, it varies in strength and fruitfulness in different minds.

The work of education, therefore, will differ in different families, and in different children of the same family. With some, the educating work requires veneration to be developed. It exists with comparatively little power. It needs strengthening and opening up. With others, this feeling exists in excess, and colors all the other feelings from the beginning of life; and it needs direction, restraint, curbing. Still others require simply training, or the knowledge of how to use the feeling that exists in them with ordinary degrees of power.

We must learn to accept the same diversity of moral gifts as to strength and ease of training that we recognize in social and intellectual gifts. We are not surprised to find some natures poetic, and others prosaic, or literal, or practical, as it is said. In such cases, everybody recognizes an organic and original difference which no training would have equalized; and nobody thinks of ascribing partiality to Providence. There are no moral difficulties in saying that this man has strong understanding, and that man has a comparatively feeble one; or in saying that this man has the gifts of reflection, while that man has the gifts of observation. Every day we see

that some men have a natural tendency to order and symmetry, while other men are devoid, to any considerable degree, of these qualities. Some men from the beginning show oratorical gifts, and some men with the greatest amount of training are still slow of speech and difficult of utterance. It never surprises a teacher that this child has mathematical tendencies, and that that child is extremely unapt in figures, and hard to instruct. We know that some children are mirthful, and that some are sober. We know that some children are cheerful and buoyant, and we know just as well that some children are melancholy and sad, from the force of their original disposition. And we have learned, that in the understanding and in the social affections, God distributes mental powers with different degrees of strength in different dispositions.

Now, add one step of knowledge. Learn that the same thing is true in respect to the moral feelings. God distributes them differently. To some he gives more, and to some less. Some are fertile in directions in which others are barren of original gifts.

Hence, a child is not to be regarded as wicked, primarily, that is simply feeble in the direction of any moral faculty, any more than a child is to be regarded as wicked that is born lame, or maimed, or blind, or deaf; though such a child should have more care and more education than one more happily organized. It is required of us according to what we have, and not according to what we have not. There be many parents who suppose themselves to have very wicked children, because they are dull and slow in certain moral directions. They have children that will require at their hands much attention, and these children, by reason of their defects, may become more wicked; but the mere want of strength in any faculty, intellectual or moral, is not wickedness in a child.

In the light of the difference in original gifts which I have pointed out, many things done or neglected by persons who have but little of this quality, should not be judged by your susceptibility, but by a consideration of *their* gifts and their nature.

This feeling, like many others of the moral sentiments, comes into activity at different periods of growth in different individuals. With some it opens up among the earliest feelings of the mind, and colors the earliest experiences. It is late with others, acting only after the maturity of reason, and after other moral sentiments have excited it.

It should not, therefore, be a cause of discouragement if your training does not at once show success; and if your children seem to be devoid of veneration, do not lose hope. You may now be sowing seed that by-and-by will come up and bring forth fruit. For a child's

mind does not develop at once; and different parts of it develop very differently; and the same parts in different children develop at different periods.

This is true of many other moral qualities besides veneration. Sometimes the moral feelings are the earliest, and at other times they are the latest to develop. Some natures there are, therefore, that grow far richer in age than ever they were in youth, while some are rich and morally beautiful from the beginning. We must bear this in mind in training, or we shall make mistakes and fall into discouragements. Our children are not for ever to be irreverent because they are heedless of divine and sacred things in the earlier hours of their existence. Wait, instruct, and have faith.

Experience shows that a weak feeling is better excited through some other feeling than by a direct appeal to itself. The mind helps itself from within—one part stimulating another. The moral feelings are not exceptions.

A child lacks generosity. It refuses to divide a gift with its companions. The mother cannot persuade it to generosity by making a direct appeal to that feeling. She takes the child upon her knee, and reasons with it. She attempts to excite generosity through the reason. She fails. Then she attempts to excite the child's emulation by holding up and praising the conduct of other children that are generous, hoping to reach generosity in the child through its desire to equal or excel those with whom it is contrasted in that which is praiseworthy. Again she fails. Then she shames the child; i. e., she endeavors to excite its generosity through the feeling of shame. She fails still again. Then she puts the child down firmly and gently, and gives it to understand that she is wounded and grieved that a child of hers should be ignominious. That masters its selfishness! The child's affection for its mother is deep and strong; and that feeling at last comes to the rescue; and the child is willing to do, out of love for mother, what it was not willing to do out of shame, or pride, or generosity. Here was this feeling that lingered to be excited by one of its co-ordinate feelings; and the mother learns to deal with the child by drawing out first one and then another of the collateral feelings by which to excite a third.

It is thus with veneration. Where it is naturally active and fruitful in a child, it will need no stimulation, and will, perhaps, need some restraint. In some natures, in which it is not active and fruitful naturally, it will only respond occasionally, and will respond at no time except to the accompaniment of the affections. It is dull, it is reluctant to move; and yet it will move through quick and vivid affections, keeping company with them. In others it will act only under the influence of the imagination. Visible

objects will not be venerated; not places; not persons; but those ineffable things that the imagination brings down and clothes with realities will excite veneration. In others it will only take form and development through benevolence.

Some, also, will be found to reverence *things*, and not qualities. They will reverence a temple, they will reverence a vast cathedral, they will reverence that which their senses can distinctly comprehend and bring to them; but that which they cannot see, nor in any way measure, has no power upon them.

There be others on the other hand that reverence qualities, ideas, invisible truths. These things stir them wondrously; whereas visible things seem barren and literal; and they scarcely experience any veneration in their presence.

The early education of the child to veneration is properly mother-work. It cannot begin too early. It should not be left to any besides parents. Yet, sometimes, bumble servants and good nurses are better for children than parents. Some sisters there are that are the moral mothers of sisters' children. All honor to such! Nevertheless, as a general truth, it is mother-work to educate the child in every religious tendency. The parents are God's appointed instruments, and are, themselves, objects of infantile veneration. They are the first objects as well as the first educators of it. To the little child, God is a vague and remote idea, while father and mother are near, and definite, and potent. The most powerful instructor is a parent's own self. The natural influence of tenderness, of goodness, of patience, of generosity, of self-sacrifice and care, is to open the child's mind to love and to reverence. A good mother is always saintly to her child.

The older brothers and sisters serve next as proper instructors of the young. The difference of age and rank is a fit difference on which to build some sentiments of respect and reverence; and due obedience in common things to superiors in the family lays the foundation of reverence in after life for those in authority.

Indeed, the whole household epitomizes life. The parents are to the children as gods; the elder brothers and sisters are as magistrates; and it is in the family that the germs of all those qualities are to be developed, which are to carry children through their experiences in after social and civil life.

There might be in the household, were parents wise enough and good enough, the very ideal and semblance of heaven itself, in the love that the parents inspire; in the veneration that springs up in the young heart toward them, and in all the relations which subsist between child and child.

So, too, in the household, old age, honorable

and beautiful in itself, will go far to serve as a means of educating the young to reverence. I mourn the unhappy decline of this spirit among us. It is far from being to our credit. The aged are respected; but, after all, there is not commonly a tenderness, a carefulness, an obvious respect manifested toward them, such as there was once, and such as there ought to be; not alone for their sakes that are old, but for their sakes that are young. Not to inspire your children with reverence for the aged, is to betray a parent's trust. I cannot sufficiently emphasize to those that are young, to those that have not had instruction in the family, the sacredness of age, and the benefits that will accrue from a religious veneration of the aged. I have been shocked in cars, on ferry-boats, and in all public places and conveyances, to see the selfishness with which the young literally run over the needs and necessities of venerable persons—aged men and women. For in this regard old age effaces all distinctions of condition. An old man, if he is a pauper, is sacred. A woman with silver locks, no matter if all her life long her hand has grown hard in service, is venerable; and I should be sorry to carry a heart that did not instinctively honor and respect such a one.

On such natural basis the parent lays the foundation on which to develop reverence for God. I do not mean that the parent should wait for these things; but I wish to urge that, through family training, religious reverence should take form and gather strength.

Nothing will better serve as an education of religious reverence than the peculiar habits of teaching that belong to a mother. The mother that has a sweet narrative gift, and that, not with cold, didactic instruction, but with that witching effect that goes with melody and poetry, describes the future or the past in their connection with that which is sacred—she thinks that she cheers the hour; she thinks that she is preparing to fold her child to sleep; and she is, but she is also preparing that child to wake into a higher and better moral experience. No mother knows what she writes in the whole after-life of her child, that sings instruction into it day by day.

We are not to be unobservant in teaching our children reverence for sacred things of fit times and occasions. Reverence is not to be commanded. It is to be inspired. It is a kind of love witch-work; and suitable periods ought to be taken advantage of. The hour at evening is worth all the rest of the day. The effect of twilight on the senses can scarcely be appreciated but by a poetic nature. The sounds of a summer evening; the coming out of the stars, that seem to be eyes to the little child looking out upon it from heaven; the chirp of the cricket and of insects—all these things, and as many

more, excite the child's imagination. And now, in a mother's lap, and from a mother's lip, the story of God's love, of God's Fatherhood, of Christ's advent, of hymning angels, of the passion and death of Christ, of the heavenly glory, and of the ascended Savior, cannot but produce a marvelous effect. Such instruction, from such a pulpit, in such a holy season, and by such a preacher—what other instruction is like it? And having received such instruction, do you suppose that the child can ever meet in after life the salient truths which it has received, and not be conscious that it has been trained to reverence, to veneration?

All the nobler aspects, all the sublime phenomena of nature, should also be employed in the mother-work of training children to this feeling. Storms; the motion of the clouds; the sounds of thunder; the appearance of the mountain, the sea, the river, the cataract; the coming on of spring, or the resounding footsteps of winter—these may all be made to give depth and power to this sentiment. The Bible itself, the chiefest and earliest of all books, made use of natural phenomena to inspire reverence toward God. Nowhere else are clouds, and storms, and trees; nowhere else are animals and birds; nowhere else is the procession of the seasons so employed as in the Old Testament.—*H. W. Beecher.*

"The reason why it is not granted man to foreknow events is, that he may be able to act from freedom, according to reason.

The desire of foreknowing the future has its origin in evil. To those who believe in the Divine Providence, there is given a trust that the Lord disposes their lot; hence, they do not wish to foreknow it, lest they should themselves, in any manner, interfere with the Divine Providence."—*Swedenborg.*

HABIT IN WELL-DOING.

Every thing is a labor just in proportion as we have to do it by a separate effort. If a person were obliged to do up all his breathing once a week, to eat his food only at rare intervals, or to put on his clothing simply for a few days in the year, he would find them a very wearisome task. It is only frequency of these acts, only breathing every moment, eating every day, and wearing our clothes literally as a habit, that keeps them from being irksome. Drive your wagon over a road where the planks are two feet apart, and the motion is excruciating: let the planks be shoved up together, and it is one delicious roll. So in the Christian life. We must make our duties come so near to each other that they will touch, if we would have them a pleasure. It is easier to give fifty times a year than it is ten; easier to go to church every Sunday than every month; easier to pray

each night and morning than only now and then; easier to be a Christian on every day, and in every place, than only in the church, and once a week. Habit is the great helper that takes away the burden from all labor, and makes even the roughest place smooth. And, in our well-doing, the best way never to be weary is never to stop and rest.—*Rel. Mag.*

FRIENDS' INTELLIGENCER.

PHILADELPHIA, EIGHTH MONTH 11, 1866.

FRIENDS TRAVELLING IN THE MINISTRY.—

Joseph Head, a Minister of East Hamburg Monthly Meeting, N. Y., obtained a minute to attend Pelham Half-Yearly Meeting, C. W., and Scipio Quarterly Meeting, N. Y., and to appoint some meetings within their respective limits if way should open.

"THE FATHERS, WHERE ARE THEY, AND THE PROPHETS, DO THEY LIVE FOREVER?"—This Scriptural inquiry forces itself upon the mind on occasions of the frequent removal of those who have been looked upon as fathers or prophets in the Church Militant—who have stood as upright pillars in the Lord's house; and, under a feeling of the void thus created, the spirit is sometimes oppressed with the weight of the concern, of who shall be found to fill these vacant places? We look around with increasing interest upon those who are not indifferent to the cause of Truth, and yet have not made a *full* surrender of the heart, by which they might be prepared to step into the thinned ranks, and render the service required, in order that the work of righteousness and peace may be advanced in the earth. We would ask, that there be no longer a hesitation whom these will serve. The invitation goes forth with renewed earnestness, "to come up to the help of the Lord against the mighty,"—yes, to "come up," to leave the things that are behind, and press forward toward the mark which has been set as the Christian's goal—a place wherein to obey the Father's will, will be the chiefest joy. In the expansion of spirit, there will be found an enlargement of the sphere of usefulness, and strength, with wisdom, will be furnished, to nobly bear the cross and maintain with integrity the testimonies of Truth, for which many of our predecessors suffered imprisonment and death.

We are fully sensible that the principles advocated by these apostles have not been as faithfully maintained by all bearing the name of Friends, as their worth demands; but the fault lies wholly with individuals, and is no proof that they are not what many, to their great joy and peace, have found them to be—emanations from the Fountain of Light and Life.

With the view that this Society has not yet fulfilled its mission, which is, we believe, to give practical evidence of the sufficiency of its "foundation principle," the "Light of Christ within," to save from sin, and to redeem from iniquity, we call upon its members, especially those in the meridian and youthful periods of life, to examine for themselves this blessed testimony, that it may become theirs through conviction, and not merely by tradition. If we are favored with this rich inheritance, we shall not become "a by-word nor a reproach." The shaft of the adversary will fall harmless at our feet. The cry of heresy and unbelief, can no more move us from the immutable Rock, than it did the pioneers of a great reform in the days of George Fox.

MARRIED, on the 27th of Sixth month, 1866, by Friends' ceremony, at the house of Abram R. Vail, Quakertown, New Jersey, SAMUEL M. ROBINSON to ADOLIA S. VAIL, daughter of Abram R. and Jane D. Vail.

DIED, on the 10th of Seventh month, 1866, at her residence in Menallen Township, Adams County, Pa., MARY H. GRIEST, wife of Jesse W. Griest, and daughter of Charles Hollingshead, of Medford N. J., in the 27th year of her age; a member of Menallen Monthly Meeting.

—, At Taylorsville, Bucks Co., Pa., on the morning of 20th of Seventh month, 1866, BENJAMIN F. TAYLOR, in the 40th year of his age.

—, On Fourth-day, Eighth month 1st, BENJAMIN ALLEN, late of Bristol Pa., in the 74th year of his age.

—, on Seventh-day morning, Eighth month 4th, at the residence of her grandson, Thompson Reynolds, REBECCA REYNOLDS, in her 92d year; an esteemed member of the Monthly Meeting of Friends of Philadelphia.

A CORRECT IDEA OF LIBERTY.

Burke's idea of liberty. He says, "Men are qualified for civil liberty in exact proportion to their disposition to put chains upon their own appetites; in proportion as their love of justice is above their rapacity; in proportion as they are more disposed to listen to the counsels of the wise and good in preference to the flattery of knaves.

From the "Chimney Corner" in The Atlantic Monthly.

VENTILATION.

The want of suitable ventilation in school-rooms, recitation rooms, lecture-rooms, offices, court-rooms, conference rooms, and vestries, where young students of law, medicine, and theology acquire their earlier practice, is something simply appalling. Of itself it would answer for men the question why so many thousand glad, active children come to a middle life without joy,—a life whose best estate is a sort of slow, plodding endurance. The despite and hatred which most men seem to feel for God's gift of fresh air, and their resolution to breathe as little of it as possible, could only come from a long course of education, in which they have been accustomed to live without it. Let any one notice the conduct of our American people travelling in railroad cars. We will suppose that about half of them are what might be called well-educated people, who have learned in books, or otherwise, that the air breathed from the lungs is laden with impurities,—that it is noxious and poisonous; and yet travel with these people half a day, and you would suppose from their actions that they considered the external air as a poison created expressly to injure them, and that the only course of safety lay in keeping the cars hermetically sealed, and breathing over and over the vapor from each others' lungs. If a person in despair at the intolerable foulness raises a window, what frowns from all the neighboring seats, especially from great rough-coated men, who always seem the first to be apprehensive! The request to "put down that window" is almost sure to follow a moment or two of fresh air. In vain have rows of ventilators been put in the top of some of the cars, for conductors and passengers are both of one mind, that these ventilators are inlets of danger, and must be kept carefully closed.

Railroad travelling in America is systematically, and one would think carefully, arranged so as to violate every possible law of health. The old rule to keep the head cool and the feet warm is precisely reversed. A red hot stove heats the upper stratum of air to oppression, while a stream of cold air is constantly circulating about the lower extremities. The most indigestible and unhealthy substances conceivable are generally sold in the cars or at way-stations for the confusion and distress of the stomach. Rarely can a traveller obtain so innocent a thing as a plain, good sandwich of bread and meat, while pie, cake, doughnuts, and all other culinary atrocities, are almost forced upon him at every stopping-place. In France, England and Germany the railroad cars are perfectly ventilated; the feet are kept warm by flat cases filled with hot water and covered with carpet, and answering the double

purpose of warming the feet, and diffusing an agreeable temperature through the car, without burning away the vitality of the air; while the arrangements at the refreshment rooms, provide for the passenger as wholesome and well-served a meal of healthy, nutritious food as could be obtained in any home circle.

What are we to infer concerning the home habits of a nation of men, who so resignedly allow their bodies to be poisoned and maltreated in travelling over such an extent of territory as is covered by our railroad lines? Does it not show that foul air and improper food are too much matters of course to excite attention? As a writer in "The Nation" has lately remarked, it is simply and only because the American nation like to have unventilated cars, and to be fed on pie and coffee at stopping-places, that nothing better is known to our travellers; if there were any marked dislike of such a state of things on the part of the people it would not exist. We have wealth enough, and enterprise enough, and ingenuity enough, in our American nation, to compass with wonderful rapidity any end that really seems to us desirable. An army was improvised when an army was wanted,—and an army more perfectly equipped, more bountifully fed, than so great a body of men ever was before. Hospitals, Sanitary Commissions, and Christian Commissions, all arose out of the simple conviction of the American people that they must arise. If the American people were equally convinced that foul air was a poison,—that to have cold feet and hot heads was to invite an attack of illness,—that maple-sugar, pop-corn, peppermint candy, pie, doughnuts, and peanuts are not diet for reasonable beings,—they would have railroad accommodations very different from those now in existence.

We have spoken of the foul air of court-rooms. What better illustration could be given of the utter contempt with which the laws of bodily health are treated, than the condition of these places? Our lawyers are highly educated men. They have been through high-school and college training, they have learned the properties of oxygen, nitrogen, and carbonic-acid gas, and have seen a mouse die under an exhausted receiver, and of course they know that foul unventilated rooms are bad for the health; and yet generation after generation of men so taught and trained will spend the greater part of their lives in rooms notorious for their close and impure air, without so much as an attempt to remedy the evil. A well-ventilated court-room is a four-leaved clover among court rooms. Young men are constantly losing their health at the bar: lung diseases, dyspepsia, follow them up, gradually sapping their vitality. Some of the brightest ornaments of the profession have actually fallen dead as they stood pleading,—

victims of the fearful pressure of poisonous and heated air upon the excited brain. The deaths of Salmon P. Chase, of Portland, uncle of our present Chief Justice, and of Ezekiel Webster, the brother of our great statesman, are memorable examples of the calamitous effects of the errors dwelt upon; and yet, strange to say, nothing efficient is done to mend these errors, and give the body an equal chance with the mind in the pressure of the world's affairs.

But churches, lecture-rooms and vestries, and all buildings devoted especially to the good of the soul, are equally witness of the mind's disdain of the body's needs, and the body's consequent revenge upon the soul. In how many of these places has the question of a thorough provision of fresh air been even considered? People would never think of bringing a thousand persons into a desert place, and keeping them there, without making preparations to feed them. Bread and butter, potatoes and meat, must plainly be found for them; but a thousand human beings are put into buildings to remain a given number of hours, and no one asks the question whether means exist for giving each one the quantum of fresh air needed for his circulation, and these thousand victims will consent to be slowly poisoned, gasping, sweating, getting red in the face, with confused and sleepy brains, while a minister, with a yet redder face and a more oppressed brain, struggles and wrestles, through the hot, seething vapors, to make clear to them the mysteries of faith. How many churches are there that for six or eight months in the year are never ventilated at all, except by the accidental opening of doors? The foul air generated by one congregation is locked up by the sexton for the use of the next assembly; and so gathers and gathers from week to week, and month to month, while devout persons upbraid themselves, and are ready to tear their hair, because they always feel stupid and sleepy in church. * * *

(To be continued.)

"DESPISE NOT THE DAY OF SMALL THINGS."

'Tis little by little the bee fills her cell,
And little by little a man sinks a well;
'Tis little by little a bird builds her nest,
By littles a forest in verdure is drest;
'Tis little by little great volumes are made,
By littles a mountain on level is laid;
'Tis little by little an ocean is filled,
And little by little a city we build;
'Tis little by little an ant gets her store,
Every little we add to a little makes more;
Step by step we walk miles, and we sew, stitch by stitch,
Word by word we read books, cent by cent we grow rich;
Little rills make great rivers, an acorn an oak,
We tunnel by inches, fell trees stroke by stroke.

To speak to the purpose, one must speak with a purpose.

FAITH.

Restless, and oft complaining, on his bed
Tossed a fair child, as burned along his veins
The fire of fever with consuming pains;
And ever and anon he raised his head
From the hot pillow, and beseeching, said—
"Water! oh, give me water!" By his side
The healer stood, and tenderly replied:
"Wait yet awhile, this potion take instead."
"No," cried the child, "'tis poison, and will kill."
His father took the cup—"My son, be sure
This is a nansoons draught, but it may cure:
Will my boy drink it?"—Then said he, "I will—
I'm not afraid 'tis poison now—I know
Thou would'st not give it, father, were it so."
Oh, trusting childhood! I would learn of thee
This lesson of pure Faith, and to my heart
So bind it, that it never may depart;—
Therefore, shalt thou henceforth my teacher be,
For in thy perfect trust the sin I see
Of our own doubts and fears. The cup of life,
Drugged with the bitterness of tears and strife,
Shall I not drink it when 'tis proffered me?
Yes—for 'tis mingled by a Father's hand,
And given in love—for, rightly understood,
Trials and pains tend ever to our good,
Healing the soul that for the better land
Thirsts with a deathless longing! Welcome pain,
Whose end is bliss and everlasting gain.

W. H. BURLING.

IS THY PATH LONELY?

Is thy path lonely? Fear it not, for He
Who marks the sparrow's fall is guarding thee;
And not a star shines o'er thy head by night,
But He hath known that it will reach thy sight;
And not a joy can beautify thy lot,
But tells thee still that thou art unforget.
Nay, not a grief can darken, or surprise
Swell in thy heart, or dim with tears thy eyes,
But it is sent in mercy, and in love,
To bid thy helplessness seek strength above.

EXTRACT FROM "SELF-HELP."

Perhaps the life of the late Dr. Lee, Professor of Hebrew, at Cambridge, furnishes one of the most remarkable instances in modern times of the power of perseverance and resolute purpose in working out an honorable career in literature. He received his education at a charity school at Lognor, near Shrewsbury, but so little distinguished himself there, that his master pronounced him to be one of the duller boys that ever passed through his hands. He was put apprentice to a carpenter, and worked at that trade until he arrived at manhood. To occupy his leisure hours he took to reading; and, some of the books containing Latin quotations, he became desirous of ascertaining what they meant. He bought a Latin Grammar, and proceeded to learn Latin. As Stone, the Duke of Argyll's gardener, said, long before, "Does one need to know anything more than the twenty-four letters, in order to learn everything else that one wishes?" Lee rose early and sat up late, and he succeeded in mastering the Latin before his apprenticeship was out. Whilst working one day in some

place of worship, a copy of a Greek Testament fell in his way, and he was immediately filled with the desire to learn this language too. He accordingly sold some of his Latin books, and purchased a Greek Grammar and Lexicon. He took pleasure in learning, and he soon learned the language. Then he sold his Greek books, and bought Hebrew ones, and learned that language, unassisted by any instructor, without any hope of fame or reward, but simply following the bent of his genius. He next proceeded to master the Chaldee, Syriac, and Samaritan dialects. But his studies began to tell upon his health, and brought on disease in his eyes through his long night watchings with his books. Having laid them aside for a time and recovered his health, he went on with his daily work. His character as a tradesman being excellent, his business improved, and his means enabled him to marry, which he did when twenty-eight years old. He determined now to devote himself to the maintenance of his family, and to renounce his luxury of book-learning; accordingly he sold all his books. He might have continued a working carpenter all his life, had not the chest of tools upon which he depended for subsistence been consumed by fire, and destitution stared him in the face. He was too poor to buy new tools, so he bethought him of teaching children their letters; a profession requiring the least possible capital. But though he had mastered many languages, he was so defective in the common branches of knowledge, that at first he could not teach them. Resolute of purpose, however, he assiduously set to work, and taught himself arithmetic and writing to such an extent as to be able to impart the knowledge of these branches to little children. His unaffected, simple, and beautiful character gradually attracted friends, and the acquirements of the "learned carpenter" became bruited abroad. Dr. Scott, a neighboring clergyman, obtained for him the appointment of master of a charity-school in Shrewsbury, and introduced him to a distinguished Oriental scholar. These friends supplied him with books, and Lee successively mastered the Arabic, Persian, and Hindostanee languages. He continued to pursue his studies while on permanent duty in the local militia of the county, gradually acquiring greater proficiency in languages. At length his kind patron, Dr. Scott, enabled him to enter Queen's College, Cambridge; and after a course of study, in which he distinguished himself by his mathematical acquirements, a vacancy occurring in the professorship of Arabic and Hebrew, he was worthily elected to fill the honorable office. Besides ably performing his duties as a professor, he voluntarily gave much of his time to the instruction of missionaries going forth to preach the Gospel to eastern

tribes in their own tongue. He also made translations of the Bible in several Asiatic dialects; and having mastered the New Zealand tongue, he arranged a Grammar and Vocabulary for two New Zealand Chiefs who were then in England, which books are now in daily use in the New Zealand schools. Such, in brief, is the remarkable history of Dr. Samuel Lee; and it is but the counterpart of many similarly instructive examples of the power of perseverance in self-culture, as displayed in the lives of many of the most distinguished of our literary and scientific men.

There are many more illustrious names which might be cited to prove the truth of the common saying that "it is never too late to learn." Even at advanced years men can do much, if they will determine on making a beginning. Sir Henry Spelman did not begin the study of science until he was between fifty and sixty years of age. Franklin was fifty before he fully entered upon the study of Natural Philosophy. Dryden and Scott were not known as authors until each was in his fortieth year. Boccaccio was thirty-five when he entered upon his literary career, and Alfieri was forty-six when he commenced the study of Greek. Dr. Arnold learnt German at an advanced age, for the purpose of reading Niebuhr in the original; and in like manner James Watt, when about forty, while working at his trade of an instrument-maker in Glasgow, learnt French, German and Italian, to enable him to peruse the valuable works on mechanical philosophy in these languages. Robert Hall was once found lying upon the floor, racked by pain, learning Italian in his old age, to enable him to judge of the parallel drawn by Macaulay between Milton and Dante. Handel was forty-eight before he published any of his great works. Indeed hundreds of instances might be given of men who stuck out an entirely new path, and successfully entered on new studies, at a comparatively advanced time of life. None but the frivolous or the indolent will say, "I am too old to learn."

And here we would repeat what we have said before, that it is not men of genius who move the world, and take the lead in it, but men of steadfastness, purpose, and indefatigable industry. Notwithstanding the many curious stories which have been told about the infancy of men of genius, it is nevertheless true that early cleverness is no test whatever of the height to which the grown man will reach. Precocity is quite as often a symptom of disease as an indication of intellectual vigor in youth. What becomes of all the "remarkably clever children?" Where are all the duxes and prize boys? Trace them through life, and it will often be found that the dull boys, who were invariably beaten at school, have shot ahead of

them. The clever boys are rewarded, but the prizes which they gain by their greater quickness and facility, rarely prove of service to them. What ought rather to be rewarded is, the endeavor, the struggle, and the obedience; for it is the youth who does his best, though endowed with an inferiority of natural powers, that ought above all others be encouraged.

An interesting chapter might be written on the subject of illustrious dunces,—dull boys, but brilliant men. We have room, however, for only a few instances. Pietro di Cortona, the painter, was thought so stupid that he was nicknamed "Ass's Head" when a boy; and Tomaso Guidi was generally known as "heavy Tom" (Massoccio Tomasaccio,) though by diligence he afterwards raised himself to the highest eminence. Newton, when at school, stood at the bottom of the lowermost form but one. The boy above Newton having kicked him, the dunce showed his pluck by challenging him to a fight, and beat him. Then he set to work with a will, and determined also to vanquish his antagonist as a scholar, which he did, rising to the top of his class. Many of our greatest divines have been anything but precocious. Isaac Barrow, when a boy at the Charterhouse School, was notorious chiefly for his strong temper, pugnacious habits, and proverbial idleness as a scholar; and he caused such grief to his parents, that his father used to say that if it pleased God to take from him any of his children, he hoped it might be Isaac, the least promising of them all. Adam Clarke, when a boy, was proclaimed by his father to be "a grievous dunce;" though he could roll large stones about. Dean Swift, one of the greatest writers of pure English, was "plucked" at Dublin University, and only obtained his recommendation to Oxford "speciali gratia." The well-known Dr. Chalmers and Dr. Cook were boys together at the parish school of St. Andrew's; and they were found so stupid and mischievous, that the master, irritated beyond measure, dismissed them both as incorrigible dunces.

The brilliant Sheridan showed so little capacity as a boy, that he was presented to a tutor by his mother with the complimentary accompaniment, that he was an incorrigible dunce. Walter Scott was all but a dunce when a boy, always much readier for a "bicker," than apt at his lessons. At the Edinburgh University, Professor Dalzell pronounced upon him the sentence that "Dunce he was, and dunce he would remain." Chatterton was returned on his mother's hands as "a fool, of whom nothing could be made." Burns was a dull boy, good only at athletic exercise. Goldsmith spoke of himself as a plant that flowered late. Alfieri left college no wiser than he entered it, and did not begin the studies by which he distin-

guished himself, until he had run over half Europe. Robert Clive was a dunce, if not a reprobate, when a youth; but always full of energy, even in badness. His family, glad to get rid of him, shipped him off to Madras; and he lived to lay the foundations of the British power in India. Napoleon and Wellington were both dull boys, not distinguishing themselves in any way at school. Of the former the Duchess d'Abrautes says, "he had good health, but was in other respects like other boys." John Howard, the philanthropist, was another illustrious dunce, learning next to nothing during the seven years that he was at school. Stephenson, as a youth, was distinguished chiefly for his skill at putting and wrestling, and attention to his work. The brilliant Sir Humphry Davy was no cleverer than other boys; his teacher, Davies Gilbert, said of him, "while he was with me, I could not discern the faculties by which he was so much distinguished." Indeed, he himself in after-life considered it fortunate that he had been left to "enjoy so much idleness" at school. Watt was a dull scholar, notwithstanding the pretty stories told about his precocity; but he was, what was better, patient and perseverant, and it was by that means, and by his carefully cultivated inventiveness, that he was enabled to perfect his steam engine.

What Dr. Arnold said of boys is equally true of men,—that the difference between one boy and another consists not so much in talent as in energy. Given perseverance, and energy soon becomes habitual. Provided the dunce has persistency and application, he will inevitably head the cleverer fellow without these qualities. Slow but sure, wins the race. It is perseverance that explains how the position of boys at school is so often reversed in real life; and it is curious to note how some who were then so clever have since become so common place; whilst others, dull boys, of whom nothing was expected, slow in their faculties but sure in their pace, have assumed the position of leaders of men. The author of this book, when a boy, stood in the same class with one of the greatest of dunces. One teacher after another had tried his skill upon him and failed. Corporal punishment, the fool's cap, coaxing, and earnest entreaty, proved alike fruitless. Sometimes the experiment was tried of putting him at the top of his class, and it was curious to note the rapidity with which he gravitated to the inevitable bottom, like a lump of lead passing through quicksilver. The youth was given up by many teachers as an incorrigible dunce,—one of them pronounced him to be "a stupendous boddy." Yet, slow though he was, this dunce had a sort of dull energy of purpose in him, which grew with his muscles and his manhood; and, strange to say, when he at length

came to take part in the practical business of life, he was found heading most of his school companions, and eventually left the greater number of them far behind. The last time the author heard of him, he was chief magistrate of his native town. The tortoise in the right road will beat a racer in the wrong. It matters not though a youth be slow, if he but be diligent. Quickness of parts may even prove a defect, inasmuch as the boy who learns readily will often forget quite as readily; and also because he finds no need of cultivating that quality of application and perseverance which the slower youth is compelled to exercise, and which proves so valuable an element in the formation of every character. Davy said, "What I am I have made myself;" and the same holds true universally. The highest culture is not obtained from teachers when at school or college, so much as by our own diligent self-education when we have become men. Hence parents need not be in too great haste to see their children's talents forced into bloom. Let them watch and wait patiently, letting good example and quiet training do their work, and leave the rest to Providence. Let them see to it that the youth is provided, by free exercise of his bodily powers, with a full stock of physical health; set him fairly on the road of self-culture; carefully train his habits of application and perseverance; and as he grows older, if the right stuff be in him, he will be enabled vigorously and effectively to cultivate himself.

From the Leisure Hour.

A FEW WORDS ABOUT SCHOOL FEES.

Like most things that can neither be eaten nor subjected to material handling, the educational art is apt to be considerably undervalued in the market. It is one of the many things not seen, and never thoroughly laid hold of. When, by the exercise of his physical powers, a man builds a house; or, by the use of his mental and physical ones, he produces a book, the world is willing in certain cases to look upon him as a laborer worthy of his hire. The result of his industry is tangible; it has a certain value, and passes from hand to hand in the form of a currency. But there is no material and tangible sign by which the achievements of the schoolmaster may be duly estimated. Let those who believe that the profits of teachers are unreasonably great take the case of a schoolmaster having twenty pupils, each paying £35 per annum. This will yield him an income of £700. The expenses will be—for the board of pupils, at £16 a year each, £320; rent, rates, and taxes, say £80; salaries of two tutors, £80; board of ditto, £40; wages of three servants, £30, and board of ditto, £60, independently of many individual expenses, bad debts, and interest upon capital employed. The net in-

come, therefore, cannot be estimated at more than £150 a year, a sum that every reasonable person must consider very moderate. Let grumblers examine facts and then state whether they consider the general scholastic fees of the present day too high. If persons will send their sons to private schools, and require them to be properly fed, decently lodged, and efficiently taught, it follows that they must pay more than mere out-of-pocket expenses. They must, moreover, take into consideration the "wear and tear" of the master and mistress, and, indeed, of all those persons upon whom rests the responsibility of turning out a reputable article in the way of a finished scholar. There is reputation and prestige, too, to be considered, just as speciality is valued in matters of pure business. A man who has made a name in the scholastic world has a right to set upon that name its due value, and to regulate his tariff of charges accordingly. He may consider himself as in some sense the dispenser of a patented article, which bears an exceptional price, and to the perfection of which he has, perhaps, devoted the best years of a busy life. If he make a profit of £500 a year by it, he is only doing what the skilful physician, the able pleader, and the successful artist are also doing; and it may be presumed that, in cases where exceptional high prices are paid, something better than the average is got for the money.

At the same time, it does not follow that the best education is to be procured in the most expensive schools. Indeed, where general tuition is required, the contrary is frequently the case. In an establishment where the charges are high, the number of pupils is "limited and select," and the domestic expenses are great, while the outlay for teachers is too small. The proprietor is generally a man of high classical or mathematical attainments, who by himself is enabled to impart thorough tuition in the subject that is his speciality. The more general branches of study are, however, neglected, inasmuch as the income of the school will not admit of a proper number of tutors being employed. If special training, or superior association, be not required, there is not anything gained by youths being placed under expensive tutors. It may often happen that the best general training is to be procured in a school where the terms are moderate, the pupils numerous, and a large staff of masters reside on the premises. Tuition by visiting professors has not the same advantages, except in special branches, and for advanced pupils who can be trusted to exert themselves during the long intervals between their visits. Parents are too apt to consider that, where the principal devotes all his time to tuition, the boys will turn out better scholars than where assistants are employed. Such, however, is not the case. A

head master may be a very gifted man, but a bad teacher; and when he descends to teach minor subjects, his pupils may gain less knowledge than they would from a person of mediocre attainments, who devoted himself wholly to the instruction of not more than two branches. Subdivision of labor is as necessary in teaching as in every handicraft; and one or two masters can very rarely be competent to undertake the whole range of studies.

MAGNESIUM.

The metal magnesium is now extensively manufactured in this country and Europe. As we have large quantities of the native carbonate in New Jersey and Pennsylvania, we ought to be able to compete with England in this article. Various methods are used in its production: 600 parts chloride of magnesium, 100 parts fused chloride of sodium (or better, a mixture of 7 parts chloride of sodium and 6 parts chloride of potassium,) 100 parts pure pulverized fluorepar are to be intimately mixed, and to the mass 100 parts sodium in fragments added, and the mixture projected into a hot crucible and covered. After the first energetic decomposition has passed, the fused mass must be stirred. The magnesium will be gathered in globules, and can easily be separated from the slag. It is afterward purified by downward distillation. The metal can be drawn into fine wire, and is now extensively used as a source of light in photography. Two ounces of magnesium will produce a light during ten hours equal to that afforded by 74 stearine candles, of 5 to the pound, consuming 20 pounds of stearine.

The Boston Magnesium Company produce the metal in quantities, and some enterprising photographer ought to take pictures cheaply at night. By means of the magnesium light the drawing-rooms of private houses, with the family sitting around the table reading or with their work, a family group can readily be taken. For microscopic photographs the magnesium wire is more available than the sun, inasmuch as it is always ready.

It has been finely said by Dr. Smith, "that of all the arts to which a man can apply himself, the most excellent and important is the right ordering of his own life."

FIFTY-FIVE SUBMARINE CABLES.

The Atlantic cable is the fifty-fifth deep sea line now in working order. The oldest line is that from Dover to Calais, twenty-seven miles long, which was laid in 1851, and has, therefore, been in operation for fifteen years. The line from Dover to Ostend has been worked for thirteen years. A cable was laid from Corsica to Tuscany ten months ago.

The following is a list of the lines now in operation:

PLACES CONNECTED.	Length.			No. of Years in Operation.
	Laid.	Length.	Conductors.	
1851—Dover to Calais.....	27	4	15	
1853—Denmark—across the Belt...	18	3	13	
1853—Dover to Ostend.....	80½	6	13	
1853—Frith of Forth.....	6	4	13	
1853—Portpatrick to Donaghadee	25	6	13	
1853—Across River Tay.....	2	4	13	
1854—Portpatrick to Whitehead....	27	6	12	
1854—Sweden to Denmark.....	12	3	12	
1854—Italy to Corsica.....	110	6	12	
1854—Corsica to Sardinia.....	10	6	12	
1855—Egypt.....	10	4	11	
1855—Italy to Sicily.....	5	3	11	
1856—St. of Canoe to Cape Breton	1½	3	10	
1857—Across Norway Fiords.....	49	1	9	
1857—Across Mouth of Danube....	3	1	9	
1857—Ceylon to India.....	30	1	9	
1858—Italy to Sicily.....	8	1	8	
1858—England to Holland.....	140	4	8	
1858—England to Hanover.....	280	2	8	
1858—Across Norway Fiord.....	16	1	8	
1858—S. Australia to King's Isl'd	140	1	8	
1858—Ceylon to India.....	30	1	8	
1859—Alexandria.....	2	4	7	
1859—England to Denmark.....	368	3	7	
1859—Sweden to Gothland.....	64	1	7	
1859—Folkestone to Boulogne.....	24	6	7	
1859—Across the Rivers in India..	10	1	7	
1859—Malta to Sicily.....	60	1	7	
1859—England to Isle of Man.....	36	1	7

Total miles..... 8677

Several cables of shorter lengths, not included in this table, are in operation in different parts of the world, but they are of minor importance, and their working does not materially affect the probability of deep sea telegraphy.

England, Ireland, and Scotland are the starting points of nineteen of the whole number of submarine lines. Italy has three; Norway has laid three across the Fiords since 1857; France has two; Spain has one, and India two. The Malta and Alexandria line, next in length (1,535 miles) to the Atlantic cable, is laid in three sections, and the part in deep water has never caused any expense for repairs.—*The Press*.

REVIEW OF THE WEATHER, &c.
SEVENTH MONTH.

	1865.	1866.
Rain during some portion of the 24 hours,	12 days.	15 days.
Rain all or nearly all day,	0 "	0 "
Cloudy, without storms,	7 "	2 "
Clear, in the ordinary acceptance of the term,	12 "	14 "
	31 "	31 "
TEMPERATURE, RAIN, DEATHS, &c.	1865.	1866.
Mean temperature of 7th month per Penna. Hospital,	77.80 deg.	80.33 deg.
Highest do. during month,	96.00 "	99.25 "
Lowest do. do. do.	60.50 "	63.00 "
Rain during the month,	2.97 in.	2.52 in.
Deaths during the month, being for 5 current weeks for 1865, and 4 for 1866,	2233	2047

Average of the mean temperature of 7th month for the past seventy-seven years,	75.68 deg.
Highest mean of do. during that entire period (according to Peirce) 1793-1838,	81.00 "
Lowest do. do. the memorable 1816,	68.00 "

Dr. Conrad, of the Pennsylvania Hospital, believes the week from the 12th to the 18th to be the hottest on record, and furnishes the following maximum for each day:

12th,	91 degrees.
13th,	95 "
14th,	97 "
15th,	94 "
16th,	98 "
17th,	99-25 "
18th,	97-25 "

He also gives a memoranda of the maximum for July, 1830, from the 16th to the 18th, both inclusive, wherein there were four successive days reached a maximum of 95 degrees, one 96 degrees, one 97, the balance ranging from 90 to 94 degrees. This was also a *heated term* worthy of being remembered.

While the heat was so intense in Philadelphia on the 16 h, neighboring cities also made the following records:

Baltimore,	96 to 100
Allentown,	96 to 108
Albany,	100 to 104
Boston,	94 to 100
New York,	80 to 94
PHILADELPHIA, 8th mo. 4, 1866.	J. M. ELLIS.

ITEMS.

THE ATLANTIC CABLE.—On the morning of the 28th ult., the laying of the Atlantic Telegraph Cable was finally accomplished, and the insulation between the coasts of Ireland and Newfoundland was pronounced perfect, despatches being hourly received from Europe, at Heart's Content. The steamship Great Eastern, left Sheerness on the 30th of 6th mo., and arrived at Beerhaven, 7th mo. 5th. The other steamers joined the Great Eastern at Beerhaven, as follows: the William Corry and Terrible on the 6th; the Albany on the 7th and the Medway on the 10th. On the 7th, the end of the Irish shore cable was landed from the William Corry, and at 2.30 the next morning the laying was successfully completed, and the end buried in ninety-four fathoms. On the 13th, the shore end was connected to the main cable on board the Great Eastern, and at 2.40 P. M. the telegraph fleet started for Newfoundland. The weather was favorable during the whole passage, which was fourteen days. The distance made by the Great Eastern is sixteen hundred and eighty-six miles; the length of the cable is eighteen hundred and sixty-six miles. The Great Eastern was in constant communication with Valentia since the splice was made on the 13th ult., and daily received news from Europe which was posted up outside of the telegraph office, for the information of all on board of the Great Eastern, and signalled to the other ships. The telegraph fleet has already sailed for the spot where the cable was lost last year, to recover the end, and complete a second line between Ireland and Newfoundland, and then the Medway will proceed to lay the new cable across the Gulf of St. Lawrence. The process of splicing the main cable with the shore end was commenced as soon as the Great Eastern came to anchor. The operation was performed successfully, and despatches were instantly sent throughout the country, announcing the completion of the event which joins the Old and New World.

It is a curious coincidence, that the first news despatches received by the Atlantic Cable in 1858 and 1866 have been messages of peace. The dispatch of 1858 announced the conclusion of the war in China. The one by the New Cable, a treaty of peace between Austria and Prussia.

Congratulatory messages have been received and sent between the two continents.

From the Queen of Great Britain to the President of the United States.

OSBORN, July 27, 1866.—To the President of the United States, Washington, D. C.—The Queen congratulates the President on the successful completion of an undertaking which she hopes may serve as an additional bond of union between the United States and England.

PRESIDENT JOHNSON'S REPLY.

EXECUTIVE MANSION, WASHINGTON, July 30, 11.30 A.M.—To her Majesty, the Queen of the United Kingdom of Great Britain and Ireland.—The President of the United States acknowledges with profound gratification the receipt of her Majesty's dispatch, and cordially reciprocates the hope that the cable which now unites the western and eastern hemispheres may serve to strengthen and to perpetuate peace and unity between the Government of England and the Republic of the United States.

ANDREW JOHNSON.

The President's message to the Queen, containing seventy-seven words, was passed through the Atlantic cable in eleven minutes, and delivered to the Queen almost immediately.

During the first twelve hours that the line was

open, four thousand words were transmitted across the wires, with as much ease as on an ordinary land route. The provisional charges for the transmission of messages through the Atlantic Telegraph cable are as follows:

From any telegraph station in America to any telegraph station in Great Britain, for twenty words or less, including address of sender and receiver, £20 in gold; for every additional word not exceeding five letters, 20 shillings sterling per word.

From any telegraph station in America to any telegraph station in Europe, for twenty words or less, including the address of the sender and receiver, £21 sterling in gold; and for every additional word not exceeding five letters, 21 shillings in gold per word.

From any telegraph station in Africa, Asia or India, for twenty words or less, including the address of sender and receiver, not exceeding in all one hundred letters, £25 sterling in gold; and for every additional word not exceeding five letters, 25 shillings per word. The letters in all words after the first twenty will be counted and divided by five; each five or fractional remainder will be charged a word. Messages in cypher will be charged double the foregoing rates. All figures intended for transmission must be written in full length, and will be charged as words.

Messages destined for places beyond the telegraphic system will be forwarded by mail.

Five attempts have been made to lay an Atlantic Cable, and the period covered by the different experiments is nine years. In 1857, the expedition failed on the fifth day; the first expedition of 1858 was abandoned on the twentieth day; the second and successful expedition in the summer of 1858 occupied eighteen days, including the run to mid-ocean for splicing the Cable, and the return of the Agamemnon to Valencia with one-half of the line; twenty-three days later, the cable became dumb. The expedition of 1865 failed, by the breaking of the cable, on the eleventh day of the Great Eastern's voyage. This year the whole time occupied in the run of the great ship was twenty days.

DEATH OF JOHN ROSS.—John Ross, the well-known chief of the Cherokee nation, died in this city yesterday evening. Ross, for more than a third of a century, exercised a powerful and controlling influence, not only over his own people, but upon all the border tribes. He was a man of great political sagacity, which is shown in the fact that he so long maintained the ascendancy as chief of his nation, to which place he was elected every four years, a place which he filled when the Cherokee people went from their old home in Arkansas, into 1835. He married a lady, we believe, in Delaware, and leaves a numerous family connection. Mr. Ross was the representative of the "full blood" portion of the nation, and that being the controlling element of the nation, his ascendancy was always secure. He was a man of intelligence, conversed well, bore himself with dignity, and used a pen handsomely and with force. He was a politician of intense ambition, loved power, and his opponents accused him of unscrupulousness in securing his purposes. When the war opened, he embarked with the South, carrying with him the most of the full bloods of his nation; but subsequently he changed front, and was afterwards with the Union. He could not have been much less than seventy-five years of age at the time of his death.—*National Intelligencer*, August 2d.

A few young men can be accommodated with board by applying for two weeks at 1004 Cherry St., Philadelphia.

A SELECTION FROM THE LETTERS OF SARAH (LYNES) GRUBB.

An address to her children, written at several different
periods.

Stoke Newington, 28th of 12th month, 1832.

My dearly beloved Children.—Being now in the sixtieth year of my age, and not knowing how long it may please Infinite Wisdom to leave the ability for employ of this kind, I embrace the present time to commit to writing some short account of my past life; hoping the perusal of it may be blessed to you.

I was born at Wapping, London, in the year 1778. My father's name was Mason Lynes; he was, by trade, a block and mast maker. My mother's name was Hannah Holdway. I have been informed that they both came of respectable families in the middle class of community, and were each favored to experience something of vital religion. My dear mother has spoken to me of the tenderness of my father's conscience, and of the day of Divine visitation to her own soul in early life. She was a beautiful person, and much admired when young; but could not see her way to enter the married state, until she had an offer of the hand of the plain, simple-hearted Mason Lynes. She has related to me an instance of my father's sense of religious duty, as being worthy the first attention. Having some urgent business on board a vessel lying in the river, that was to sail at a certain time, he suffered some work to be done on the first day of the week, which I un-

derstand, cost him many weeks of bitter remorse. He was in great repute for upright dealing; and being of industrious habits, had realized some property, when it pleased the Lord to call him from every worldly pursuit, and every tender tie in nature, to a fixed state of existence in the world of spirits. Those who best knew him, and witnessed his departure, were comforted in the persuasion that an entrance into the everlasting kingdom of God was abundantly ministered to him, through redeeming love and mercy, which is in Christ Jesus our Lord. I well remember his taking a final leave of his seven children, one by one. While he labored hard for breath, he counselled us severally to fear and love God. I was then about six years old.

Two years after this solemn and deeply affecting event, the three youngest of us were placed at "Friends' School," Islington, or then Clerkenwell. The change was severely felt by us who had come from every comfort, to endure sore privations, but our heavenly Father blessed all to my mind—even He who had visited me by his love when not more than five years old; so that I delighted then in the "Divine Songs" of Watts, which an amiable elder sister had made me acquainted with, at that early period of my life.

At school I sought the Lord; feeling His power in my heart operating against the evil propensities of my nature; yet to these corrupt inclinations, I many, many times gave way;

and for this I was brought under great condemnation, even as early as when nine years old; so that I bemoaned my condition, and have begged and prayed at that period, for a better state and a happier. I went on sinning and repenting for years; still my love for good books increased, and for good people. We had few books. The Bible, and one or two journals of Friends, are all that I can recollect reading; and I really valued them as highly as I was capable of doing in this my childhood. When I grew to about thirteen years of age, I began to discover something about me, or in my mind, like the heavenly anointing for the ministry; for the Lord had revealed His word as a hammer, and had broken the rock in pieces in my living experience; and I was contrited under a sense of power and love; saying even vocally, when alone, "Lord, make me a chosen vessel unto Thee!" I could even then utter good things, and have done so to my schoolfellows in select companies; and once I saw several in tears while I spoke to them. I was not, however, sensible of a Divine requiring to do as I then did.

Soon after I was fourteen years old, a friend from Ireland took me into her family to attend her children, who were young, there being four of them. This situation was as a fresh ordeal to me. At one time I wrote thus:—

"3d of 6th month, 1791.—Oh the deep distress and sore anguish of soul which I now feel! It is beyond expression; yet, out of the depth of my tribulation, have I been permitted this morning to cry unto the depth of His mercies, whose compassions fail not. Oh! there is something in me which perhaps is not of His pure Spirit; that wishes it might please Him to cut the thread of my life, or that I might go into some solitary place, where I might mourn and none know it. But I find another language, peradventure more profitable to attend to, 'Is this keeping the word of my patience?'"

I was then eighteen years old; had come forth as a minister, yet discovered great need of further refinement, both for my own acceptance with the Lord, and that I might be fit for the Lord's use. Truly I had to abide the fiery furnace.

With respect to my first appearances as one called to speak in the high and holy name of the Lord, they were in great fear, and under a feeling that my natural inclination would not lead me into such exposure, for I shrunk from it exceedingly; and often have I hesitated, and felt such a reluctance to it, that I have suffered the meeting to break up without my having made the sacrifice: yea, when the word of life, in a few words, was like a fire within me. Great has been my mourning through these omissions of duty, although but seventeen

years old when I first gave utterance publicly to a sentence or two; and I had opened my mouth in private many months previously, under the constraining influence of the Spirit of truth; being without the shadow of a doubt that it was indeed required of me, poor child as I was, I had sweet consolation in coming into obedience; and after a while was surprised to find, that although I stood up in meetings expecting only to utter a *little* matter, more passed through me, I scarcely knew how.

Thus the gift grew and much baptism and suffering was my portion from time to time: the great work of my salvation and sanctification going on, while I was occasionally induced to invite others to the needful acquaintance with Him who came to redeem us from all iniquity. I have never known an easier way to favor with the Lord of life and glory, than that of passive submission to all His holy will concerning me, even under dispensations most proving and mortifying to the fleshly mind.

I lived nearly ten years in the family to which I went from school, viz, that of Sarah Grubb, of Anner Mills, near Clonmel, Ireland. Never, all that time, could I see my way to change my situation; for, through all the difficulty that lay in my way of fulfilling my religious duty, I believed that the Great Master had some good end which He designed to answer, in permitting me to be as it were cramped in the gift dispensed to me as a minister of Christ: and my faith was at times renewed and confirmed, that if I would patiently endure to the end, my reward would be sure. Thus I was mercifully enabled to "wait all the days of my appointed time until my change came;" until, in the clear openings of truth, I was led back to my native land, to my near relatives, and sent forth *largely* to publish the glad tidings of the Gospel. I had been some journeys while a servant in Ireland, but now a very wide field of labor opened before me; and, with the consent of my Monthly Meeting, I travelled much, up and down in England, both among Friends and others, for some successive years; and many blessed and powerful meetings we had, to the praise of His excellent name, with whom we can do nothing, and are nothing. For some considerable time I was joined by my beloved friend Ann Baker, daughter of Samuel Baker of Birmingham, and afterwards wife to Stanley Pumphrey, of Worcester. We passed through tribulation together, which, as well as experiencing some rejoicings, had a strong tendency to unite us in true sisterly love and friendship; and in it we were preserved to the end of her course, which was finished with holy triumph many years since. Neither hath death itself dissolved the heavenly bond by which our spirits were united; even in that which outlives all probation.
